Appendix

The Farm Problem: Do We Need a New Approach?

EXTENSION OF REMARKS

OF

HON. CLINTON P. ANDERSON

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Thursday, January 5, 1956

Mr. ANDERSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Do We Need a New Approach?" which I delivered before the Texas Farm Bureau annual convention at Fort Worth, Tex., on November 8, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

When I tried to put a title to the things which I wanted to discuss with members of the Texas Farm Bureau, I jotted down many suggestions that strongly appealed to me. I would have enjoyed, for example, spending my whole time talking with you about the problems of cotton, the need for decisions on cotton acreage in old areas and in new ones. I would have been happy to have discussed price cycles in the cattle trade. And as you can well imagine, I could have spent most of an afternoon examining with you the history of our whole program of price supports, acreage limitations, and marketing quotas.

I still feel that before another year rolls around I will have tried to reduce to writing what I know of the history of the long battle over price-support programs and levels. This battle is not something that can be dealt with casually in a few minutes. On the contrary, it has roots which run back to the days of the Federal Farm Board in the early 1930's—yes, even to the 1920's and the fight for the McNary-Haugen bills.

Through the fabric of that whole experience, through the changing patterns of processing taxes, soil-conservation payments, limited price-support operations, production payments, high-incentive prices and flexible price-support programs, there runs like a red threat one constant question from farmers in time of economic strain and financial difficulty: Do we need a new approach?

So I have taken that as a title and will talk about it today.

The minister rises in his pulpit and announces his text. He may travel far from it, but it is always there in case he wishes to return and avail himself of that anchor. I, too, have a text, and it is this chart prepared by the Agricultural Marketing Service in the Department of Agriculture following the form and pattern of a pencil sketch which I sent to the Service months ago and requested a reproduction in exact graphic proportions. I present it with no apologies, because I have studied figures and tried to draw from them crude charts as a means of graphic presentation almost as long as I have been in business.

This chart that I use today attempts to trace the relationship between national income and farm income over the past 45 years. By it, we see that beginning in 1910, particularly through the 5 years 1910 through 1914 which became the parity base for our earliest endeavors toward equality for the farmer, farm income and national income rose and fell together. I do not refer to actual dollars and cents, because farm income is only a fraction of national income, usually about from one-twelfth to one-fifteenth; but, nonetheless, they travel in the same relative pattern.

Then came the period prior to our entrance into World War I when those European nations which had been drawn into the conflict required enormous quantities of American farm products. Wheat prices rose to unprecedented levels as the armies in Europe surged back and forth over the hundred battlefields, digging trenches, developing barbed wire entanglements, tearing up the soil.

This was the great American era for ripping up pastures and plowing up the plains. I lived in the Dakotas, and my high school and college years were spent in an atmosphere of fervid agricultural expansion. Every available piece of land was put into wheat or corn. The Iowa farmer could turn a bumper corn crop into fat cattle which could be sold at such record levels that the value of Iowa farmland jumped from $50 or $100 an acre to $400, $500, and in Black Hawk County to $600 or more. People bought and sold farmlands with the frenzy with which they now dabble in uranium.

There came, of course, a day of reckoning. The armistice was signed to end World War I. The pipelines of wheat and meat and dairy products no longer needed to be filled. The wheat farmer had no guaranty that his market would last forever and no umbrella to protect him in the day when his product was no longer needed. Within a year after the close of the war, the boom was over and within 2 years the panic was on. There were six banks in my hometown. Five of them closed. The sixth was kept open by brute strength, but the whole agricultural economy was shattered and torn. You see that picture on the chart.

Then from 1921 for a period of 26 years farm income stayed relatively below but proportionately close to national income. It was never up to what we might call parity or equality except in the years 1924 and 1934, but it came close in the early 1940's and only dropped off in 1943, 1944, and 1945 when price controls worked more effectively against farm production than against the output of other segments of our economy.

The Congress tried to recognize that situation. It passed the Steagall legislation promising the farmer that he would have high, rigid price supports as an incentive to production during the period of the war, and that in recognition and reward for his stimulated and expanded production under price controls during the war he would have 2 full years after the war during which the Government of the United States would guarantee him adequate prices for his enlarged production. During these 2 years, of course, he was expected to adjust his production, to shrink it back to more normal levels and to prepare once again for the period when farm income and national income might move along together.

Now I am speaking of things that are within the orbit of my own acquaintance, because I came into the Department midway between the ending of the European and Japanese phases of World War II.

You see next on the chart a rapid lift in the relationship of farm income to national income, because we moved as rapidly as we could to eliminate price controls from the farm commodities and to give them a chance to reach their more normal relationship to farm income, but there were some clouds overhanging the farm price horizon. We had on hand 7½ million bales of ragtag cotton, cheap cotton that had moved under the Government loan at standard prices but had been of such inferior quality that it had not been taken out of warehouses for manufacturing into textiles. We had enormous stockpiles of butter, wool, fish, dried skim-milk powder, and a host of other things. We had thousands of cases of canned vegetables, millions of pounds of canned meats.

The problem then, and perhaps the problem now, was to move those commodities into markets other than the normal market of the American farmer. It is unnecessary to detail those now; but the surplus cotton, for example, went to China, Japan, Austria, and Germany in a fashion that did not interfere with the normal exports of American cotton to England, Belgium, Italy, and other large buyers. In 1945, 1946, and 1947, the release of these enormous stocks of surplus commodities did not drive down domestic agricultural prices because there was a world demand for our goods and we could find places to put away our food and fiber without disturbance to the normal American channels of domestic and international agricultural trade.

The separation of farm income from national income began in the year 1948 as you can see from the chart. Agricultural prices began to drop because agricultural production held up even after markets began to disappear. The people of Europe and Asia began to reestablish their wheat fields and their rice paddies. The rehabilitation work of UNRRA and other agencies had its effect. We moved from a period in which each year we had to scrape the bottom of the barrel for enough wheat for our needs at home and abroad to a time when we could remove all restrictions on the use of wheat and could be fairly generous with areas where shortage was the rule rather than the exception.

It was at the end of 1948 when the adjustment of agricultural production and consumption in the United States needed to be accomplished, but the Congress kept going through 1949 high, rigid 90-percent supports which had stimulated the production of agricultural commodities during and after World War II. The spread between national income and farm income continued downward to the end of 1949 and only lifted a little toward the end of 1950 because war started in Korea in the middle of 1950, and we could fill our military pipelines from our agricultural surpluses and thereby remove the strain from commodity purchasing.

There were those who had foreseen the possibility of a drastic reduction in farm income following the 2-year period of the Steagall guaranties. The Department of Agriculture had had a study committee looking steadily at this problem during World War II. In 1946 there was an intensive drive to bring together the lessons of that long

AUTHENTICATED U.S. GOVERNMENT INFORMATION GPO

study and attempt to congeal into new legislation our best knowledge of what would safeguard American farmers and perpetuate the favorable relationship between farm and national income.

I am sure you know the results of that study. We, in the Department, recommended a program of flexible price supports giving the Secretary of Agriculture discretion to establish such price levels between about 75 percent and 90 percent as would permit him to guide farmers in their planting and help them toward the balance between production and consumption which brings about a healthy active market and a good price for agricultural commodities in the market place. We recommended that the Secretary have broad discretions as to the level at which prices were to be fixed. We advocated no sliding scale by which the level of price supports was to be measured against the supply of each commodity but we did feel that the flexibility which had been written into the Agricultural Act of 1938 was a proper power for a Secretary of Agriculture to possess, even though the level recommended was substantially above the 52 to 75 percent adopted in the administration of President Roosevelt.

Now, if I may return to the chart, I must point out that Korea did great things for our agricultural situation. Had it not been for Korea, the farm problem in 1950, 1951, and 1952 would have been comparable to some of our problems today; but Korea required that this country stockpile enormous quantities of butter, meat, and cereals. Whatever quantities the farmer was able to produce the Government stood ready to buy.

There was a very substantial turndown in income during 1952. It has carried on through 1953 and 1954; and it will follow on through 1955.

If you want to know what this loss in farm income has done, take two quick statistical references:

1. Farm assets have dropped three billion from their peak; and

2. Farm debt is up two billion from 1953.

What I wish to point out particularly is that during all the time in 1948, 1949, 1950, 1951, 1952, 1953, and 1954, farmers of this country had whatever protection there is in high, rigid 90 percent price supports. This great gap which has opened up between national income and farm income opened and developed during the years when the price-support program was pegged to a rigid 90-percent standard. No farmer should ever forget that.

This is the first year that flexible price supports have been operative. The decline under 90-percent supports began at a time when we were relatively free from surpluses. When I left the Department of Agriculture in May 1948, I believe that all Commodity Credit loans totaled around $1¼ billion, and a great deal of that was current and quickly liquidated. Now our borrowing authority from Commodity Credit is $12½ billion and we are using the major portion of that amount with steadily increasing Commodity Credit stocks. So it is fair to say that 90-percent supports had their chance to work in a market relatively free from surpluses. If we are to be fair we should give flexible price supports a chance to work in a market not glutted with a billion extra bushels of wheat and 12 million extra bales of cotton and 20 million hundredweight of rice and so on down the roll call of surplus crops which today makes our whole farm problem difficult if not desperate.

On October 17, 1955, the New York Times said: "National Income Sets a New Peak. The national income attained a record annual rate of $321 billion during the second quarter of this year, the Government reported today." That is higher than the figures go on my chart, but the chart is prepared by statisticians and bears this footnote: "Department of Commerce estimates of national income have been adjusted to make them comparable with farm income estimates. I believe, however, that the 1955 national income mark will be up from the 1953 and 1954 level, but this I do know—the 1955 net income of farmers will be down. The last estimate I saw was that farm net income now was running at the rate of 10.6 billions for 1955, and you will find that figure on page 3 of a pamphlet called the Farm Income Situation issued by the Department of Agriculture on October 31, 8 days ago.

The point I am constantly trying to make to you is that in 1947 national income was at the level of about $199 billions, and that farm income was at the level of about $16¾ billions. During the next years, national income went up past $300 billions, but farm income in 1954, at the end of the period when rigid 90-percent price supports were in effect, had dropped to $12.3 billions. (Farm Income Situation, FIS 155, Department of Agriculture, Oct. 31, 1955, p. 3.)

If you will look at the chart and realize that if farm income had moved in normal relationship to national income as it mounted up to $300 billion, farm net income would now be about $27 billion, yet the latest Government publication puts it at the rate of of $10.6 billion.

This is the farm problem. It is not important that we waste our energies in farm meetings debating whether we go back to the 90-percent supports which carried us from high farm prosperity and comparable high net farm income to the low figure of $12.3 billion for 1954, or whether we should try flexible price supports or two-price systems or export subsidies. The question is: What do we do now and do quickly to put the farmer in a safe spot economically and in a proper financial relationship to the businessmen, the doctors, lawyers, and engineers who live in the cities that our farm produce feeds.

I am going to talk about a few commodities, and then I am going to try to answer my own questions as to what we do now.

The Department of Agriculture, in its October reports, said that the 1955 harvest would be the second highest on record. Corn was estimated at 3,117,000,000 bushels. The wheat crop was 915 million bushels. Tobacco has been growing so well that a special story in the New York Times a month ago found the tobacco glut so bad that the Government owns now and has in storage about 425 million pounds of tobacco, acquired under the price-support system. In auction after auction the Government has been the biggest and at times the only bidder. Tobacco, you know, was the one crop that supposedly worked so perfectly under 90-percent supports that it has a special permanent status unlike any other crop, yet even tobacco isn't able to withstand the stimulation these rigid supports give it.

But I am talking in Texas to Texans. Maybe I better talk about cotton because Texas has 40 percent of the cotton acreage in the United States. The October crop report found the Department of Agriculture forced to raise its estimate of the 1955 crop to 13,920,000 bales, an outpouring of cotton that nullified the control measures which had been in effect and aggravated more than ever a surplus problem already severe. If that estimate holds up the 1955 crop is 232,000 bales above the 1954 harvest and nearly a million bales above the 10-year average from 1944 to 1953. Add that crop to the present surplus of 11,121,000 bales and you have a record supply of 25,049,000 bales which is greater than the previous record set in 1939. Next month the cotton producers will have to vote on a referendum to reduce acres below 18 million at a very time when legislation is pending in the Congress to raise the acreage to 21½ million.

Under our present supports, we have held an umbrella over cotton producers in Mexico, Brazil and many other Latin American countries until today they are able to move into our export markets at prices lower than our Secretary of Agriculture is authorized to sell under existing law. We have seen world production increase even when our production decreased. This year we will see a substantial increase even though your acreage has been cut down. If controls are continued, you can be reasonably sure that the 1957 acreage will have to be lower than the 1956 figure.

So what do you do? Do you plant more rice or wheat? Let's talk about rice.

Texas is a great producer of rice. We had a hearing in Washington last May dealing with rice programs, and these interesting facts developed.

In 1935 the United States produced 17,735,000 hundredweight of rough rice; in 1940, 24,495,000; in 1945, 30,668,000; in 1950, 37,971,000; and in 1954, 58,853,000. The Korean war had stimulated the production of rice and also stimulated the exportation of rice. Here are the figures on exportation: In 1935, 7½ percent of the United States crop was exported; in 1940, 25.3 percent; in 1945, 38.5 percent; in 1950, 40.9 percent; and in 1954, 43.8 percent.

No one need be told how important exports are to the American rice producer nor does any rice producer need to be told that exports are dropping rapidly. They are about half this year what they were last year and probably will be as low as 9 million hundredweight. Add that to a domestic consumption of only 24 million hundredweight, and you have need for perhaps 33 million hundredweight with a production nearly 59 million hundredweight. What do you do with the balance? Do you continue to store it year after year?

That's why rice producers now face drastic acreage reductions just after they have purchased additional rice production machinery. How do they propose to solve it? By a two-price system or by export subsidies, anything except bringing production in line with consumption. How much better it would have been if controls had gone on right after 1950 and we had produced what the Government and the market needed.

I could go on through basic and nonbasic commodities tracing the same pattern of accumulation and price deterioration, but I have promised that I would try to make a suggestion of what might be done.

One of our national news magazines (U. S. News & World Report, September 30, 1954) had an article entitled "Wanted: Magic Formula for the Farm Problem. After 35 Years of Search No Really New Ideas."

I agree with that heading. There is no device that we can hastily concoct to cure our ills, no magic wand that we can wave to make them disappear. There is, however, hard work to be done, and your organization, along with the American Farm Bureau Federation of which it is a part, has earnestly tried to study farm problems and work steadfastly for their solution. So I do not hesitate to present to you my belief that we do need a new approach and my ideas as to what that new approach might be.

First, I think we need to quiet the fighting on several farm fronts. By that I mean that we must soon be able to bring all farm organizations to a common position in behalf of the farmer. We must try to find a program that can be acceptable to both political parties, Republican and Democratic, and that unifies the individuals within each party. I need not tell you that the opponents of Secretary Benson are not all within the Democratic Party. He has stern, harsh critics within the Republican Party, and they are Members of the Senate and Members of the House.

2d set

We need to find a basis for prompt action that can halt the decline in farm income. That basis must be able to enlist the 90 percenters like my good friends DICK RUSSELL and HAROLD COOLEY, as well as Senators who believe in flexible price supports like GEORGE AIKEN, SPESSARD HOLLAND, and me. I don't care how few things we agree on at first or how simple the early areas of agreement are, we need to take the farm program out of perpetual political strife, and substitute the bipartisan approach to farm problems which characterized the years when prosperity was being restored on the American farm.

I know that you will say at once that there is a wide gulf between the Farm Bureau and the Farmers' Union. I think I know the ground around that gulf and how deep it is. But I also recall two items:

1. In 1945, I named a special committee, with Milton Eisenhower as chairman, to work on the reorganization of the Department of Agriculture. When that group and I had finished our joint endeavors, we presented the plan of reorganization to leaders of the Congress and to all farm organizations. After a little overhauling and some slight modifications we got complete approval by representatives of both political parties and all farm organizations. The Production and Marketing Administration was established. Personally, I think it was the only organization in the Department of Agriculture that made much sense.

2. In 1946, after years of study we prepared the farm legislation to which I have previously referred, but before it was presented to the Congress, it was considered by farm organizations. Even though it involved flexible price supports and modernized parity, it was supported by the Farm Bureau, the Grange, the Farmers Union, and the National Council of Farm Cooperatives.

From these two experiences, I have decided that it is possible to bring farmers and the Congress together on farm programs and agricultural administration.

Second, we must clean the shelves of the Commodity Credit Corporation. I mean we must dispose of our surpluses. No farm program—rigid 90-percent supports, flexible-price supports, soil-fertility banks, production payments, or two-price plans—will work with the surpluses we now have on hand. We should not fool the American farmer by pretending that we think they will.

We must clean our shelves if we expect to see the line representing farm net income turn upward and if we expect to see national income stay high. Economically, this Nation would be in a far sounder position if we gave away about $6 billion worth of food and fiber than it will be if we continue to keep these stocks hanging over every commodity market. At the end of World War II we dumped enormous quantities of food on islands around the Pacific and while I do not advocate dumping commodity stocks now, I do advocate getting rid of them.

If no one else takes the lead, I intend on the first appropriate day of the next session of Congress to introduce a bill requiring the Commodity Credit Corporation to present to Congress within 30 days a program for the orderly but complete liquidation of surplus Commodity Credit stocks. I do not mean they must be liquidated in 1 month or 1 year but the mere announcement that they will be liquidated in 4 or 5 years will bring the buyers of commodities back into the market.

Why should a miller buy wheat or hedge his position when Commodity Credit has a billion bushels beyond our normal needs? Why should the manufacturer of cotton goods protect himself against a price rise when he knows that Commodity Credit has millions of bales that he can take out from under the loan any day he wants it? But once you earmark those surpluses for shipment abroad into markets not normally available to our farmers, the textile manufacturers will be frantically calling their agents to find some good cotton and tie it up.

When I took the oath of office as Secretary of Agriculture, I had to sign a receipt for 7½ million bales of cotton. It was sorry cotton at that but as long as it was hanging over the market there wasn't much trade in farm-produced cotton. We moved it all in a year or a year and a half; and the day we decided to move it outside of normal American trade zones, the cotton market stiffened and cotton prices went up and stayed up until cotton got it in a surplus situation again. I tell you, we can still move cotton when we want to.

A program to move these commodities may involve putting great quantities in the hands of people in other lands who could not otherwise afford to buy them. What is wrong with that? Our slogan in World War II proclaimed that food would win the war and write the peace. Well, it won the war, all right. Why not let it try to write the peace? These billions in food and fiber could implement our foreign policy far better than supplying arms to the Arabs or to the Israeli. Shooting irons placed in the hands of trigger-happy people lead to war; but food and fiber can lead to peace.

Food and fiber can help carry the spirit of Geneva at a time when that spirit seems to be mighty weak and when the foreign ministers find little on which to agree. When food and fiber lie in bins and pile up the storage, the accumulation only breaks our farmers. If they are sent abroad and removed from our economy, farm income will spurt upward, national income will stay at high levels, and in a few years we will have forgotten the cost of such a disposal program just as we forgot the cost of letting thousands of tanks, planes, and guns be captured by "General Rust" after World War II. We will have forgotten, but the heart of the world will not and it well might be that we would have created an atmosphere where the spirit of Geneva, the blessings of atomic power, and a host of other favoring circumstances might begin to work toward the achievement of peace.

Third, we must spend more on research and extension to build wider markets at home and abroad.

As I reflect on my years in the Department of Agriculture, I have many memories. Some relate to the problems of food rationing, shortages of essential supplies to farmers, reorganization of the Department to increase the emphasis on marketing; however, none is so satisfying as the fact that during this period the Research and Marketing Act of 1946 was enacted into law and a program for accentuating research in agriculture was set in motion.

For far too long we have been neglecting agricultural research and the task of bringing the results of research to farmers on the land. I regret that in the years immediately after 1946 we weren't able to get the program in "high gear" to the extent that should have been done. Therefore, it was gratifying to me that in the 1952 platforms of both political parties, there was a firm commitment to expand agricultural research.

The Democratic party platform pledged expanded research.

"We are justly proud of the outstanding achievements of our agricultural research. We favor a greatly expanded research and education program for American agriculture in order that both production and distribution may more effectively serve consumers and producers alike, and thus meet the needs of the modern world. We favor especial emphasis on the development of new crops and varieties, on crop and livestock disease and pest control, and on agricultural statistics and marketing services."

The Republican platform made a like promise.

"We recommend expanded agricultural research and education to promote new crops and uses, new markets, both foreign and domestic, more trustworthy crop and market estimates, a realistic trade program for agriculture aimed at restoring foreign markets and developing new outlets at home."

Progress has been made in getting more adequate funds for this important work. However, with the cost-price squeeze on in agriculture, it is more necessary than ever before that we bring to farmers the very best information on ways and means of cutting costs. This means that 1956 is no time to stop the accelerated program now underway. I shall be interested in the budget recommendations of the administration in this field. In the effort to balance the Federal budget, I hope that important programs like adequate research and education will not be victim of election-year political expediency.

To me nothing is more vital to a lasting solution of our farm problems than continued emphasis on research and extension. The route to newspaper headlines and publicity is to be for or against 90-percent price supports. The route of service to farmers is to be for increasing appropriations in our Federal budgets for the expansion of research and education in American agriculture.

Finally, my last words are not truly recommendations of programs, but I trust are words of hope. No. 4 in my program is to tell farmers to hold on until population catches up with the capacity of our agricultural plant. This is not too far in the future because of two circumstances: (1) We are losing farmland to cities, roads, and airports; and (2) the great American baby boom is on.

A recent magazine article (Chemurgic Digest, September 1955, p. 16) estimates that we are using up 1 million acres of farmland a year for city expansion. The road program has an even greater appetite. The turnpike from Canton, Ohio, to Chicago will gobble up some 70,000 to 100,000 acres of excellent cropland, and the proposed program of turnpikes and toll roads runs into millions of acres.

I talked to the school teachers of my State a few days ago about the American baby boom. I do not intend to review those statistics other than to say that 37 million babies were born in this country in the last decade. They are starting now to have their effect upon our economy. They have begun to accelerate the expansions of our markets for all sorts of commodities—food, clothing, shelter, automobiles, candy, soft drinks, television sets, new houses, new schools. My estimate has been that probably by 1965 and surely by 1970 we will need 4 or 5 billion more pounds of meat annually, a billion dozen extra eggs, several billion extra quarts of milk, and 15 million tons of feed grain more than we will produce in the harvest of 1955, the second largest in our history.

Hold on for the good days that are sure to come. Long before the dawn of the new century this country will be searching for new ways to grow food or new areas in other lands from which our bread basket may be filled. That day will mean increased activity in world trade, new markets for the products of our factories, and new customers abroad to match the increased industrial activity at home.

The farm problem has been with us for most of this generation. The next generation will have to endure it only a little while until world population catches up. That's why I hope that those people who are sincerely the friends of the American farmer may quit fighting each other and join on a program that will clean the commodity shelves, that will bring to the American farmer an alert, active and aggressive market for his produce, and will at the same time give truth at last to our slogan that food may have a voice in the final pronouncement of peace.

On Picking the Man of the (1956) Year

EXTENSION OF REMARKS
OF
HON. RICHARD B. WIGGLESWORTH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpts from an article by Frank Kent in the Washington Star of January 1 entitled "On Picking the Man of the (1956) Year":

ON PICKING THE MAN OF THE (1956) YEAR
(By Frank R. Kent)

As the year 1956 opens, in which the American people must elect a President and Vice President, the situation that confronts them is not only unusual but practically unique—in the history of the Republic. Four years ago they elected General Eisenhower and Senator NIXON by an overwhelming popular and electoral majority. Immediately after the election there came many exceedingly dire predictions of what was ahead.

These came from the labor bosses, all of whom had opposed the Eisenhower-Nixon ticket. They came from the spokesmen of the Americans for Democratic Action, from all the leading radicals and left-wingers in the country from all the professional Democrats who had been in office for many years and could not believe that anything except calamity would follow a Democratic defeat. But none of these calamitous forecasts turned out to be well based. The bloody stalemate in Korea was ended. There was no depression. Instead there has ensued unprecedented prosperity and the highest employment in history.

DEVOID OF ISSUES

In a very short time these major administration indictments were dropped because there was no substance to them and developments showed them to be rather silly. Then there followed a period in which the political opponents of the administration tried to find a "goat" in the Cabinet. The first attack was on Secretary of Defense Wilson, but that didn't last long. It soon was recognized that Mr. Wilson was one of the ablest men in the Government.

He had made 1 or 2 slight slips of the tongue which the labor demagogs seized and distored, but the country as a whole disregarded. Then a drive was made to pillory Attorney General Brownell and Secretary of Agriculture Benson, but that also proved a flop. At the moment, the Democrats are so devoid of issues and complaints that they are concentrating on the claim that the President has turned the country over to Big Business and that the Dixon-Yates contract was a scandalous and outrageous proposal.

It is pretty generally admitted that these charges are too thin to be taken seriously. They are somewhat reminiscent of the first, second, and third campaigns of the late William Jennings Bryan. Yet, if any of the anti-Eisenhower aspirants for the Presidency in either party has anything more weighty in either the domestic or foreign field upon which to appeal he has not made it clear. The plain truth is that this President is the most utterly sincere, completely honest and truthful man who has been in the White House in a generation. He is also the most dearly beloved. There is nothing soft about him and nothing weak. He is a genuine fighting man who knows war but loves peace. He is able, determined and courageous. He can—and does—get mad occasionally—but he does not hate anyone personally, and if there is anyone who hates him personally he has not disclosed himself. This is a considerable contrast to his two predecessors.

THE VOTERS WANT HIM

Quite clearly, the voters will reelect him if they get the chance. Quite clearly, they do not want a change. Every poll, every test bears this out. Nobody really disputes it. The great question, of course, still is whether his health will permit him to run again. As to that, his doctors increasingly reflect the conviction that his recovery is such that there is no reason to feel that a second term would be more than he could stand. It is interesting and significant that, as the new year begins, more of his intimate friends and advisers are increasingly confident that he will be a candidate to succeed himself. The reasons for this decision, they say, are so overwhelming that they refuse to doubt it. Perhaps they are right. Of course, no one can be certain, but some of our most astute observers will be deeply disappointed if it does not work out that way.

Of course, if they turn out to be wrong, the plight of the country is not too pleasant to contemplate. Literally, there will be no one in sight in either party for whom there is a majority sentiment.

Archbishop O'Boyle's Sermon on the Communist Issue

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post and Times Herald of January 4, 1956, entitled "Communism and Intellectuals." This editorial emphasizes the necessity that Congress take positive action on House Joint Resolution 193, entitled "A commission to make available information as to the basic differences between the theories and practices of the American way of life and the theories and practices of atheistic communism." Gentlemen, we must stop shadowboxing and hit the Soviets and our friends with the truth.

COMMUNISM AND INTELLECTUALS

Archbishop O'Boyle, in his sermon last Sunday in St. Matthew's Cathedral, put his finger on one of the great reasons why Communist influence has been gaining at the expense of the West in general and of the United States in particular in so many parts of the world. It is, said the archbishop, in effect, because we have chosen to ignore the philosophical and ideological phases of the struggle, and to emphasize purely material advantages; accordingly we have created "a powerful Army, Navy, and Air Force. We have ringed the world with alliances, formed for the sole purpose of containing the Communist orbit. We spend millions for propaganda. At the same time we are strangely quiet about the purpose of all these activities.. We engage in a form of pretense, as if it were not proper to mention the subject of communism in polite circles. [All this] plays directly into the hands of the enemy."

One example, according to the Archbishop, is the prevalent American disparagement or contempt of the intellectuals, which has led us to underestimate grievously the influence of such persons on the evolution of events. Thus in the matter of propaganda we have permitted the Communists to exploit, however cynically or hypercritically, the power of mere ideals. And this, said the Archbishop, has had the effect of alienating persons of sensitive natures and altruistic purposes, especially in those areas of the world which have been newly freed from colonial status. It is in precisely these areas that the power of communism is growing with dangerous speed.

Archbishop O'Boyle's statements are interestingly reminiscent of the criticisms of western policy and propaganda, expressed by Dr. Charles Malik, the Lebanese Ambassador, in an address more than 6 years ago before the United Nations Assembly. To a superficial observer, said Dr. Malik, "there is little to choose between the soulless materialism of the West and the militant materialism of the Communist East. * * * Not the better and the truer, but the larger and physically stronger call forth moral approbation. * * * Yet the tragedy of the world today is that the traditions which embody the deepest truth are not bothering to articulate themselves. * * * If your only export is a distant reputation for wealth and prosperity and order, you cannot lead. Nor can you really lead if you send forth to others only technical advice and expert assistance. To be able to lead and to save yourself and others, you must above everything address their mind and soul."

The West, according to Dr. Malik, has persistently neglected its principal weapon in ideological struggle against communism. This weapon is nothing more nor less than its own free intellectual and religious traditions. We recall Dr. Malik's words for the sake of pointing up the Archbishop's warning against the danger of the present mood of anti-intellectualism in these United States, his insistence that prosecution of the conflict lies outside as well as within the range of government, and his assertion that what is most needed is to tell the whole truth about communism in contrast with the whole truth about the free world.

In Memory of the Late Vera Buchanan

SPEECH
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 3, 1956

Mr. DAGUE. Mr. Speaker, it is with a heavy heart that we come to the contemplation of the untimely passing of our respected and esteemed colleague the Honorable VERA BUCHANAN. She was a stimulating and winsome person, and we all learned to appreciate her undoubted contribution to this body. As one who engages infrequently in debate myself, I know that a Member's greatest service to his constituents can never be gaged by his eloquency in debate on the floor, and it is with that in mind that we commend our late colleague to the consideration of all those who place value on a complete dedication to the welfare of a Member's constituents, which was her greatest attribute.

Mrs. BUCHANAN was my good and respected friend, and I shall continue to

mourn her passing as the loss of one for whom I always had an abiding admiration. My family joins with me in extending to her children and grandchildren our heartfelt condolences as well as our prayerful solicitation for that strength and courage which they so sorely need in this sad hour.

Congressman Walter Lauded

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Daily Press, St. Marys, Pa., of August 18, 1955, in which the paper lauds Congressman WALTER, of Pennsylvania, for his forthright stand against the Communist conspiracy in the United States, and for his outstanding leadership as chairman of the House Un-American Activities Committee:

DUE FOR SMEAR

Venerable Democratic Congressman F. E. WALTER, of Easton, Pa., chairman of the House Un-American Activities Committee, will soon be due for the smear treatment from all left of center publications in the United States, plus personal attacks from the breast thumpers who speak loudly of the Bill of Rights, but clam up when asked how come they once belonged to the Communist Party.

Mr. WALTER, presiding as chairman of the committee, has been questioning numerous witnesses connected with the entertainment world, and for the most part has received only evasive answers, dodgers under the fifth amendment and challenges as to the committees' right to question anybody on any question.

All of which is gradually leading up to an outright smear headed in Mr. WALTER'S general direction, the same type of smear Senator MCCARTHY was subjected to when he headed a similar Senate committee.

It happens to be a fact in America that the minute a man attacks communism he is made the target of verbal, and often physical, abuse. It goes back to the days of Congressman MARTIN DIES when he undertook a probe of Reds in Government employ, and got the back-of-the-hand treatment from F. D. R. and his wife, who went so far as to entertain at the White House some of the witnesses called before Mr. DIES to answer allegations relative to their Communist Party membership.

Today Congressman WALTER finds himself caught in the same smear trap that has been aimed at so many loyal Americans who want to protect this country from those who would destroy it. And it is puzzling to find so many so-called Americans lined up in sympathy with the Reds summoned to congressional quiz sessions.

And it is interesting to note the ways Reds use American gullibility to collect money for Communist causes. It has just been revealed the Justice for the Rosenbergs cause collected over $1 million presumably to save those two Reds spies from New York's electric chair. Not one penny of this amount was paid to assist the Rosenbergs, and only $1,279 has been turned over to the orphaned Rosenberg children.

What suckers we Americans are for conspiracies aimed at our national foundations. And what greater suckers we are for not giving more solid support to men like Congressman WALTER, battling to preserve democracy.

Christmas Message of Pope Pius XII

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. ANFUSO. Mr. Speaker, in his annual Christmas message to the world, Pope Pius XII urged a three-point program for international disarmament based on a renunciation of nuclear arms. His three proposals call for: (a) renunciation of experimentation with nuclear weapons; (b) abandonment of the use of nuclear weapons; (c) control of armaments in general. He also mentioned favorably the proposal of President Eisenhower for mutual aerial inspection of armaments by the United States and Soviet Russia.

Subsequently thereafter, the Pontiff held audiences for members of the diplomatic corps assigned to the Vatican. He discussed with them the possibility of reaching an accord between the East-West powers on nuclear disarmament, but noted that it was impossible for the Vatican to undertake mediation "when two of the greatest powers are not represented at the Holy See." Pope Pius was referring, of course, to the United States and Soviet Russia, neither of whom presently maintain diplomatic relations with the Vatican.

Mr. Speaker, what a strange situation it is for the United States not to have a diplomatic representative at the Vatican. The Vatican maintains diplomatic relations with some 50 countries throughout the world, and these are not all Catholic countries. Such Protestant countries as Great Britain and the Netherlands find it advantageous to have official representatives attached to the Holy See. But oddly enough, among the major countries which have thus far not established such relations, are Communist Russia, Red China, and—I regret to include in this group—our own United States. For our country, which is the moral leader and spokesman of the free world, this is surely a most embarrassing position.

The Catholic Church is today a major force, spiritually and morally, in the struggle against the evil forces of communism. The Vatican is an important center of information and intelligence concerning the countries and peoples behind the Iron Curtain. This source of information would unquestionably be available to us, if we had a diplomatic representative at the Vatican.

I believe that this is a most appropriate time to bring up this matter for discussion and consideration. I believe that it is imperative for the United States to establish diplomatic relations with the Vatican through the immediate appointment of an envoy as a gesture of friendship and because of our desire to promote world peace and greater understanding. In this way, we would not only show that our country has the highest esteem for the Catholic Church and its broad principles for achieving a world truly at peace, but it would also enable the Church to undertake mediation for disarmament and peace along the lines advocated in the Pope's Christmas message.

Mr. Speaker, I am happy to insert into the RECORD the following excerpts from the Pope's message as published in the New York Times, Sunday, December 25, 1955:

EXCERPTS FROM POPE'S MESSAGE

With a heart open to welcome the sweet joy which the birth of the Redeemer will once again bring to the hearts of the faithful, we desire to express good wishes to you, beloved sons and daughters, and to all men without distinction. We shall draw the subject of our address, as in the past, from the inexhaustible mystery of light and grace, which shone forth from the cradle of the Divine Infant on the holy night in Bethlehem, whose brilliance will never be extinguished so long as one will hear on this earth the steps of those who in sorrow seek amid the thorns the path of true life.

O how we could wish that all men, scattered over the continents, in cities and towns, in valleys and across the deserts, on steppes and on the vast reaches of glacier wastes, and on the seas, throughout the whole world could again hear, as coming to each of them in particular, the voice of the angel announcing the mystery of the divine grandeur and of the infinite love which closed a past of darkness and condemnation, and ushered in the reign of truth and salvation.

"Do not be afraid; behold, the news I bring you is good news of a great rejoicing for the whole people. This day, in the city of David, a Saviour has been born for you, no other than the Lord Christ." (Luke II: x, xi.)

There is reason, indeed, for asking with fear and anxiety if modern man is still disposed to allow himself to yield to a supernatural truth so sublime, to be penetrated by the joy it has to offer; this man so convinced of his own increasing power, inclined to measure his stature according to the power of his instruments, his organizations, his weapons, the precision of his calculations, the vastness of his production, of the distance he can reach with his words, his gaze, and influence; this man who speaks at length with pride of an age of easy prosperity as if one just had to reach out a hand for it; who is so sure of himself and his future, he dares all, urged by an insatiable desire to know nature's deepest secrets, to bend its forces to his own will, eager to penetrate in his own person the interplanetary spaces.

In truth modern man, precisely because in possession of all that the mind and labor of man have produced, ought to recognize even more the infinite distance between what he can do and what proceeds from the limitless power of God.

SELF-SUFFICIENCY QUESTIONED

But can it be truly asserted that man has attained, or is on the way to attain, full self-sufficiency? Modern achievements, certainly remarkable, in scientific and technical development, will assuredly be able to give man an extensive mastery over the forces of nature and over sickness, and even over the beginning and the end of human life; but it is also certain that such mastery will not be able to transform the earth into a paradise of assured enjoyment. How, then, will every one of man's powers be reason-

ably cared for if the realities of new false developments, and also of new weaknesses, show the one-sided character of an idea which would wish to control life exclusively on the foundation of quantitative analysis and synthesis? Its application to social life is not only false, but also a simplification of many complex processes which is dangerous in practice. Conditions being what they are, modern man needs also to pray, and, if he is wise, he is ready to pray for security as well.

Yet this does not mean that man must abandon new ways, that is to say, give up adapting to present conditions for his own security, the order just referred to which has regard for true human nature. There is no objection to security insuring its own stability by also making use of results in technique and industry; yet it is necessary to resist the temptation to gain support for order and security from the above-mentioned purely quantitative method which takes no account of the order of nature, as is the wish of those who entrust man's destiny to the tremendous industrial power of the present age.

In this industrial age, the man who accuses, and rightly accuses, communism of having deprived of freedom the people over whom it holds sway, should not omit to note that, in the other part of the world also, liberty will be a very dubious possession if man's security is not derived to a greater extent from a condition of things which corresponds to this true nature.

In the Christmas radio message last year, we set forth the mind of the church on this topic, and we now intend once again to ratify it. We reject communism as a social system by virtue of Christ's doctrine, and we have a particular obligation to proclaim the fundamental principles of the natural law. For the same reason, we also reject the opinion that the Christian ought today to see communism as a phenomenon or a stage in the passage of history, one of the necessary "moments," as it were, of its evolution, and consequently to accept it as if decreed by Divine Providence.

MORAL ORDER SO STRESSED

But at the same time, we again warn the Christian of the industrial age, in the spirit of our immediate predecessors in the supreme pastoral and teaching office, against being satisfied with an anti-communism founded on the slogan and the defense of a liberty which is devoid of content; rather we urge them to build up a society in which man's security rests on that moral order of which we have very often set forth the need and the consequences, and which has regard for true human nature.

If, therefore, Christians unite to this end in various institutions and organizations, they are setting before themselves no other objective save the service willed by God for the benefit of the world. For the sake of this motive, and not out of weakness, let Christians group themselves together. But let them—and more so than others—remain open to every healthy undertaking and to all genuine progress, and not withdraw themselves into a sealed enclosure as if to preserve themselves from the world. Committed to promote the advantage of all men, let them not despise others, who, at any rate if they are submissive to the light of reason, both could and should accept from the teaching of Christianity, at least what is based on the natural law.

In obedience to this principle, our peace program cannot approve of an indiscriminate coexistence at all costs with everybody; certainly not at the cost of truth and justice. These irremovable boundary marks, in effect, demand complete observance. Where this is so, including today in the question of peace, religion is in a sure manner protected against abuse from the political quarter; whereas, when it has been restricted to the purely interior life, religion is more exposed to that danger.

This, though of its own accord leads us on to the ever acute question of peace which constitutes an object of solicitude always present to our heart, and at this moment one of its partial problems begs for special consideration. We propose to direct our attention to a recent proposal which aims at putting a check on experiments in nuclear weapons by means of an international agreement. There has been talk also of taking further steps toward conventions, through which the use of those weapons would be renounced, and all states subjected to an effective arms control. Thus, there would be question of three steps: Renunciation of experimentation with atomic weapons, renunciation of the use of such, and general control of armaments.

PROPOSALS' IMPORT ANALYZED

The supreme importance of these proposals is tragically illustrated, if one stops to consider what science thinks it can predict about such actions, and which we think it useful to sum up briefly here.

As for the experiments of atomic explosions, the opinion of those who fear the effects produced if they are multiplied, would seem to be finding greater acceptance. Too many such explosions would in time cause increased density of radioactive products in the atmosphere, whose diffusion depends on elements not under man's control; thus would be generated conditions very dangerous for many living beings.

Concerning the use: In a nuclear explosion an enormous amount of energy, equivalent to several thousand million kilowatts, is developed in an exceedingly short time; this energy is composed of electromagnetic radiations of very great intensity, distributed within a vast gamut of wavelengths even to the most penetrating, and of tiny bodies, produced by nuclear disintegration, which are hurled at nearly the speed of light. This energy is transferred to the atmosphere, and within thousandths of a second increases the temperature of the surrounding air masses by hundreds of degrees; their displacement is violent, propagated at the speed of sound. On the earth's surface, in an area of many square kilometers, reactions of unimaginable violence take place, material volatilized and utterly destroyed by direct radiation, by heat, by mechanical action, while an enormous amount of radioactive materials of varying life span, complete and continue the destruction through their activity.

This is the spectacle offered to the terrified gaze as a result of such use: entire cities, even the largest and the richest in art and history, wiped out; a pall of death over the pulverized ruins, covering countless victims with limbs burned, twisted and scattered, while others groan in their death agony. Meanwhile, the spectre of the radioactive cloud hinders the survivors from giving any help, and inexorably advances to snuff out any remaining life. There will be no song of victory, only the inconsolable weeping of humanity, which in desolation will gaze upon the catastrophe brought on by its own folly.

Concerning the control: inspection by properly equipped planes has been suggested, in view of watching over any atomic activities in broad territories. Others might, perhaps, think of the possibility of a world-wide network of observation posts, each one staffed by experts of different countries, and protected by solemn international pacts. Such centers would have to be equipped with delicate and precise meteorological and seismic instruments, with equipment for chemical analysis, with vast spectrographs and such like; they would render possible the real control of many, unfortunately not of all, the activities which antecedently would be outlawed in the field of atomic experimentation.

EQUAL SECURITY IS URGED

We do not hesitate to declare, as we have in previous allocutions, that the sum total of those three precautions as an object of international agreement, is an obligation in, coscience of nations and of their leaders. We said the sum of those precautions, because the reason they are morally binding is also that equal security be established for all. If, however, only the first point, concerning experimentation, be put into effect, the result would be that that condition would not be verified, the more so that there would be given sufficient reason to doubt a sincere desire to put into effect the other two conventions. We speak so frankly because the danger of insufficient proposals concerning peace depends in large part on the mutual suspicions that often trouble the dealings of the powers concerned, each accusing the other in varying degrees of mere tactics, even of a lack of sincerity in a matter basic to the fate of the whole human race.

For the rest, efforts toward peace must consist not only in measures aimed at restricting the possibility of waging war, but even more in preventing, or eliminating, or lessening with time the quarrels between nations which might lead to war.

To this kind of preventive pacification statesmen must devote themselves with great vigilance, imbued with a spirit of impartial justice and also of generosity, within the limits, of course, of healthy realism. In last year's Christmas message we indicated the points of dispute noted in the relations between Europeans and those non-Europeans who aspire to full political independence. Can those disputes be allowed to run their course, so to speak—a procedure which might easily increase their gravity, show hatred in men's souls, and create the so-called traditional enmities? And might not a third party come to profit from such enmities, a third party which neither of the others really wants, and cannot want? At any rate, let not those peoples be denied a fair and progessive political freedom and hindered in its pursuit. To Europe, however, they will give credit for their advancement to that Europe without whose influence, extended to all fields, they might be drawn by a blind nationalism to plunge into chaos or slavery.

PASSIVENESS DEPLORED

On the other hand, Western peoples, especially those of Europe, should not, in the face of such problems, remain passive, in futile regret over the past or in mutual recrimination over colonialism. Rather, they should set themselves constructively to work, to extend where it has not yet been done those true values of Europe and the West which have produced so many good fruits in other continents. The more Europeans strive for this, the more help will they be to the just freedom of young nations, which in turn will be saved from the pitfalls of false nationalism. This in truth is their real enemy, which would pit them one day against each other, to the advantage of third parties. Such a forecast, not unfounded, cannot be neglected or forgotten by those who handle their problems of peace at congresses, where, unfortunately, there gleams the splendor of a unity that is external and predominantly negative. We think that in such considerations and in such modes of procedure there is a valuable assurance of peace, in some respects even more important than an immediate prevention of war.

May the divine Infant deign to hear out our fervent prayer, so that His presence in today's world may be felt almost sensibly, as in the days of His dwelling on earth. Liv-

ing in the midst of men, may He enlighten the minds and strengthen the wills of those who rule over nations; to these latter may He assure justice and peace; may He encourage the zealous apostles of His divine message, sustain the good, draw the errant to Himself; console those persecuted for His name and for His church; succor the poor and the oppressed, assuage the pains of the sick, the imprisoned, the exiled. May He give to all a spark of His divine love, so that everywhere on earth His peaceful kingdom may triumph. Amen.

The Conflict Between Communism and Freedom

EXTENSION OF REMARKS
OF
HON. RICHARD B. WIGGLESWORTH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence in the Washington Star, commenting on the excellent address by George Meany, president of the newly merged AFL and CIO:

MEANY'S WARNING TO FREE WORLD—DECLARES COMMUNISM MORTAL THREAT—CALLED SPEECH FOR ALL TO READ

(By David Lawrence)

An address was delivered the other day that should have been printed in every newspaper in every country in the world.

It was made by George Meany, president of the newly merged AFL and CIO, and reflects better than any governmental pronouncement ever issued here what the American people really think about communism, about neutralism abroad, about package deals in the UN, and about misguided liberals, and anti-anti-Communists inside the United States.

Mr. Meany, who spoke before the National Religion and Labor Foundation in New York, pointedly questioned the course pursued by Nehru of India and Tito of Yugoslavia. But what he said might also be pondered by the leaders of both major parties in the British Parliament who want to appease Red China and by Messrs. Khrushchev and Bulganin of the Soviet Union because it comes from the head of the largest organization of free workers in the world with a membership of more than 15 million.

"Too many people in the free world," said Mr. Meany, "fail to see the real nature of communism as the mortal foe of everything that we hold dear, of every moral and spiritual value. Too many in the free world are still prisoners of the illusion that communism is, historically speaking, a progressive system—extreme liberalism temporarily making bad mistakes.

"Actually, communism represents darkest reaction. It is an antisocial system in which there are imbedded some of the worst features of savagery, slavery, feudalism and life-sapping exploitation manifested in the industrial revolution of early-day capitalism.

"Too many in the free world seem to have lost their capacity for moral indignation against the most brutal inhumanities when they are perpetrated by Communists. It is painful, but we must face the cruel facts of life.

"We of the democratic camp must develop a far more vigorous moral attitude. We must rekindle our capacity to cry out against, to protest against the godless dogmas and savage crimes being perpetrated by Moscow.

"Such struggles and such protests are not negative actions. They are positive. They are morally and politically constructive. I know of nothing more positive and constructive than a total struggle against the totalitarian cancer in the body politic of modern society.

"It is rather disturbing to me that many people in our country who call themselves liberals are stone silent about the Soviet concentration camps. They never find the time to utter a word of condemnation against the Communist-imperialist destruction of the national independence and democratic rights of hundreds of millions of people in Europe and Asia.

"It is shocking to see the studied attempts being made by Western diplomacy to tear to shreds the charter of the United Nations under the guise of the so-called package deal with Moscow and Peiping. Can it be that the free world is so weak in its moral spirit that it does not recognize this deal as appeasement of the worst kind?

"I am all for a fight to the finish against racialism in our own midst. Racialism is damnable and detestable in any form. But racialism in reverse—as now propagated in India and Burma by Khrushchev and Bulganin—is just as reprehensible.

"And the Communist imprisonment of hundreds of thousands of hostages—so-called war prisoners—10 years after the close of the war, in violation of every human right and international agreement—is morally reprehensible. One would expect the true liberal to cry out in protest against human beings being carted, tagged, and shuttled about for weeks in rail yards of Russia, as if they were carloads of coal or bags of potatoes.

"Not until we of the free world can give rebirth to a vibrant moral attitude, to a burning indignation against such frightful bestialties, can the freedom-loving people be sufficiently stirred to gather the moral strength for resisting and defeating the totally antimoral dogmas and deeds of communism at home and abroad. Yes, this means above all a moral struggle against communism.

"Communism is the very opposite of liberalism. Communism is the deadliest enemy of liberalism. Liberals should be the most consistent and energetic fighters against communism. Liberals must also be on guard against developing a certain type of McCarthyism of their own. They must shun like a plague the role of being anti-anti-Communist.

"Only by refusing to be thus entrapped, can liberals shep every vestige of subconscious and conscious regard for communism as a movement with which they have something in common.

"Much more regard must be shown by the democracies for principles—for the principles of human rights and human freedom. We must never sacrifice principles to expediency. This means being rigid in support of our principles.

"Moscow is sure it has history's timetable in its pocket. Hitler once thought so, too. We have nothing to fear from peaceful competition. They need our help. We do not need theirs. They have nothing that can hurt us.

"In conclusion, I cannot emphasize too strongly to you: The conflict between communism and freedom is the problem of our time. It overshadows all other problems. This conflict mirrors our age, its toils, its tensions, its troubles and its tasks. On the outcome of this conflict depends the future of all mankind. I pray that, on the threshold of the atomic age, we—all of the free world—can muster the moral courage and total strength to preserve the peace and promote the freedom of the men and women of every continent, and color and creed."

The Eighth World Health Assembly

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, January 5, 1956

Mr. HUMPHREY. Mr. President, it was my privilege to attend the annual meeting of the National Citizens Committee of the World Health Organization at Kansas City, Mo., held November 16, 1955.

One of our most distinguished citizens, and a member of the United States delegation to the World Health Assembly, Dr. Harold S. Diehl, dean of the medical school, University of Minnesota, delivered a remarkable address to the National Citizens Committee Conference. His report on the Eighth World Health Assembly represents a review of the accomplishments of WHO and the immensity of the health problems that still confront the world. It is a report worthy of careful study and thoughtful attention.

I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE EIGHTH WORLD HEALTH ASSEMBLY

(By Harold S. Diehl, M. D., Minneapolis)

I would like to express my appreciation to the National Citizens Committee for the World Health Organization for this opportunity to report to you my impressions of the Eighth World Health Assembly, which was held in Mexico last May. It was my privilege to serve as a member of the United States delegation to this assembly, as well as to the Seventh World Health Assembly held in Geneva in 1954.

The large attendance at this luncheon meeting is evidence of the interest of public health workers in the activities of WHO. Yet, I am certain that many Americans fail to appreciate the full significance of world health activities. In this country, which is relatively free from preventable diseases, few realize the disastrous burden still imposed by disease in much of the world. Furthermore, those of us who presume to be health experts—even those of us concerned with international health—may be so much occupied with specific programs and technical details that we lose sight of the broad significance of the World Health Organization.

It is essential today that we learn to live with and adjust to the circumstances of a rapidly changing world. Part of this learning process, part of the adjustment, takes the form of a realization of the increasing international responsibilities which our country must assume,

Gradually we in the United States and the peoples of other nations are learning to cooperate to the end that mankind may live a better life, one less fraught with the urgent unfilled needs, the stresses, the animosities, which lead to unrest and conflict. I am proud that my fellow Minnesotan, who shares this plaform with me, Senator HUBERT HUMPHREY, is prominent among the growing number of those who are helping our Nation to understand the need for constructive cooperative international action.

But to turn to the subject assigned to me: The World Health Assembly is, as I am sure most of you know, a legislative body of member nations. Delegations are composed of

Ministers and Directors of Health; top level health administrators; Foreign Office and State Department representatives, and internationally known public health experts to wrestle with program considerations.

The Assembly considers and approves, disapproves, or modifies policies, programs, and budgets presented to it by the Director-General and the executive board. Its work is carried out primarily through two major committees of the Assembly as a whole; that is, committees in which each member nation has a representative. These committees are the Committee on Program and Budget, and the Committee on Administration, Finance, and Legal Affairs. The Assembly then in plenary or general sessions acts upon the reports and recommendations of these committees.

The skill and finesse of some of the chairmen of these large unwieldy committees in keeping discussions and debates within bounds and getting work done is truly amazing. An example of this which I found interesting and amusing occurred last year in a debate upon the size of the budget. After this debate had gone on for most of the day, and we were approaching the end of the afternoon, the French delegate who was serving as chairman said: "I have requests from quite a number of additional individuals to speak. They will all be heard. However, after all that we have listened to I cannot believe that there is anything new or significant that can be added to the discussion. Furthermore, the hour is getting late, and I am determined that we will have a vote on the budget today if we have to continue into the night to do so. I would, therefore, urge the remaining speakers to be brief." The next speaker followed this request by delivering a long flowery oration on the general thesis of the necessity of care and conservatism in the preparation of budgets, finishing with the comment that we must remember that "pennies make dollars, dollars make hundreds, hundreds make thousands, thousands make millions." As he sat down, the chairman thanked the honorable representative of country X for his eloquent address, and stated that he would paraphrase his final comments by reminding speakers that "seconds make minutes, minutes make hours, and hours make days."

Again to return to my subject, the Eighth Assembly was the first held in the Western Hemisphere, although the organization came into existence through the efforts of the International Health Conference, which met in New York in July of 1946. The Government of Mexico in 1954 had offered its facilities to WHO, and the invitation to hold the Eighth Assembly in Mexico City in May 1955 was accepted by the Seventh Assembly. This was a generous offer by Mexico since it carried with the obligation to pay all expenses of the Assembly in excess of what they would have been had the meeting been held in Geneva. In addition, the invitation carried with it the social obligations of a host country—and what superb and gracious hosts the Mexicans were, both officially and personally. In this connection I must make special mention of the Women's Committee which provided our wives with a most memorable and heartwarming experience.

The spirit and the significance of the Eighth World Health Assembly was splendidly expressed at the opening session by the Minister of Foreign Affairs of Mexico, who stated that "20th century man, after the dreadful experience of two world wars, is striving to create a peaceful world. In our time there is no more urgent or basic problem than that of maintaining international peace. We all know that peace is not merely a political question to be resolved through treaties among states, but rather something closely linked to the general development of all nations. Peace is something quite different from war and truce. Peace means liberty and abundance, justice and respect for man, proper living standards, and, fundamentally, health. It is not sufficient to affirm that all peoples and all men have a right to liberty, justice, and bread; in order to enjoy these blessings and to live fully, it is necessary to have life; in other words, it is necessary to possess that energy to enjoy which only health can give.

"Yet, how can we hope to achieve a universal political equilibrium when more than half of humanity is still victim to plagues which science has vanquished in the laboratory but not in fact among the peoples? A world cannot aspire to be called civilized until such time as the aid of science and modern techniques are put into service on a universal scale for the health of man. That man is not an abstract idea. He is flesh and bone reality. In devoting your efforts and ideas to him you are laying the foundation of universal peace, for man's health is the foundation of the social edifice, the workshop of the world rests on his shoulders."

The First World Health Assembly, and I am certain that at least two of the members of this group have vivid memories of the event, authorized WHO to give assistance to governments in malaria control. An expert advisory committee was established and a small malaria section was added to the permanent secretariat. Experts were sent on request to advise governments on the latest control techniques; in some cases also demonstration teams were sent to carry the gospel of control into remote places where potentially productive areas of the world lay undeveloped because there was no one to till the fields, and where 600,000,000 people were exposed, and 300,000,000 people each year were affected by this disease.

Seven years later, in Mexico, the director-general proposed to the assembly "that the eradication of malaria from the world as a public-health problem is a basic objective of WHO." In those few years 230,000,000 of the 600,000,000 previous potential victims of malaria, have either been freed of the disease or are being protected. Experts now believe that a concerted all-out effort can accomplish the seemingly impossible task of eradication of malaria from large areas of the world within 10 to 15 years.

Eradication is both urgent and possible. In several areas of the world the anophelines are showing signs of resistance to insecticides and this has pointed to the need for a vigorous approach. The assembly appropriated moneys to be spent on technical meetings, advisory teams, research grants, and fellowships. This money, as priming to the pump, represents approximately 1 percent of the expected total cost to governments of the eradication program.

Environmental sanitation still remains a major public-health problem throughout the world. Improvement requires trained personnel, which are in short supply. WHO is trying to overcome this situation by helping countries in the training of sanitary engineers and allied workers. This subject is being incorporated also into other programs, and in recent years WHO has encouraged countries to place special emphasis on environmental sanitation activities, such as providing safe water supplies, vector control, and sewage disposal.

Inadequate nutrition, particularly protein malnutrition in the young child immediately following the weaning periods, is a serious problem in most areas of the world. A vigorous step forward in this area was the survey done by the organization in collaboration with the Food and Agriculture Organization. This has led WHO to initiate a study of a means of preventing this condition. Laboratories in Africa, Central America, and India are conducting research on the development of an acceptable plant protein, which it is hoped will take the place of the scarce animal protein unobtainable by the large percentage of the world's children.

Maternal and child health programs, sponsored by WHO and UNICEF, the United Nations International Children's Fund, are having great and lasting effects throughout the world. These programs cover broadly the fields of pediatrics, nursing, and midwifery. They include the teaching of pediatrics to medical students in New Zealand and Australia, a teacher training project in Thailand for the development of school health programs, and the development of services in several countries for the care of premature infants.

Seventy-seven million individuals have been tuberculin tested since the start of the WHO/UNICEF program and 22 million have been inoculated with BCG vaccine. Twenty-five million people have been examined for yaws and of these 6 million have been cured with the result that this disease has ceased to be a public-health problem in many areas of the world.

In the field of international epidemiology and its operative branch of international quarantine, the WHO has brought together existing conventions into one set of International Sanitary Regulations to which 60 member states, 73 overseas territories, and 1 nonmember state are bound without reservations. Ten member states and outlying territories are bound with reservation, and only four member states do not consider themselves bound by the regulations.

In Mexico City the yellow-fever provisions of the International Sanitary Regulations were discussed at length. The decision was taken, in light of newer epidemiological knowledge, to narrow the areas against which restrictions may be placed to those areas in which yellow fever actually exists, instead of continuing to include areas in which it was once known to exist. This action will serve to expedite travel and the flow of commerce while still providing adequate protection.

As you can well appreciate, there was great interest at the World Health Assembly last May in the use of Salk vaccine as a public-health measure—an interest which was intensified by the fact that Dr. Keefer and Surgeon General Scheele were unable to attend the assembly, being, as I explained, paralyzed in Washington by the vaccine controversy. Denmark had already used 400,000 doses for its child population with an intradermal vaccine similar to the Salk vaccine, but made in the Danish State Vaccine Laboratories, and was going ahead with its second dose schedule regardless of the controversy raging here. Several delegates stated in committee that WHO should make a pronouncement on the value of the vaccine. The United States delegate, sitting in a very warm seat, gave a summary of developments as they had occurred up to the time of the assembly, and quoted from Secretary Hobby's report to the President in the hope that this would give guidance, and yet not be misunderstood.

Continuing and expanding previous WHO activities, the Assembly made a small appropriation for the coordination of research and training in poliomyelitis and for setting up a system of strain identification laboratories, much like the influenza centers and the brucellosis center which the WHO supports in conjunction with FAO.

A small item budgetwise, but one which may have broad implications for the future, was the approval of $42,000 to finance an exploration into the health aspects of peaceful uses of atomic energy. The Director-General had laid the groundwork in this area by calling a meeting of experts with the head of the division of biology and medicine of the Atomic Energy Commission as chairman, to seek advice on how WHO might serve as an international nonpolitical agency in this field. Arising out of the meeting and the deliberations of the executive board, it was decided that its role properly included the immediate training of health personnel in

protection; facilitating the flow of information; and a long-term training program in all aspects of this field, including the use of isotopes, through such means as the exchange of professors and fellowships. The Assembly approved the Director-General's request and thus launched the organization on a course, as yet not fully charted, which may be as significant as any action ever taken by the Assembly.

The technical sessions of the Seventh World Health Assembly were devoted to rural health—a subject of such importance in most countries of the world that the same topic was selected for the technical sessions of the Eighth Assembly. Rural sanitation, communicable disease control, maternal and child health, nutrition, medical care, health education, and public health organization were all discussed by experts. In addition, a special feature of these sessions was a series of field trips arranged by the Ministry of Health of Mexico to enable delegates to observe rural health problems of that country. These trips were most interesting in affording a first-hand picture of life and living conditions of the vast rural population of Mexico, and of the very real progress which is being made in local cooperative planning and action for the improvement of health conditions.

Another aspect of the World Health Assembly business concerned the mundane but vitally important matter of finances; both budget totals and scales of assessments. At each of the two assemblies which I have attended our United States delegation has been embarrassed by the necessity of opposing any increase in the WHO budget because of the $3 million ceiling which Congress placed upon the United States contribution to WHO. It did not make for goodwill toward the United States for the richest country in the world to be opposing even moderate expansion of WHO activities which other countries believed desirable and were willing to support financially.

We were also opposed, and I feel rightfully so, to one aspect of the scale of assessments. In this regard an anomalous situation has existed since the withdrawal of the Iron Curtain countries from active participation in the work of the organization. Although they have been assessed their share of the budget yearly, they have made no contribution. This year the United States delegation was instructed to press for the removal of these noncontributing countries from the 100 percent scale of assessments. The Assembly agreed to this in principle. However, because this change, together with certain changes requested by other nations and agreed to by the Assembly, such as bringing the WHO scale in line with the present United Nations scale, would prove a financial strain to some of the poorer countries, it was decided that the changeover should be a progressive one over a 4-year period.

This represents a vastly improved situation, but even more significant is the removal of the congressional limitation on our United States contribution to the support of WHO. This remarkable change in our United States position is due, I am glad to state, primarily to two of our Minnesota Representatives in Congress, Dr. WALTER JUDD in the House of Representatives, and Senator HUBERT HUMPHREY in the Senate.

These were some of the actions that were taken at the Assembly. I was impressed by every minute of it. The delegations worked hard. They were honest and able; dedicated to their work, which cut across many political boundaries.

I came away with two thoughts uppermost in my mind. One was the concept in public health of eventual worldwide eradication of communicable disease. Yaws has disappeared from large areas of the globe under sustained attack. Now the nations of the world are taking on the greatest killer of all time in that class—malaria; and more, agreement had been reached by nations that this was the thing to do. A special fund had been set up to receive voluntary contributions of money, services, and material from countries to help each other in the fight. If malaria and yaws can be eradicated, we will look forward to the conquest of smallpox, for which WHO has been working on dried vaccines which can be carried into tropical areas away from civilization and refrigeration—and plague—and cholera—and rabies and brucellosis, tuberculosis, and poliomyelitis. The eradication concept is new in international health, but a concept that is within the realm of possibility and one that will make history.

The other concept is that health is a subject in which all people of the world, irrespective of color, race, and political philosophy, have a common interest; and that cooperation in the field of health is proving to be a common ground for the development of cooperation and understanding among nations. This is a field in which the United States has the ability as well as the unique opportunity to assume world leadership. It is important that health workers understand and participate in these efforts on the part of our Government. Such a participation helps protect the health of Americans at home and abroad; it furthers the progress of public health throughout the world; and probably most important, it is a force in our worldwide effort to build the conditions of peace.

The Harris-Fulbright Gas Bill

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Thursday, January 5, 1956

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two very excellent editorials from the Denver Post of December 12 and December 28, respectively, criticizing the so-called Harris-Fulbright gas bill.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Denver Post of December 12, 1955]

A GAS MAN ATTACKS THE HARRIS BILL

The price of natural gas to residential consumers will increase 35 percent over 1953 average prices if the Harris-Fulbright bill is passed by the United States Senate next year.

That opinion comes not from any enemy of free private enterprise but from one of the best posted men in the gas business, Arthur K. Lee, president of United Cities Utilities company, which, through a string of subsidiaries, pipes and distributes gas for many cities in Illinois, Wisconsin, Tennessee, the Carolinas, and Georgia.

According to Mr. Lee, the field price of natural gas, which averaged 9.2 cents per thousand cubic feet in 1953, and has already risen to 17 cents or more in some localities, will go to 25 cents within a short time if the Harris-Fulbright bill should become law.

Since the average householder consumer paid 77.4 cents per thousand cubic feet for gas in 1953, it would be logical to believe an increase from 9.2 to 25 cents in the field price would add only 15.8 cents to the bill of the ultimate user.

But, Mr. Lee points out, the effect of an increase to 25 cents in the field price would not be as simple as that. A 25-cent price at the well would cause most industries that use natural gas on an interruptible basis to switch to cheaper fuels, oil or coal.

Industrial customers paid an average of 21 cents per thousand cubic feet for interruptible gas in 1953. A 25-cent field price plus pipeline transportation charges would make natural gas too expensive for industrial users. Hence pipeline companies would lose large sales revenues which would have to be made up by additional price increases to residential consumers.

Mr. Lee concludes that passage of the Harris-Fulbright bill would raise the average price of gas to householders from 77.4 cents in 1953, to slightly more than $1.04—or 35 percent.

The Harris-Fulbright bill would put producers of natural gas beyond effective control by the Federal Power Commission. For the last year and a half EPC control has been pretty much of a joke even under existing law. Gas prices have been rising rapidly all over the country. Colorado consumers have not been immune.

Mr. Lee cites the case of 1 producing company which is claiming the right to make a profit of $297 million on a gas field investment of $3 million under 1 FPC decision. He estimates a 25-cent field price for gas would add $9.7 billion to the value of the known gas reserves held by 29 large oil companies.

No wonder the oil industry is spending $1½ million in propaganda for the Harris-Fulbright bill and has enlisted its employees to flood newspapers and Congressmen with letters favorable to the bill.

Mr. Lee does not want us to abandon the principle that gas prices (and profits) should be fair and reasonable. But authors of the Harris-Fulbright bill admittedly and deliberately avoided the use of the word "fair"—or its equivalent, "just."

Authority to fix fair or just prices carries with it an obligation to determine if profits are excessive. The Harris-Fulbright bill would, without regard for the fairness of profits, allow prices to go as high as consumers would be willing to pay before junking their gas stoves and furnaces in favor of oil or coal burning equipment.

Mr. Lee has suggested that prices prevailing on June 7, 1954, be considered fair and reasonable and that they be adopted for regulatory purposes subject to any cost increases that have occurred since that time. But advocates of the Harris-Fulbright bill have set their sights on extra billions in profits and will not go along with Mr. Lee.

The Harris-Fulbright bill barely passed the House in the dying days of the last session. It is now before the Senate. Normally a bill so damaging to consumers would not have much chance for adoption in an election year.

But, according to the Wall Street Journal, gas producers, most of whom are oil companies, are afraid that if Mr. Eisenhower does not run for reelection 1956 may be their only chance to get the bill approved. So, they will push for enactment even at the risk of embarrassing many Senators and the Republican administration.

If the bill should pass there can be but little doubt that gas prices and giveaway will become major issues when next November rolls around no matter who the candidates may be.

[From the Denver Post of December 28, 1955]

NOT SO FAST

The Federal Power Commission has received a setback in its effort to give sharply higher prices to producers of natural gas as an incentive to make them want to go out and find new fields.

In a unanimous decision, the United States circuit court of apepals in Washington has set aside a multi-million-dollar rate increase the FPC had granted Panhandle Eastern Pipe Line Co., which serves Detroit, Mich., and vicinity.

Part of the increase was due to the abandonment by the FPC of the time-honored

principle that natural-gas companies should be allowed to earn no more than just and reasonable profits on their investments in production properties.

On the gas production part of Panhandle's business, the FPC had substituted a "fair field price" method of price fixing for the yardstick of just and reasonable returns.

The "fair field price," as intrepreted by the FPC, is the price at which unregulated gas producers are able to sell under supply and demand conditions. Of course, since World War II the demand for gas has far outstripped the supply. Hence, the "fair field price" is higher than any company would be allowed on the basis of just and reasonable return on investment.

While the court did not say "fair field price" may not be used as a method of price regulation, it said that if "fair field price" is used it still is necessary under the law to show that any increase is just and reasonable.

In other words, the FPC cannot give a regulated company a higher price merely because other companies not under regulation happen to be getting that price. The test of "reasonableness," which the FPC and the gas industry would like to avoid, must still be applied.

And if the FPC wants to use the "fair field price" yardstick, any increase in price resulting therefrom must be within the limits of what the company needs to realize a just and reasonable profit.

The decision, unless it should be upset by the Supreme Court or Congress, seems to mean that everything the FPC has been doing for the last year and a half in its effort to boost wellhead gas prices for the benefit of producers, without regard for the protection of consumers, is improper.

The ruling could result in lower prices for Colorado consumers since the rates now being collected in this area on a temporary basis, pending further hearings, are based in part on the "fair field price" theory.

The need for new incentives to encourage gas exploration has never been demonstrated satisfactorily. Most gas fields are discovered in the process of searching for oil and as long as it is profitable to drill for oil there is every expectation that all possible gas fields will be discovered in time.

However, the FPC, shortly after the advent of the present administration, became enamored of the idea that gas exploration should be encouraged by a lure of larger dividends. Invention of the "fair field price" followed.

Legalization of the "fair field price" method of pricing gas is the principal objective of the Harris-Fulbright bill which has passed the House of Representatives and is now pending in the Senate.

The present FPC has been so eager to sidestep the just and reasonable requirements of the Natural Gas Act that it has tried to apply "fair field price" methods without waiting for legal authorization. That in itself is a strange performance for a Federal agency.

The Late John Dingell

SPEECH
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 3, 1956

Mrs. GRIFFITHS. Mr. Speaker, words do not come easy for me in paying tribute to the life and work of the late JOHN DINGELL.

It was my privilege to have known and worked with JOHN DINGELL many years in Michigan before joining him as a Member of Congress. His friendly advice and assistance proved most valuable to me when I entered the House as a freshman Member a year ago.

His courage and steadfastness of purpose were an inspiration to all who knew him. His contribution to American life will be measured with increasing value as the years go by.

If it can be said of any man that he devoted his life to the service of his country, it can surely be said of JOHN DINGELL. His devotion to duty came from the highest precept of public office. The courage he displayed in standing for what he believed to be just stimulated others to positive action.

And may I take this opportunity to welcome his son, Congressman JOHN DINGELL, JR., to this Chamber. We who know Congressman DINGELL have confidence he will ably exemplify the spirit of his beloved father, and will, in his own right, demonstrate a capacity for good works.

The Westinghouse Strike

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, January 5, 1956

Mr. MARTIN of Pennsylvania. Mr. President, all of us deplore differences between mangement and labor. In prolonged strikes, both sides lose.

The Westinghouse strike is now in its 12th week. The Wall Street Journal of January 3d contains a very timely editorial, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LESSON FOR THE LEADERS

The International Union of Electrical Workers strike against 40 Westinghouse Electric Corp. plants is now in its 12th week. And as is usual in prolonged labor disputes, both company and workers are losing millions of dollars in profits and wages.

There is something a little different, though, about this strike. Aside from the monetary losses to both sides, the union is losing support of many of its members who are returning to work.

The reason is the difference between the tactics used by the company and by the union. Westinghouse knows they are dealing with people. Their campaign is aimed at getting the workers back to work. At the Lima, Ohio, plant, for example, they have had supervisors and foremen talk to their men; more than 1,800 of the plant's 2,000 wage earners have been reached at least once. Just before Christmas, Westinghouse offered to lend $100, free of interest, to all its workers, those who had returned and those who were still on strike. Around 30,000 employees borrowed the sum to carry them over Christmas. Some pay adjustments are being made to returned workers as well.

The union, on the other hand, acts as though people are just numbers. It has spent some $130,000 so far in an advertising campaign knocking Westinghouse products and has engaged in violence at some of the plants. Neither of these activities sits well with some of those on strike, and they returned to work in protest. "I came back because I didn't like the way the union was running down Westinghouse products," said one. "When a union goes out and runs down the goods made by the company that gives their workers a living, they're biting the hand that feeds them," said another. "Union leaders don't have to go around beating people or telling people their children will be hurt," said a 23-year-old woman assembler.

We do not mean to imply that the attitudes of these outspoken people are in the majority. Neither can we predict when the strike will be settled, or the settlement terms, any more than either the union or the company can just now.

But the attitude is there and it is growing. And in it is a lesson, it seems to us, for both union and management on how and how not to handle a strike.

Capital's Glamor Overrated

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, January 5, 1956

Mr. NEUBERGER. Mr. President, I ask unanimous consent to include in the Appendix of the RECORD an outstanding article about Mrs. Wayne Morse which appeared in the Eugene Register-Guard under the title "Capital's Glamor Overrated, Mrs. Wayne Morse Reveals." This article is by the women's editor of the Register-Guard, Mrs. Kay Lundeen. I know that members of the Senate will be pleased to learn that the talented author of this article about the wife of my distinguished senior colleague, is the daughter-in-law of a former Member of this body, Senator Ernest Lundeen of Minnesota, and is also now the stepdaughter-in-law of another former Member of this body, Senator Rufus C. Holman, of Oregon. Mrs. Lundeen's association with these two distinguished past Senators, who served with distinction in this Chamber, adds interest to her fine tribute to Mrs. Wayne Morse.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CAPITAL'S GLAMOR OVERRATED, MRS. WAYNE MORSE REVEALS

(By Kay Lundeen)

Most people have an exaggerated idea of the glamor of Washington life, says Mrs. Wayne Morse who after nearly a dozen years in the Nation's Capital describes her own life there as pretty workaday.

As she puts it:

"Housekeeping is just the same in Washington as anywhere else—if you do not do the dishes, they will pile up; if you plan a dinner party, that is the day the washing machine runs over and the cat gets mauled in a cat fight. You worry about making ends meet, just as anywhere else, and when the Ambassador comes to dinner you serve the best thing you can, then live on hamburger the rest of the week."

The wife of Oregon's senior Senator, here Tuesday to visit Democratic Women of Lane

County, gave some of her impressions of Washington life in an informal talk to them at a luncheon at Willamalane Memorial Building, and later in an interview. At the same time she attempted to put straight some of the misconceptions many people have, she feels, about the average Senator's wife.

As typical, she recalled with amusement how shortly after the Morses moved to Washington, she began to take her laundry to a nearby launderette and of how amazed the proprietor and his wife were when they happened to discover that she was a Senator's wife and doing her own laundry.

REPORTERS PHONE

"Didn't they know that a Senator's shirts get dirty, just as anyone else's?" she smiled.

Capital society reporters, Mrs. Morse continued, have helped to create and encourage this aura of glamor about official Washington. Before a White House reception, for instance, they'll call her along with other Senate wives to find out about the gowns they plan to wear.

"Then I have to think of some different way of describing the same old dress."

Mrs. Morse, whose own three daughters have spent much of their lives in Washington, said she thinks official children have a very hard life.

"They get more publicity than any child should have," she said firmly. "And they have to be protected from making mistakes. Actually the best way for people to learn is by making mistakes, but official children are almost certain to be criticized, if they blunder—so we have to rush in and protect them from making any mistakes."

CONSTANT REMINDING

She thought for a moment, then added:

"Also you have constantly to keep reminding them of things they have now, not because of anything they've done, but because of what their father has done."

Actually her own daughters seem to be doing very nicely in their own right:

Nancy, now Mrs. Hugh Campbell of Hartsville, S. C., is the mother of the Morse's first grandchild, Melaine, born October 25. Judy will be graduated in February from George Washington University, where she's majored in drawing and painting. Amy is in her sophomore year in nursing at the University of North Carolina.

As for her own activities, Mrs. Morse expressed greatest satisfaction in her membership in the Senate Ladies Group which meets weekly as a Red Cross unit to sew, knit, and fold bandages.

"Party lines are down in the group, even though our husbands may be locked in political battle," she related. "We are ladies, and we take care of the amenities. We discuss our children, our grandchildren, our gardens, and we exchange recipes. We never discuss controversial issues. It just isn't done."

COMMON BOND

The Senate Ladies, regardles of party, have a common bond, she pointed out, "because we've all been fired in the same crucible—statewide campaigning." With feeling, she added:

"We all know how fleeting is public opinion."

There's no such thing as an 8-hour day in the Morse household.

"Wayne leaves for the Capitol at 7 in the morning," she went on, "and if he gets back by 10 at night, we feel lucky. Often he'll arrive about 11 and announce that he's hungry, that he hasn't had anything to eat since lunch."

This is the time, she said, when the Senator usually tells her about the events of the day. While she never works in her husband's office, Mrs. Morse does take on innumerable housewifely jobs that assist him in carrying on his job.

"I buy everything for him," she said. "I have a terrible time getting him into the store for a new suit. Usually I go shopping ahead to pick out a couple of possibilities for him to try on, then I go in with him when he does try them. I even have trouble getting him to the dentist and to the doctor for a checkup. He just doesn't have the time."

Though Senator Morse seldom has the chance to go shopping for his wife, she reports that "when he does buy anything—jewelry, gloves, perfume—I always like his choice."

He enjoys complaining about her hats, she admitted, but it's unlikely he'd ever find any fault with her dresses, many of which she makes for herself. The becoming chalk-blue knit dress she was wearing is one she recently knitted in less than 3 months.

Mrs. Morse pint-sized and feminine taught sewing and cooking for 7 years, later served on the New York City staff of the Delineator Home Institute, where part of her job involved answering readers' correspondence about everything from household equipment to personal problems "I was a sort of Dorothy Dix."

TEACHES SEWING

Recently Mrs. Morse has been teaching adult education classes in clothing construction just outside of Washington. The prospect even loomed for her to give a course in home economics at one of the local universities. When she mentioned it to her family, the Senator protested:

"But Momma, you can't do that. We need you."

She knew how right he was.

"Wayne's job takes everything he has," she explained simply. "I couldn't start a job that would take everything of me and not leave anything to give to him and what his job demands of me."

The Responsibilities of the Medical Profession

EXTENSION OF REMARKS
OF
HON. J. ALLEN FREAR, JR.
OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Thursday, January 5, 1956

Mr. FREAR. Mr. President, every Member of this body has heard and read a great deal about the medical profession. Some of what has been said has been good, some of it not so good.

In the December 22 edition of the Delaware State News, Dover, Del., there was printed a letter to the editor. This letter was written by an 11-year-old person, but it expresses the sentiment of thousands of people in our community, including adults as well as children. I am very pleased to concur wholeheartedly in the expressions of the letter. No doubt many of our colleagues, as well as others, would like to read it, so I am asking unanimous consent to have the letter printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DECEMBER 13, 1955.

Mr. JACK SMYTH,
Delaware State News,
Dover, Del.

DEAR MR. SMYTH: One night I was reading a magazine called the Upper Room. The artice was written by a man from Ontario. It was about a doctor who had served his community for 50 years. In the middle of town was a monument honoring the doctor for his unselfish work. He neither became rich or famous. But he made many people happy and helped people if they were sick. The article reminded me of Dr. Benjamin Burton. Dr. Burton answers calls all hours of the night. He would do anything for a sick child without thought of pay, he does a lot of things out of the kindness of his heart. Dr. Burton reminded me of the doctor in the story. I think he is one of the finest men I've ever known. I think he is what a doctor ought to be.

Sincerely yours,

A PATIENT OF DR. BURTON, AGE 11.

The Woman Behind Morse, Strong in Chosen Career

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, January 5, 1956

Mr. NEUBERGER. Mr. President, I ask unanimous consent to include in the Appendix of the CONGRESSIONAL RECORD an outstanding article from the Oregon Daily Statesman, of December 3, 1955, about the charming and gifted wife of the senior Senator from Oregon. This tribute to the capabilities and talents of Mrs. Mildred Morse was written by Marguerite W. Wright, of the Statesman staff. I should like to add, Mr. President, that perhaps the understanding and friendly tone of the article stems from the fact that both Mrs. Morse and Mrs. Wright have a great bond in common—each of these fine Oregon women is the mother of three atractive daughters.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE WOMAN BEHIND MORSE, STRONG IN CHOSEN CAREER

(By Marguerite W. Wright)

In Time magazine's cover story on Oregon Senators NEUBERGER and MORSE earlier this year, Mrs. Wayne Morse was described briefly as a pretty and talented daughter of a Wisconsin railroad conductor, a wife who has remained in the background throughout the Senator's stormy career.

Is that all there is to be said about the woman who has been for 31 years at the side of one of the most controversial men in the United States. This reporter met Mildred (Midge) Morse at an informal tea here Thursday and the impression I received is that of a woman who has made a career of her husband and family—a career consciouly chosen from several other possibilities open to her.

MANY OPPORTUNITIES

She could have been a journalist. While WAYNE MORSE was working on his doctorate at Columbia in New York, Mrs. Morse was a staff writer on Delineator magazine, a popular woman's publication, now defunct.

She could have been a teacher—and was for several years a home economics teacher. Recently she has taught adult classes in sewing as a part-time activity, and not long ago she was asked to organize and head a home economics department at American University in Washington, D. C., but turned down the offer.

She could have become a part of Washington's frenetic social whirl, flitting around at cocktail parties and embassy balls.

Instead she chose to be the full-time wife of WAYNE MORSE and mother of his three daughters—Nancy, Judy, and Amy, all born in Eugene.

It has not been easy to maintain a normal, close family life with frequent moves betwene Eugene and Washington and the family separated about 6 months out of the year. Thus Mrs. Morse has had to make extraordinary efforts to get the children and their father together whenever possible. Breakfast became the only meal at which the whole family was regularly at the table. Fortunately, she said, the Senator is not one to retreat behind the morning newspaper, welcomed the opportunity to talk to the girls.

HORSE LOVERS

By encouraging the family's great mutual interest in horses and riding, Mrs. Morse has assured that father and daughters had something in common ever since the toddlers learned to ride their Shetland pony. Incidentally, they expect that same pony to produce a colt for the Morse's first granddaughter, born this year.

A major tie between mother and daughters has been Mrs. Morse's sewing. She's made most of their clothes, for reasons of economy and because sewing "satisfies a creative urge," and the girls prefer them to ready-mades.

Another form of relaxation for Mrs. Morse is reading. First on her list is the CONGRESSIONAL RECORD, then the Oregon newspapers, items in which she marks to bring to the Senator's attention.

Then when the Senator comes home late from work—which is frequently—Mrs. Morse can discuss the days' events while preparing his meal. He often misses dinner, so she has become "an expert short-order cook," she laughingly explains. Since the Morses stock their freezer with meat from their own farm, Mrs. Morse usually pops a steak or chop into her infrared broiler and slices off part of a brick of frozen vegetables for the Senator's supper. Quick trick: She sprinkles the steak with paprika (for appetizing color) before broiling it.

EUGENE IS HOME

Although the Morses have a town house in Washington, D. C., and rent part of a Maryland farm for the Senator's livestock, they consider their Eugene farm the family's home and look forward to returning there whenever congressional work permits. Two daughters attended the University of Oregon, and though the Senator resigned from the faculty (he was dean of the law school) as soon as he entered politics, the Morses still count many friends on the campus and in Eugene.

Mrs. Morse herself is a friendly person, although no extrovert. She is soft-voiced and poised in a group, and seems to be genuinely fond of and relaxed with children. She looks young for a grandmother, with her soft brown and grey hair and rosy, outdoor complexion. She is petite and feminine, and has the sweetness of a well-integrated, smooth-running, and sympathetic personality. But behind the softness there is iron self-discipline and unswerving dedication.

Has it been worth it—giving her husband and family precedence in all things and trying not to make demands on him? Mrs. Morse smiles as though that were a somewhat impertinent question and answers that she feels the Senator "is making a contribution to our time." The implication is that anything she can do to share his task is its own reward.

And then she adds that, after all, "I have long thought that WAYNE is wonderful. I thought so long before anyone else did." If others now think so, much of the credit must go to the pretty and talented schoolteacher who, with her children now grown, may emerge from the background and be recognized as a woman of stature in her own right.

Destroy Thrift and Incentive

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including a pertinent article that appeared in the monthly letter of the National City Bank of New York for October 1955. It points out quite vividly that confiscatory personal income tax rates work against thrift and incentives which spark the American economy. The article in question follows:

THE $64,000 QUESTION

The television program, "The $64,000 Question," the most popular on the screen today, has attracted audiences estimated as large as 55 million. It has also brought to the notice of listeners, and most emphatically to the attention of participants, the heavy cut Uncle Sam demands from the winnings of successful people.

Since the program was launched, 4 months ago, 4 persons have successfully doubled their money up to the $32,000 mark, answering questions on such varied topics as the Bible, opera, food, and baseball. Reaching $32,000, 3 of the contestants dropped out. It took the raw courage of a United States Marine, Capt. Richard McCutchen, to attempt the $64,000 question. Excusing his imprudence, he explained: "I belong to a very proud organization."

The participants have had a lot of good, free advice. Hundreds of listeners from all over the country have written or telegraphed warnings that $64,000 is not, as it might seem to be, double $32,000 but only about half again as much. The rules of the income tax supersede the laws of arithmetic. To a single person with a $4,000 income from other sources, a winning of $32,000 gets assessed an additional Federal tax of $15,400 leaving $16,600 as the actual prize. An extra $32,000 winning would get assessed a tax of $23,292, increasing the prize by no more than $8,708. Thus he is risking an assured $16,600 for a chance to win an additional $8,708.

The tax laws treat people who are married or have dependents less harshly. But our single person would need a nominal prize of $107,600 to have and keep $32,000, and a nominal prize running to $448,711 to have and keep $64,000.

Prizes before tax required to double prizes after tax

[For single person with regular income of $4,000]

Prize	Share of—	
	Tax collector	Contestant
$1,253.26	$253.26	$1,000
$2,558.75	558.75	2,000
$5,260.20	1,260.20	4,000
$11,675.47	3,675.47	8,000
$30,285.71	14,285.71	16,000
$107,600.00	75,600.00	32,000
$448,711.11	384,711.11	64,000

The program has provided a vivid illustration of the way confiscatory personal income tax rates stack the cards against risk-taking ventures. Tens of millions of listeners have seen people, because of tax considerations, decide against taking the chance of turning $32,000 into $64,000. They rebel, not unnaturally, when the internal-revenue collector claims the major slice of the pie. This strikes people instinctively as unjust.

Although less well advertised, tax rules dictate answers of "no" every day of the week to businessmen, investors, and professional men of every description. The injury is not only to the opportunities of people but also to the tax collections. Risk-taking enterprise affords the richest source of Government revenues.

In the consideration of changes in the personal income tax next year, Congress will do well to ponder the desirability of finding a schedule of rates that encourages people to go ahead. For people who feel the urge and have the talent to go ahead the real $64,000 question is what the Congress will determine to do.

Why I Like To Live in Our Town

EXTENSION OF REMARKS
OF
HON. J. WILLIAM FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES

Thursday, January 5, 1956

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a brief essay written by Mrs. W. J. Baerg, of Fayetteville, Ark. The essay was judged best among thousands entered in a nationwide contest on the subject, Why I Like To Live in Our Town.

The town about which Mrs. Baerg has written is Fayetteville, which is also my hometown. She has been successful in summing up in a few words the feeling which all of the citizens of the community have about Fayetteville.

I know that all Senators have a similar affection for their hometowns, but I hope that in the course of the months ahead many of them will have an opportunity to visit Fayetteville which, I believe, is one of the most beautiful and most hospitable of cities.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

WHY I LIKE TO LIVE IN OUR TOWN

(By Eloise Baerg)

"So lost, so naked, and so lonely in America. Immense and cruel skies bend over us and all of us are driven on forever and we have no home." An accurate observation, I think, except for those fortunate ones who hold fast to one spot, as do the families in our town, Fayetteville, Ark. They have scooped out a place for themselves and thrown up the mountains to rim it.

Here the splendid repetition of life moves in happy rhythm. Lusty young husbands bring home their brides, sure in the knowledge that soon there will be cribs holding babies, who will grow lithe and strong as the Ozark Mountains. Our men go out to tend great brooder houses of chicks that grow into tender broilers to ride away in long trucks, or they teach at the university. Our women, quick limbed, move about their kitchens, glad they have work to do, untroubled by longings for servants. When our

young go out to explore the other side of the earth they come back and tell stories of the fabulous far places and we marvel at them and draw closer, for here in our town we have home.

Address by George Meany, President, AFL-CIO, Before the National Religion and Labor Foundation, December 13, 1955

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

ADDRESS BY GEORGE MEANY, PRESIDENT, AFL-CIO, BEFORE THE NATIONAL RELIGION AND LABOR FOUNDATION, DECEMBER 13, 1955

In expressing my appreciation for this award today, may I also pay my respects to the National Religion and Labor Foundation for the splendid work which they are doing in bringing about mutual understanding between labor and religion on the basis of the dignity of man, as an individual creature of God, without regard for race, creed, or color.

Last Saturday, there was celebrated the seventh anniversary of the U. N. general assembly's adoption of the universal declaration of human rights. This week the American people will be—rather should be—celebrating the anniversary of the adoption of our country's Bill of Rights. The ideals of the two documents have much in common. In fact, the U. N. Charter owes much to our country's Bill of Rights.

Human rights are the first bridge and binding force between the free labor movement and religion. We, of free labor, reject and abhor Lenin's doctrine that: "Religion is the opium of the people." We also brand as sheer idiocy Lenin's dogma that "religion is a kind of spiritual vodka in which the slaves of capital drown their human shape and their claims to any decent life."

Without human rights, human progress—progress by the great mass of humanity—can at best, move only at a snail's pace. Without human rights—the right to freedom of conscience, the right to freedom of thought, expression, association and assembly, there can be no moral advancement. Without human rights, there can be no elevation but only the degradation and oppression of the individual human being.

This question of human rights is especially urgent in the present critical world situation. Today, we have a gigantic military machine fanatically dedicated to the destruction of all religion, free labor, and all human rights throughout the world. All totalitarian systems—in varying degrees—have it, as their first duty, to extirpate freedom of religion and to exterminate free labor organizations. The more total the dictatorship, the less freedom of conscience and the less free is labor. That is why Communist dictatorship—which is the most total of all totalitarianism—is the most ruthless and unrelenting foe of free labor and free religion.

This worldwide conspiracy is a vast anti-moral movement. Its philosophy is anti-moral, for with it—the end justifies any and all means. It sneers at our most cherished moral values as decadence and weakness. Its source of inspiration and ultimate goal is crude force, the power of violence, unlimited totalitarian terror over the individual who is denied all protection of law, religion, and free labor organization.

The present crisis is not only political. It is above all a moral crisis. No one can separate these features of the crisis of our times. If a democratic Russia had played as important a role in defeating Hitler, the postvictory claims and counterclaims could have been settled through the normal channels of statesmanship and diplomatic negotiations. If Russia were not a totalitarian dictatorship, a huge imperialist power with a world ambition and mission, we would not be facing today a worldwide fifth column, the international Communist conspiracy.

That is why the Communist parties are not political parties, in the democratic sense of the word. They are only national sectors of a Russian-directed world body. The military weight and material resources of the Soviet state are the base, the heart, and head of Communist activities everywhere. This brute force is combined with a phony religious fanaticism. The Soviet state and its foreign branches constitute a Godless church state. This Godless church state fights on all fronts, in all walks of life, and with any and all means. Its central aim is the extension of the present Moscow-Peiping Empire to include the entire world. In this light, the free world faces the following dangers: (1) The military power of the Moscow-Peiping axis; (2) Communist subversion within non-Communist countries—especially in colonial and underdeveloped areas. This subversion moves in various stages: Neutralization, paralysis, and full control; (3) diplomatic-commercial maneuvers.

We face three tasks in meeting these dangers: (1) To develop military forces strong enough to deter and defeat direct and indirect aggression. (2) Develop social, economic, and political superiority of democratic order through international cooperation, freedom, and social progress for colonial peoples and underdeveloped countries and through the advancement of social justice in every free country. (3) Defense of freedom and the free state against fifth column at home.

The three tasks are necessary. They are not alternatives. They are organically tied up with each other. They must go together and be applied simultaneously.

It is just as wrong to think that Communist imperialism can be defeated with arms alone as to say that it can be beaten with social reforms or social security legislation alone. We must defeat Communist imperialism, Communist ideology and Communist subversion, and not merely any one of these evils. If we win on 1 or 2 fronts and the enemy breaks through on the third, we of the free world might lose all. In addition, we must also exploit the political differences and economic difficulties within the Soviet empire. We must do nothing to ease Moscow's difficulties with the satellites. We must do nothing to help the Kremlin get over the difficulties arising from the struggle over succession to Stalin. In the diplomatic field, we should do nothing to help build up the authority of the new regime among the Soviet peoples.

We should avoid being fooled by the more flexible and more cautious tactics of a regime which is still seeking to consolidate itself and enhance its authority. In fact, the more the Khrushchev regime feels itself secure, the more harsh and frontal its attacks will become. The present Bulganin-Khrushchev tour of India and Burma is a striking example of Soviet insincerity.

Moscow has sought relaxation not as an end, but as a means to strengthen Soviet imperialism. This is proven by Russia's unchanged and uncompromising attitude to the basic causes of world tension. Moscow wants relaxation to affirm and strengthen its conquests of yesterday as a base for more Communist conquests tomorrow. Khrushchev Kaganovich and Bulganin have openly and impudently said so.

It would be wrong to think that the weakness of the free world in the face of the Communist onslaught has been only military. If it were that simple, there would be nothing to worry about. We have grave weaknesses in our social and economic armor. We have especially serious weaknesses in our moral and intellectual armor.

Too many in the free world fail to see the real nature of communism as the mortal foe of everything that we hold dear, of every moral and spiritual value. Too many in the free world are still prisoners of the illusion that communism is, historically speaking, a progressive system—extreme liberalism temporarily making bad mistakes. Actually, communism represents darkest reaction. It is an antisocial system in which there are imbedded some of the worst features of savagery, slavery, feudalism and life-sapping exploitation manifested in the industrial revolution of early-day capitalism.

Too many in the free world seem to have lost their capacity for moral indignation against the most brutal inhumanities when they are perpetrated by Communists. It is painful, but we must face the cruel facts of life. We of the democratic camp must develop a far more vigorous moral attitude. We must rekindle our capacity to cry out against, to protest against, the godless dogmas and savage crimes being perpetrated by Moscow. Such struggles and such protests are not negative actions. They are positive and constructive than a total struggle against the totalitarian cancer in the body-politic of modern society.

It is rather disturbing to me that many people in our country who call themselves liberals are stone silent about the Soviet concentration camps. They never find the time to utter a word of condemnation against the Communist imperialist destruction of the national independence and democratic rights of hundreds of millions of people in Europe and Asia. It is shocking to see the studied attempts being made by western diplomacy to tear to shreds the charter of the United Nations under the guise of the so-called package deal with Moscow and Peiping. Can it be that the free world is so weak in its moral spirit that it does not recognize this deal as appeasement of the worst kind?

I am all for a fight to the finish against racialism in our own midst. Racialism is damnable and detestable in any form. But racialism in reverse, as now propagated in India and Burma by Khrushchev and Bulganin is just as reprehensible.

And the Communist imprisonment of hundreds of thousands of hostages, so-called war prisoners, 10 years after the close of the war, in violation of every human right and international agreement, is morally reprehensible. One would expect the true liberal to cry out in protest against human beings being carted, tagged and shuttled about for weeks in railyards of Russia, as if they were carloads of coal or bags of potatoes. Not until we of the free world can give rebirth to a vibrant moral attitude, to a burning indignation against such frightful bestialities, can the freedom-loving people be sufficiently stirred to gather the moral strength for resisting and defeating the totally anti-moral dogmas and deeds of communism at home and abroad. Yes, this means above all a moral struggle against communism.

Communism is the very opposite of liberalism. Communism is the deadliest enemy of liberalism. Liberals should be the most consistent and energetic fighters against communism. Liberals must also be on guard against developing a certain type of McCarthyism of their own. They must shun

like a plague the role of being anti-anti-Communist. Only by refusing to be thus entrapped, can liberals shed every vestige of subconscious and conscious regard for communism as a movement with which they have something in common.

Much more regard must be shown by the democracies for principles—for the principles of human rights and human freedom. We must never sacrifice principles to expediency. This means being rigid in support of our principles.

Moscow is sure it has history's timetables in its pocket. Hitler once thought so too. We have nothing to fear from peaceful competition. They need our help. We do not need theirs. They have nothing that can help us. What they have can only hurt us. But what we have they want from us in order to help and save them from the follies of communism and Soviet imperialism.

We must avoid the suicidal self-deception of the popular front and united front.

No country, no people, no movement can stand aloof and be neutral in this struggle. Nehru and Tito are not neutral. They are aides and allies in fact and in effect, if not in diplomatic verbiage.

In conclusion, I cannot emphasize too strongly to you: The conflict between communism and freedom is the problem of our time. It overshadows all other problems. This conflict mirrors our age, its toils, its tensions, its troubles and its tasks. On the outcome of this conflict, depends the future of all mankind. I pray that, on the threshhold of the atomic age, we of the free world can muster the moral courage and total strength to preserve the peace and promote the freedom of the men and women of every continent, color, and creed.

Cardinal Mindszenty Held as Red Indictment by the Honorable Michael H. Prendergast, New York State Democratic Chairman

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks of the Honorable Michael H. Prendergast at the Cardinal Mindszenty rally, sponsored by the Hungarian Catholic League, in New York City, on Monday, December 26, 1955:

REMARKS OF THE HONORABLE MICHAEL H. PRENDERGAST, DEMOCRATIC STATE CHAIRMAN, AT THE CARDINAL MINDSZENTY RALLY, SPONSORED BY THE HUNGARIAN CATHOLIC LEAGUE, IN THE WHITE HALL OF ST. STEPHEN OF HUNGARY CHURCH, 414 EAST 82D STREET, NEW YORK CITY, DECEMBER 26

I am deeply honored to have this opportunity to speak today, in communion with the millions of freedom-loving peoples all over the world, who are with us in spirit—as we pay our respects and our tribute to Cardinal Mindszenty.

It is fitting that we meet for this solemn occasion in the church which bears the revered name of Hungary's patron saint. And it is fitting, also, that we should be meeting in the same hall, and speaking from the same platform from which the Cardinal himself gave such an inspiring address during his last visit to New York in 1947, at which time I had the great privilege of meeting him.

On December 27th, 2 days after Christmas in 1948, the Iron Curtain came down on the life and works of Josef Cardinal Mindszenty. But his spirit lives on in the hearts and minds of all of us as we join together to renew our protests and proclaim our indignation once more over the tragic and outrageous course of events which befell this courageous and valiant prelate under mankind's most dreaded disease—communism.

We come here on the seventh anniversary of the Cardinal's incarceration with determination and deep abiding faith that such tyranny will not prevail. The people of Hungary, and all the oppressed, captive peoples of Eastern Europe, will once again know the freedom Cardinal Mindszenty fought so courageously to defend.

We who have lived most of our lives in a democracy, where the sacred rights of religion and all man's other freedoms are paramount in our Government, find it difficult to comprehend the tragic drama now being enacted behind the Iron Curtain. We can only begin to imagine the agony of Cardinal Mindszenty, and the other members of the clergy and the faithful who are engaged in a life-and-death struggle against atheistic communism.

But realize it we must, if we are to help our enslaved brethren throw off the yoke of Communist slavery, and preserve the hard-won liberties for which freedom-loving peoples fought and died down through the centuries.

Cardinal Mindszenty stands as a symbol of faith—not only for the Church of Hungary and its more than 7 million Catholics, but for moral-thinking people of every religion and every walk of life all over the world. His steadfast devotion to his beliefs, and his valiant fight to preserve his and the Hungarian people's inalienable and God-given right to practice those beliefs, have etched him a place in history, and won him the everlasting devotion of freemen everywhere.

By his own supreme sacrifice he has awakened the world to the dangers of communism in all its horror and ruthlessness. He has opened our eyes—as never before—to the full meaning of Communist oppression and its ultimate goals—the debasement of religion, faith, and the dignity of man. He is living proof of the fate of any nation that comes under the Communist heel, but more important, he is a glowing symbol of faith in salvation and the ultimate victory of freedom over tyranny.

The Hungarian primate has become, in effect, the Communists' albatross. When the Communists condemned Cardinal Mindszenty they created a martyr, and brought upon themselves the anger and indignation of people both in and outside their satellite nations. Their totalitarian mock trial and reign of terror and intimidation against the cardinal served to do what they most feared—it lifted the Iron Curtain—and gave the people a close look at Communist persecution and subversion.

Our Holy Father pointed out, in an address before the College of Cardinals in February of 1949, right after the cardinal's sentencing: "In all this matter one thing alone stands out clearly, the principal object of the trial was to disrupt the Catholic Church in Hungary and precisely for the purpose set forth in sacred Scripture: 'I shall strike the shepherd and the sheep of the flock shall be dispersed.'"

The Soviet commanders followed the traditional party-line methods in attacking the Church of Hungary. In a rapid succession of events, starting in 1946, the Communists attacked the clergy, and progressively stripped the church of her schools, her press, and her religious institutions.

But the Communists didn't take into consideration in their devious schemes—the shepherd who wouldn't abandon his flock—the great and good Cardinal Mindszenty. And they were blind to what the Holy Father so well described as "the tenacious faith of the Catholics of Hungary, who are doing all they can, though faced with serious obstacles and difficulties, to defend their old religion and keep alive and fresh the glorious tradition of their ancestors."

The Communists will never be able to understand the great strength of spiritual weapons which cannot be purged or imprisoned behind an iron curtain. "The church," said one Communist contemptuously, "is brought to its knees." Father Robert A. Graham writing in a recent article in the June 4 issue of America answers that contempt so well that I would like to repeat some of it now:

Referring to the church, Father Graham says, "* * * it is on her knees that she implores the divine strength to endure the passing cruelty of tyrants. It is for us fellow Catholics and fellow believers in the free world to join our prayers and penances with the supplications and sufferings of the faithful in the Church of Silence."

Cardinal Mindszenty is a vital link in that church of silence behind the Iron Curtain.

Communism's real irony is that it is the source of its own destruction. In their very designs to dismantle the Hungarian primate, and disrupt the faith of the Hungarian people, the Red tyrants succeeded in laying the groundwork for their own inevitable destruction.

The Mindszenty persecution aroused public opinion throughout the entire democratic world. All over Italy protest gatherings were held. In Milan 5,000 Catholics bitterly fought the Communists who tried to break up their demonstration. In Paris 30,000 people of all faiths and all political beliefs conducted a mass protest meeting, and the French Government officially expressed its deep emotion. London's Albert Hall was filled to capacity by over 6,000 Britons, while 25,000 more waited outside in the rain, as speaker after speaker renounced the Mindszenty trial. In Rio de Janeiro 250,000 people gathered in the streets in demonstration. President Harry S. Truman called the trial "infamous," and said it had been conducted by a kangaroo court. The United States House of Representatives unanimously asked for U. N. action against Hungary.

In their panic over the harmful repercussions of the travesty of justice, Communist turned against Communist to eliminate all who could be blamed. Those liquidated included the three Ministers of Interior—all key witnesses against the cardinal—the secret-police agents who participated in his arrest—the Minister of Justice at the time of the trial—and all the interrogators of Mindszenty at the time of his arrest.

Perhaps the greatest indication of Communist fear over the boomerang of the Mindszenty case was the announcement this July from Budapest of the so-called interruption of the cardinal's life sentence. The Hungarian Government's announcement did not refer to the cardinal as cardinal, much less as archbishop. It did not even divulge the place where he was to live under what amounted to house arrest. As the Vatican paper said at the time: "* * * the innocence of the primate of Hungary has not been established, his freedom has not been restored, and the rights of the church have not been recognized." The free world could only view the empty Red gesture as a hoax, designed to mislead the critics of Red rule in Hungary and to offset adverse world opinion at the time of the Geneva summit conference.

No one was deluded by the transparent Communist scheme. No one will ever forget the brutality endured by Cardinal Mindszenty and his church at the hands of the Communists. For 39 terrible days between the time of his arrest and trial, the Hungarian primate was subjected to that special brand of brainwashing and torture Communists employ to force a confession. A so-called people's court, from which the people were barred, went through the motions of a mock trial and condemned the cardinal to life imprisonment.

The arrest of the cardinal during the Christmas festival revealed most clearly the fundamental materialist creed of communism in which neither Christian festival nor Christian faith has a place.

From the beginning of his incarceration, throughout the 7 long years he has been a prisoner of communism, Cardinal Mindszenty has never wavered in his defiance of the Red demagogs.

Beginning in 1953, the Hungarian Red leaders offered to release the cardinal if he would promise to leave Hungary. They later modified their terms and offered to free him on several repugnant conditions: that he renounce the Vatican; abdicate as primate and go into village exile as an ordinary priest; not issue any uncensored statements concerning his imprisonment; and personally express desire for clemency.

"I have my own conditions," the cardinal told them, "not those you put before me."

This was in keeping with the Mindszenty tradition.

Throughout his lifetime the cardinal had long been recognized as an unyielding foe of tyranny—first against the rise of nazism and later in the fight against communism. He could have escaped long before his trial in 1948, if he had wanted to surrender his principles. Time and time again, when it was suggested he leave Hungary, he refused because he wanted to stay home with his people. "We are in a period of storms and disturbances," he once said, "but the Hungarian church has outlasted the storms of centuries. She is under the protective wing of God."

Early in his childhood Cardinal Mindszenty had learned stories from his mother of the holy King Stephen whose crown remains one of Hungary's most sacred treasures. Just as that holy crown—still safe from Communist hands—remains a symbol of Catholic unity in Hungary so, too, does the servant of God—Cardinal Mindszenty.

He lived by what he believed, and for that he was persecuted. His only crime was his refusal to deny his God and his principles. Those who threaten any religion threaten all religions. The lesson we must learn from the Mindszenty case is that no one can be really free so long as any people anywhere in the world are forced to live in slavery.

The Communist war on religion, with all of its traditional contempt for justice and freedom, is attempting to bring about a society of class justice which is not justice at all. It strikes at the very heart of all our fundamental human rights, and threatens the whole concept of democracy.

The free world can never find peace or security until the Soviet Union liberates its captive satellite nations and allows truly free elections. Self-determination in Germany and Eastern Europe is an essential condition of peace. Since peace cannot exist without freedom, none of us will be secure until the people of Hungary and all the other captive peoples of Europe regain their independence.

As the Governor of our State, Averell Harriman, said recently at a memorial dinner commemorating the 10th anniversary of the last free election in Hungary:

"It is more important than ever that we demand, and that we continue to demand, that the Soviet Union adhere to the principle of true self-determination for the peoples of Central and Eastern Europe. It is also more important that ever that we strengthen, not weaken, our mutual defense, and that we accelerate, not relax, our efforts to help build up the economic strength and unity of purpose for the whole free world."

Hungary has a proud tradition of freedom and long history of glorious battles for its national independence. Until Hungary itself was invaded by Hitler in 1944, she willingly and anxiously gave asylum to hundreds of thousands fleeing from Nazi persecution.

The Hungarian people continue now to carry on their valiant fight against the Communist onslaught. Remember the local and national elections 10 years ago when the brave people of your country represented by the Small Holders Party— the peasant party—set an example for all the democracies of the world—by defying Soviet occupying authorities and electing the anti-Communists to power. The flame of freedom burned brightly in Kossuth Square—and people everywhere took pride in the courage of the Hungarian people.

The Soviet authorities have been trying to extinguish that flame ever since, but they never will. They may be able to dictate elections by sheer force, and they certainly know all the techniques of subversion and militaristic domination, but they will never be able to kill the spirit of the Hungarian people.

I feel deeply privileged, indeed, to have had some small connection with these valiant people behind the Iron Curtain as part of my activities for the Catholic War Relief Services of the National Catholic Welfare Conference.

For some 9 years I lived the problem of displaced persons and Communist tyranny, and saw at first hand the courageous spirit of the Hungarian people. I can tell you it was an experience I shall never forget. War Relief Services was charged with bringing into this country for resettlement almost 50 percent of the total immigrants brought in under the special immigration bill between 1948 and 1949. Our agency was able to contribute substantial sums of money for the aid of the Hungarian clergy. In addition, we distributed hundreds of thousands of pounds of food, clothing, and medicine to the people of Hungary, under another great servant of the church, who now carries on similar work in Austria—the Reverend Fabian Flynn.

I was privileged to have been able to serve as the director of this particular project until, as you know, we were eventually driven from Hungary by the Communists, and forced to terminate our programs there.

The Catholic War Relief Services continues, nevertheless, to provide aid for the Hungarian people who have managed to escape from behind the Iron Curtain, and are living in various communities throughout Europe.

One of my fondest treasures is a medal presented to me jointly by the hierarchy of the Catholic Church in Hungary and by the members of the anti-Communist Hungarian Government for my small part in this work. What little we were able to accomplish will always remain one of my greatest sources of satisfaction.

I want to say publicly now, that I intend to use every political influence at my command to insure the expansion and improvement of war-relief programs. I am deeply concerned with the present injustices and discriminatory provisions of the McCarran-Walter Immigration Act passed in 1952. The national origins quota system which unfairly favors some nations at the expense of others should be changed. Under the quota system now in force some 77 percent of the annual total of 154,657 immigrants permitted under the McCarran-Walter Act, is allotted to 5 nations, while 80 other countries must share in the remaining 23 percent.

Also, we must immediately concern ourselves with the problem of revising the Refugee Relief Act of 1953 in order to make it a functioning, meaningful program. There is nothing more heart-rendering than the sight of a refugee camp. We cannot encourage people to take flight from behind the Iron Curtain, and then turn around and close our door in their faces once they have escaped.

In 1953 Congress passed the Refugee Relief Act, providing for the admission of 214,000 refugees over a 3-year period, as a supplement to the McCarran-Walter Act of 1952. To date enforcement has bogged down, and the stringent eligibility and security provisions of the Relief Act have seriously curtailed admissions.

We must rescue these programs and make them the best we possibly can.

And by so doing, I firmly believe we will be doing our own Nation a great service. Our country has grown and thrived by welcoming freedom-loving peoples to its shores, and we shall continue to grow and thrive so long as we carry on this great democratic tradition.

The people of Hungary look back upon a thousand years of culture and independence. They have made great contributions to the vitality and diversity of American life—and we are indeed in their debt.

The beautiful Church of St. Emeric, on New York City's lower East Side, was founded on January 1, 1949, by his eminence, Cardinal Spellman, in honor of Cardinal Mindszenty and the plight of Hungarian Catholics. It was a tribute from Cardinal Spellman, who has taken deeply to heart the sorrow of Hungary and its imprisoned primate. His eminence named as the first pastor of this new parish in the great diocese of New York—one of the most humble and respected men of God—the Rt. Rev. Msgr. Vincent J. Brosnan.

A statute of Louis Kossuth—that heroic fighter for Hungarian liberty—stands on Riverside Drive right here in New York City—to remind us of Hungary's continuing battle for independence.

Hungary has given the world such great musicians as Franz Liszt, Bela Bartok, and Franz Lehar.

She has given us great poets and famous authors like Franz Molnar—whose writings have enriched us all.

The Hungarian nation has contributed to science such world famed atomic physicists as John Newman, Eugene Wigner, and Eduard Teller.

The list is long and rich with talent and greatness. And it is headed by the humble servant of God we meet to honor today.

It is fitting that I close my remarks on the occasion of this solemn commemoration with the same prayer with which the beloved Cardinal Mindszenty ended his final plea for justice on the date of his sentencing in 1949:

"God give us peace in these days, not merely in the future, but in these days * * * I ask this peace for my church, the love of which is constantly with me, for the Hungarian state to which I have shown my obedience, and for my own soul."

The case of Cardinal Mindszenty is not closed. He stands as a living indictment of Communist regime everywhere.

The road to freedom in Hungary, as elsewhere behind the Iron Curtain, for Catholic, Protestant, and Jew, is yet a long one. Our continuing indignation, our steadfast determination to right the Communist wrongs, and our loyal devotion to the principles of God-fearing men may someday soon, with the help of God, restore the worldwide peace and sanctity for which Cardinal Mindszenty made his greatest sacrifice.

Thank you, and God bless you.

Reds Steal United States Tactics in Cold War, Prelate Says

EXTENSION OF REMARKS
OF
HON. MICHAEL J. KIRWAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. KIRWAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article from the Washington Evening Star, dated Monday, January 2, made by the Most Reverend Patrick A. O'Boyle, Archbishop of Washington:

REDS STEAL UNITED STATES TACTICS IN COLD WAR, PRELATE SAYS

An "agonizing reappraisal" of American policy and tactics in the cold war against communism is necessary, the Most Reverend Patrick A. O'Boyle said yesterday.

"They (Communists) utter their lies bluntly and fearlessly while we leave the truth muted and gaged," he declared in a sermon in St. Matthew's Cathedral.

Because we have "conceived the struggle too narrowly," we "talk in terms of material wealth and military power while our opponents monopolize slogans of justice, peace, and equality," the spiritual leader of Washington area Catholics said.

"And therein lies the secret of our frustration today," he continued. "We are outmaneuvered and outgunned in the very area where our strength should be the greatest. By default, we have permitted the enemy to use our choicest weapons."

APPEAL TO IDEALISTS

Archbishop O'Boyle warned of the continuing appeal of communism to the idealists.

"We must remember that the appeal of communism is not only to the disgruntled, the bitter, and the neurotic members of a community," he said. "It has been able to convince some men of sensitive natures and of high ideals."

He recalled the shock with which the free world learned of the defections of learned men in Canada, Great Britain, Australia, and the United States when Red spy rings were uncovered.

"These men were scientists, university professors, and others of real standing in their communities," the prelate said.

INTELLECTUALS UNDERESTIMATED

"The process of winning over misguided idealists still continues. And it is far more dangerous to the security of the world than most of us realize. Our country is inclined to underestimate the power of the intellectual.

"We call such persons eggheads, or ivory-tower professors. But in the brains of such scientists was born the fearful weapons of modern war—the ultimate weapons of fisson and fusion."

The archbishop warned that this country is engaging in a "form of pretense" by building powerful military machines, spending millions for propaganda, and, "at the same time, we are strangely quiet about the purpose of all these activities * * * as if it were not proper to mention the subject of communism in polite company."

PUSSYFOOTING DECRIED

"Pussyfooting on such issues plays directly into the hands of the enemy," he declared.

Moral rearmament by the free world is necessary, Archbishop O'Boyle said.

"If we ask the uncommitted peoples of the world to choose between our way of life and life under communism, we must be sure that we can stand the comparison. It is easy to say that the Communists are out-and-materialists, and that we honor God and respect our fellowman. But are we prepared to prove our point?

"Unfortunately, the answer is that many people think that there is little choice between the two systems."

The sermon was delivered during the nationwide observance of a Day of Reparation by American Catholics. Special prayers were offered in all Catholic churches for Christians, Jews, Hindus, Moslems, and other persons behind the Iron Curtain who are being persecuted for their religious beliefs.

Views of Senator Wiley on State of the Union Message

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, January 5, 1956

Mr. WILEY. Mr. President, as I listened today to the state of the Union message of the President of the United States, I felt for Dwight D. Eisenhower a deeper sense of gratitude for the immeasurable service he has given our country, and a renewal of my profound respect for him as our national and world leader.

I am confident that with him at the helm of our Nation, progress toward our domestic and foreign goals will continue evenly and effectively.

The message is a reflection of the dynamic spirit of President Eisenhower. As I have supported him in the past, so do I now again pledge my wholehearted and continued support to the President, and to the praiseworthy and constructive measures highlighted in the state of the Union address.

Facing the United States Congress, there are additional measures that will affect millions of Americans. I refer to such important issues as the battle against decontrolling of natural gas, the battle for completion of the St. Lawrence seaway, and others.

In a New Year's speech over Wisconsin radio stations, I had previously dealt with these significant matters. I feel that it would be useful, at this time, to bring these remarks to the attention of my colleagues.

I am pleased to point out that there is broad general agreement between the points I had presented in my talk and those set forth by the President today.

I request unanimous consent to have my New Year's speech printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SENATOR WILEY ANNOUNCES 20-POINT PROGRAM FOR 2D SESSION, 84TH CONGRESS—EMPHASIZES NEED FOR MAINTAINING UNITED STATES PROSPERITY AT PEAK LEVEL, THROUGH AN EXPANDING PEACEFUL ECONOMY

(Radio address by Hon. ALEXANDER WILEY, of Wisconsin, broadcast over Wisconsin radio stations on New Year's Day, 1956)

I am glad once more to speak to you through the courtesy of this station.

I would like to share with you some observations regarding Wisconsin's and America's bright future.

It is particularly appropriate to take stock of our national situation, as we head to what we believe will be a wonderful, peaceful, and prosperous 1956—with all its priceless abundance.

I am not simply referring to the great material resources which are ours—our wealth, our comforts, and conveniences. Rather, I refer principally to our spiritual blessings—the blessings from the source of all good, blessings which we enjoy as children of the all-knowing, all-seeing, all-present Creator. Yes; I refer to the heritage which the Wayshower said is ours—yours and mine—the Wayshower who came in order that we might "have life and have it more abundantly."

Let's look now at the overall picture in Wisconsin and in all America for 1956.

We will look, for example, at the prospects for peace. Then, we will turn to such varied subjects as roads, social security, taxes, housing, labor, agriculture, population, and the presidential elections of 1956.

FOUR GOALS: OUR GREATEST GOAL, PEACE

Question. First off, Senator, what would you say should be our principal aims for the New Year?

Answer. I believe that our aims as a people should be these:

First, to keep our country at peace.

Peace—no big wars, no little wars. Atoms for Peace and not for war.

But peace, how? How can we maintain and keep it?

Peace, through vigilance, against an atomic Pearl Harbor. That means vigilance against communism's plans to enslave the world.

Peace through strength, through a powerful modern defense, an Army, Navy, and Air Force, second to none, a guided missile and nuclear program superior to Russia's program. Such strength can serve as a continued deterrent to war.

How else, can we maintain peace?

Through understanding, understanding of historic differences, understanding the arguments among the nations and seeking to ease and erase them, seeking to remove frictions between ourselves and the peoples of Europe and Asia and Latin America.

And, lastly, we seek peace, through determination, through courage and God-given ingenuity, so as to banish bloodshed forever, if at all possible.

Preserving our freedom from attack

Question. That is our first objective, Senator. Now how about the second?

Answer. Secondly, our aim must be of course to preserve our heritage of freedom.

Nothing must imperil our traditional liberties, our freedoms of speech, press, assembly, worship, our freedom to own property, freedom to choose jobs, freedom to take our chances under the profit system. Nothing, neither big government nor big anything else must regiment us Americans.

Our civil, economic and political rights, the rights of majority and minority, must be preserved, from all harm, from any quarter.

Maintaining and expanding our prosperity

Question. What should be our third objective?

Answer. Our third great objective must, of course, be to maintain our country's prosperity.

I need not tell you in detail, that fortunately, we are today enjoying the greatest national income which we have ever known, almost $330 billion per year. Sixty-five million Americans are fortunately employed. One-third of our workers are women. Our Nation's salaries, dividends and bonuses are at peak levels. We want to continue to enjoy this great prosperity and to expand it. We want to continue to have a sound, stable dollar, not a cheap, inflated, worthless dollar. We want a healthy, growing economy.

As a matter of fact, we must do so, in order to pay off our heavy national debt, as well as our personal and corporate debt. More than 23 million families owe payments on installment plans. That means that they must have continued, high income to pay off their obligations. Prosperity, therefore, is not a luxury, it is a necessity for all of us.

We cannot afford a recession. And we will not have a recession.

Fraternal bonds between all Americans

Question. And our fourth need, Senator WILEY?

Answer. Our fourth vital goal, while enjoying these three other goals, while keeping the peace, while maintaining freedom, while expanding our prosperity, is to increase the actual happiness of all of our people, the peace of mind, the feeling of friendship and well-being.

That means more than simply increasing our national wealth. It means continuing warm, fraternal bonds of cooperation and mutual respect in our land. It means avoiding class warfare, keeping labor and management together, as a working team. It means cutting down on frictions between North and South and other regions of our country, as well as between racial, religious, and minority groups. This, too, is a worthy goal, especially in the time of the birthday of the Nazarene.

A. F. of L.-CIO merger welcome

Question. Well, speaking of cooperation, How does the new A. F. of L.-CIO merger affect that situation, Senator WILEY?

Answer. Well, the big merger of the formerly rival organizations is now an accomplished fact.

It brings together 15 million organized workers, out of the total of 17 million such workers and out of our 65 million labor force.

The merger of A. F. of L.-CIO can be a great force for good. It can open a new era of responsible, efficient, unionism. That means sensible, orderly, collective bargaining. The merger can strike important blows at any racketeering influences. It can help end the senseless and often bitter jurisdictional squabbles which have cost labor and have cost the public dearly.

And so, we are looking forward to good things from the merged organizations. We are hoping, of course, that minority rights—political rights, economic rights, will be fully respected by it. Each laboring man must remain absolutely free in his political choices. No one must attempt to dictate to him what he does inside the ballot booth.

Badger State's bright outlook

Question. Well, Senator, those are four splendid objectives for 1956.

Now, how does the outlook for Wisconsin look to you?

Answer. I would say that the outlook is excellent.

Our own State has of course shared in America's great prosperity. In many respects, we are actually doing far better than a great many other States.

Of course, the farm segment of Wisconsin's population has been having its difficulties, serious difficulties. I want to refer to that situation a little bit more later on.

But, in most other phases of our State's economy—in industry, especially manufacturing, in distribution, in consumption—Wisconsin has enjoyed and will continue to enjoy peak records.

Our State's population, which is now at the 3½ million mark, is headed for further increases. By 1965, there will be 4,100,000 people in Wisconsin.

In America as a whole, we are going to have 190 million citizens. That means 28 million more than we have now. That in turn means a vastly expanded market—increased demand for goods, throughout the 48 States and, in particular, in our own State.

Question. Senator, that leads us into what you propose to do for the State of Wisconsin and for our country as a whole during the next legislative year, opening in January.

What legislation, for example, will you be offering?

Completing seaway, social security, and roads

Answer. Well, it will be my purpose in this 2d session to try to secure the enactment of the numerous important bills which I introduced in the 1st session of the 84th Congress, in 1955. I will, moreover, be carrying forward overall policies for which I have been striving since I first came to the Senate in 1939—policies aimed at the goals of peace, freedom, prosperity, and cooperation.

Now, let me spell out exactly how I hope to achieve all this.

First of all, of course, it must mean passing the Wiley bill to complete the Great Lakes-St. Lawrence seaway. This bill will authorize deepening the connecting channels west of Lake Erie. This is by far the single most important bill affecting the State of Wisconsin in this Congress.

Secondly, I will once more resume the fight to improve the Nation's social security system. That means liberalizing pension benefits, particularly for elderly women. I want them to become eligible to receive their modest old-age pensions at the age of 60, instead of waiting and waiting until the age of 65.

Thirdly, another item on my legislative program is to make sure that this time Congress definitely enacts legislation for Federal improvements of our highway system. As we all know, the Nation's roads are choked with traffic. This universal traffic jam is costing us fortunes in terms of increased costs of distribution, in terms of highway accidents, and many other direct and indirect costs.

Opposing natural-gas rate increase

Question. I know, Senator, that one of the major items on your program is to oppose one particular bill, which you feel could be very damaging to the interest of Wisconsin—the natural gas rate bill.

Answer. That is exactly right.

One of the early bills which will probably be coming up is the so-called Harris bill. This dangerous bill could result in a third of a billion dollar increase in the already high gas rates which Wisconsin and 30 million other consumers pay for the fuel which is used in homes, offices, and factories.

This gas rate increase bill would very unfairly cancel out a decision of the United States Supreme Court. The Court had rightly held that gas rates should be—I repeat—should be subject to Federal control. Naturally I oppose very strongly the bill which would decontrol rates, and thus leave the consumer helpless and defenseless.

Fifth plan: Specific planks in farm program

Question. Senator, earlier you referred to the problem of Wisconsin agriculture. Would you tell us about some of the planks in your farm program?

Answer. I am glad to. I will just list them briefly, because time unfortunately is limited. The following are planks to halt the dangerous downward spiral in United States agriculture.

First, I propose that dairying be treated as a basic commodity, alongside the six so-called other "basic commodities," like wheat, corn, tobacco, and cotton.

Second, I propose that the dairyman have a minimum floor on his prices, just as the laboring man gets a minimum wage. That means the dairyman must get his cost of production plus a reasonable profit.

Third, dairy research should be strengthened, through a bill such as the Wiley bill for establishing a dairy research laboratory at Madison. That means finding new uses for milk and milk by-products.

Fourth, we have to step up our program of constructive use of the Nation's dairy surpluses. That means using dairy products for the needy folks in America. Moreover, to the extent that the supply is available, we should use the surplus to help relieve need among the hungry and starving people abroad.

Fifth, we've got to step up the consumption of dairy products right here at home. That means increased education of the American people on the value of eating wholesome, nutritious milk, cheese, ice cream, butter, and nonfat milk solids. It means making more dairy vending machines available. It means improved advertising, public relations and food recipe programs, to spread the dairy habit.

Sixth, we have got to increase the amount of milk which is used under the Nation's school-lunch program so as to feed our children's growing bodies with more milk.

Seventh, we must strengthen the battle against livestock and other diseases, which already cost the American dairy farmer so much.

Eighth, we must make sure that acreage is not diverted from other agricultural production into dairying. Why? Because that would only complicate our existing dairy problems, and make for a still more serious surplus.

Ninth, improve soil conservation through some such proposal as the soil bank.

Tenth, strengthen dairy production and marketing cooperatives.

These, then, are 10 points in my agricultural program. But please remember, folks, they are designed not simply to help the farmers, but to help our city people as well. That means making sure that the farmers can buy what the city people want to sell. It means, moreover, healthy bodies for 165 million Americans, consuming dairy products.

THREE JUDICIARY COMMITTEE PHASES

Question. Senator WILEY, thus far, in our program, you've discussed 5 points in your plan for the 2d session of the 84th Congress, including 10 specific planks in your farm program.

In the time remaining to us, would you run down the list of the many other points which you are proposing on behalf of the people of Wisconsin and of our Nation?

Answer. Yes, indeed.

My sixth point is to strengthen the Nation's antitrust laws. Right now, those laws, which are designed to protect small enterprise—meaning 4 million small businesses—against monopoly, these laws are confusing and vague.

I personally have the privilege of serving on the Antitrust Subcommittee of the Senate Judiciary Committee. And I am hoping that we will be able to come up with many specific recommendations to improve these antitrust laws. (Right now, I might point out, we are looking at America's automobile industry which is, of course, a mainstay of our economy.)

Next, one of the most important things we in Congress can do, relates to another subcommittee of the Senate Judiciary Committee on which I serve. That is the Juvenile Delinquency Subcommittee. Thus, I want us to come up with action on the Wiley bill, or similar legislation, to help curb the widespread crime which is committed by the Nation's youngsters. We must help prevent the crime, before it occurs in the first place, and/or help to rehabilitate the youngsters if they once get into trouble.

Question. That brings us down to the eighth point in your program, Senator.

Is it another point stemming out of your service as senior Republican on the Judiciary Committee?

Answer. That's right. You know, one of the important functions which I fulfill on the Judiciary Committee relates to its work in the field of combatting subversion. That means combatting the Communist enemy. So, I have offered numerous bills to

strengthen the Nation's antisedition laws. I am hoping that we will be able to close up some of the present loopholes in antisubversion statutes during the next session.

Question. Thus far, Senator, you have referred to the St. Lawrence seaway, social security, roads, opposition to natural gas rate increases, antimonopoly, antijuvenile delinquency, and antisubversion.

What is next on your program?

Answer. Here are some additional points.

Veterans, schools, health, reserve

9. We should pass veterans survivors' benefits legislation, so as to improve the position of the survivors of America's veterans, especially during this period of high cost of living. A bill for that purpose has already passed the House of Representatives, and is now passing the Senate.

10. The needs of the Nation's overcrowded schools must stand high in our priority list for the next session.

11. America's hospitals, particularly in rural areas, need both improvement and expansion. In addition, there is a clear need for stepping up medical research, so as to banish the illnesses which still take such a tragic toll among our people.

12. Congress needs to take another look at the Nation's Reserve program. Last year, we enacted an important new Reserve law, but already there are serious complaints to the effect that the law is not working out nearly as well as we might have hoped. Reserve units in many instances are mere skeletons, and Reserve obligations are still falling somewhat unfairly. We Americans want to be fair, and we want to be effective in the Reserve program. That is part of our efforts for vigilance against communism.

Question. That is an even dozen recommendations, so far, Senator. How about other points in your program?

Answer. Here they are:

Outdoors, housing, distress, disaster

The 13th point is to strengthen our Nation's outdoor heritage, step up the battle against water pollution, protect our national parks, forests, and monuments against danger from any quarter.

14. Strengthen America's housing. Fortunately, 3 out of every 5 of our people already own their homes, but millions of homes are obsolete and could stand repair or replacement, if sound credit is available. We're building 1¼ million new homes this year. That is still only a drop in the bucket compared to our unfulfilled housing needs.

15. Relieve distress in critical unemployment areas. Why? Because, in spite of widespread prosperity, there is still need in isolated "pockets" of our country, in individual communities where unemployment is high, unfortunately.

16. Explore disaster insurance plans, so as to help reduce the cost of natural disaster—flood, hurricane, tornado—if they should happen to strike.

Shipping, anticrime, labor, tax changes

Question. Any more points, Senator, in your program?

Answer. Yes, indeed.

17. Strengthen Great Lakes shipping, provide for restoration of package freight service on the lakes, deepen and improve Great Lakes harbors, so as to accommodate deeper draft shipping through the St. Lawrence Seaway.

18. Pass long-pending anticrime bills, measures to combat tax evasion by gangsters, together with antigambling bills, such as were recommended by our Senate Crime Committee.

19. Remove inequities in the Nation's labor-management laws, inequities on which labor and management, in many instances, both agree, and

20. Last but not least—revise the Nation's tax laws. Remove tax injustices. Take a new look at the nuisance excise taxes, the so-called sales taxes on individual purchases, provide additional relief for low income brackets, providing we can balance the budget.

Give the taxpayer a break, particularly by continuing the all-out battle against governmental waste and inefficiency. That's about it. Of course, if time permitted, I could add numerous other points in my proposed program for 1956.

The political situation

Question. Well, Senator WILEY, you have certainly provided a great deal of food for thought in these 20 recommendations. I know that the people of Wisconsin will be following closely your work on each of these fronts.

Now, how do you feel about the political situation as it shapes up in 1956?

Answer. Well, we of Wisconsin are of course looking forward to the April 3 date of the preferential primary for the presidency. The closing date for filing for the primary is March 2.

It is still too early, of course, to be very sure as to what the picture will look like, in either the Republican or Democratic races. But I do want you to know this: irrespective of the April presidential primary, and the September primary for the congressional races, we in public office all have an important job to do—in every single one of the 11 months of 1956 preceding the November election.

In other words, the American people don't want men in public office to be talking and playing politics all the time. The people expect, and are entitled to, constructive action immediately—on issues like roads, social security, tax revenue, schools, health, housing, the seaway, and the various other subjects which I have mentioned.

That will certainly be my aim—to provide such constructive action.

Question. I know, Senator, that this constructive note will be well received by the people of Wisconsin.

CONCLUSION

Answer. Yes; I think we should all remember the old song about "accentuating the positive." That means emphasizing the constructive, not the negative. Why? Because there is too much of a tendency these days to talk negatively about individual personalities or to take a gloomy look about possible troubles on the national or international scene.

To the contrary, we as a people have so much to be thankful for, we have so bright a future in store for us, that we should certainly look forward to the future with faith and optimism. In that way, we will be better able to meet the problems up ahead.

Southern Forestry

EXTENSION OF REMARKS

OF

HON. SPESSARD L. HOLLAND

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Thursday, January 5, 1956

Mr. HOLLAND. Mr. President, on October 3, 1955, I had the honor of delivering the keynote address at the 80th anniversary meeting of the American Forestry Association, in Jacksonville, Fla.

I ask unanimous consent that my address be incorporated in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SOUTHERN FORESTRY: AN INDUSTRIAL REVOLUTION WITH ROOTS

(Keynote address of United States Senator SPESSARD L. HOLLAND, of Florida)

I was delighted when the American Forestry Association invited me to speak at this great convention. Naturally I have wondered just how I might contribute something to the success of this meeting. I am conscious of the fact that many of you have come here from distant States. Accordingly, every minute of your stay here should be both interesting and profitable. I am hoping that my part of the program may not be a roadblock in this connection.

First of all, as one born and bred in the Sunshine State, one of the fastest timber growing States in the Union, I welcome you to Florida and to the South—a region of fast-timber-growing States.

I think you came to the right place for this meeting. Here in Florida, the second largest State east of the Mississippi, you have all the elements to please the heart and mind of any forestry-conscious individual. Ponce de Leon, the Spaniard, aptly described this State in the year 1513, nearly 4½ centuries ago, and gave Florida her name. Here's what his ship's log, in an ancient English translation, contains by way of description:

"They steered then along ye coaste for the purpose of seekying a haven and this same nyghte they saw lande nearbye at eighte fathom water; which they supposed to be an ilande and straitwaye named it Florida, on account of the marvelous viewe which met their eyes of beautiful Orchardes, Plantes, level gardens and animal kynde; and then as Jean Ponce nowe allsoe discovered the daye to bee ('Pascua Florida,' Easter) Sunday, he determined for those twoo reasons to give this name to ye lande."

And it was here in Florida that one of our first Federal ventures into the field of forest management took place. I quote from Ovid Butler's American Conservation in Picture and in Story an item relating to the administration of President John Quincy Adams 130 years ago:

"Seapower in President Adams' day meant wooden ships and he foresaw that maintenance of a strong United States Navy depended upon a permanent supply of proper timber. One of his first acts upon becoming President was to establish a naval station in the live oak region of Pensacola, Fla. At the same time he had a reconnaissance made of the live oak supply along the coasts of Georgia, Florida, and North Carolina. The depleted conditions reported prompted him to initiate a project for the growing of live oak for naval timbers. To this end he withdrew 80,000 acres on Santa Rosa Island, across the bay from the new Pensacola Naval Station, and in December 1828 work began on this, the first Federal venture into the field of forest management."

You probably are wondering why I take this time to mention this bit of the history of conservation. On the Federal Archives Building in Washington is this saying, "What is past is prolog." It is my concern and I know that it is yours, too, that we learn well from the past in order to chart a wise course for the future. Here in the South we are building in forestry, in part at least, on the basis of our knowledge of past conditions and events.

My office within the past month has received an attractive bulletin called Native Land published by the National Association of Manufacturers. I commend to you its reading. It has much in it about forestry. In addition it points out that conservation—or rather lack of conservation—influenced the course of empires long before our country was established. I quote from it as follows:

"Trace the course of civilization westward from what historians call the Cradle of Civilization—the area through which the Tigris and Euphrates Rivers flow in Asia Minor. The way is marked by the remnants of the

glory that was Greece and the grandeur that was Rome and Babylon and Persia and empires that flourished long before even these.

"You come upon areas where you find olive and wine presses, wrecked by time and weather. But you search the horizon in vain for a single olive tree or vineyard. Great cisterns still collect the water that falls from the skies. Meantime, stretching out for as far as you can see, are deserts—man-made deserts—where there were once waving fields of grain.

"Where there were once thriving populations and rich cities you find shepherds tending underfed flocks that nibble at the sparse grass. Farmers work their worn-out, sunbaked fields against a background of crumbled colosseums and tottering temples. The Cradle of Civilization has also been the Graveyard of Empires."

Each of us learns most, of course, from his own personal experiences. I would like to tell you of some of the things I have seen right here in Florida. I was born at Bartow, 200 miles south of here, and my home has always remained there. In my lifetime I have seen two relatively old forest industries boom, decline and rise to expand again and I have seen a new forest industry start and grow strong.

The older industries to which I refer are, of course, naval stores and lumber. As most of you know the naval stores industry is one of the oldest industries in the South, and in the Nation too. One of the reasons for the settlement of Jamestown was the hope of England to develop a source of naval stores. As early as the turn of this century it was believed that the gum naval stores industry was doomed because the big pine trees which were needed for the crude methods of gum collection in chopped out "boxes" were becoming scarce. Through research new methods were devised; first a cup and gutter system supplanted the old chopped box, and more recently a system of bark chipping, using acid and doubleheaded nails, has given the naval stores industry a new lease on life by making profitable use of second growth pines. Florida is now exceeded only by Georgia in our naval stores production.

The other older forestry industry to which I refer is the lumber industry. Pine lumber production reached its peak in Florida in 1909. At that time 75 large sawmills accounted for 70 percent of the production. From 1936 to 1944 Florida's lumber output dropped almost half. Today about 600 sawmills, most of them small, are cutting the lumber produced in Florida but, thanks to sounder forestry practices, lumber production has gone up again.

While our pines account for the larger part of our lumber industry, we still have substantial production of cypress, some cedar; and continuing production of various hardwoods, which our State forestry department is seeking to encourage and increase.

The forest industry which is relatively new to most parts of Florida and the South is the pulp and paper industry. In 1925 the Nation produced 5 million cords of pulpwood of which less than one-fifth came from the South. In 1954 when the Nation produced 27 million cords about two-thirds of all this came from the South. Florida alone contributed almost 2 million cords. Florida now stands third among the States in capacity of her mills to produce pulp.

While all forest industries—lumber, naval stores, poles, cooperage and pulp—have shared in the South's industrial revolution it is the pulp and paper industry that has had the most pronounced effect. It has led the way in making possible our forestry industrial revolution with roots.

The pulp and paper industry has made tremendous investments in the South. It has invested not only in multimillion-dollar mills but also in lands, operations, facilities and personnel. These big mills are not easily moved; they are permanent investments—they are here to stay.

What brought about the great movement of pulpmills into the South and their recent expansion? In addition to the excellent facilities such as workers, transportation, and steady supplies of clean water, which it offers all industry, the South has the additional wealth of fast-growing second-growth timber, and abundant land for new forests.

Most of our old growth timber has long been cut but through the benevolence of nature and the help of a few far-sighted pioneers a second growth of pine and hardwood developed throughout much of the South. At first this regrowth was considered practically worthless. Why? Simply because there was no market.

Then the pulp mills came, and now most of the South has good markets for its second-growth timber. There can be no argument as to which is more important—the timber or the markets. We must have both. One without the other is of little value. The mills are providing the markets, which make forestry profitable. But it is equally true that only through intelligent forestry will we be able to sustain in perpetuity this great industrial revolution with its roots in the renewable forest resources of the South.

Most people do not realize that more than half of the capacity of the pulp mills of this Nation is now in the South. Florida alone has 10 mills with a total 24-hour capacity of 5,415 tons which is about equal to one-half of the capacity of the mills throughout the entire northeastern region.

If I seem to emphasize too much the achievements of the pulp and paper industry and do not discuss sufficiently the accomplishments of the lumber and naval stores industries, I hope that my friends in lumber and naval stores will forgive me. Many big lumber companies and naval stores operators have been practicing good forestry for a long time. When I speak of forest industry I include all industries which provide markets for the forest growth. I like to think of industry also in its broadest sense including not only the mills but the workers, the land, and the consumers as well.

What is this great pulp and paper industry doing to assure its future? In the first place it has bought large forest holdings and is managing them intensively. Some of the finest forestry operations you'll see anywhere, and I hope you will see them while you are here, are in the Florida holdings of this industry. But most of the great quantities of wood these mills use come from noncompany lands. Consequently, it is in the interest of the mills to encourage their neighbors to practice good forestry. The millowners realize this and have started a good-neighbor policy of helping adjoining landowners practice forestry. Most of these neighbors are small landowners.

Both the problems and the opportunities of the small woodland owners have been pointed out many times since they were first emphasized by the Reappraisal Survey made by the Forest Service some 8 to 10 years ago. I fully expect that in the new study now nearing completion that has been made by the Forest Service with the help of the States, industry and others, we will find that the small woodland owner is still the key to the forestry future of the South.

One thing which the owners of small tracts urgently need is technical assistance, which is procured by large landowners from private professional foresters. I am especially proud of the accomplishments under the Cooperative Forest Management Act of 1950 whereby the State foresters in cooperation with the United States Forest Service have farm foresters working with the many small forest owners of the South. I was glad to work with Senator ELLENDER, and others on the committee which secured its passage. At this point I would like to pay a tribute to my colleague in the House of Representatives who has worked tirelessly for this act and many other pieces of forestry legislation—Congressman BOB SIKES, of West Florida.

We have made great progress in tree planting in the South. In 1954 the State of Florida produced about 75 million seedlings. The State Forestry Department produced two-thirds of them on its two great nurseries and industry nurseries produced the other third. The State is now completing a third large nursery, but I am told that even with that new production we will still not quite meet the demand which already exists. In other words our property owners are, for the most part, decidedly forestry minded.

Of course, protection of this great forest resource is basic.

You are all aware of the progress being made in our cooperative forest fire control program since its inception under the Weeks law of 1911. You know of its expansion under the Clarke-McNary law of 1924. Through this program a great deal of State and private forest and watershed lands is being protected, and many benefits accrue to us as a result. Along with other Southeastern States Florida is now completing the organization of the regional fire protection compact which was approved by Congress last year.

But, increased effort by the forestry agencies and the continued support of Congress are needed in the forest fire protection program. It was enheartening to me, and I am sure to you, to note this year that the 84th Congress is apparently more forestry conscious than its predecessors. Of special interest to us was the item of $300,000 provided for expanded research in the long-leaf slash-pine belt extending eastward from east Texas to the Atlantic. Another notable item was the increase of over a half million dollars for cooperative fire fighting.

In 1954 throughout the Nation on State and private lands, there were over 168,000 fires, burning about 9 million acres. The damage came to about $45 million, without considering the loss in wages of woods workers, loss in values of processed forest products, and the loss of many other values that mean much to our economy.

None of us should be happy to learn that 77 percent of all the fires and 80 percent of the total burn occurred in the Southern States. Here, too, is where we have 70 percent of the total forest land area that is still without organized forest-fire protection.

Even though my own State of Florida is making much progress, with protection now applying to over 14 million acres, there are still about 6 million Florida acres without organized fire protection. It was on this unprotected area that more than 3.4 million acres were burned out of a total of 3.84 million acres burned in our State in 1954. In other words more than half of the unprotected acreage was burned over in 1954 whereas, even in that severe drought year, fire damage injured only a little over 3 percent of the protected areas. It seems to me that this 1954 fire-loss experience in Florida offers conclusive proof of the value of organized fire protection.

The forest industry in Florida is exceeded only by the tourist industry and agriculture as a source of income. Our forest products were worth in 1953 $368 million with three principal divisions as follows: $247 million, pulp and paper at the mils, $62 million, lumber, and $28 million, naval stores. More than 200,000 Floridans—workers and their families—are directly dependent upon forest products for a livelihood. So we have a big stake in our forest lands—they are decidedly worth protecting.

More than that, they are worth building up to even higher levels of productivity. We must have continuing research to devise ways of growing more and better quality timber.

Our State can be proud of its leadership in forest research. The work is done mostly at the research centers of the United States Forest Service, with the strong assistance of the Florida Board of Forestry and the cooperation of forest industries.

The Lake City Research Center is a mecca for naval stores men from all over the world. New methods of turpentining developed there are making it possible to get more gum with less labor costs. Tree breeding research at Lake City is beginning to produce trees that run twice as much gum as wild trees. These trees will be available for the turpentine orchards of the near future. The pulpwood industry, with its tremendous payroll in our State, has also much to gain from slash pine timber growing research on the Olustee Experimental Forest near Lake City.

In west Florida and portions of the peninsula, the Forest Service Research men are learning how to reclaim the vast acreage of scrub-oak sandhills for pine-timber production. This research will ultimately mean millions of dollars to west Florida's economy.

Fifteen million acres of wild land plus 3 million acres of improved pasture provide grazing for nearly a million beef cattle in south Florida. What needs to be done here is to learn how to utilize the forage that is available without deteriorating the resource. Research may be able to find out how to increase the amount of land available for livestock in the future.

There are nearly 4 million acres of cutover forest land in south Florida. Some of this will go into cattle production, but a great deal of it should be reforested by planting. Unfortunately, the wet summers and dry winters in that region kill off many of the trees, but this is a problem that I'm sure research can solve if we keep at it.

I've been talking mainly about Florida because that is the State I know best. But what is going on in our State is fairly typical of what is happening all over the South. Now, in winding up, I want to emphasize that the South is intensely proud of its forest industrial revolution. We've come a long way in a comparatively short time and the future in prospect has a rosy hue. We think that what is happening here is good and that our forest industry will continue to prosper greatly. Our progress has its roots anchored firmly in the soil. Like the tap root of a longleaf pine, these roots run deep. Our forest industry will need continuous care, of course, else the "roots" might wither and die. We shall, of course, have many problems to meet, many difficulties to overcome, but we are rapidly gaining more technical knowledge and the facilities to provide, through good forest practices, the care needed to safeguard these roots, which sustain such great values, I assure you that the South in our own interest and in the interest of the Nation will do everything within its power to husband well our expanding forest resources and to encourage even further expansion of "southern forestry, an industrial revolution with roots."

Award of the Order of the Southern Cross to Dr. Joseph F. Thorning

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Thursday, January 5, 1956

Mr. BEALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the recent speech of His Excellency, Ambassador João Carlos Muñiz of Brazil, awarding the Nation's Order of the Southern Cross to Marylander author, educator, and lecturer, Dr. Joseph F. Thorning, associate editor of World Affairs. All the people of the Free State of Maryland rejoice, I am sure, that the Brazilian Government, acting in the name of the citizens of that great Republic, has seen fit to give this encouragement to a Marylander whose labors on behalf of the good-neighbor policy have been manifold and persevering.

Ambassador João Carlos Muñiz, who invested Dr. Thorning with the insignia of this famous decoration, is widely and favorably known, not only throughout the Western Hemisphere, but also throughout the world. It was Ambassador Muñiz who took a leading and successful part in the movement in the United Nations that brought about the reestablishment of full diplomatic relations with Spain. As one result, Spain is now one of the new members of the United Nations. Dr. Muñiz is celebrated as a diplomat, a jurist, and a philosopher. It was fitting that he should preside at the ceremonies that honored a citizen-scholar of Maryland.

I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH BY HIS EXCELLENCY, AMBASSADOR JOÃO CARLOS MUÑIZ, OF BRAZIL, AT A DIPLOMATIC RECEPTION ON SEPTEMBER 26, 1955

Rev. Father Joseph Francis Thorning, in presenting to you, on behalf of the Brazilian Government, the diploma and insignia of the Order of the Southern Cross, with which Brazil signifies its recognition of your substantial contribution towards the divulgation in the United States of the values of the civilization and culture of my country, it is my pleasant duty also to tell my audience here of the affectionate interest which has marked your association with Brazilians over a period of almost 20 years. This is well evidenced by your articles relating to impressions gathered in your travels there, as well as by the contacts which you have constantly maintained with my fellow-countrymen, no matter how high or how modest their station in life; and, finally, by the frequency with which you have always tried to awaken the attention of the public toward the firm traits of historic solidarity existing between our two nations.

If, as André Maurois said, "a people is a mirror in which the traveller sees his own image reflected," your visits to Brazil and your knowledge of its people have enabled you to find spiritual affinities and an identity of sentiments in that land, marked at discovery by a mass and a cross—because Brazil, like your country, was born not from political conquest nor from economic expansion, but from a direct religious intention. In America, regardless of religious persuasion, the sentiment of faith and the concern over its dissemination have always been fundamental and intentional features. The great Lusitanian bard, Luis de Camões, touched upon this when he extolled "the glorious memory of those kings who fought to spread the faith and the empire through distant savage lands."

Yours is the spiritual group, which congregates mankind around the loftiest among its activities, that which takes man directly to God through prayer and a righteous life. Nevertheless, without neglecting your divine ministry, you have found the time to dedicate yourself to the missionary task of spreading light and truth among your fellow countrymen about distant lands, about this Latin America where Brazil became the object of your special attention.

It were idle to descant further upon your contributions to a closer state of relations between the American peoples. I will only refer to the tribute paid to you by the House of Representatives in 1951, when you were termed "a missionary of good will" and "a man whose name is synonymous with Christianity in Central and South America."

In making delivery to you of the insignia of the Southern Cross, in the degree of officer, I tender sincere wishes that you may long continue to serve the cause of the American community with the faith that characterizes your religious formation and with the dynamic enthusiasm peculiar to the teacher, thinker, and journalist that you are.

Address by Hon. Herbert H. Lehman, of New York, at Hanukkah Festival Sponsored by Israeli Bonds

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, January 5, 1956

Mr. LEHMAN. Mr. President, on December 15, 1955, I had the privilege of addressing the Hanukkah Festival at Madison Square Garden in New York City. I ask unanimous consent that the text of this address may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

From a full heart, and with a deep appreciation of the historic meaning of tonight's occasion, I say to you—and to all the world—"Shalom," peace be unto you. And in this greeting, I include the Arab world. I wish to all men, everywhere, the blessings of peace.

This is an occasion not so much for words as for deep and joyous feeling. While Hanukkah is a holiday of celebration and triumph, it is also a holiday of dedication. And tonight none of us is without a somber sense of the dangers which, at this very moment, confront our co-religionists in Israel.

Our concern for them is not based entirely on the fact that they are Jews and we are Jews. First of all, we are Americans. As Americans, we must have an abiding eagerness and a deep anxiety for the preservation of peace in the Middle East. As Americans, we must zealously strive, with hand as well as heart, to preserve the beacon of freedom and democracy that shines from Israel and sheds its light throughout the Middle East.

The fact that this light still burns undimmed impresses me as almost as great a miracle as the one which our spiritual forefathers witnessed ages ago in the Temple and which we commemorate tonight.

On this night let us make clear that the people of Israel are not isolated and alone, besieged and surrounded though they may be. Here and wherever men breathe free, there is an endless host who support the resolve of the Israeli people to defend and maintain their Republic, and the cause of freedom and democracy for which it stands.

This is not a night for captious criticism, but we cannot view with easy approval the irresolute policy of our own Government—a policy of half-measures and half-

answers—a policy of too little and almost too late—despite critical and growing dangers to the cause of peace and to our own vital interests in this crucial area of the earth.

Nor is this a night for intemperate anger or indignation, but still we must take note that while the voices of the Kremlin shrilly cry for peace, the hands of the Kremlin cynically feed the fires of war.

This is a night, an appropriate night, for affirmation of faith, and for prayer—faith in the power of right, and prayer for guidance and wisdom in the difficulties we face.

There are, of course, measures and actions which only our Government can take.

There are restraints and disciplines which only Israel and the Israelis can adopt.

Finally, there are actions which each of us, as individual Jews and individual citizens of America, can and must undertake.

Thus, as individuals, we can tribute to the UJA and buy bonds.

Tonight's gathering is a heartening token—indeed, a thrilling token—of the intention of Americans of Jewish faith, and of all faiths, to support this year's bond drive. As far as this activity goes, we are not going to let Israel down.

As far as our Government is concerned, the situation clearly calls for courageous and forthright action. We must assume a role of leadership that will rally the force and support of world opinion to the cause of peace and security in the Middle East.

A first order of action should be the negotiation of a security pact with Israel and any of her Arab neighbors who are willing to enter into such pacts with the United States.

Any such pact must guarantee the territorial integrity of Israel and of her Arab neighbors, too.

Our Government must press forward with its economic programs, such as the Johnson water resources development plan, giving assurance that our aims are unselfish, and that our sole interest is the welfare and security of all the peoples of this entire area.

Our Government should also give sympathetic consideration to any other proposals which might be made to alleviate tensions in this vital area. But we dare not lend support or comfort to so-called compromises which are not compromises at all, but would represent surrender of the vital interests of the State of Israel, and of the United States.

Let there be no Middle Eastern Munich.

In the meantime, in the face of the rapidly growing in-balance of military power, as a result of Soviet arms shipments to Egypt, we must supply arms to Israel. Israel must be enabled to purchase arms abroad.

But let us clearly understand that arms, and arms alone, do not furnish a satisfactory solution for the problems of Israel in her present plight.

There is only one end to an arms race—violence and disaster.

At the same time, it is true that while one side arms, the other must. There is only one thing worse than an arms race, and that is to lose one.

I believe that Israel must be kept strong, just as America must remain strong.

But armed strength alone is not even the answer for America. How can it be for Israel?

Israel must continue to represent, as she so nobly has in the past, a great moral purpose—the cause of democracy and freedom. And here I want to emphasize that in my considered opinion—and I hope Ambassador Eban will agree with me—the people of Israel must show restraint—as Jews have shown restraint for so many centuries—not only in order to endure and survive, but in order to remain true to the great moral heritage which is common to all who are of the Jewish faith. And though I drafted these remarks before the Syria incident, my remarks encompass that incident. Israel must continue, as in the past, to be the vibrant expression of a great moral idea and a great moral purpose. That idea and purpose must reflect in every act as well as word our people's traditional respect for the sanctity of each human life and of each individual human soul.

This moral purpose will give such a strength to the cause of Israel as to render impotent, in the end, all the designs of her enemies. Around this moral purpose, I am confident, the strength of the free world can be rallied.

In these ways, I believe peace will be assured in the Middle East, and Israel will be saved from the fate of Korea, or even worse.

The day must and will surely come when the present armistice lines that divide Israel from her neighbors will become permanent boundaries. These boundaries will then in turn cease to be passageways for marauders and infiltrators and become instead arteries for trade and commerce, those two historic ambassadors of peace and cooperation.

We pray that these lights, the lights of Hanukkah, will illuminate the path to such a day of peace and understanding, under the guidance of God, the Father of us all.

Your Congressman Comments

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, January 5, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a press release by Representative USHER L. BURDICK, of North Dakota.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

YOUR CONGRESSMAN COMMENTS

(By USHER L. BURDICK, of North Dakota)

OUR LACK OF FOREIGN POLICY

WASHINGTON, D. C.—We have made so many blunders in our foreign policy that it is going to be difficult for the taxpayers of the United States to repair the damage. These mistakes are chargeable to Democratic and Republican administrations alike.

Making an agreement with Russia to let her enter Berlin first was a sad mistake. All the trouble we have had because the Russians were in control of a section of Berlin and East Germany could have been avoided. It will be recalled that our armies were delayed several weeks in order to let the Russian armies enter first. Another mistake was begging Russia to get into the war against Japan when we had Japan licked to a frazzle. The result of this mistake was the Korean war, and after it started we would not let our soldiers fight, and as a consequence the Korean war is not yet settled.

Another huge mistake was withdrawing our support to Chiang Kai-shek, and thus compelling him to retreat out of China. How we could possibly have done this when at Casa Blanca we gave positive assurance that we would support the Nationalist Chinese army is something that cannot be explained. The story is well known of how General Marshall withdrew arms from the Nationalists as the agent of the administration. The result was that the Communist armies overran all of China.

Another project we put forth was the forming of the North Atlantic Treaty Organization, in which many of the countries involved did not want membership, and most of them have been like worms ever since. No country in Europe was as excited about the danger from Russia as we were. The next blunder was going down into the heart of Asia and trying to organize a number of countries to join in one central organization to defend all of Asia against communism. The result has been that Russia is now doing the same thing, and, like us, promising money, guns, and everything else if they will rely on her protection. Many countries, like England, the Netherlands, France, and Spain, for centuries have had colonial empires, where the people did not rule and were subjected to foreign dictatorship. Some of these empires have been given back to the people, but many still continue. When we woo France, for example, to join the NATO, we impliedly approve of the colonial empire of France. Immediately the Russians come in and promise the people self-government and brand us as supporters of the colonial system; and this promise, even though the Russians have no intention of granting it, is great ammunition against us. The papers report that Russia is making loans and furnishing guns to the Afghanistan Government and support of guns to those Moslem countries fighting Israel. This situation is apt to be the powder keg of a great uprising among the Mohammedans.

We have rested our security on the fact that we organized the United Nations and that through it wars could be prevented. But look at the record. The U. N. has devoted most of its time, outside of debating, to trying to establish peace among the Israelites and the Mohammedans. But what are the facts? The trouble still continues and is apt to break out into a great war at any moment. Russia backs one faction and we back the other, yet both the United States and Russia are brother members in the United Nations. We propose measures for peace, and Russia promptly vetoes our plans. But still we cling to this organization. The United States and Russia have been in a cold war ever since World War II ended, and yet we are both members of an organization dedicated to peace.

If every nation in the world were a member of the United Nations, do you think that would stop the Russian cold war? Far from it. The Russians had a lot to do about starting this organization and they have and will continue to use this forum as a propaganda base for their own intent to destroy capitalism. We have held meeting after meeting, but the disciples of Karl Marx, Lenin, and Stalin are right on the job to do what they intend to do, and that is to bring about the total destruction of capitalism.

Some people in this country are afraid that we, alone, cannot defend this country. I venture to say that with 10 percent of the money we are now showering upon every country on earth we could not only defend ourselves but be in a position to maintain at least one other country on the face of this earth where liberty and freedom is secure. If we follow that path which leads us into every squabble anywhere in the world, the time will come when there will be grave doubt of our ability to preserve this country.

Recently the papers carried the information that we are to dig up four billion for aid to foreign countries in the way of economic support and to supply arms. We all want to see the budget balanced, but we have about as much chance of balancing it and keeping the debt limit within the law as we have in making a successful round trip to the moon in a model T Ford.

It takes this kind of money to correct the mistakes we have made and are still making in our foreign policy. We speak of loans to this country and that country. I would rather have a page out of the harness section of a Sears, Roebuck catalog than to

have a note against any nation which we are showering with money. We should not dignify these injections of money by calling them loans.

If we give foreign countries anything, let us give them the things known here as surpluses. Brother Benson just woke up to this method of cutting down surpluses, but still we are so used to voting billions of giveaway dollars that this $4-billion donation will undoubtedly be passed.

The Voice of a Free Press

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, January 5, 1956

Mr. LEHMAN. Mr. President, the New York Times is a great, independent, patriotic American newspaper. It has served the people of the Nation faithfully for many generations, and today is serving them with courage, patriotism, and fairness. It has always been a tower of strength in the fight against communism and in the defense of the democratic principles which have made our country great.

Mr. President, this morning the New York Times printed a stirring and thought-provoking editorial entitled "The Voice of a Free Press." I ask unanimous consent that this editorial be printed, along with my own remarks, in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE VOICE OF A FREE PRESS

In executive hearings held recently in this city, in public hearings held last summer in Washington, and now again in public hearings held in Washington, a Senate subcommittee headed by Senator JAMES O. EASTLAND, of Mississippi, has been looking for evidence of what it considers to be subversive infiltration of the press. A number of employees of this newspaper have been called to appear as witnesses before the subcommittee.

We do not question the right or the propriety of any investigation of the press by any agency of Congress. The press is not sacrosanct. It is as properly subject to congressional inquiry as any other institution in American life. It is the inescapable responsibility of Congress, however, to make certain that any such inquiry be conducted in good faith and not motivated by ulterior purpose.

A few employees of this newspaper who have appeared before the Eastland committee have pleaded the fifth amendment. A few others have testified to membership in the Communist Party over periods terminating at various dates in the past. So far as we are aware, no present member of the Communist Party has been found among the more than 4,000 employees on our rolls.

The policy of this newspaper with regard to the employment of Communist Party members has been stated many times, and may be stated here again. We would not knowingly employ a Communist Party member in the news or editorial departments of this paper, because we would not trust his ability to report the news objectively or to comment on it honestly, and the discovery of present Communist Party membership on the part of such an employee would lead to his immediate dismissal.

In the case of those employees who have testified to some Communist association in the past, or who have pleaded the fifth amendment for reasons of their own, it will be our policy to judge each case on its own merits, in the light of each individual's responsibilities in our organization and of the degree to which his relations with this newspaper entitle him to possess our confidence.

We may say this, however. We do not believe in the doctrine of irredeemable sin. We think it possible to atone through good performance for past error, and we have tried to supply the security and the favorable working conditions which should exist in a democracy and which should encourage men who were once misled to reconsider and to reshape their political thinking.

We have judged these men, and we shall continue to judge them, by the quality of their work and by our confidence in their ability to perform that work satisfactorily. It is our own business to decide whom we shall employ and not employ. We do not propose to hand over that function to the Eastland subcommittee.

Nor do we propose to permit the Eastland subcommittee, or any other agency outside this office, to determine in any way the policies of this newspaper. It seems to us quite obvious that the Eastland investigation has been aimed with particular emphasis at the New York Times. This is evident from several facts: from the heavy concentration of subpenas served on employees of this newspaper, from the nature of the examination conducted at earlier hearings by the subcommittee's counsel, Mr. Sourwine, and from that counsel's effort, at those hearings, to demonstrate some connection between a witness' one-time association with the Communist Party and the character of the news published in this paper.

It seems to us to be a further obvious conclusion that the Times has been singled out for this attack precisely because of the vigor of its opposition to many of the things for which Mr. EASTLAND, his colleague, Mr. JENNER, and the subcommittee's counsel stand—that is, because we have condemned segregation in the southern schools; because we have challenged the high-handed and abusive methods employed by various congressional committees; because we have denounced McCarthyism and all its works; because we have attacked the narrow and bigoted restrictions of the McCarran Immigration Act; because we have criticized a security system which conceals the accuser from his victim; because we have insisted that the true spirit of American democracy demands a scrupulous respect for the rights of even the lowliest individual and a high standard of fair play.

If this is the tactic of any member of the Eastland subcommittee, and if further evidence reveals that the real purpose of the present inquiry is to demonstrate that a free newspaper's policies can be swayed by congressional pressure, then we say to Mr. EASTLAND and his counsel that they are wasting their time. This newspaper will continue to determine its own policies. It will continue to condemn discrimination, whether in the South or in the North. It will continue to defend civil liberties. It will continue to challenge the unbridled power of governmental authority. It will continue to enlist goodwill against prejudice and confidence against fear.

We cannot speak unequivocally for the long future. But we can have faith. And our faith is strong that long after Senator EASTLAND and his present subcommittee are forgotten, long after segregation has lost its final battle in the South, long after all that was known as McCarthyism is a dim, unwelcome memory, long after the last congressional committee has learned that it cannot tamper successfully with a free press, the New York Times will still be speaking for the men who make it, and only for the men who make it, and speaking, without fear or favor, the truth as it sees it.

Importation of Swiss Watch Movements

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Thursday, January 5, 1956

Mr. BEALL. Mr. President, because there has been much discussion and considerable concern over the increase in tariff on imported watches, particularly are we concerned over legislation, introduced at the last session under the sponsorship of the Treasury Department, designed to prohibit the remanufacturing or upjeweling of watches by American manufacturers.

We Marylanders are justifiably disturbed over the obstacles placed in the path of the importation of Swiss watch movements because of the effect such obstacles would have on the sale of Maryland tobacco. I think our position is very clearly explained in an article appearing in Barron's, a national business and financial weekly, dated December 26, 1955.

I ask unanimous consent to have this article inserted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EMPTY CASE: THE UNITED STATES WATCHMAKERS MERIT NO FEDERAL AID

The passage of time, we are reminded by the rapid approach of another New Year's Eve, is constantly with us. And so, it appears, are the woes of a handful of American companies, which, in a manner of speaking, earn their living from the fleeting seconds and minutes, the manufacturers of jeweled watches. Last week, as the sands of the old year were runing out, these firms filed an appeal with the United States Government, foreign competition, notably from Switzerland, is causing them serious injury, the domestic watchmakers averred. Unless Washington comes to their aid, they went on, in the form of higher tariffs, import quotas or subsidies, their industry sooner or later will go the way of the hour-glass and the grandfather clock.

This plea, it might be noted, is not exactly new. It has been voiced from time to time for over half-a-decade, recently with considerable effect. In mid-1954 the United States producers, with a powerful assist from the Office of Defense Mobilization, won an increase of 50 percent in the tariff on imported watches and movements. Since then, as official concern for their well-being has mounted, both the Treasury and Justice Departments, in their respective spheres, have taken steps to harass the Swiss. Such moves, it is argued, are vital to the well-being and safety of the United States. The facts, however, suggest otherwise. For the administration, in trying to cushion the domestic industry against competition, simply has struck a blow against the free economy. What is perhaps worse, it has undermined the principles of international

trade, to which this country is supposed to be unequivocally pledged.

Mainspring of the mischief, it seems, is a small group of medium-sized, old-line concerns which turn out watches containing movements of their own manufacture. Their quarrel lies with the far greater number of enterprises, including such well-known publicly held firms as Benrus, Gruen, and Longines-Wittnauer, which import the movements for their timepieces, add cases, and watchbands, and assemble them here. Over the years—since World War II in particular—the latter have captured a growing proportion of the market, especially in the lower and medium-price ranges. Lately they have been competing vigorously for the 17-jewel trade. As a consequence, out of an estimated 12 to 13 million jeweled watches sold in the United States each year, some 10 million contain parts or movements fabricated abroad. And so-called Swiss watches, which by and large happen to be American-made products with Swiss innards, have become a favorite target of the protectionists, in business and government alike.

The dispute between the two horological camps is a complicated one, involving wheels within wheels. These include, among others, the intricate issue of upjeweling or the practice of adding extra jewels to watch movements which, to qualify for lower duties, are imported with some missing. In a not unrelated hassle, the Swiss have been charged by the Department of Justice with restraint of trade and monopoly in the sale of watchmaking equipment. Where the right may lie in these controversies is something for customs men and lawyers to decide. But regarding the plea for greater protection, which is, after all, the heart of the matter, the domestic watchmakers apparently can make a case on neither economic nor military grounds.

On the first count, it is true that the importers have captured the bulk of the market. But that market today, owing largely, as it happens to the importers' own efforts, is vastly bigger than it was in the placid days of the dollar Ingersoll. In the past 25 years the population of the United States has increased by around one-third; the annual sale of watches, however, has more than doubled. This burgeoning of demand has resulted in part from the many technical innovations, such as self-winding and calendar timepieces, which the importers have introduced in this country, as well as from their aggressive merchandising and imaginative styling. It also has been stimulated by the higher quality and lower price of the imported product, made possible by a Swiss watchmaking technology which, in its modest sphere, resembles in some measure that of Detroit. In any event, the United States companies, while not perhaps as prosperous as they should like to be, on the whole are making money. Moreover, obviously spurred by the competition, they have devised some new timekeeping twists of their own lately, including a watch with a numbers cylinder instead of a dail, and, possibly for next year, one which runs electronically.

None of the foregoing suggests that the domestic industry has suffered grave financial injury. The military argument, though supported by ODM and its civilian chairman, Arthur S. Flemming, can be exploded just as quickly. In fact, the Defense Department in a report published last year (and ignored by all hands since), blew its flimsy logic sky-high. Watchmaking, to be sure, is a skilled craft, which in past emergencies has served the Armed Forces well. However, the Pentagon was at some pains to point out, times have changed. The watchmakers today can supply barely more than 10 percent of the timing devices needed for mobilization. As a clincher, the Defense Department has revealed that anything made by the industry is readily obtainable from a number of other sources. Greater protection for the watchmakers, in short, may benefit Elgin, Ill., or Waltham, Mass., but it will be of precious little help to the rest of the country.

What is being urged, in fact, is apt to do positive harm, to producer as well as consumer. In the realm of international trade, there is no way for government to favor one group except at the expense of another. In this case, the immediate victim was the Swiss watch industry, not to mention United States prestige abroad. More recently, however, the pendulum has swung the other way. Thus today the growers of Maryland tobacco, who sell the bulk of their output to Switzerland, suddenly have discovered that their market is in jeopardy and are up in arms about it. Such cause and effect are inevitable. For protectionism, in watches or anything else, must in the end make everyone poorer; only free trade among peoples can serve the general interest. It is time the administration reaffirmed its belief in these truths.

Equality of Opportunity and Freedom

EXTENSION OF REMARKS

OF

HON. BARRY M. GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Thursday, January 5, 1956

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered at Tucson, Ariz., on October 30, 1955, by the Assistant Secretary of Labor, Hon. J. Ernest Wilkins.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The right of every American to have a meaningful level of equality of opportunity and freedom is inherent in our form of government. We must face this fact squarely in order not only to vindicate the hopes of the founders of this Nation, but also in order to demonstrate to the peoples of the rest of the world our firm belief in this right. If this right is to be preserved we must respect the dignity of every human being. Unless this right is maintained and strengthened in the United States of America, how can we ever expect the fulfillment of full freedom in nations torn with suspicion, subjected to dictatorial governments and constantly engaged in a never ending arms race toward total destruction?

Those who insist upon thinking of groups in terms of individuals would do well to give thanks for the great and lasting benefits given to all of mankind by "the rejected." I would not here attempt to catalog the accomplishments which have emerged from our minority peoples. But I would remind you that the giant who has emerged in the fight against the dreaded polio disease—Dr. Jonas E. Salk—is a Jew. He is the same kind of person still barred from living anywhere he might please by the practical effect of obnoxious restrictive covenants. He is still not acceptable in country clubs and social organizations whose members search for superiority in caste aristocracy.

Irony also attends the work of the late Dr. Charles R. Drew, of Howard University, who perfected the process of preserving blood plasma. Many soldiers owe their very lives to this man they would not ask into their homes except by the back door for fear of violating the racial taboos that have too long blinded our people to individual worth.

But more and more, and in countless ways, our individual efforts are unifying all of our people in the common bonds of mutual understanding, faith and respect. The ability of differing peoples to live together in a stable, enduring and beneficial society is being proven in every corner of our land. It is evidenced in the greater number of businessmen who are realizing that when they hire for skill and talent alone, they best serve their personal interest and that of the Nation. It is reflected in the admission practices of most of our colleges which have eliminated the abominable quota system, a device to exclude qualified students from professional life simply because of the color of their skin, their religious faith, or their national origin. We see it in the awareness of the average American who now realizes that for his own well being he cannot regard as harmless indulgence giving vent to his irritation on Americans of foreign parentage or those of a particular creed or color.

In this growing atmosphere of amity and brotherhood our individual efforts have been greatly aided by community relations groups and national organizations. They have contributed significantly to adult education and social science research, to the protection of democracy without sacrifice of civil rights, and to the techniques for reducing group hostility.

The confidence with which everyone is facing the future is indeed encouraging. While most people are satisfied, they know that something is causing this good fortune which they cannot fully comprehend. I did not realize myself the reason for all of this until after President Eisenhower was stricken. I was then fully awakened to the fact that the propelling force in all of this new outlook is President Dwight D. Eisenhower.

Immediately after the President's heart attack the country and the world were stunned. Everything semed to become paralyzed temporarily. The stock market began to do funny tricks, business slackened and there was general bedlam among the peoples and the nations of the world. While we in the United States do not subscribe to the principle of the indispensable man, we now realize the terrific influence which Dwight D. Eisenhower is having on the every day lives of all of us. As he regains his health it is gratifying to see the confidence return both at home and abroad. President Eisenhower is of the people, for the people and with the people.

Now to examine the record of this great world leader who has set the atmosphere for this overwhelming world confidence among men and women—whether they be laborers, housewives, business men, professional people, farmers or what have you.

When this administration took office on January 20, 1953, the world was in turmoil; we were at war in Korea. President Eisenhower said while campaigning—"I pledge a firm consistent foreign policy with one primary goal—the attainment of peace in the world for ourselves and for all free people."

Under his administration the 3-year-old Korean war was ended in July 1953, just 6 months after he took office, and our boys are home again and living normal lives.

Before his election our great President said that he pledged "that the full resources of our new administration will be thrown into the battle against inflation. Only if the steady whittling away of the value of the dollar is stopped can our farmers, or factory workers, white collar workers, or our aged find any security in their savings, social benefits, or pensions."

The average wages of American workers have reached new highs under this administration. Factory workers' wages in Septem-

ber 1955 were at an all-time record high of $77.90 a week. The cost of living has been stabilized so these increases in pay really mean something to the worker. All economists agree that a new record in goods and services will be reached before 1955 bows out. Nearly 65 million Americans are now on jobs; more than ever before in our history. Said AFL President George Meany, "American workers have never had it so good as right now."

Mr. Eisenhower promised that the "social gains achieved by the people, whether enacted by a Republican or Democrat administration, are not only here to stay but are here to be improved and extended."

The Department of Health, Education, and Welfare was established April 11, 1953. The Social Security Act was amended to extend old-age survivors insurance to 10 million more persons; benefits under this act were increased to all. A 3-year program of Federal aid to the States for facilities for the aged, chronically ill, and disabled was inaugurated; and other proposals made by President Eisenhower to provide schools, highways, and better health for a stronger America were not acted upon by the Democrat Congress despite pleas from the President.

Mr. Eisenhower said, "I pledge that I will support and strengthen, not weaken, the laws that protect the American worker. I will defend him against any action to destroy his union or his rights. I will enlist every resource, of private industry and of the Federal Government, to protect him against the awful consequence of depression and joblessness. I will work unceasingly to build an economy that will maintain for him a high level of wages with steady purchasing power so he and his family can share fully in the comforts of American living. Finally, I pledge that I shall strive to conduct myself so that at the end of my service the workers of America can honestly say: 'He has been fair. He has been my friend.'"

The AFL reported at its executive board meeting in Miami this year that "agreements were reached with fewer strikes and less work time loss in strike action than in any year since World War II." The A. F. of L., in that same report said, "But the increases in (wages) 1954 while modest, generally provided more of a gain in real wages than increases in other postwar years, for they were almost entirely over and beyond the amount needed to compensate for the rise in the cost of living."

Mr. Eisenhower said, "I pledge that if elected the President of the United States I will serve all the people irrespective of their race, creed, their national origin * * * I pledge to devote myself toward making equality of opportunity a living reality for every American. There is no room left in America for second class citizenship for anybody." He has kept his promise on this civil rights front. His effort in this field has been one of his brightest and most outstanding achievements. Our great President promised that he would "search for merit wherever it is. I will search for the qualifications needed to serve the United States well and if, in a particular field, I can find someone whose appointment would give reassurance to the great body of Negro men, I should like very much to do such a thing. * * *I tell you that there will never be anybody around me on whom I depend, whether I am a private citizen or an official, who is going to take what I consider a reactionary view." In keeping with this promise some 250 Negroes have been appointed to important jobs in this administration and thousands of others have been given smaller jobs.

The past 33 months of our American history has marked the greatest advances in social gains in the life of our great Nation. Out of Washington during this short period of time have come orders, decrees, and edicts that have restored to the largest minority segment in America some of the human dignity inherent in their birth but denied them in their daily living because of man's inhumanity to man. Out of Washington during this period has come the trumpeting of a new spiritual, moral, and political concept of the right of all Americans to walk the streets of this Nation in dignity and in peace, unfettered by any restricting bonds of race, color, religion, or national origin.

May I recite briefly just a few of the major orders that have come:

1. Segregation at Army post schools abolished by Executive directive.

2. Employment discrimination in District of Columbia service contracts, and segregation in eating places, outlawed.

3. Segregation in United States naval installations in the South ended.

4. Racial discrimination effectively banned on Federal contract jobs by the President's Government Contract Committee.

5. Segregation ended in major veterans' hospitals in the South and labeled "undemocratic, uneconomical, undesirable."

6. Committee on Government Employment Policy appointed to eliminate discrimination because of race, color, reliegion, or national origin in the employment of or in the upgrading of employees in the Federal agencies themselves.

7. Segregation abolished in District of Columbia recreation facilities 1 day after the Supreme Court schools decision.

8. Appointment of more than 250 Negroes—on the basis of their eminent qualifications—to high positions in the Federal Government, including many first-time appointments.

9. The historic decision of the United States Supreme Court outlawing segregation in public-school education.

In evaluating this great victory in human progress I am appalled that so few have acknowledged one of the vital human elements that made this epochal triumph possible. We have heaped praise on the brilliant and victorious lawyers who carried the segregation cases to court; we have extolled the virtues of an eloquent and enlightened court; we have acknowledged the hard, arduous, persistent, courageous 40 years' effort on the part of the National Association for the Advancement of Colored People; and we have cast grateful glances in the direction of any and all who made a contribution. But, in my opinion, few have recognized or publicly acclaimed the essential and conclusive work of one great citizen who in a large measure fashioned the atmosphere and climate in this country so that the kind of decision the Court rendered could be possible and accepted with calm and equanimity. I am speaking, of course, of the President of the United States.

I am happy to be able to quote from a speech made by the distinguished Senator from this State, Senator GOLDWATER (who is performing such an excellent job in furthering social progress in the Nation), who, in this city, in discussing the matter of civil rights before the Tucson branch of the NAACP on October 12, 1955, said, "This is a report on what has been accomplished for all Americans, because I don't think we should continue to look on Americans as a Nation of minorities and majorities, but rather as a Nation dedicated to the proposition that all men are created equal and that they are endowed by their Creator with certain inalienable rights, and that among these are life, liberty, and the pursuit of happiness. I believe we should recognize in these great words of Jefferson the source of our freedom and the fact that freedom given by God is given to all people whether they be white or black, or Catholic, Protestant, or Jew." And may I respectfully add to the distinguished Senator's words the following: If the United States of America is to continue in its role of leader of the free peoples of the world, two-thirds of whom are nonwhite, it must more and more practice at home the wise philosophy enunciated by Senator GOLDWATER.

One could talk on and on about the many significant social changes that have taken place during the past 33 months, but I realize every speech must close at some point. I do, however, want to mention briefly before closing two very significant proposals made by President Eisenhower in the area of world peace. One was his Atoms for Peace proposal launched at the meeting of the General Assembly of the United Nations. This proposal earned for President Eisenhower the gratitude of the entire world and reflected his recognition and that of his administration of the fact that the problem of peaceful uses of atomic energy is both important and of primary interest to the entire world. The other was President Eisenhower's celebrated disarmament proposal made at the Geneva Summit Conference. The 10th General Assembly of the United Nations will consider this proposal and if agreement is reached, the nations of the world and humanity will be freed from the dangers of surprise attacks.

A nation that has made such great advances in tearing away the barriers of time and space through technological brilliance certainly must have the force, courage, and intelligence to continue the process of continuing and extending the social gains that have come to all Americans in less than 3 years.

In no other nation in the world's history have a people so nearly approached the realization of full freedom and equality for all its people as in the United States. The American people have demonstrated great courage and wisdom in the social progress thus far made. I see no reason why we cannot continue to demonstrate our ability to complete the solemn responsibility of every loyal American to bring full and complete justice, freedom, and equality of opportunity, and an abiding peace and happiness to all of the peoples of our great Nation.

Not All That Meets the Eye

EXTENSION OF REMARKS

OF

HON. WILLIAM H. NATCHER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Not All That Meets the Eye," which appeared in the January 3, 1956, issue of the Owensboro Messenger, of Owensboro, Ky.

The editorial is as follows:

NOT ALL THAT MEETS THE EYE

Taking a leaf from the United States, the Soviet Union is emphasizing firepower over manpower in its expenditures for armed forces next year.

A reduction of 8.5 percent in defense expenditures just announced is not all that meets the eye. If it aimed as the announcement says at reassuring the world of the Soviet's peaceful intention, it would have shown a much deeper cut.

In the first place, the unilateral cut of 640,000 men from the armed forces should have brought a 20-percent reduction in expenditures. Secondly, prices charged the Soviet Government for heavy industrial products were reduced last April and the ruble

buys more heavy goods. Similarly, there was a price reduction in food and clothing. Were all three of these developments truly reflected in the budget, there would have been a sharp decline.

The truth is inescapable. The Soviet Union is shifting from cheap cannon fodder to high firepower. It is investing in new weapons, to match the highly effective United States forces. Instead of cutting its military expenditures, the Soviet Union will be increasing them next year, and will be buying more, not less, military power.

Arseny G. Sverev, the Soviet finance minister, told the Soviet National Assembly "the reduction in military appropriations means the Soviet Union, not only in words but in deeds, shows its concern for lessening world tension and insuring peace and international security." But it was significant that he drew the loudest applause for his reference to the tour of India, Burma, and Afghanistan made by Communist Party Chief Khrushchev and Soviet Premier Bulganin. They tried to create disharmony and alienate South Asia from the West and create a new Communist sphere of influence, in the new-type Soviet colonialism fast replacing Britain, which recently granted independence to India and Burma and has long befriended Afghanistan.

Military Liberty: Antidote for Communism

EXTENSION OF REMARKS

OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE SENATE OF THE UNITED STATES

Thursday, January 5, 1956

Mr. MARTIN of Iowa. Mr. President, in the ideological debates accompanying the post World War II struggles between the East and West too little has been published as to the superior spiritual basis and philosophical resources of the free world. It is thus highly gratifying to see recognized by a responsible official the truly American concept of "militant liberty" as the antidote for communism, which is both international and militant.

In a notable address in the city of Washington on October 25, 1955, before the Second National Conference on Spiritual Foundations, Adm. Arthur Radford, Chairman of the Joint Chiefs of Staff, presented this thesis.

Mr. President, I ask unanimous consent to have his inspiring statement published in the Appendix of the RECORD.

There being no objection, Admiral Radford's address was ordered to be printed in the RECORD, as follows:

THE MIND AND THE SPIRIT IN NATIONAL SECURITY

(By Adm. Arthur Radford)

President Eisenhower recently issued a widely publicized Executive order to announce a code of conduct for the members of the Armed Forces.

In brief, pointed terms, the first article of this code said:

"I am an American fighting man. I serve in the forces which guard my country and our way of life. I am prepared to give my life in their defense."

I believe most of you realize this is written in the form of a creed. Possibly some of you feel that it is written mostly for those of us in uniform. If so, you are not wrong. It is written as a guiding precept to be followed by the men in our Armed Forces.

I would suggest, however, that this creed could very well be a part of every American's atttiude. There is no hidden meaning, nor is there lack of meaning, when you pledge: "I serve in the forces which guard my country and our way of life." These words are the key to the part played by the mind and the spirit in our national security. They signify: militant liberty.

Ladies and gentlemen, every American should be dedicated to this mission. It is not sufficient for only a relatively few to defend the United States. In our present peril, people everywhere must unite in the fight against militant international communism, or any other threat to our American way of life.

What is this American way of life of which I speak? You know it and I know it. We have lived it and enjoyed its benefits. But how can we define something so nebulous?

Language is sometimes a peculiar thing. Sometimes it plays tricks on us. The word freedom has far different meaning when spoken from Communist lips. And in American speech, that word may become so loosely used that its meaning begins to wear thin and to become vague.

It has become increasingly apparent to me since World War II that men and nations who want to remain free must understand freedom and be able to explain it—by their example as well as in their own words.

It is obvious the Communists have made amazing gains, largely because they know what they believe, why they believe it, and can explain it. They are educated in it and completely versed in it.

On the other hand, we who are free have many times been incoherent or have lacked the verbal ability to explain or defend completely what our way of life really is. We must know what we mean by it. We must be convinced that it presents the very best way of life in today's world—and I think we are. But we must be able to explain this conviction to others.

FREEDOM

My own understanding of the American way of life is manyfold. First it is freedom and liberty.

Freedom began with a belief in human dignity, and it grew with the history of the world. Often it came in conflict with tyranny and despotism. Often it was knocked down, but always it arose to fight again. It would fight, and lose, and then fight again.

We learned this in history when Moses stood before Pharaoh and said: "Let my people go." We read it again when the barons stood before King John and the Magna Carta was embodied into laws. We lived it still again in the epic of Valley Forge.

Our Founding Fathers were adept at choosing the right words to explain the meaning of our way of life. Thomas Jefferson called it "life, liberty and the pursuit of happiness." Patrick Henry summed it up when he said: "Give me liberty or give me death."

All of you know well the other meanings of our freedoms. They are all part of the American way of life: freedom of religion, freedom of the press, freedom of assembly, freedom of speech, and many more. We have lived with these freedoms so long, and have enjoyed them so much, that we are prone to take them for granted.

FAITH

A second primary ingredient in our American way of life is faith. Faith is essential. We must have it.

The New Testament calls faith "the substance of things hoped for, the evidence of things not seen." (Hebrews 11:1.) Let me repeat that. Faith is "the substance of things hoped for, the evidence of things not seen."

Faith is our belief in the equality of man in the sight of God. It is our belief in what Alexander Hamilton referred to as "the sacred rights of mankind." Far beyond the point of lip-service, we must all believe that each and every human is entitled to life, liberty, and the pursuit of happiness. These are the "substance of things hoped for."

That cold winter at Valley Forge was truly an ordeal. The suffering from freezing and starvation almost led American troops to abandon their cause. Faith in their God; faith in their great leader, George Washington; and faith in the righteousness of their cause inspired the courage with which these men were victorious in their hour of trial. These are the "evidence of things not seen," to return again to the words of the New Testament.

Without such faith, we could not be ready, as written in the code of conduct "to give my life in their defense." But with it, we can meet successfully any future hour of trial.

RESPONSIBILITIES

Now, faith in the principles upon which this Nation was founded automatically implies a third important element of the American way of life, namely, the individual acceptance of responsibility to defend these principles against any threat.

To the young person growing up in a country such as ours, it is to easy to consider the rights of man as accepted facts rather than as prizes to be won. The world can too easily seem his for the taking, without personal effort.

The lessons of history, however, teach us otherwise. History is replete with instances to prove that nations who take their liberty for granted are apt to fall prey to tyrannical forces, from within as well as from without.

For every freedom there is a corresponding responsibility. If a person denies his responsibility, he runs the risk of losing his freedom. If he accepts his responsibility, he can do much to perpetuate freedom for generations to follow.

In this same vein, teaching a person to recite the Declaration of Independence and the Bill of Rights by memory, line by line, word for word, is not enough, for you could teach a parrot to do that.

Instead, teaching him to understand the meaning of liberty is much better. It is all important. We should always give him a "Bill of Responsibilities" to go along with his "Bill of Rights," and at the same time, instill in him a spirit of service to God and country.

SPREADING THE WORD

Having established faith, responsibility, and freedom as the three elements of the American way of life, I am concerned with relating the whole to the concept of the mind and the spirit in national security. How do we go about perpetuating this American way of life, for us today and for our children tomorrow?

An important feature in the multifaced Soviet threat has been their conviction and complete command of their doctrine. Their successes have been achieved in great part by the subversive appeal of an artful logic, effectively spread by organized zealots. They have denied spiritual values and pretended to show that following the Communist system is the dynamic way to economic security for the masses. They have associated the United States with status quo powers whose only motivation is to hold onto the bounties they already possess.

Thus, the free world, in spite of its greater resources and spiritual values, has been sometimes outmaneuvered. Too many times we who are free have seemingly lacked the understanding conviction with which to defend our way of life.

The answer lies in the heart, the mind, and in the spirit of all Americans. We must teach a better understanding and appreciation of the American way of life; we must rebuild the conviction that our path is the closest to that which God would have us follow, that it is truly worthy of personal sacrifices.

We must spread the word, both at home and abroad. We must call on the good offices and influence of the home, church, school, and Armed Forces, to develop the sound minds and dedicated spirits upon which our national security is fundamentally based. We can take our cue from Nathan Hale, who, when asked by his captors if he had any last words, simply said: "I only regret that I have but one life to give for my country."

You, ladies and gentlemen, are among the teachers. By virtue of the great wisdom you possess, you are able to wield your power and influence on people everywhere. Therefore, you have perhaps a greater responsibility to freedom.

Yes; you are accountable. You are accountable for your use of freedom and your powers to teach. Through your patriotic dedication, you can rekindle the fires of understanding conviction so that all Americans will proudly dedicate themselves to the words of our Founding Fathers in the Declaration of Independence:

"And for the support of this Declaration, with a firm reliance on the protection of Divine Providence, we mutually pledge to each other our lives, our fortunes, and our sacred honor."

This, ladies and gentlemen, is the mind and spirit in our national security.

Thank you.

Removal of Controls Would Not Eliminate Surpluses

EXTENSION OF REMARKS

OF

HON. WILLIAM H. NATCHER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Removal of Controls Would Not Eliminate Surplus," which appeared in the December 29, 1955, issue of the Leitchfield Gazette, of Leitchfield, Ky.

The editorial is as follows:

REMOVAL OF CONTROLS WOULD NOT ELIMINATE SURPLUSES

There are many farmers who believe high-price supports have caused the present surplus and ensuing low prices on their products; at least that is the impression gained from the recent Farm Bureau Convention in Chicago. It is possible, though, that the delegates mirrored political rather than practical thinking. The idea that if support prices are abandoned, the surplus will vanish, has found its way into the thinking of persons who have not checked the records. During the twenties when general prosperity was at a high level, farm products brought less than a living wage to their producers, and there were no support prices then, yet the ruinous prices were attributed to overproduction.

Surpluses of farm products followed by depressed prices are not new; in fact, they have been a recurring plague since man learned to produce more than he can use. Price supports without crop controls tend to aggravate the condition of unbalance, but it would not be fair to assume that they are the sole cause. They can add to surpluses if no real move is made to limit production.

Even persons who once advocated no controls at all have altered their thinking, proposing an outright subsidy to farmers to take land out of production. It should have been apparent to them long ago that farming is a large and diversified occupation, with little hope for limiting production to market demands unless there is some sort of authoritative control. Farmers themselves have favored these controls in every vote where the issue is between controls and unlimited production which could lead to low prices.

In developing a solution to the farm problem, nothing is gained by blaming surpluses on legislation of recent years. The goal should be to improve this legislation or abandon altogether the program of providing stable markets for products of 12 percent of the Nation's population. Dropping controls possibly would mean a greater exodus from the farm and eventual removal of the surplus under laws of supply and demand. But would it be best for the country to allow this 12 percent only the choice of selling their products below cost or entering some other occupation more remunerative?

Aviation and Transportation Problems

EXTENSION OF REMARKS

OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Thursday, January 5, 1956

Mr. DIRKSEN. Mr. President, on December 8 Mr. Louis E. Leverone, of Chicago, deilvered an address before the aviation committee of the Decatur Chamber of Commerce at Decatur, Ill. Mr. Leverone served several terms as president of the National Aeronautics Association, is presently a director of that organization, and is recognized as an able authority on national aviation problems. His address is therefore not only authoritative but very timely, and points out a number of aspects of the overall aviation and transportation problem which will prove useful and constructive. I therefore submit his address for inclusion in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Within recent weeks, the largest public borrowing of all times was successfully completed in our Nation's money marts. This underwriting covered the financing of the Illinois toll-road program, and its success gives the assurance—in the months and years ahead—that our State will be given those new arteries of transportation so vitally necessary for the future. To speed up travel time within legal limits—to eliminate travel congestion and to provide safer highways—are sufficient reasons for this very new program.

But there is a more basic reason why this toll-road program is tremendously important. Highways—lots of them—are the outlets for cars, trucks, and busses. The high level of production of the automotive industry has been one of the great sustaining bulwarks of our prosperity of the postwar decade. If Detroit is to continue to produce automotive equipment, then public agencies must supply the roads and highways to handle this increased traffic.

We may be very thankful to our alert and farseeing Governor—Bill Stratton. He saw the need and acted promptly. He had to fight down tremendous opposition but he did so successfully and we, the people of Illinois, are beneficiaries of his good judgment.

I only mention this in preface and as parallel of a very comparable problem which faces us in air travel. Similarly, we need the same kind of public leadership and sound planning to avert a very critical situation which is slowly but certainly developing in aviation. Here are sample headlines which have recently appeared in the daily press:

"American Airlines purchases $165 million worth of Boeing 707 Jet Transports;" "United Airlines places order with Douglas Aircraft for 30 DC–8 Jet Transports for $175 million"; "Pan American enters large order for DC–8's"; "National Airlines buys $36 million worth of Jet Transports," and et cetera, and so forth.

The question is, "Are we ready?" Do we have the necessary ground facilities in the form of longer runways and airports of greater area to handle this expansion? I don't think so. You may remember that the DC–6 was introduced to commercial transportation less than 10 years ago. At that time airline presidents confidently predicted that this aircraft would be the answer to high-speed transportation for the next 20 years. The advent of the DC–6 caused the airport planners to increase runway lengths from 4,000 feet to more than 6,000 feet. Different airport patterns were acquired and it was a matter of several years before the necessary ground changes were made to accommodate the six. But, what happened concurrently with this development? The DC–6 was surpassed in performance by the Super G Constellation the DC–7 and the Vickers Viscount. So, it becomes evident that the air transportation industry in itself failed to foresee the tremendous advance which occurred much sooner than anyone was willing to predict. But the history of aviation is full of incidents where even the most thoughtful planners have failed to estimate even their own projected aims. One of my favorite stories has to do with one of our great aircraft manufacturing companies and its pioneer president who was and is recognized as an all-time leader in this field. Early in 1947, a brilliant young engineer from this company predicted, in a speech before the chamber of commerce, that we would see the time when aircraft would fly at speeds of more than 1,000 miles per hour. Our pioneer friend was so incensed and so irritated by what he considered brash and irresponsible boasting that he terminated this boy's services immediately. Within 1 year after this incident, Larry Bell, Lt. Chuck Yaeger, and John Stack, were jointly awarded the Collier Trophy, the highest aviation award of the world for producing and operating the X–1, the first plane to break the sonic barrier for traveling, mind you, at 1,100 miles per hour which my good friend, Glenn L. Martin, hadn't believed possible. And, it goes the same way in many other instances.

But, to get back to my subject on our particular emergency, I should like to point out that the progress and improved technique of aircraft manufacture are not at all paralleled by comparable planning in the field of airport design and development. Every one of these new planes on order require greater takeoff runs than any aircraft presently flying in commercial service. If these new types of aircraft were placed in service tomorrow, only a handful of American cities would have airport facilities adequate to handle this air traffic. Here are

some current figures which might give you some food for thought. There are approximately 7,000 counties in the United States. There is a total of 6,921 civil airports currently certificated in the United States; that amounts to less than 1 airport per county. But let's break down this figure. Out of the 6,921 airports, only 1,216 are lighted. Only 1,373 are paved. So we see that more than 80 percent of our total number of airports in the United States are unlighted and unpaved. Furthermore, of the 20 percent which are lighted and paved, a very small percentage of these airports are adequate to even handle our present four-engine air transport. In other words, most of our present facilities can't even handle our present multiengine aircraft, to say nothing of those airplanes planned for the future. I am not including, of course, military airbases for, logically, it would seem that these bases must continue to be bastions of our defense program and may not even be considered for civilian or commercial purposes. What is the answer?

I should like to make a few points:

1. That because of the immensity of the problem, it can't be handled through private channels but must be handled through public agencies—Federal, State, or local—or any combination of the three.

2. The realization of this need must come from the grassroots, and must be encouraged and stimulated at the community level so that the people themselves will be educated to the need and the importance of such a program. At this moment, I should like to review what we in Illinois are actually doing about it. Back in 1942, when air travel was coming into its own, the Illinois State Chamber of Commerce, which I headed that year, established its first aviation committee, under Harry Neumiller, of Peoria. This committee, composed of community leaders throughout the State, sponsored and promoted the Illinois and Municipal Airport Act in the legislature and which statute was finally enacted into law. Through the Illinois Airport Authority Act, many cities in Illinois, have been enabled to build and finance their own facilities which has aided the commerce and prosperity of these communities. Even today, this particular legislation is regarded as a model by many other States who have patterned their own statutes along the same lines. But what happened to the aviation committee? It was disbanded several years ago because the communities had their airports and the members of the commitee felt the job was finished. In view of recent developments, it would appear that this was a premature assumption.

Other groups of local aviation enthusiasts seemed to have lost their interest and have fallen by the wayside. So, actually, we have no statewide civic group which is actively engaged in educating any large segment of the electorate, as a present problem.

Within the next 10 years at least $100 million will have to be expended in airport improvement within the boundaries of our own State if we are to keep up with progress. Some of it may be Federal grant and a substantial part of it may be obtained by local financing. There will be opposition, of course, as progress is always opposed and perhaps there will be those groups who will remark that the day of vertical ascent is upon us so that it would mean smaller and not larger airports. This is the kind of obstructionist thinking which tried to block the toll-road program, by the way.

We have too few leaders who can envision this progress; and not enough men of stature who realize that this is the golden era and the next 10 years may be the greatest decade of our entire history. We need men of courage and foresight who will accept these challenges and who will lead us to greatest peacetime prosperity.

One gentleman with an eye to the future, with whom I disagreed violently, politically, was former Mayor LaGuardia who I admired personally for his foresight on the subject of aviation. When the Little Flower announced plans for Idlewild, which was to cover an area, not of 40 acres but of 400, his detractors proclaimed him a candidate for the psychiatric ward. He had to fight his own associates to bring this program to completion and was able to see the New York International Airport in operation before his death. Today, Idlewild is the greatest international airport in the world and, believe it or not, needs further expansion from its original program which many claimed was overambitious.

I shall never forget the time that Mr. LaGuardia told me in Chicago that our city's airport was inadequate. This was in 1944 when he was a delegate to the International Civil Aviation Convention. As we sat in his hotel room, at the Stevens, he pointed to the lake front at 23d Street and said, "Fill in at that point and several miles out, and there will be an airport which will take care of Chicago at least for a few years." I told him that the idea had been discussed but that its cost—$160 million—seemed so high that the idea was abandoned. Today it seems that we should have heeded that counsel, for even O'Hare Field now open to public use, the two Chicago airports aren't going to be enough to handle our future traffic.

Perhaps we will finally build the lake front airport, but at a cost of somewhat more than $300 million. You will agree that this is a rather costly type of conservatism.

I hope that the time will arrive when every community of over 10,000 people in the United States is accessible to an airport, lighted and with hard-surfaced runways, to accommodate commercial aircraft. It is just as important to consider the economic advantages of airports as it was years ago to realize the need for hard roads. Don't forget that political action is aroused by alert public opinion and that public sentiment must be generated from just such groups as these. I am confident that in meetings like this, we can prepare material for editorial support of a constructive airport program and it will follow that our dreams and hopes will come to fruition.

Courier-Journal, New York Times Named on Every List in Survey as Among 10 Great United States Papers

EXTENSION OF REMARKS

OF

HON. WILLIAM H. NATCHER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article entitled "Courier-Journal, New York Times Named on Every List in Survey as Among 10 Great United States Papers," which appeared in the December 29, 1955, issue of the Courier-Journal, of Louisville, Ky.

At this point, Mr. Speaker, I would like to state that generations of Kentuckians have watched the modern growth of the Louisville Courier-Journal beginning under the leadership of Henry Watterson with the certainty that the Courier is one of the finest papers in the United States. It is gratifying to have our faith upheld by a jury of outstanding journalists who place it as one of the 10 greatest newspapers in this country.

The article is as follows:

COURIER-JOURNAL, NEW YORK TIMES NAMED ON EVERY LIST IN SURVEY AS AMONG 10 GREAT UNITED STATES PAPERS

What is a great newspaper?

In any group of intelligent journalists there would be difference of opinion as to what was meant by the question and there would be great variation in the answers. But if each journalist indicated some of the newspapers he especially respected, a pattern of greatness might be worked out.

Accordingly, a group of outstanding journalists was asked to suggest the 10 greatest papers.

There were 29 replies from editors of large and small papers, from every region, and from syndicated columnists working on a national scale.

Two newspapers appear on all the lists. They are the New York Times and the Louisville Courier-Journal. The next highest number of votes went to the St. Louis Post-Dispatch. Two newspapers share the next bracket—the Christian Science Monitor and the Milwaukee Journal. The Washington Post stands alone in the fourth bracket.

Tied for fifth place in frequency of mention are the New York Post, Des Moines Register and Tribune, Baltimore Sun, and New York Herald Tribune. Next come the Wall Street Journal and the Madison Capital Times.

Highly regarded by a majority of the journalists are the Toledo Blade, Denver Post, Raleigh News and Observer, Minneapolis Star and Tribune, Providence Journal and Bulletin, Kansas City Star-Times, Washington Star, Chicago Daily News, and Hartford Courant. Receiving at least one mention are the San Francisco Chronicle, Atlanta Journal, Buffalo Courier-Express, Newark News, Oakland Tribune, Los Angeles Times, Cleveland Press, and Philadelphia Inquirer.

Obviously, some of these choices are favorite sons, valueless to any serious study of the subject. In any case, the selections offer food for thought.

In general, it would appear that the outstanding newspapermen think of a great newspaper as one having the confidence of its public. That would include many of the smaller publications whose impact on public and craft is not as great.

Integrity, fairness, willingnes sto take up unpopular and unprofitable causes when circumstances demand, responsible leadership and the putting of public service above private gain were some of the criteria. With few exceptions, all the newspapers mentioned are financially stable. It would be difficult to be great otherwise.

There is a curious regional alinement in this selection. Of the 31 newspapers mentioned, only 1 is in the Deep South. Only three are on the west coast, each mentioned only once, and none are in the Pacific Northwest. On the other hand, cities lying along the old faultline between North and South—in the so-called border States—have more than their share of recognition on the list. Baltimore, Washington, Louisville, St. Louis, and Kansas City are all in this area.

It is also noteworthy that The Chicago Tribune, which calls itself the "world's greatest newspaper," is chosen by none of the successful journalists queried.

The editor who named the Los Angeles Times said he was tempted to recognize the Chicago Tribune, even though he frequently disagreed with it, but it was not on his list.

WHY WAS AREA SKIPPED?

One wonders why the Pacific Northwest was ignored by this group. Is it because we are not long enough settled to establish essential traditions? Possibly, but that could

apply to the Mountain States, where at least one of the candidates is located.

If our youth is a factor, then how would one answer the journalist who said that a generation ago he would have nominated the Portland Oregonian "or maybe one other in that area," but he could not do so now?

The number and size of dailies in a region must be a consideration; but Denver, in a sparsely settled area, is on the list, and journalists as far away as Colorado, Missouri, and California listed one Midwest daily of only about 40,000 circulation.

Perhaps some of our readers could offer a plausible explanation as to why we have no representation on the list. (Reprinted from Northwest Communications, based on a survey made by that publication, which is a product of the University of Washington, Seattle. The executive editor of the Courier-Journal was invited to vote on the 10 greatest newspapers, but did not do so."

Address by Hon. William F. Knowland, of California, Before National Association of Manufacturers

EXTENSION OF REMARKS

OF

HON. WILLIAM F. KNOWLAND

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Thursday, January 5, 1956

Mr. KNOWLAND. Mr. President, I ask unanimous consent that there may be printed in the Appendix of the RECORD an address which I delivered before the National Association of Manufacturers on December 9, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, fellow Americans, in 179 years our Nation has grown from a small colony of three million people on the Atlantic seaboard to a great world power with a population of 166 million extending from the Atlantic to the Pacific.

The American competitive enterprise economic system, which is represented in part by members of your organization, has provided our people with the most productive economy and the highest standard of living the world has ever known.

This growth and this economic productivity has taken place under our American Constitution which recognized that personal rights and property rights were and are inseparable.

No system of socialism, Marxian or Fabian, could have produced such a remarkable growth and development in a country that represents but 6 percent of the world's population.

Other nations have now, or did in the past contain, larger natural resources, more population, older civilizations, and wider geographic boundaries. So these alone or in combination do not represent the priceless ingredient that has brought us to our present position as a leader of the free world.

The catalyst is the American constitutional system wherein the Federal Government was created by the people and given limited and specified powers so it might not in turn make them subservient to an all-powerful central government.

Abroad and at home we face the challenge of those who would destroy us by Marxian brute power or by a Fabian process of sugar coating each Socialist pill to produce a devastating narcotic effect upon once free men.

Both the external and internal threats may be camouflaged until after the American people go to the polls 11 months from now.

That is why the year 1956 may become one of the great turning points of history.

A short time ago some at home and abroad were anticipating a release of tensions by a cooling plunge into the mirage of Lake Geneva rising from the desolate trackless waste of a Communist tyranny that today enslaves almost one-half of the world.

At almost the same time Soviet First Deputy Premier Kaganovich was laying down the hard line to the party faithful at a dinner on November 6 in Moscow:

"If the 19th century was a century of capitalism, the 20th century is a century of the triumph of socialism and communism."

A short time earlier between the last two Geneva meetings, a robust and ruthless colleague in the Kremlin hierarchy, Khrushchev, said:

"Anybody who takes our smile for withdrawal from the teachings of Karl Marx or Lenin is making a mistake.

"Those who expect this will have to wait until Easter Monday falls on Tuesday."

In language devastatingly frank, these spokesmen of the Kremlin have made clear to our diplomats and our people that despite vodka toasts and Communist smiles that political conclusions should not be drawn from social favors.

Their statements mean that to cheat, lie, and murder, to violate treaties and to destroy free nations are still a part of "the end justifies the means" policy of the Soviet Union and of international communism.

In the dialectics of communism it means that the struggle will continue not by the standards of civilized nations with an obligation to God and to humanity, but by the tooth, claw, and fang standards of Marx, Lenin, and Stalin.

For the past 12 years beginning at Tehran in 1943, through Yalta and Potsdam in 1945, to the Korean war and in 10 years of United Nations deliberations we have been compromised by our entanglements with the Soviet Union through accepting their words rather than requiring deeds.

Since the rulers of the Kremlin cannot renounce the Soviets' role as a spearhead for world revolution any agreement they enter into with the free world is fraudulent.

Lenin said: "Communists will disarm only after we have completely forced down and expropriated the bourgeoisie of the whole world."

Because of the Soviet threats we face, our defense budget for the next fiscal year has been reported at $34½ billion.

This compares with the total expenditures of the Federal Government from the day George Washington was inaugurated as President until we entered World War I in April 1917, which amounted to $24 billion.

A prolonged siesta of wishful dreaming and failure to face the facts with traditional American courage and commonsense can jeopardize the preservation of our Republic and the survival of human freedom here and abroad.

We should not forget the Biblical injunctions in II Corinthians:

"Be ye not unequally yoked together with unbelievers: For what fellowship has righteousness with unrighteousness? And what communion has light with darkness?"

We are in a struggle for the minds and souls of men. We dare not continue to compromise our moral position if we are to win this conflict.

We must win the cold war if we are to successfully prevent world war III.

A prolonged stalemate will break us economically and ultimately undermine both our military and political position.

If America goes under in this struggle we would take the whole free world down with us. There would be no one left to bale out this Nation or our allies.

As for the neutrals, they can enjoy that luxury only so long as someone else is helping to preserve international law and order.

How long is a retreat from principle to be tolerated by the people of the free world?

Or have we become so immune that we do not want to be reminded of the facts by the press, radio, or television?

Are we or our allies to become so bewitched by the Soviet tactics that we ignore their long-term strategy?

Is the doctrine "peace at any price" to so throttle prudent warnings that men will dare not speak out for fear their political future will be damaged if not destroyed?

"Peace at any price" means the ultimate communization of the world. It is far different than peace based on freedom and justice.

For if we accept this doctrine of "peace at any price" and they do not, it means that with their cynical and brutal measures they will pick off our allies one by one, first the smaller ones and then the larger. The neutrals will go by default.

If we dare not risk a conflict what will stop the ruthless men in the Kremlin from moving during the next 10 years, by external aggression or Soviet directed internal subversion, against Norway, Denmark, Western Germany, Italy, France, Korea, Japan, the Republic of China, the Philippines, Australia, Great Britain, or our own Territory of Alaska?

Ten years ago at the time of the Yalta Conference there were less than 200 million people behind the Communist Iron Curtain. Tonight as we meet here in New York there are over 900 million people who have lost their freedom to the most godless tyranny the world has ever known.

The world should have learned at Munich that appeasement is not the road to peace—it is only surrender on the installment plan.

Let us take just three significant examples of retreat from principle.

1. At Yalta in 1945 when Stalin demanded recognition of the Lublin Polish Communist Government, British Prime Minister Churchill declared that British recognition of the exiled free Polish Government in London was a matter of honor. Later, on the Soviet promise of free elections which they never kept and because of their adamant position the free world yielded.

2. In 1945 in the discussions leading up to the organization of the United Nations, the Soviet Union demanded membership for the Ukraine and Byelorussia. President Roosevelt protested and stated that they were no more eligible than any of our 48 States. Again the free world yielded to Soviet demands.

3. Previously on numerous occasions, the official representatives of Great Britain and the United States have declared that the Soviet attempt to force a "package deal" wherein qualified nations could hurdle a Soviet veto only by the admission of unqualified Communist ones was unadulterated "blackmail." Now in December 1955, the British and Commonwealth countries affirmatively support and we acquiesce by abstaining from voting on the issue. Again the free world has in the United Nations General Assembly yielded to an adamant Soviet position.

The shocking sequel to this shift is that at the United Nations headquarters the Representatives of the Republic of China were informed that if they used their veto right in the Security Council there would likely be a majority vote in the General Assembly to seat Communist China next year.

In any event, after the 1956 American elections the neutrals, the Soviet bloc and the British Commonwealth, other than Australia, have given strong hints that they will seat Communist China in the General Assembly.

I wish to say to you and to the American people that it is later than you think.

Communist China was an aggressor in Korea that inflicted 140,000 casualties upon us, including 35,000 dead; is now a violator of the terms of the Korean armistice, and is an extortionist that has sought to use American civilian and military personnel for bargaining purposes. I am opposed to the admission of Communist China into the United Nations.

Foreign policy is too important to be left to Government alone. It must be based on a fully informed public.

It is far more important that we save freedom for ourselves and our posterity than we save face for any United Nations member or diplomat.

As long as I have a voice and a vote in the Senate of the United States, I shall oppose diluting any of our rights under the American constitution with any form of world government, wherein freedom is compromised with totalitarian tyranny.

A sound national economy and a solvent Federal Government are essential prerequisites for successful domestic and foreign policies.

The Eisenhower Republican administration came into office on January 20, 1953, and has now been in office only 35 months. The previous New Deal administration had been in control of the executive branch of the Government for 20 years and the legislative branch for 18 years.

Among its accomplishments in the limited period of time that this Republican administration has held office are the following:

There are 65 million people gainfully employed which is the highest record of employment in the history of the Nation.

The previous Truman New Deal budget has been reduced by over 10 billions of dollars.

The American people have been given a 7½ billion dollar tax reduction, the largest in the history of our Nation.

The stalemated war in Korea was brought to an end.

Wage and price controls have been abolished to the encouragement of our free enterprise system.

The policy of this administration is to reduce and not increase Federal governmental competition with private enterprise.

It is the policy of the Federal Government to bring businessmen and business methods into the administration of our public affairs.

Since President Eisenhower took office in January of 1953, the gross national product is up 6 percent; production in factories and mines is up 4 percent; construction is up 19 percent; business investment in plant and equipment is up 4 percent; employment is up 2 percent; personal income is up 8 percent.

In October of this year retail sales reached the highest in history for any month of any year and amounted to over $15 billion.

The state of the Nation is good. To be sure there are certain agriculture, mining, and industrial areas that have not been up to the national averages.

We will not solve our agricultural problems by reenacting the 90 percent fixed parity legislation for the basic crops under which more than $7 billion of agricultural products were accumulated.

The American farmer understands agricultural facts as does the distinguished former Democratic Secretary of Agriculture, CLINTON ANDERSON, now Senator from New Mexico. At the November Texas Farm Bureau Federation meeting in Fort Worth, Senator ANDERSON said:

"No farmer should ever forget that during all the time from 1948 through 1954, when a great gap has opened up between national income and farm income, the price support program was pegged to a rigid 90 percent standard."

The farm problem needs thoughtful light from the farmers and sound economists rather than political heat for election-year purposes.

Prudent and thoughtful people in all areas know the importance of agriculture getting its fair share of the national income.

Our support program should give encouragement to quality production of basic and nonbasic crops rather than quantity alone.

We must also be careful that supports do not price American agriculture out of the world or domestic market.

We must renew foreign aid programs whereby taxes upon the American farmer, businessman and worker go to help finance similar crops or products at lower production costs across our borders or in distant lands and foreclose agriculture, industry and labor from the advantages of our historic markets.

The challenge our generation faces is to preserve man's identity as an individual. How can he be protected in his personal, political and property rights against overpowering business, labor or governmental mechanisms which would submerge him.

Every generation of Americans has desired to improve the well being of our people and leave to their children an even better land than they themselves found.

Our challenge is—to demonstrate that this can be better done by our American system of competitive enterprise rather than by an all powerful Federal Government exercising its taxing, price and wage control powers to make the Nation into the image designed by Washington planners.

Continued deficit financing leads to inflationary pressures that would bring on Federal controls of prices, wages and allocations of materials. In peacetime such a program would strangle free enterprise and be the road to socialism.

We have made progress toward a balanced budget, but to date it is not yet an accomplished fact.

When our budget is balanced I believe that sound fiscal policy would require a start on the repayment of the national debt.

It would take 280 years to pay off the national debt at a rate of $1 billion a year.

At the lower rate of repayment of $1 million a day it would take 769 years to eliminate the debt.

Under the circumstances, Congress and the administration should show prudence in advocacy of new spending programs.

The public may surprise both ends of Pennsylvania Avenue by judging the quality rather than the quantity of legislation recommended and passed.

As the Federal administrative structure grows, it becomes cumbersome, tends to be arbitrary and can be dangerous to our system of checks and balances.

In December 1944, it reached an all time high of 3,209,000, which is more people than constituted the population of our country at the time we won our freedom.

It is now 2,397,869 which is still a top-heavy Federal structure difficult for a President to administer, for Congress to check upon, or for the courts to safeguard equity and justice for the citizen in the multiplicity of decisions handed down by anonymous parts of a huge organization.

The Hoover Commission estimated that there were a total of over 2,500 commercial and industrial-type activities with an investment of $15 billion. The Commission recommended that 1,000 of these facilities could be eliminated without injury to our national defense or any essential governmental activities.

It was Thomas Jefferson who said:

"In questions of power, let no more be said of confidence in man, but bind him down from mischief by the chains of the constitution."

The American system of competitive enterprise is as essential to labor as it is to the investor and the general public. No segment of the national economy can all for long without infecting the balance, to the detriment of all.

Heavy tax burdens, Federal and State, have in many cases resulted in the forced sale of successful small businesses or partnerships to their larger competitor when death suddenly brought tax obligations of a confiscatory nature.

We need to encourage the broadening of our private property economic base.

The more we can encourage widespread stock ownership among the general public and among employees, giving them all added incentive in private enterprise, the better it will be in combatting those who would turn more and more to public ownership.

Early in this century, the enactment of antitrust statutes established traffic signals along the economic highway to protect the pedestrian public or the individual small economic business vehicle owner from the highpowered ones which were operated without a sense of public responsibility.

Bigness alone does not necessarily make for more efficiency or better and more thoughtful relationships with the union member, the stockholder or the general public.

No business or labor organization should have the power to strangle the economic life of 166 million Americans and by so doing endanger the whole free world of freemen.

But overpowering business or labor organizations are not the only menaces to the dignity of man as an individual.

Big and overpowering Government is what our Founding Fathers sought to guard us against. We have already skipped too far down this primrose path.

The following are guide posts for the preservation of our free institutions:

1. Maintaining our constitutional system of checks and balances between the three great coordinate branches of the Federal Government.

2. The division of powers between the Federal and State Governments and limiting the Federal Government to its specified powers and preserving States' rights.

3. Keeping the military subordinate to the civil authority.

4. Maintaining control of education on the State and local level rather than in the Federal Government.

5. Balancing the Federal budget and making provision for a gradual reduction on the national debt.

6. A maintenance of the same standards of fiscal rectitude in the treatment of our social security trust funds that the Government expects of private insurance companies. It is also important to keep in mind that inflation hits the recipients of benefits in both cases.

7. Encouraging our free enterprise system so that our people will be gainfully employed and new opportunities will be constantly opened up for our increasing population.

8. The maintenance of peace with honor. We must realize it is neither necessary nor desirable to try to remake the world in our governmental, economic, or social image. Neither international nor personal friendships can be purchased.

9. In legislative programs seek to encourage a prosperous economic climate for agriculture, labor, industry, the investor, and the public by which they can provide for current needs and future normal requirements from adequate wages and earnings. This should take place under our American enterprise system rather than by political parties bidding against each other for group favor out of the Public Treasury.

10. Insist that both parties and their candidates discuss the basic issues confronting this generation. The time for the public to know where candidates stand is before their nomination and election, not afterwards. The times are too serious and

the consequences too great to permit, this year or next, any waltzing around on the fundamental issues confronting us.

All Americans who believe in our political and economic system, regardless of their party affiliation, should join in the pledge of Thomas Jefferson, who said:

"I have sworn upon the altar of God eternal hostility to every form of tyranny over the mind of man."

The President—His Office and His Job

EXTENSION OF REMARKS

OF

HON. JOHN W. HESELTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. HESELTON. Mr. Speaker, the following is an address by the Honorable Sherman Adams, the assistant to the President of the United States at the dinner of the Advertising Council in honor of Clarence Francis, special consultant to the President, at the Plaza Hotel on December 1, 1955.

This address is worthy of the most careful consideration by each of us. It points up vividly both the challenge and the opportunity Americans have in supporting President Eisenhower's magnificent efforts to establish and guarantee peace in the world.

When I have a hard job or one which I do not know how to perform, I usually ask somebody how.

The answer to my query brought this—the first note—that I was to pay tribute to Clarence Francis for 1 minute. It seemed to me that Clarence Francis is worth at least a minute and a half. He is one of the few extremely able people in America who has never refused so far as I know, anything anybody asked him to do. When it was suggested that he was the best man who could be found to help liquidate a butter surplus of 365 million pounds he seemed surprised. I am satisfied he did not want the job, but he thought he ought to do it, and he did it.

If I had time enough, I would try to tell you just what he has done in giving a great lift to the business of selling off of commodities nobody wanted. It is quite a story. Yet there is still plenty of work remaining to be done. For instance, we own at the present time about 925 million bushels of wheat.

If Clarence Francis had been able to sell that, this meeting would have been called in the White House with the President at the head table. If he does it in 1956, we will give him the White House. If he can dispose of $7 billion worth of unneeded agricultural commodities that overhang the market in this country today, I even think he can be elected President of the United States.

Clarence Francis is one of the really superbly useful, dedicated Americans I know. His light has shone upon more than one field of intricately difficult administrative responsibilities. In public undertakings, his contribution has been outstanding. I can here give testimony to the fact that he is not only appreciated by yours truly, but by the staff, the Cabinet, and above all, by the President of the United States. This gives me the opportunity to thank Clarence Francis publicly, on behalf of the President, for his devoted spirit and generous undertakings.

What I have to say about the President deals largely with his recovery. This, I presume, is what you expect me to talk about. The President has a very large heart. Fortunately, this is a figurative statement, and not a pathological one. As everyone knows, he passed through a few years of great anxiety. Your doctors will tell you that you cannot have a substantial thought that does not have a physical reaction. Although our President was, on the statement of his doctors, in as good physical condition as any man of this age whom they ever saw, he did suffer an injury. That injury was caused by the stress of anxious years. In the doctors' view the most anxious years were those when his actions affected the security of his country, and the lives of American boys.

This explains a lot of things. In it you find the principal reason why the President has considered peace the great goal of his efforts since he was elected. Fundamentally, it is the reason why peace will continue to be the goal to which his full efforts will continue to be dedicated. And he will continue to devote himself to this goal as long as he continues to be President, and thereafter, I am sure, as long as his strength remains.

If you found yourself curious about the real condition of the President at the onset of his illness, you might like to know that the most curious person was the President himself. The first time I saw him after he was ill, he said, "If the doctors here didn't tell me differently, I would think this heart attack belonged to some other guy."

In any event, it is a fact that his recovery so far is thorough and complete. You can look forward to this particular case falling into that uninspired category of figures called average life expectancy, which means the President will probably live to an older age than you and I, that is, if you are a young man like myself.

Now the Advertising Council well knows what I think of it. For some time now I have been on the public record on this issue. To the best of my recollection, you were the most active post-election zealots of any organization in the Nation. Your emissaries, Mr. West and Mr. Repplier, were early Commodore visitors, and the lecture I got about the good deeds of the Advertising Council stood me in good stead. What I have since learned is that what they told me was the truth. The council, of course, is an indispensable mechanism. It not only has a head, but it has a heart, an attribute of the body of considerable significance these days.

The council is truly an organization devoted to the public interest, and here the public interest is more than a couple of fuzzy words. For you it means the use of your extraordinary talents and facilities for public enlightenment—to fulfill the need for common understanding of national urgencies of substantial importance to the peace, security, and well-being of our country.

The programs you have adopted are those whose success imposes a large measure of responsibility on the part of the Government. Therefore, they are a part of the business of the Federal administration, in short, the President's business. That you have effectively assumed the task of public information aspects of the giving of blood, for instance, the prevention of forest fires, the educational needs of our children, and the distribution of the public debt through United States savings bonds, all this has lightened the President's burden.

That brings up another subject. There has been a good deal said lately about lightening the President's load. I read recently that it was absurd that the President had to sign his name an average of 200 times a day. This is an inaccurate approximation. There are a considerable number of other misconceptions about the characteristics of his work.

A variety of ways have been devised by the Congress and the Constitution literally to require the President personally to make the major decisions. This is as it should be. No wise or responsible counselor would divest the Office of the demands upon it which determine the principal policy. Notwithstanding, over the years there have been added duties of signature, of directive, of decision which are in the nature of duties otherwise delegated, and which properly can and should be discharged by others. It is in this field that thorough attention is now being given toward the disposing of irrelevancies.

This by no means wholly meets the needs of the more perfect management of the Office. The physical competence of a man to carry the presidential burden is not determined by the number of times a day he must sign his name. Rather it lies more in the competence and judgment of his appointees, his Cabinet, his staff, and the agency chiefs to carry out their responsibilities and to discharge their trusts. The magnitude of his burden the President in great measure determines himself when he makes his appointments. The ability of a head of a vitally important Federal agency to do the work set out for him without continually needing to lean upon the Chief Executive often measures his stature and his usefulness as a public servant. Sometimes, from what I read, it seems that the importance of a man in the administration is metered by how many times a day he sees the President. Often the opposite can be the case.

The management of the presidential office is probably the most difficult task of its kind there is. Success in its initial organization is half the battle. It is how the presidential appointees conduct themselves that decides the dimensions of the burden of the Office of President. There is sufficient time without overburden for the necessary decisions, directives, yes, and signatures. There is no need to divest the office of its vital function and the extraordinary powers reposing in it. That is where they belong.

Now I come to my assigned topic. I approach it with some misgivings.

This summer I went to Berlin. There Ambassador Conant took me to see the great library John McCloy, formerly High Commissioner, dreamed of, and which he never saw until a few weeks ago. Here, hardly a stone's throw from the Brandenburg Gate separating free West Berlin from Communist East Berlin, close to the shambles of the Reichstag and the bombed out bunker of Hitler and Goering—a scant half mile or so from Stalinstrasse of East Berlin—stands a free library. There it is—modern, beautiful, free. Books, by the thousands, a cultural citadel for anybody who can read in whatever language, adult or child, whether his origins are East or West. If you reside in the East sector and are apprehended reading a capitalistic newspaper your conviction carries 25 years under close Communist military supervision. Yet the librarian told me that he estimated over 25,000 eager hungry readers had taken the subway this year from East to West Berlin to seek knowledge otherwise forbidden to them.

If you live in West Germany during these days, you are being persuaded by every conceivable means that the Soviet possesses the only remedy to a divided Germany. You are being taught that the West cannot provide it. Look at Geneva, they say, you can see for yourself.

Yet you do not want it that way. You still are distrustful of what will become of your liberty and your property. You believe in Eisenhower's sincerity of purpose, and you hope that somehow he can come back again. You feel that he will avoid the war whose weapons this time, if unloosened, means the destruction of a country like Germany. You want the West to prevail. But will it, you ask?

In a different climate, if you are an Egyptian and grow cotton, for instance, you would not be too particular whether your government sold it for you in exchange for arms from Czechoslovakia. The Americans didn't want your cotton, and cotton is your

bread. Wherever you are, are you so sure now that the West offers you the best choice? There are more opportunities now being offered, loans for a steel mill if you are in India, various trade and other inducements if you are in Syria, Afghanistan, or Ceylon.

We are aware of all this propaganda and negotiation, of course. We are sensitive to the influences at work which underlie all of it. And we are doing our best, in company with our allies, to promote the unification of Germany and help develop political and economic stability and self-reliance among all nations who desire freedom and self-government.

Let us be sure we Americans, that we understand all this for what it really is. Here we have a new phase of the Communist offensive. Let us be sure that we ourselves are clear about the difference between the blandishments offered in each new Soviet proffer, and what we hold out for the hope and the goal of the free world. We enter, it is true, a new phase of the cold war but the conflict is not changed. It is as ominous, as sinister, as deceptive as it has ever been. How do we meet it?

As an aftermath of Geneva somehow the notion took hold that we are involved in some new and unexpected crisis. Not so. If there has been a central purpose in the conduct of every phase of our foreign affairs, it has been the carrying out relentlessly of clearly stated objectives. Ours is a schedule of attainable strength, air squadrons, long range missiles, strategically located bases, evolving new atomic weapons, warning and communication lines on land and on the sea. These objectives, unchanged, were as explicit before Geneva as after it. We are not on a crash program basis.

Nor should be be blind to materialistic competition. The conflict of economic systems further reflect uncompromising ideological philosophies. In character was the recent reduction in the slight gains the harassed Soviet consumer was promised by the Malenkov government. It is not to the betterment of the consumers that their might and political ambition are committed. The largest peacetime military budget in Soviet history brings only increasing privation to the individual Soviet and to the satellite citizen.

While we condemn the system we seek to thwart we should be mindful of the increasing benefits of the new capitalism we seek to strengthen and preserve. We have actually achieved those things communism empty-handedly promises. We are literally Nation of middle class, few of us very rich, few of us very poor, most of us somewhere in the middle of the economic road. The growth of the middle income population has been enormous. The abundance of our land, the leisure to enjoy it, and the opportunity to grow intellectually and culturally are being shared by more and more Americans. It is ironic that this which was Marx's dream should have come about through an evolution of the very system he so deeply reviled.

Ownership of capital is rapidly moving into the hands of more and more Americans. The other day the chairman of the President's Council of Economic Advisers gave me an interesting statistic. Consumer plant and equipment in the possession of our people, in homes, automobiles and durable household goods, exceeds by one-third the value of all industrial plant and equipment in the Nation. Almost everybody has a savings account, or life insurance, or belongs to a pension plan. More and more earnings of the individual are being invested in industry. Employees are now becoming stockholders. The funds of labor unions, in many cases, are being invested in the securities of the corporations which employ their membership.

Because the people supply both the capital and receive the benefit of our increased productivity, what has evolved in America today is truly a people's capitalism. The advertising council coined that phrase, and I like it. The United States Information Agency has adopted it as a meaningful way of describing our system abroad, and has asked the advertising council to produce an exhibit called people's capitalism for display at trade fairs around the world. That exhibit is presently building and will be set up at Union Station in Washington early in February, so many of us may see it before it begins its tour abroad.

The term "people's capitalism" has the virtue of reclaiming for America's aggressive use words which significantly characterize the very life blood of our whole system. In 1787 it was, "We the people," who did ordain and establish our Constitution. There is scarcely a citizen who does not feel himself strongly bound to Lincoln's "of the people, by the people, and for the people," and those words now describe not only our Government but our economic system as well.

We need not and should not be foolishly apologetic for the fact that what we have in this country is capitalism. We should not try to disguise it by calling it something it is not. Instead of the term capitalism becoming a weapon to be used against us it should become a proud description of what our system in fact now is, namely a new people's capitalism which serves our Nation in a way no other system has ever approached.

Actually it produces the most for the many. In America today it has not developed as Marx predicted. Far from the poor becoming poorer and the rich becoming richer, ever-increasing benefits have come to the great mass of our citizens. Contrast this with the wretched socialism of the Soviet, concealing behind its curtains and its barbed wire its low-living standards, slave labor and cruel restrictions on personal freedom.

There is no doubt that we are in a conflict, continuing and cold. Indeed there was little to indicate that the conferences just held this year at Geneva would do much to assuage this conflict. We can claim 'E' for wholehearted effort, but what these conferences made painfully clear is the need to press relentlessly the logic and justice of our own cause. Moreover our military and economic assistance programs must be continued. We can no more abandon the support of our freedom-loving friends than we can abandon our airfields, our bases abroad, or reduce our Armed Forces.

While we seek resolutely for better formulae for peace, we still are confronted by the need to keep forging ahead in the race for intercontinental missiles, and more modern and powerful atomic weapons. With all the frustrating scurrying for maximum defensive strength, a hard task of budget balancing confronts us. While Geneva's disappointments mean no crash programs of accelerated military preparedness, they reinforce decisions already made to provide for the maximum security of our country against a hatefully expanding communism. It is not easy to marshall public support for major expenditures of public funds for military security in the face of demands for tax reduction. It is not easy for the farm families of America, for instance, to accept with good grace the harrowing necessity of maintaining mutual-security programs of huge proportions. Yet we must not relax those efforts which meet the threat of Communist expansion. Vigilance is no dearer price to pay for our own liberty than it was to those who watched the building of this Republic.

To persuade others to our way of life we have to think for a moment, as we have tonight, of what has happened in America in the last 50 years. When we understand that it is something truly new and dynamic, we can carry that word abroad. There are, I think, two elements to this persuasion. The people of less-developed nations have two main concerns in determining the direction in which they will go. First, they want to follow the direction they believe to be the winning side. Second, they naturally want to pursue the path which will do the most for them in providing for their own needs, their own culture, and their own happiness.

George Mason, of Virginia, in the Revolutionary Convention of 1776 stated philosophically what he deemed to be one of the great objectives of the system of government then emerging. That objective was pursuing and obtaining happiness. That thought was adopted only 2 months later by Jefferson and his committee in the first section of a great declaration. One of the inalienable rights of all men ought to be, they said, the pursuit of happiness.

In this Christmas season it is not inappropriate to reflect upon the significance of that thought. If it belongs to us as it belonged to them we must believe in that right for others as we believe in it for ourselves. If we do we can fervently hope and willfully strive for the sharing of that right by every man as his universal possession.

The hunger and longing of human beings for sympathy and understanding are emotions common to every man whether he be a citizen of the East or of the West. These sentiments are not expressed simply in terms of money, or in rates of interest, or in the cold terms of conventions. If we will dedicate our efforts to the understanding of Eastern peoples that Americans have a warm heart, as well as a willing hand, and hold a firm interest in their welfare as human beings, we shall move toward a far better appreciation of our purposes as a people. The world of peace for which we strive will only be won by their confidence in us as well as our confidence in them. In that spirit we can hope for a better world for us and for all mankind.

Address by Hon. William F. Knowland, of California, Before the Women's National Press Club

EXTENSION OF REMARKS

OF

HON. WILLIAM F. KNOWLAND

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Thursday, January 5, 1956

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the RECORD an address which I delivered before the Women's National Press Club on January 3, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Madam Chairman, Mr. Speaker, Mr. Majority Leader, my friend LYNDON JOHNSON, and fellow Americans, tonight as Americans we are thankful for the splendid recovery of President Eisenhower and Senate majority leader LYNDON JOHNSON.

We look forward to these annual gatherings with the Women's National Press Club. There is always a pleasant atmosphere. Some might say it is the calm before the storm.

At any rate we gather at this festive board before Members of Congress at the 2d session of the 84th Congress have had, at your hands, wrinkled brows from laurel wreaths piled upon them or hides so perforated by harpoons that one additional is hardly noticed.

With a free press and a women's press corps, which is second to none, there is, of course, the inference that these awards and demerits are nonpartisan in character.

Yet I would be less than frank if I did not reveal that in the inner sanctum where both Republicans and Democrats let their hair down, if they have any, there is sometimes expressed the strong belief that the Weather Bureau first got the idea for naming cyclones by latching on to one of your membership rosters.

No one has a crystal ball to predict with certainty what the future holds in store for our civilization in this atomic age, for the United States, our two great political parties or any of the individuals constituting them.

Lincoln, in his house-divided speech, said: "If we could first know where we are, and whither we are tending, we could better judge what to do, and how to do it."

As Americans, rather than as bitter partisans, we know that all the virtues are not in one party nor all the faults in the other.

Despite the claims that may be made as tensions mount when the session grows older the fact remains that neither party can, even if it would, ride roughshod over the opposition.

Any bill to become law will require a working majority which, because of defections one way or the other, will constantly change from issue to issue and time to time.

With the paper thin Democrat majority of one in the Senate and the narrow margin in the House it is doubtful that any veto could be overridden.

It is a difficult task confronting the leadership in the White House and among the two parties in both the House and the Senate.

In 1913, 43 years ago, my father completing his 10th year of 12 years of House service helped welcome three new freshman members: SAM RAYBURN, CARL HAYDEN, and ALBEN BARKLEY.

That year the total Federal budget reached the then astronomical heights of $1,021,349,990.63. How times have changed.

He was also a good friend of both Uncle Joe Cannon and Champ Clark. I learned early in life that though the center aisle may divide parties it does not divide friendships or the respect political opponents can have one for the other. Over in the House, for example, SAM RAYBURN and JOE MARTIN have established sort of a rotating speakership.

In certain other countries of the world such a divided governmental situation might provoke paralysis if not civil war.

Here, such is the firm foundation of our constitutional system and the sense of responsibility of the leadership and Members of both bodies that I predict there will be a constructive record of accomplishment.

The President, on Thursday, will make his recommendations in the state of the Union message. In addition there will be a number of special messages.

It is then the duty and responsibility of the Congress, a coequal branch of the Government, and the constitutional respository of the legislative power to act on these and other measures before it.

No person can know for certain what the men in the Kremlin or their associates in Europe, Asia or the Middle East may be planning for this wear of 1956. However, there is one thing certain, if they plan to take advantage of this year for some further adventures of aggression and are counting on our Nation being so paralzed by a great presidential election that it is unable to function to meet such a challenge they are making the mistake of their lives.

No matter how tense the campaign may become or how acrimonious the debate if our national security is challenged or human freedom in the world is endangered by overt acts of aggression, 165 million Americans will stand shoulder to shoulder in facing a common danger.

Our Nation was founded and grew to its present position of leadership based on faith and not on fear.

If we of this generation will only show the same courage and commonsense that motivated the men who sat at Philadelphia and under what I believe was divine inspiration, gave us first our Declaration of Independence and later our Constitution of the United States there are none of our great domestic problems we cannot solve and there is no foreign foe we need ever fear.

War or Peace?

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. MULTER. Mr. Speaker, the following series of articles which appeared in the New York Daily Mirror are an important contribution to sober thinking about the problems of the Middle East. I set them forth without comment for the independent appraisal of our colleagues.

ISRAEL: WAR OR PEACE?—REFUGEE PLAN VERSUS POWDER KEG

(By Erwin Savelson)

I have just returned from Israel and the Middle East where war is in the making.

At best, the leading diplomats, military experts, and even some of President Eisenhower's most trusted aides with whom I talked in Cairo and Jerusalem, give the Holy Land tinderbox only 6 more months of peace—unless the Big Four powers intervene effectively at once.

After talking frankly with Defense Minister David Ben-Gurion in Israel, Prime Minister Gamal Abdel Nasser in Egypt, and observing conditions for the fourth time in 6 years in Israel and the Middle East, this is what became quite clear to me:

The situation is critical, dangerously critical—but not hopeless.

For in the Libyan Desert of Egypt, this writer was permitted to inspect a project which offers a possible solution to the biggest stumbling block to peace in the Middle East—the resettlement of hundreds of thousands of Palestine Arab refugees.

The refugees have now been 7 years in camps in the dangerous Gaza Strip of Egypt, in Syria, Lebanon, and Jordan. As long as they are kept in camps, as long as the Arab States delay their resettlement, just so long will the tension exist.

Amid the gathering war clouds, the blustering of military spokesmen, and the heightening tensions, I was probably the first American newspaperman permitted by Egypt to visit this little-publicized yet seemingly vast project known as the liberation province.

Before me in the desert, 100 miles from Cairo, off the Alexandria Road, was unfolded the first 3 of some 132 modern towns—all strikingly similar to the Kibbutsim and Moshavim (cooperative) settlements which flourish in Israel and which have contributed so much to the dynamic democracy and high standards of that brave little republic.

Here, on the hot sands facing historic El Alamein, this observer saw what he believes presents an almost perfect solution to the refugee problem; the resettlement of thousands of the 250,000 refugees concentrated in Egypt's Gaza Strip on Israel's border. For Gaza is the powder keg of the northern Negev where, at any moment, a spark along the strip might set off a terrible holocaust.

Prime Minister Nasser himself said he plans to settle at least 1 million young peasants on 1,300,000 acres of his Liberation Province as part of his social revolution. He further intimated he is considering resettling 50,000 Gaza refugees, but did not specify whether any of these would be removed to Liberation Province.

Yet, with the aid of the United Nations. American loans, compensation which Israel has set aside to pay Palestine refugees, plus moneys contributed by the Arab States, tens of thousands could be resettled in similar Liberation Provinces throughout the spacious Arab world.

Thus would be removed the most festering sore spot in that troubled part of the globe, since even the most ardent Arab pleaders admit solution of the refugee problem would open the door at least to discussions of peace.

But time today in the Middle East is not on the side of peace; time to achieve resettlement of the Arab refugees is running out fast. And the entire crisis has been dangerously aggravated by the flow of tanks, guns, and planes into Egypt from the Communists via their Red Czechoslovakian pipeline.

For it is obvious that Israel—whose progress this writer can only describe as miraculous and inspirational—must arm itself tooth and nail to meet the dreaded scourge of a threatening second round with the Arab forces it vanquished to win independence in 1948.

As hopeful as I am that settlement of the refugee problem will remove the major obstacle to peace, I am just as convinced that only immediate action by the Foreign Ministers' meeting in Geneva and the U. N.—not in a few weeks or even a month, but now—can head off a terrible war.

With the Red network and Russia—whose age-old ambition has been to establish itself on the Persian Gulf or Mediterranean—pouring arms into Egypt, the Western World will, of necessity, be compelled to balance this with arms for Israel.

Strife and turmoil in the Middle East serve only the cause of the Communists. The Arabs, who now outlaw communism but buy Red arms, will rapidly become dependent upon the Kremlin for more supplies and replacement parts. The Reds will move in with technicians and agents demanding concessions and obligations.

Even as pro-American a publisher as Moustafa Amin, coowner and editor of Akhbar-el-Youm, Egypt's largest newspaper and magazine group and all-powerful in his country, told me bluntly in Cairo:

"This time we negotiated for arms without obligations. The next time we won't be able to do that. There will be obligations."

The intimation? The Soviet Union will demand the right to protect its new interests in the Middle East in event of war.

The result? Threat of a full-scale conflict between East and West for control of the most strategic and oil-rich area in the world—the Mediterranean, the Middle East, Suez, the gateway to the Orient and the Far East.

One top military observer warned that if the Big Four Foreign Ministers do not prevent an arms race in the Middle East and maintain a balance of armed power between Israel and the Arabs, the region will flame with a conflict that would make the Korean war look like a skirmish.

It was against this saber-rattling background and amid the joyful proclamation from Jerusalem that oil was discovered in Israel, that I traveled to Cairo and Jerusalem in search of rays of hope for peace.

In Israel, I found all the people want peace, but show no fear of being able to give a good

account of themselves if the "second round" bell is ever sounded.

In Cairo, where the Arab League was meeting during my week-long visit, I found little talk of peace publicly or officially. But privately, a number of influential and prominent Egyptians conceded that Israel "is here to stay" and advocated that the Arab world adopt a more realistic attitude, dropping demands that another attempt be made to drive the Israelis into the sea.

But everywhere, I found evidence of preparation for fighting.

What can be done to check this growing menace to peace and to Israel's security and equal security for the Arab world?

Drawing upon experiences in four assignments to Israel and the Middle East since 1949, this writer believes:

1. Israel must be provided with sufficient arms by the West to balance the flow of Red-made munitions and guns to Egypt.

2. A United Nations Commission should be established immediately to study Colonel Nasser's amazing "liberation province" program and develop means to apply it to resettlement of the Palestine Arab refugees.

3. Eric Johnston's Jordan River development program should be adopted without further delay. It will provide Syria, Lebanon, and Jordan with 60 percent of the river's waters for reclamation, irrigation, and power, 40 percent going to Israel. Even the slightest agreement on Johnston's plan will be a step toward peace.

4. The U. N., Big 4, and Security Council support must make it clear that they will brook no attempt by Israel or the Arabs to alter boundaries by force.

5. The Arabs have repeatedly demanded a "corridor" through Israel to permit them to travel without difficulty from Egypt to Jordan, Syria, and Lebanon. Israel is prepared to offer "free port" facilities at Haifa, from where railroad connections can reach any part of the three latter Arab states in a few hours.

6. The Arabs must stop confusing the world on the question of anti-Semitism. On one hand, I was assured by the most influential Egyptians that their nation was not "anti-Semitic," that nearly 100,000 Egyptian Jews live in peace and harmony within the nation.

On the other hand, some of their propagandists have learned they need not refer to the word "Jew," but only make disparaging use of the term "Zionist"—a practice standard among the most unprincipled anti-Semites throughout the world.

Rabbi Abba Hillel Silver, of Cleveland, perhaps summed up the most sensible approach to the problem of war or peace in the Middle East. He said:

"We must continue to work with the people and governments of both sides to improve their economic status and speed up the program for establishment of permanent peace in the area."

In Israel, after an absence of 3 years, I saw the fruits of peace. I saw the seeds of the same fruits growing in Egypt's "liberation province."

What I saw in Israel on my fourth visit—amazing progress, development and almost miraculous achievement which will be described in this series of articles—convinces me it would be folly for the Arabs to start all over again.

It would be tragic indeed if the Middle East were plunged into war again—for peace in the Holy Land can bring an era of prosperity and abundance which that ancient region has seldom known and which it badly needs.

ISRAEL: WAR OR PEACE?—DEFENSE ONLY AIM, EGYPT SAYS

(By Erwin Savelson)

I shuttled between Cairo and Jerusalem to interview the two men who hold the key to war or peace in the Middle East.

The first was Prime Minister Gamal Abdel Nasser, Egypt's ambitious "Tiger of Faluja" and current strong boy of the Arab world.

The second was white-haired Defense Minister David Ben-Gurion, the unflinching, realistic soldier-pioneer, under whose drive Israel won its independence and went on to turn ancient deserts into flourishing, fertile fields.

I have returned home utterly dismayed by what I heard and found in Cairo, where Arab leaders have developed a habit of talking about peace out of one side of the mouth, but practice devastating propaganda warfare to justify their arms deal with the Communists.

Yet, I am still hopeful that calmer heads among great statesmen of the world will realize the gravity of what is taking place and act before it is too late: Act by either bolstering Israel's economic and military strength to counter the steadily rising might of Red arms flowing into Arab hands, or persuading the Kremlin to call off its foolhardy and dangerous incursion into the Middle East tinderbox.

Colonel Nasser, his military tunic replaced by a gray business suit, fingering a cigarette, flashing a broad smile, walked jauntily from behind his desk in the heavily guarded presidency of the Council of Ministers in Cairo to extend a cordial greeting.

A moment later, we plunged into frank and revealing talks about the mounting crisis in the East. He asked for no quarter in our give-and-take and I tried to give none. I came with some hope that the "Tiger of Faluja" might offer even the slightest clue that the Arabs are willing to talk about peace.

But little hope came from this 38-year-old revolutionary militarist who first boosted his old friend, ex-Premier Naguib, to power, then dumped both him and fat boy ex-King Farouk to bid for power as the up-and-coming man of the hour among 45 million Arabs.

His line was clear: The Arabs want peace but on terms which would decimate Israel.

"Egypt will do its best to avoid war with Israel," he began. "All my acts show Egypt has no aggressive intentions."

"Then why not sit down and talk about peace with Israel?" I countered.

Slipping into a long harangue about the retaliatory raid staged last February 28 by Israel on an Egyptian position in Gaza, Nasser rolled on:

"Nobody likes a peace brought about by force and I have felt threats against me for the last few months. I'm feeling threats from February 28 until now."

The bloody February 28 skirmish cost the Egyptians 38 men and the Israelis 8. It came on the heels of raids by Fedayeen (Suicide Squad) commandoes who infiltrated Israel's countryside, spreading terror, ambushing and killing scores.

"Until that day (February 28) I had hopes the difficulties might pass away," continued Nasser. "But after that, my officers came to me and said they needed arms to defend themselves. Now I wake up with nightmares about being attacked."

It was the closest he came to acknowledging that the military junta which helped rocket him to power and whose hatred of Israel knows no bounds had practically served a "produce—or else" ultimatum on Nasser. Either he found new sources of weapons or else hazarded the risk of going the way of Naguib and playboy Farouk.

I said it was impossible to believe Israel, a bustling nation of 1,800,000 free souls—all busied with the monumental task of hammering out a solvent democracy—would chance a military campaign to subjugate 23 million Egyptians.

The Tiger of Faluja shrugged the remark off with:

"I want arms to defend—not to attack!"

There was no reference to the warlike blustering in the Arab press, to the scorn being heaped on the United States and Britain for seeking an amicable solution of the Israeli-Arab tension or to the dreadful pronouncement 20 months ago by King Saud of Saudi-Arabia that it was worth sacrificing 10 million Arabs to wipe Israel off the map.

I tried another tack—Nasser's arms deal with Red Czechoslovakia.

Was he aware that the course he was pursuing was bound to set off an arms race?

Was he cognizant of the risk of enabling Soviet Russia to secure an influential grip on a strategic area long regarded as vital to the security of the Western and Free World?

Again came the new Arab theme:

"I need arms for defense—not for attack," Nasser replied. "We asked for weapons that would enable us to achieve a true defense of our country."

"How can you reconcile your dealings with the Communists when Egypt outlaws communism as one of its worst crimes?" I pressed.

"We made no deals in return for the arms," he answered.

The talk switched for a moment to his social reforms—particularly the Liberation Province, which this reporter—probably first among American newspapermen—was permitted to inspect. The province is in the Libyan Desert between Cairo and Alexandria, toward El Alamein.

It is probably the major contribution produced thus far by Nasser's revolutionary government to ease, on a mass scale, the plight of Egypt's downtrodden millions. For Nasser hopes 1 million young peasants will ultimately be settled in cooperative villages (not unlike the ones which have flourished for generations in Israel) stretching over 1,200,000 Libyan desert acres.

I sought an opening by suggesting that similar liberation provinces could be created to resettle tens of thousands of Palestine Arab refugees—huddled for 7 years in border camps, living on United Nations subsistence.

When I implied this might serve as a solution to remove the No. 1 obstacle to peace talks in the Middle East, Nasser indicated:

"We are planning a scheme—50,000 acres for them, near Suez, but they still refuse to go."

I could not help but observe it was distressing that Egypt and the Arabs should spend millions on arms instead of applying the same moneys to create "liberation provinces" to improve the lot of the Egyptians as well as of the languishing Palestine Arab refugees.

For a moment I thought I had touched a vulnerable spot in Nasser's makeup. Then came his answer:

"I feel the same way, but I also feel the fears of attack, so I had to take money for the projects out of my budget for defense use."

The talks suddenly turned to Nasser's "enemies" and he launched into a vitriolic diatribe against what he termed the "Zionist" conspiracy.

I caught him up on the point emphasizing that unprincipled anti-Semites frequently apply the term "Zionists" when they desire to attack the Jews, but he quickly denied harboring any antisemitism in his makeup.

Like other leading Egyptians, including Moustafa Amin, powerful American-trained publisher, Nasser maintained that Egyptian Jews live in peace. Amin went so far as to point out to me that Cairo papers even wished their citizens of the Jewish faith a "Happy New Year" during the recent High Holy Days. Nasser, Amin, and the other prominent Egyptians sought to draw sharp distinctions between usage of the term "Zionists" and Jews.

However, 24 hours after I left Egypt, news agencies reported that the Egyptian Masonic Grand Lodge had ordered dissolution of all local Jewish Masonic lodges.

And the London Jewish Chronicle, in a special report from Cairo, warned Jews in Egypt are in danger. Calling Nasser "an open enemy of the Jews," the Chronicle reported that the former division in the Interior Ministry known as "anti-Zionist department" had been reorganized into a "department for Jewish problems."

The purpose, according to the Chronicle: "To supervise Jewish businesses and liquidate them."

Getting back to my closing moments with Nasser, the Egyptian ruler told me:

"During World War II, I was friendly with a Jewish officer in the Middle East. During armistice negotiations with Israel, I met him. We'd shake hands, sit down, and talk. Then, I'd go my way, maybe to figure out how to fight him, and he'd go his way, maybe to do the same. There was nothing personal about the whole thing."

I repeated:

"Then why isn't it possible to sit down now and talk about peace?"

"It'll take time for the difficulties to pass away," he reiterated.

"I am going to Jerusalem," I told the Premier. "You have made some pretty serious charges about Israel preparing to attack you. I am going to Israel to ask for answers."

"Good," he replied. We rose to say goodby and, as if by some prearranged signal, photographers rushed into the room to photograph the farewell.

Forty-eight hours later, I was in Jerusalem where Ben-Gurion listened intently while I repeated Nasser's statements.

There were no guards around as we talked after lunching at the President Hotel in Jerusalem, where he lives with his wife, Paula.

The Israeli leader, who returned from life in a desert settlement to take up the defense cudgels once more when the land he sired found itself confronted by a threatening second round with the Arabs, looked up sharply and replied:

"Nonsense. If Nasser wants peace, really wants peace, he can have it right now. I told that to Mr. Hearst (William Randolph Hearst, Jr., editor-in-chief of the Hearst newspapers) in June and what was true in June is true now."

As for the Arab fears of attack from Israel, Ben-Gurion was just as blunt:

"They're a bunch of liars."

One of Ben-Gurion's top aides interrupted:

"There isn't a single Arab who really believes the Arab world is in danger of attack. It's a colossal falsehood. We live in peace with millions of Moslems in other states. Tens of thousands of Arabs live peacefully in Israel. But what's new about that? We're a democracy where all people are treated alike, regardless of race, religion or national origin."

The Israeli leader continued:

"If we were aggressive, then we were a bunch of schmoes because we certainly missed the boat often. First, when Jordan was disrupted by Abdullah's assassination and again when Egypt was disrupted right after they kicked out Farouk.

"The same Ben-Gurion about whom Nasser is complaining wished Egypt well; told them not to worry about any interference from us because we hoped the end of Farouk was the beginning of a new deal for the Egyptian people.

"We told Nasser he could carry on with his social revolution without worrying about keeping an eye on the frontier, because we realized he needed all his troops to help consolidate his revolutionary position. All we want, we told them, is an honorable peace."

From Israel Prime Minister Sharett came the assertion that his republic did not have military superiority over Egypt.

"The Soviet by supplying arms to Egypt are letting loose a war of destruction," Sharett told me.

The Prime Minister added: "The Soviet Union arms aid to Egypt exposes the Middle East to grave peril and casts a shadow over the entire world arena."

On this same day when Ben-Gurion and Sharett were extending new olive branches of peace to Nasser and the Arabs, Dr. Ali Amini, Persian Minister of Justice, offered to serve as mediator to end the Israel-Arab hostilities. His reason:

Iran, a Moslem state, lives in mortal fear of Soviet intervention and influence in the Middle East.

The Arabs, Israel, and the entire free world have much to fear if this happens.

ISRAEL: WAR OR PEACE?—HOPE BLOOMS IN LIBYA DESERT

(By Erwin Savelson)

If the Arabs really want peace they have a chance to show it and help 900,000 kinsmen at the same time.

All they need do is sit down in the United Nations and end their 7-year holdout against settling the burning issue of the Palestine Arab refugees within their borders.

For 7 years the Arabs have kept the refugees huddled in camps, 250,000 of them in the dangerous Gaza Strip facing Israel; crying about their plight, but seemingly doing little to help end their privation and frustration.

Why?

A former representative of the United Nations agency which provides subsistence for the refugees was quoted as telling an American study group in Amman, Jordan, in 1952:

"Arab nations do not want to solve the Arab refugee problem. They want to keep it as an open sore, as an affront against the United Nations and a weapon against Israel. The Arab leaders don't give a damn whether the refugees live or die."

WESTERN DIPLOMATS AGREE REFUGEE PROBLEM IS MOST PRESSING

Regardless of the accuracy of that biting analysis, the simple fact is:

Every Western diplomat with whom I talked—including one of America's highest-ranking world figures—is convinced that solution of the refugee problem would remove the most festering sore spot in the Middle East, open the door to possible peace and avoid a conflagration which could ultimately drag in the big powers.

It's a tall order to expect the Arab leaders to reverse such thinking as that of King Saud of Saudi-Arabia, whose dreadful muttering about sacrificing 10 million Arabs in order to wipe out Israel still rings in the ears of the beleaguered 1,800,000 free people in that dynamic new republic.

But, as our worried diplomats and strategists put it to me:

"Anything reasonable is worth trying to head off war."

LIBERATION PROVINCE MAY PROVE ARABS' SALVATION

And, on a sandy plain, 100 miles west of Cairo, far from the Negev frontier where the sparks of a possible new war are beginning to fly, I found what many believe may be a solution to the consuming fire now raging in the Holy Land tinderbox.

Amid all the poverty, disease, and suffering under which the Egyptian masses have slaved for generations (Prime Minister Nasser's revolutonary government insists it will reverse that trend) I found a green swath of hope cutting across the Libyan Desert, west of the rich Nile Delta, facing historic El Alamein.

The Egyptians call it their liberation province. They boast it is the greatest plan the East has known in modern times. They opened the road to show me how they contemplate settling 1 million young peasants in 132 new towns sprawled over 1,200,000 acres.

I could not help but be struck by the amazing similarity of the first three villages I inspected in this new province with the new desert settlements (kibbutsim and cooperative moshavim towns) which the Israelis erected somewhat miraculously on the barren wastes of their own soil.

"We will struggle against the desert * * * we will live off the soil."

The words flowed from Therwet Rachid, young director of press affairs for the province, who accompanied this writer and P. Juel Jensen, counsellor of the Danish Legation in Cairo, on the inspection tour.

Where had I heard the same tune before?

Ironically, it was in Israel—the land of modern miracles, where 1,000,000 Jewish refugees from Europe and other lands arrived destitute, penniless, with few belongings, to be clothed, housed and resettled in cities, towns and villages redeemed from once barren wastes.

The million, incidentally, include 380,000 Jewish refugees from hostile Moslem and Arab areas, whence they fled, leaving behind their possessions and property.

And what Israel did for the refugees it embraced, the Arab world, at least to this observer, can do for its 900,000 refugees on a similarly large scale.

SOLUTION STAMPED "MADE IN EGYPT"

The Arabs need not go outside their borders to erase the sore spot which is a major contribution to unrest in the Holy Land. They have a solution:

It's stamped "Made in Egypt." It's called: The "Liberation Province" theory.

Establishment of similar projects in Arab countries would implement Secretary of State Dulles' hope that President Eisenhower's desire for a "better way of life" for the refugees can be found.

This opinion is shared not only by your reporter but by leading diplomats, military figures, reclamation experts and engineers busy coping with the monumental job of raising living standards in the Middle East.

In a small office in the Libyan Desert, Rachid traced on a large map the area to be covered by Egypt's "Liberation Province." Pinpointed were 12 "central towns"—each surrounded by 11 villages.

A hundred yards away from where we talked, a new "Liberation Canal," tapped from the Rayah El-Beheiri branch of the Nile River, flowed with water for irrigation.

SECOND CANAL WILL SERVE 24,000 ACRES

Another canal, he related, would eventually run from Kafr David (the village in which we stopped) to Nobaria, irrigating 24,000 acres of land in this section alone.

"Each village," he went on, "will cover an area of 1,500 acres, but the buildings themselves will occupy only 70 acres, housing approximately 1,000 inhabitants—averaging 230 families living in 230 separate homes."

Surrounding the broad plaza of Kafr David (Israelis call many of their settlements Kfar, etc.) were the homes, each containing two bedrooms, a combination small foyer and living room, an extremely modest kitchen, bathroom and simple, sturdy furniture.

In the back of each home was a plot, 150 by 150 feet, where the planners hope to encourage families to grow vegetables. Each village is equipped with a central stable for the cows, sheep and other animals to be kept by that village unit.

Under the plan, each village will have a mosque, with a Christian church in each "town." The villages will have their own medical clinics, supplemented by a 40-bed hospital in the "central town."

The schools we saw were modern, with semi-circular recreational courtyards outside. Rachid said primary grades will serve pupils aged 6 to 12, with older children attending "secondary schools" in each town.

"We want to create a new generation proud of their motherland and wipe out illiteracy and poverty," said Rachid, adding this eye opener: "It's possible our women

may get suffrage for the first time in Egypt's history in this province."

A DREAM ONE HOPES WILL COME TRUE

Rachid is one of Egypt's young dreamers and I hope his dream comes true in the land where the American visitor usually grows heartsick over the miserable poverty which emanates from all sides once one leaves the luxury of modern Cairo.

At this writing, as the war clouds gather in the East, a United Nations commission estimates the value of property left behind by the Arabs in Israel totals $300,000,000.

Israel has repeatedly declared its willingness to pay maximum compensation to the Arabs for their land and holdings.

Secretary Dulles, aware of the ever-present danger in permitting the refugees to exist on Israel's borders, has offered United States help in arranging an international loan to finance the compensation. The funds also would help resettle the refugees and finance development and irrigation projects to make them self-supporting.

Nasser told me he had some plan to settle 50,000 of the refugees, but gave no details. Neither he nor his aides would speculate on whether similar liberation provinces might be feasible to take care of the refugees.

However, some Arab commentators are now calling for international action to rid the Middle East of this sore spot.

ISRAEL IS PROOF OF WHAT CAN BE DONE

In four visits to Israel, reaching back to the closing days of the War for Independence, I saw at first hand the wonders a free and untrammeled people can achieve. I venture to say that a bit of Israel's spirit has spilled over into Egypt in the form of the "liberation province."

Six years ago, I saw the start of Israel's valiant attempt to conquer the desert, feed, clothe, house and employ its million refugees. Two weeks ago, I returned and marveled at their accomplishment. Let me tell you in the next article how they did it.

It's a lesson the Arabs could well take to heart. It might prevent war.

ISRAEL: WAR OR PEACE?—BEERSHEBA AFTER 7 YEARS—A CITY RISEN FROM SANDS

(By Erwin Savelson)

Nearly 7 years ago, in the closing hours of the Israeli-Arab war, I traveled south from Tel Aviv through the northern Negev to ancient Beersheba.

From Rehovot, we swept past miles of barren rock and sand, skirting dried-out gullies and into the outpost of the Israeli desert command. There was hardly a blade of grass or a home along the tortuous 80-mile stretch.

Beersheba was an old village, with a cluster of mud-brick huts, a few rows of sturdier bazaar stalls, a handful of trees near the Well of Abraham, Israel's Biblical patriarch.

I remember how my Israeli friend, Ben (Flatbush Benny) Chorin, a Kibbutznick (member) of Kfar Menachim, a settlement on the desert's northern fringe and as rabid a Dodger fan as you could find, kicked the crusty, yellow soil of Beersheba and boasted:

"Come back in 10 years. You'll find a modern city of 50,000. You might even find the Dodgers in spring training here."

"FLATBUSH BENNY" PRAISES THE DODGERS

"Flatbush Benny" was waiting when I returned just 2 weeks ago, hopping with enthusiasm.

"Didn't I tell you?" he challenged. "The Dodgers won, and so did we. Look around."

He had no need to inform me of the amazing transformation that had taken place—not only in Beersheba, but along almost every inch of the once empty desert road I had traversed from Rehovot south.

The empty fields had disappeared. The long twisting highway south was a miniature Bronx River Parkway, lined with tall eucalyptus and cypress trees, planted by the Jewish National Fund.

Where rock and sand had imprisoned the earth for centuries, tractors and plows had churned once dismal soil to yield rich crops, from tomatoes to cotton. On a hilltop in the distance loomed the Derrick of Helets, where Israel's first oil gushed to the surface on September 23, carrying with it great promise for the struggling republic.

On the dash from Nahal-Oz, the tiny settlement sitting on top of the Egyptian big guns in Gaza, the first grapes and vines grown in the Negev in thousands of years flourished against the desert horizon.

Dozens of new settlements sat on hilltops and in flatlands, visible evidence of the results achieved by funds poured into Israel through the United States point 4 program, the United Jewish Appeal and Bonds for Israel.

The loneliness of the Northern Negev was gone; a land which had lain idle and forbidding for centuries had been redeemed.

And in Beersheba, ruddy-faced and outspoken Mayor David Tuvyahu was waiting to describe how he and the immigrants from 50 nations had wrestled with the desert and had won—so that today the ancient village is a bustling metropolis of nearly 25,000, with a better than even chance it will hit Chorin's 50,000 mark before long.

AS GREEN AS KANSAS

We strolled down Beersheba's main street and a peanut vendor with a sign in Hebrew proclaiming that his name was 'Abraham America" shouted a warm "Shalom."

The mayor pointed to a movie sign. It announced that the feature was John Wayne in "Red River Valley."

"I don't know if Red River Valley is in Kansas," said Tuvyahu, "but if you want to see a piece of Kansas just look at our fertile fields. And to think when I saw you a few years ago we had nothing but sand.

"We're out to build 2,500 new flats before April, 1956, to handle a new migration of 250 families a month, about 1,000 men, women and children every 30 days," he went on.

"Besides, I want to finish our city library so we can have 35,000 books in Hebrew, Yiddish, English, French, German and Arabic for our people."

THE MELTING POT IDEA

"Think your mayor, Bob Wagner, whom I met in New York last year, has headaches? You ought to see mine, trying to build a new city out of people from 50 different countries who speak almost as many languages. But we're doing it."

When we returned to city hall, he asked about my visit to Cairo and my talks with Egyptian Prime Minister Abdul Gamal Nasser.

"He's quite a fellow, this Nasser," said the outspoken mayor of Beersheba. "For a time I thought everything would go well. But now—well, let's say I'm sorry to see he's not on our side."

The old Beersheba is rapidly disappearing as Israel pushes the desert back while remaining alert to the war clouds gathering in the East.

I saw Arab and Jew living peacefully in the desert. I saw Sheikh Suleiman, the Desert King, roll into Beersheba in his green Buick stationwagon on Market Day when the Bedouins gather in the capital to trade and exchange gossip. Suleiman told me he is a firm believer in the democracy being hammered out in Israel.

On the outskirts of Beersheba, where 3 years ago I saw immigrants huddled in flooded, mud-filled tent cities, row upon row of white stone apartment houses, grass courtyards, paved streets and all the other utilities which make up a modern city had risen out of the desert.

"We have 3,800 of our Sabras (native born) in 7 elementary schools, we have 32 kindergarten classes; a Beersheba high school with 100 students and another 100 youngsters, all ex-soldiers, in our vocational school," Tuvyahu said with pride.

We walked by the famed Hadassah Hospital, where Bedouin and Israeli alike are served by a corps of doctors and nurses, and Tuvayahu said he was planning a new hospital of 200 beds to augment the present one. Then he added with a smile:

"We have a pretty big religious community. We have 35 synagogues representing all sects."

Tuvayahu, reelected recently to a 4-year term by the 13-member Beersheba city council, has cut out quite a job for himself in the next 12 months.

ISRAEL SHOWS THE WAY

Beersheba is a lesson in how a determined people can conquer prejudice, fear, and the elements.

If the Israelis can build a city of 25,000 out of the bare Negev soil, one can ask why the Arab world cannot do the same for the 900,000 Palestine Arab refugees who have been in camps 7 years, by developing Liberation Provinces such as I discussed in previous articles.

Given a home and piece of land, a man will dream of peace.

It's much better—and cheaper—than war.

ISRAEL: WAR OR PEACE?—IT'S ON THE VERGE OF BECOMING LAND FLOWING WITH OIL

(By Erwin Savelson)

Mack Cagle is an amiable, but toughened chief tool pusher who would rather talk about his wife and kids waiting back in Wichita Falls, Tex., than the history he has just helped to make 7,000 miles from his home.

Menachem Wakstok, 27, an engineer scarred by the Nazis in Auschwitz concentration camp, escaped to England, reached Israel and then did a blazing stint in the Negev Desert Corps during the war for independence in 1948.

Between them—the man from Texas and the boy with the brand of Hitler in his heart and flesh—they brought in the first gusher of oil in the Holy Land; an event which may alter the entire course of events troubling the Middle East today.

I saw them both on a hill at Heletz in the once howling wilderness of the Northern Negev, barely 5 miles from the jittery Gaza Strip where armed legions of Israel and Egypt are poised should the fateful "second round" ever start.

Just how much oil is located in the field struck last September 23 by the Texas-Israeli team has not yet been determined.

But, if a major oil sea floats under the Negev sands, the back of the ruthless Arab economic blockade imposed on the young republic may very well be torn asunder.

For oil is the commodity which has lifted the Middle East to the great strategic importance it occupies in world affairs today, pouring hundreds of millions in revenue into the pockets of independent states, shiekdoms, and British protectorates reaching from the Mediterranean around to the Persian Gulf and down to the Gulf of Aden.

The United Nations estimates the revenue of the five Arab oil-producing countries of Saudi Arabia, Iraq, Kuweit, Bahrein and Quatar, with a total population of 9,300,000, reached the staggering total of $434 million in 1952 alone.

And Israel, with a population of 1,800,000, may be on the verge of hitting the same economic jackpot.

Israeli experts estimate that the Heletz well alone may furnish 7 to 10 percent of the nation's oil needs.

MAY SAVE $60 MILLION

If the well is part of a large deposit, it may yield up to 25 percent of Israel's needs, saving the nation $60 million it now spends to import crude petroleum which is refined in the huge half-idle Haifa plant.

A good supply will:

Enable Israel to put the Haifa plant—one of the largest in the East—into full operation, providing employment for thousands.

Make Israel independent of outside sources for oil and gasoline; strengthen its military establishment and even conceivably compel hostile Arab neighbors to accept it as a permanent, economically strong nation; not a land dependent on loans and grants from friendly powers.

Small wonder then that Soviet Russia is casting its wary and covetous eyes on the Middle East.

A substantial oil strike in Israel will be a strong buffer against the Kremlin Communist plot to sneak into power and influence in the vital Middle East by stirring unrest and conflict with its flow of heavy armament to the Israeli-hating Arabs.

Aware of all this, plus the fact that hostile Arab forces are massed in nearby Gaza, Israel has surrounded the Heletz operation with substantial security.

Well-armed troops halted us outside the barbed wire gate near the 145-foot-high oil rig, inspected our pass closely, phoned Wakstok for permission to let us enter and ordered all cigarets, matches and lighters left behind.

Curious, oil-enthusiastic Israelis, approaching the gate, are shunted across the field towards a dried-out creek through which lazies the excess flow of the Heletz oil and where they fill bottles with the fluid to take home to the folks.

ABANDONED BY BRITISH

Wakstok told how the British-owned Iraq Petroleum Co. abandoned the Heletz site in 1951 after boring 3,644 feet in operations both before and after World War II. The British removed their rigs, plugged the deep hole with cement, covered it with sand and left.

The Israeli Government then granted a concession for a drilling operation on the same plot to the Lapidot Co. and Israel Oil Prospectors, Inc., two Israeli firms with associates from the United States.

Wakstok arrived with his men just before Cagle flew in August 22 with 3 Texas drillers, Wesley Douglas, J. D. Clayton and Herbert Harrison, all of Wichita Falls. Previously, they had shipped a machine manufactured by the Ideco Co. of Beaumont, Tex., capable of drilling down to 15,000 feet.

The Yank-Israeli team removed the cement plug and went to work on a round-the-clock basis, first penetrating down to the 3,644-foot level reached by the British.

On Thursday night, September 22, Cagle, Wakstok and Dr. H. J. Tschopp, chief geologist of the company, realized they had struck a strata of oil at 4,905 feet. But it was decided for safety reasons not to try to bring the gusher in during the night.

At sunrise, Development Minister Dov Joseph, Dr. Tschopp and other officials assembled and the signal was given to "let her go."

Wakstok described the scene for us:

"It was a terrific moment. We hit a 60-foot gusher. Everybody got soaked in oil but nobody cared. I never saw so many happy faces."

Cagle picked the ball up and added:

BROADCAST TO NATION

"They started squirting oil at each other, the big shots and the little fellows. They soaked it into their hair and their clothes. I never saw anything like it. Everybody kept slapping me on the back. They were singing and dancing, shaking hands and even crying. It was wonderful—just wonderful."

Joseph hurried back to Tel Aviv, held a beer bottle full of oil before newsmen and told the nation in a special broadcast:

"Gentlemen, this is oil, not wine."

Defense Minister David Ben-Gurion, en route to his desert home at Sde Boker, arrived, clambered over machinery, soaked his hands in the black stuff, then came up smiling with:

"Now I believe this is oil."

Analysis at the Weizmann Institute of Science in Rehovot determined the quality reached some 30.5 percent A. P. I. (American Petroleum Institute rating) indicating the oil was as good as other rich Middle East types.

The news reached Beersheba, capital of the Negev, where a bottle of oil was hung over a cafe with an inscription: "First oil found in Israel."

When a barrelful arrived, jubilant youngsters started bonfires with the "black gold," snake-dancing around the flames joyously.

On Wednesday, Oct. 12, a second gusher, higher than the first, was brought in from a depth of 4,965 feet.

Minister Joseph told me: "We are on the threshold of a new era—a step has been taken towards economic independence."

The cautious Dr. Tschopp, a Swiss geologist, advised it would be some time before the actual size of the field was determined. But he said, the discovery at Heletz prompts him to believe there are similar fields in the southern coastal region of Israel, "from the sea to the mountains."

LOOKS JUST LIKE TEXAS

Said Mayor Ray Hoffins, of Houston, Tex., as he dropped in while on a Middle East tour to congratulate his fellow Texans:

"Looks just like Texas to me—that's the way we started."

But this was in the Holy Land and call it a miracle if you will—but the week's portion of the Song of Moses which was scheduled to be read and was read in the synagogues of Israel on Saturday, Sept. 24, 1955, contains this passage "Deuteronomy 32-10-13):

"He found him (i. e. Israel) in a desert land, and in the waste howling wilderness . . . he made him to suck honey out of the rock, and oil out of the flinty rock."

ISRAEL: WAR OR PEACE?—75 HEROIC KIDS WORK IN SHADOW OF ENEMY GUNS

(By Erwin Savelson)

General Allenby, British World War I conqueror of Palestine, must be looking down today with no little awe and admiration on the handful of gutsy sun-baked kids in the powder-keg Gaza frontier settlement of Nahal-Oz.

For the young in heart at Nahal-Oz took me into their corn, cotton, and tomato fields to show me how they lived and worked under the noses of the big Egyptian batteries clustered menacingly on and around Aly Muntar Hill, scarcely 1,000 feet away.

Then they told me:

"Allenby lost a whole brigade, 7,000 men, trying to capture that hill from the Turks. He fought here a year trying to take it because it blocked his way into Gaza. Finally, he gave up and went on to capture Jerusalem."

To the right of Aly Muntar, I could see the spires of Gaza where Egypt has massed its border strength. Gaza also is the strip housing 250,000 Palestine Arab refugees, where for 7 years they have been adding to the explosive tension along the entire desert frontier.

But you don't hear a squawk from the laughing, outwardly carefree 75 boys and girls who have been sitting in Allenby's old post in Nahal-Oz for more than 3 years, taking it and dishing it out.

Yet, you know, without asking, that all of them—the oldest is 22—know what they're sweating out on the trigger-happy Gaza border where I saw war in the making in the Middle East.

Nahal-Oz, just a stepping stone from Nirim and Kissufim where 72 hours ago the Egyptians and Israelis clashed again, is the Corregidor of Gaza. In Israeli hands, it blocks the Arab path into the Western Negev. So it may be the first of the border settlements to feel the full brunt of the Communist-fed Arab armor and firepower if the "second round" in Israel ever explodes.

That's why Nahal-Oz has become a must on Israel itinerary of every visiting dignitary, of every foreign newspaperman trying to understand the meaning of Gaza.

It is not only the closest point in Israel to the tinderbox strip. It is also the rangy homestead in the Western Negev where you feel the vitality of the growing young republic; gaining in a little measure an understanding of the sacrifices which youth is still willing to bear to keep the peace—or fight the war which no one in Israel wants.

RECALLS DEWEY VISIT

Gaza is also the home of the 250,000 Arab refugees, whose resettlement in such projects as Egypt's liberation province—described in detail for the first time earlier in this series—would remove the sore point of tension in the Middle East, turning the hopes of the world to peace in the Holy Land.

Mordecai Haor, a stock 21-year-old Israeli, boasted how "Governor Dewey was our guest of honor last week." He recalled how Dewey told the youngsters Nahal-Oz was the closest to an American frontier village of Indian days; marveling at the courage and stamina of the 75 kids.

Then, Mordecai led me to a shell-battered house pointed to the blasted ground around it and said amusingly:

"Here's where your boss stood just a few months ago."

(William Randolph Hearst, Jr., editor in chief of the Hearst Newspapers, visited Nahal-Oz during his Middle East tour last June.)

Mordecai's young companions spotted us, began ribbing him, calling out good-naturedly:

"How's the Chussin (bridegroom)?"

Mordecai blushed and explained:

"I'm getting married on the 25th. They're jealous that Leah (dark-eyed and attractive 20-year-old Leah Mishkevsky, one of the settlers) likes me, that's all."

ALL ARE VOLUNTEERS

That's the way it is at Nahal-Oz on the Strip; life as usual even though imminent war sits on top of them only five blocks away.

The settlement, a former Army base, was converted into a 2,750-acre farm and advance defense post. Israel needs the extra acreage to help provide the food to nourish its growth from 750,000 in 1948 to 1,800,000 today.

The youngsters at Nahal-Oz are all city-born and city-bred volunteers, handpicked from Nahal (Fighting Pioneer Youth). When they finished military training they were given an alternative: return to the safety of their city or cast their lot with others in the desert. They are here by choice, not by compulsion.

The 75, including 25 girls, tilled the old soil to produce green fields of corn, cotton, tomatoes, carrots, beets, green and yellow beans and watermelons. They live in six buildings, are erecting another home and rushing a nursery because, Mordecai explained:

"We have one baby in the settlement and another one is on the way—due in a week or so."

ATTACK IS DESCRIBED

They eat at a central kitchen and dining room, relax in a reading room building

donated by worried parents back in the big cities of Jerusalem, Tel Aviv and Haifa. They include 12 married couples, and the baby, a 6-month-old girl, is the idol of the village.

Water, precious water, is piped to them from Nirim, the settlement and desert pumping station now under attack. But Nahal-Oz dreams of the day when the huge 66-inch pipe, "the Big 66," will reach them with plentiful supplies from rivers in the north.

Time was when the kids of Nahal-Oz also dreamed of peace, thought their troubles with the Arabs were over; that an era of good will was spreading throughout their desolate countryside. But, that was before November 7, 1953.

Let Mordecai tell what happened:

"We were working in the fields unarmed and stopped to talk to Egyptian soldiers. The border had been quiet and we used to chat with them often. There was no warning of what was to happen. Suddenly, Egyptians in another position opened fire. Those we had been talking to also opened up and we jumped into a ditch for safety. But we lost Yaakev Tuchman. He was only 19. Another boy had both arms blown off, one girl lost a leg. The rest of us got back safely."

That ended their dreams of peace.

"After that they threw a shell or two at us from Aly Muntar without causing too much damage." Hoar went on.

"That was before the big attack August 22 after Mr. Hearst was here. It started while we were at breakfast. They let loose with a surprise barrage. We heard a great noise and saw black smoke coming from one of our houses. Then the shells started falling. Some of our girls went into bunker shelters with the baby. A shell exploded 6 feet from them, but no one was hurt. The girls just ate a little dirt.

"The rest of us took our guns, went to defense posts and fired back. Reinforcements came but the Egyptians kept up their fire about 4½ hours, dropping about 200 shells around us. Then it was all over. It's been quiet since, but we don't know how long that will last."

FARMING GOES ON

They were at work when I arrived feeding their 5,000 chickens, caring for 30 cows, while 2 donkeys pulled carts with the young battling farmers into fields, followed by the settlement's 2 yelping hounds, a bulldog and wolfdog.

Asked Odden Levin, the settlement's 21-year-old rugged director:

"Do you think they'll (the Arabs) really start another war?"

I told them I did not know, but that Prime Minister Nasser, of Egypt, informed me he feared the Israelis would attack him, setting off a new conflict. Neither Levin nor his companions would buy that.

They asked about the "Liberation Province" I had seen in Egypt, showing keen interest in the development of what they called the Kibbutsim of the Libyan Desert.

Like others with whom I talked, they agreed that resettlement of the 900,000 Palestine Arab refugees would remove the most festering sore in Arab-Israel relations.

(Israel is prepared to pay maximum compensation to the refugees for the property they leave behind. Secretary of State Dulles has announced the United States would help arrange an international loan to resettle the refugees and help develop areas in Arab lands where they could live a better life.)

Mordecai laughed as we talked of war or peace in the Middle East.

"I'm getting married next week. Nobody better interfere with that. Leah won't like it, and if Leah gets mad, everybody better look out."

The "Chussin" of Nahal-Oz had spoken.

As I left their barbed wire gates, riding past the watchtower, waving farewell to the kids with the plows and the guns, I looked back at the Hill of Aly Muntar and pondered:

"How Allenby could have used the kids of Nahal-Oz."

ISRAEL: WAR OR PEACE?—RESCUE PLAN FOR JEWS AN EXAMPLE TO ARAB LEADERS

(By Erwin Savelson)

In the decayed foothills of the Valley of Elah, where the Philistine giant Goliath fell before the humble shepherd boy David, I saw the premiere of another of those feats with which Israel keeps astounding the world.

Israel has labeled it "Operation Lachish." It is a vast humanitarian endeavor to rescue 100,000 or more Jews now living among hostile tribesmen and fiercely nationalistic elements in troubled Morocco.

Hundreds of miles to the west in Libyan Desert, I saw the start of the "Liberation Province," where Egypt, in its first major reform in centuries, is striving to better the lot of 1 million of its poverty-stricken peasants.

The names and locations of the two operations are different, but the lesson inherent in each is the same:

How much better off the Arabs would be if they abandoned their senseless pursuit of conflict with Israel and turned to developing new "Lachishes" and "Liberation Provinces" for 900,000 Palestine Arab refugees in border camps in Egypt, Syria, Lebanon, and Jordan.

Perhaps it is too much to expect an Operation Lachish from men harboring such intense hatred of Israel they are willing to subject the Middle East to another war by trading for arms with the Communists.

But I repeat the words expressed to me by one of America's world famous diplomats:

"Eliminate the Arab refugee question and you eliminate the chief cause of strife in the Middle East."

Then, this ranking diplomat added frankly:

"But that would take away their (the Arabs') main arguing point against Israel. Still, it's worth encouraging "Liberation Provinces" if it will help bring peace."

That is why it is so necessary to understand Operation Lachish. For wrapped up in this project, like the "Liberation Province," is the almost perfect solution to war or peace. If the refugee issue is resolved there can be but one result: Peace.

ONE HOUR FROM GAZA

The Lachish region is an hour's ride from the flaming Gaza strip where war is imminent. It lies midway between Jerusalem and Beersheba, capital of the Negev Desert. It is astride the principal trade routes to Egypt and Mesopotamia.

Once its rich lands flourished with vineyards and olive groves. But today, 14 centuries after warring Canaanite and Egyptian, Maccabean and Roman scarred its hills with some of history's greatest battles, it lies barren and almost desolate.

Looking at the scattered stones, ruined irrigation works, and collapsed terraces, I wondered how Israel could ever redeem the fertility of the ancient soil—much less make it breathe life and hope for 100,000 new settlers.

The answer came from Moshe Kol, a new member of Israel's Cabinet and head of the Youth Aliyah (immigration) movement.

You believe Kol when he describes his devotion to the task of rescuing fellow Jews wherever they survive under the terror of persecution. Why? Because Kol's father was killed by the Nazis in the memorable Warsaw ghetto uprising of World War II; his mother and sister were slain by the Nazis in Pinsk.

"You've been here four times and still you ask how we are going to get things done?" he asked with a tone of incredulity.

"We'll do it by creating free men and women; we'll give them the tools and their own land; we'll give them hope so they can sink their roots into their own soil."

Admittedly the monumental task of restoring 750,000 dunams of wildlife (roughly 187,000 acres) is challenging, but Kol persisted:

"If we were able to turn the Emek Jezreel (northern Israel) from a malaria swamp into a green belt under more unfavorable circumstances, then the same pioneering zeal, plus modern machines, will surmount the difficulties in Lachish."

NO TIME TO LOSE

"But we must act before it is too late," Kol continued. "We must bring as many Jews out of north African danger zones as rapidly as possible."

The immediate goal is 40,000 to 45,000 by next October. The migration and resettlement will be undertaken principally with funds from the United Jewish Appeal.

Of the plight of Jews in Morocco, Kol warned:

"The Egyptian Government has been influencing the populace against our people. The Jews in Morocco have no civil rights. They remain there under the personal protection of the Sultan. They are terrorized in Marrakech and in their Atlas Mountain homes."

Under the Lachish plan:

1. Each migrant family must have at least 1 physically capable breadwinner under 45 so as not to tax Israel with future public charges.

2. Worried parents will be permitted to send their children, then migrate at a later stage.

MAKE GOOD CITIZENS

A streamlined ship-to-settlement plan has been developed. This eliminates the necessity of first lodging immigrants in tent cities or broken-down huts before moving them into permanent homes. The permanent homes are there. I saw them, modest, well-constructed concrete houses with land aplenty for each man.

"Our experience with the north African Jew shows he makes a good and constructive citizen," Kol went on.

"Many have already made good officers in our army. We've absorbed 15,000 of their children since 1949. We have a scholarship fund for their education in secondary (high) schools."

The blueprint of Lachish follows four objectives:

1. Harness the soil in Israel's drive for a self-sustaining economy.

2. Create a network of settlements to house the immigrants.

3. Cultivate industrial crops and establish industries in the region which can use such crops.

4. Fill in a border vacuum which the planners say "creates a dangerous gap in Israel's defense perimeter."

I saw the first stage of the operation in action by going to Haifa, Israel's great port in the north, as the steamship *Negbah* arrived.

The new citizens of Israel moved ashore carrying their possessions in boxes and handbags. Children clung to their mothers, others tagged along. All were processed swiftly, then driven in trucks and buses to Otzem—first village created in Lachish.

Otzem means strength and honors the Israeli forces which beat back Egyptian attacks in the area in 1948.

The settlers—mostly from the village of Bugmaz in the Atlas Mountains—lugged mattresses and crates into their new homes, then eagerly inspected the land about them.

Meir Maman, sporting a beret, lit a cigarette and moved right into the plot behind his home to sow the soil.

INDEPENDENT UNIT

The size of each settlement in Lachish will range from 60 to 100 families. Every 6 to 8 settlements will have a district center with a population of 800 to 1,000 families. This center, in turn, will be linked with a regional town of 15,000 to 20,000 families.

"In this way," Kol related, "the entire region will become to a large extent an independent economic, social, and cultural unit."

The region is criss-crossed by three new highways and the new railroad running south to Beersheba. Surveyors were taking readings for the new roads when I arrived. Not far away big ditches were prepared for the huge 66-inch pipes, part of the Yarkon-Negev pipeline, which will bring water into the area.

The UJA and Israel Government estimate 50 settlements (4,500 farms) will eventually be established.

Behind the drive to redeem Lachish is Israel's Premier and Defense Minister, David Ben-Gurion, a Negev Desert settler himself.

Later, in Paris I talked with such eminent Americans as Edward M. M. Warburg, United Jewish Appeals president; William Rosenwald, United Jewish Appeals general chairman; New York industrialist Leon Lowenstein; New York City tax commissioner Nathan Math; and Dewey D. Stone, of Brockton, Mass., philanthropist.

FITTING EXAMPLE FOR BOTH

They were en route to Israel and Africa as members of an American mission to study the plight of Jews in hostile areas and the great lachish operation. Warburg told me:

"Lachish is another demostration of the good intentions of men of good will and peace. It is a fitting example for both Arab and Jew."

It is difficult to reconcile Egyptian Premier Nasser's fears with the almost universal desire in Israel for peace—a peace that will enable it to complete lachish without draining any funds for defense.

Egypt's well-intentioned liberation province can serve the same purpose for Arab refugees as lachish will for immigrant Jews. Arab investment in future lachishes and liberation provinces would pay richer dividends than war.

More important—it would thwart Communist aspiration to gain a foothold in the vital Middle East—where Red Czechoslovakian arms are fomenting war.

Lachish and the liberation province offer great hope and promise.

It's a bargain you can't buy when you engage in pursuit of arms instead of pursuit of happiness.

ISRAEL: WAR OR PEACE?—FACE OF COUNTRY SHOWS DRAMATIC GAINS IN 7 YEARS

(By Erwin Savelson)

It's down on the farm and home on the range in Israel, 1955.

That's a long way from 1949 when a lot of us dieted on "liverless liver" and meager rations while covering the final stages of Israel's war for independence.

The enthusiastic little state—the threat of war again rumbling about its head—emerged from the first round with the Arabs with two ambitious self-set missions.

1. Peace with the Arab world.

2. Battle against deserts and swamplands to redeem idle soil and fill the empty stomachs of 750,000 citizens—now grown to 1,800,000.

Victory over the desert and malarial swamps is within sight, though the pangs of hunger endured by the Israelis for 7 long years have not disappeared entirely.

But the cherished peace—menaced by a threatening "second round" with the hostile Arabs—is not in sight.

In the hills of Gallilee near Tabcha, I saw Bud Molohon, Israel's favorite Texas cowboy, riding the hilly range, teaching young Israelis how to raise cattle. From Dan to Beersheba and even farther south into the Negev, I saw what peace means.

For the Israelis, in 7 short years, had raised the cultivated area of their land from 1,650,000 dunams (4 dunams equal 1 acre) in 1949 to 3,675,000 dunams today.

PROGRESS SPECTACULAR

It was visible evidence of the peace which Israel welcomes so that it may use its limited resources to consolidate the spectacular economic gains achieved since 1949.

Ironically, the same type of peace would enable Egypt to move forward at an accelerated pace with such revolutionary reforms as the "liberation province" without draining its treasury to pay—even cutrate prices—for arms from Communist Czechoslovakia.

Even Egyptian Prime Minister Nasser acknowledged during our recent talk in Cairo that it was distressing, as he put it, to spend money on guns, tanks, and planes instead of "Liberation Provinces."

But when I suggested that the Arabs turn to creating "Liberation Provinces" throughout their lands for 900,000 Palestine Arab refugees, I was greeted with silence.

The resettlement of the refugees would remove one of the chief issues involved in the bitter dispute between the Arabs and Israel and open the way at least to talks of peace, in the opinion of America's leading diplomats and observers.

In Israel, the average citizen in the big cities or the kibbutznick in the desert settlements, prepared for mobilization at any moment, would rather talk about the country's progress than the ominous second round threat.

Even my chauffeur, Shmuel Baker, had his opinion:

"There's so much still to be done, so let's do it. We don't like the idea of war. We'll never start one, I'm sure. But we're as ready as we can be. In the meantime, we're doing what has to be done."

BLUEPRINT CHALLENGING

Doing what has to be done?

The blueprint of Israel's future challenges the imagination.

In a back-breaking commando-car journey from Beersheba far south of Eilat at the tip of the gulf of Aqaba, millions of acres of sun-scarred wastes stretched before our eyes.

But the Israelis dream of new cities and urban centers of 10,000 and 25,000 in this desolate soutern Negev.

To the north, swamps are being drained where Cowboy Molohon and his range hands ride in Galilee, setting the pace for ultimate utilization of 2 million dunams (500,000 acres) of grazing land for beef cattle.

When you ask Molohon, of the United States point 4 missions, about the youngsters riding with him, he answers with a western twang:

"Good hands. Good people. They'll do all right!"

Seven years ago, I skirted the old road to Jerusalem, climbed to the heights leading into the Valley of Courage where youngsters perished to lift the siege of the holy city. The ancient terraces tilled by Arab and Jew were nothing but crags of rock.

Two weeks ago, I stood on the same hilltop. Before me nestled reaches of vineyards in the Judean hills. The terraces were green with cypress and eucalyptus and tropical and sub-tropical fruits and plants.

EGGS NOW PLENTIFUL

Seven years ago, an egg was a precious commodity. In 1955, I feasted on all the eggs one could desire and watched my friend Ben (Flatbush Benny) Chorin caring tenderly for hundreds of thousands of chicks in his scientific coops at Kfar Menachem on the northern fringe of the Negev.

Seven years ago, a handful of religious youngsters were eking a living out of Kfar Darom in the Negev. A fortnight ago, the 40 Darom youngsters were still there, plus 160 others from 20 different countries.

In 1948 and 1949, the 261 combines and 681 tractors represented the nation's agricultural industrial wealth. Today, there are 915 combines and 3,415 tractors harvesting cotton, groundnuts and sugar beets on a large scale and flax and tropical fruits on a smaller scale.

During my last on-the-spot survey in 1952, the Israelis were shelling out $65 million a year to import meat, wheat, tea and coffee. Similar food imports now average $14 million annually.

Once the war clouds were lifted, Israel pursued its plans to educate Arab farmers, training them to use modern methods and irrigation systems. It paid off. Arab villages now cultivate not only 550,000 dunams of land, but have increased tobacco production tenfold. And in desert regions, the Bedouins have turned an additional 300,000 dunams into fertile fields.

BOYCOTT DISCUSSED

Industrial development has kept pace with agricultural progress; witness the fact that where 80,000 were employed in 1949, there are 125,000 on the job today.

But all this does not mean that Israel is over the hump economically. Far from it. The ruthless Arab economic boycott only adds to Israel's trials. The nation's breadbaskets in the north and south have filled empty stomachs, but there still are extremely short supplies of such vital items as meat, wheat, and sugar.

In the settlements and cities, former white-collar workers, small shopkeepers, and others who are becoming experienced farmers, tell you the gathering war clouds only drive them to a greater tenacity and resolution to finish what must be done.

When I had concluded my interview with Defense Minister Ben-Gurion in Jerusalem, one of his aides took me aside to discuss relations with Egypt and the other Arab powers bent on destroying Israel.

"The Arabs go around kidding themselves that if they trade with Israel, then Israel will swamp their world with its industrial goods," he said.

"Nothing is farther from the truth. If they end their economic boycott and trade with us it will bring capital investment into the whole area. The capacity for Israel to attract capital, not only for its own development but for the betterment of neighboring states as well, is tremendous."

The blossoming hills of Jerusalem and the green in the Negev were welcome sights compared to the arms exhibits I saw in both Israel and Cairo.

The huge pumping stations and reservoirs forming part of the 70-mile Yarkon-Negev pipeline—which took 45,000 66-inch pipes and a million workdays to build—seemed better lifelines than the tense armed forces dug in along the Gaza strip.

UNFOUND TREASURES

There are still unfound treasures in Israel's Negev, the Judean hills and Galilee. There must be equal treasures in the "Liberation Province" where Egypt hopes to settle 1 million down-trodden peasants.

I saw many "Bud" Molohons scattered around delivering the goods of American know-how and good will. They were actresses and actors, cowboys and diplomats, builders and planners, TWA fliers and soldiers.

In war and peace, I found the face of the land of Israel changing—for the better.

The Arab world—which can build Liberation Provinces to ease the burden of the refugees living within its borders—can benefit from the simple philosophy being spun in Israel and around the globe by "Bud" Molohons. Summed up, it is:

In the long run a home on the range is worth a dozen divisions equipped with imported Red arms.

ISRAEL: WAR OR PEACE?—HEALING HANDS OF HADASSAH TOUCH JEW, ARAB ALIKE

(By Erwin Savelson)

War thunders to the south in the Holy Land, but it is quiet in the hills of Jerusalem.

The blood of Israeli and Arab spills on the moonlit Sinai Desert, but it is peaceful on the road to Ain Karem, birthplace of St. John the Baptist, where the highway winds down into a beautiful valley enriched with vineyards and olive trees.

For Ain Karem has been touched by the blessed healing hand of Hadassah—America's 300,000 Queen Esthers—and there a magnificent hospital is rising above the ridges to minister to Arab and Israeli alike.

Frightened children huddle in Israeli settlements and in the refugee camps in Egyptian-held Gaza as men tear at each other with weapons of destruction.

But it is calm in the blue hills atop picturesque Bayit Vegan, where 125,000 B'nai B'rith Women of America have erected a home for children terrorized by the horrors of war.

I can still hear the words of Mayor Gershon Agron of Jerusalem as we stood on the mountain at Bayit Vegan and talked about the imminence of war and the home built for war-stricken maladjusted children.

"There are no disturbed children," said Agron. "There are disturbed circumstances."

I had just flown to Israel from Egypt, via Cyprus, after inspecting the huge Liberation Province in the Libyan Desert between Cairo and Alexandria.

The disturbed circumstances of which Agron spoke were as absent in the Libyan Desert as in the Judean hills. There was a degree of similarity between the great Hadassah installations of mercy I saw in Israel's north and in the Negev Desert and the new clinics, hospitals, and schools I saw in Egypt's Liberation Province.

And I could not help but think:

Here was an almost perfect solution to the chief cause of strife in the Middle East: The presence of 900,000 Palestine Arab refugees on Israel's borders, 250,000 of them in the Gaza tinderbox.

There is universal agreement among the world's diplomats that settlement of the refugee problem is the key to war or peace in the Middle East. The refugees, cut off from farms or properties by the armistice lines drawn in 1948, have been in camps in Egypt, Syria, Lebanon, and Jordan for 7 years.

There was general agreement as well among the diplomats and military figures with whom I talked on three continents that Egypt's plan to resettle 1 million of its peasants in the liberation province could just as readily be adapted to the refugeed question, namely:

Establishment of similar liberation provinces throughout the spacious Arab States for the 900,000 refugees.

Israel is prepared to pay compensation to the refugees; the United States and Britain have announced they would arrange an international loan to help resettle them, and the United Nations has offered its assistance.

KEPT UNUSED BY WAR

It remains only for the Arab States to accept and contribute to a resettlement program.

That such action would bring vast benefits to the entire Middle East was made clear to me in Ain Karem and at Bayit Vegan.

I stood on the site at Ain Karem where indefatigable Dr. Kalman J. Mann, Hadassah Medical Organization director general, enthusiastically watched the first stages of construction on the new Hadassah-Hebrew University Medical Center.

We recalled how in 1952 we looked up at Arab-held Mount Scopus, atop of which still stands the original Hadassah Hospital and famed university—still closed and unused because men cannot attain peace.

Then we reached the bare 500-acre plateau at Ain Karem, where Dr. Mann shouted enthusiastically: "This is the spot."

This time the spot was not empty. Above the ridge rose the beginning of a new 500-bed hospital, the most modern in the Middle East; the Henrietta Szold School of Nursing, named for the founder of Hadassah; a medical school to train 450 students; a mother-and-child pavilion for maternity cases and infant care and a shikun (housing development) for the 500 families of the center's personnel.

Dr. Mann is a man of peace, a healer, and his talk was refreshing when compared with the sword-rattling words of so many men I met in the Middle East.

He spoke words which he later reiterated before the Hadassah convention in Chicago:

"Even if the Arabs are unwilling to meet with us on political problems, they should, for the welfare of their own people, contact Israel medical authorities to conquer jointly regional health scourges."

The figures he cited on comparative Israeli-Egyptian mortality rates were not meant to deride Egypt, but rather to drive home his point that disease knows no border strips like Gaza. Here are only two of Dr. Mann's startling figures:

The average life span of an Israeli male in 1953 was 68 years as compared with 35½ in Egypt.

The infant mortality rate in Israel was 36 per 1,000 against 180 in Egypt.

READY TO SHARE

Then, he added, Hadassah was ready to share its know-how with the Arabs.

This was not empty talk. For in the Negev one can witness practical application of Hadassah's belief that disease does not differentiate between Moslem and Jew.

Arab patients waited outside the Yassky Memorial Hospital in Beersheba to receive first-rate medical care; they mingled with the Israeli settlers; the nurses moved from one to another, ministering to each meticulously; an anxious Arab father held his little son as a doctor treated the child for trachoma.

I recalled what Dr. Mann had said:

"Health is an instrument for peace that provides a common ground for the masses of Arab and Israel people."

Hadassah is providing that common ground through its seven hospitals in Israel, its health centers, vocational schools, welfare stations, antitrachoma service, and other projects too numerous to list.

If Hadassah had ended its work with the prewar and postwar rescue of 70,000 youthful refugees from 72 lands, it would have been enough. But it has gone on to plant the heart of American womanhood in the Middle East to the lasting benefit of Arab and Israeli. I was proud of them.

I was just as proud the day I watched 45 American women leaders of B'nai B'rith assemble on the hill at Bayit Vegan to dedicate a $250,000 home for maladjusted children.

Old Glory and Israeli flags flew over the buildings in the picturesque setting. Capt. Naftali Gribov led his Israeli Police Band in playing national anthems, then swung into Oklahoma.

URGED HOME IN 1943

The spirit of Henrietta Szold also was at Bayit Vegan, for it was in 1943 that she urged B'nai B'rith, America's 113-year-old and largest Jewish service organization to build a home for children afflicted by the aftermath of war and persecution.

Mrs. Isaac Ben-Zvi, wife of the President of Israel, chatted with such American leaders as Mrs. Louis L. Perlman (Chicago), president of the B'nai B'rith Women of America; Mrs. Maurice Turner (Los Angeles), Mrs. Arthur G. Laufman (Chicago), Mrs. William Rabkin (New York) and others.

United States Ambassador Edward B. Lawson led the scores of diplomats and military attachés of many nations at the scene, then expressed his admiration for the contributions made to peace by American women.

The children of the home marched through its gates singing their thanks in Hebrew and English. For they were home, no longer fearful.

Before I left Egypt, one of Prime Minister Nasser's chief aides looked quizzically at the pin in the lapel of my coat and asked: "Menorah?"

Rather good-naturedly, I smiled and replied:

"No, Liberace's Fan Club."

As he laughed, I explained that Liberace's stage props were featured by the presence of a seven-pronged candelabra on a piano, then told him the "Menorah" in my lapel signified my B'nai B'rith membership.

"What does it stand for?" he asked.

"Benevolence, brotherly love, and harmony—service to mankind of all creeds and faiths," I answered.

"It's a wonderful philosophy," he admitted.

In Ain Karem and Beersheba, the children of Arab and Israeli look to the healers of Hadassah.

In Gaza and elsewhere on the war-jittery borders, the children of the refugees await the better life to which they also are entitled.

They are entitled to liberation provinces. All children can do without disturbed circumstances.

ISRAEL: WAR OR PEACE?—JOHNSTON'S PLAN: QUELL MIDDLE EAST FIRE WITH WATER

(By Erwin Savelson)

Water is the life of the Middle East. The Nile is Egypt and the Jordan is Israel. And there are men in Arab lands so filled with hatred of Israel they say the twain shall never meet. But, if I were they, I wouldn't bet on it.

For I have seen a man with a mission in action. He is Eric Johnston. His title—President Eisenhower's Special Ambassador to the Middle East. Americans know him better as the "czar" of the movie industry.

His mission: Peace—not war.

I met this patient troubleshooter extraordinary in Cairo on a Sunday morning. Two days later, we met again in Jerusalem. Though he has been shuttling back and forth from Hollywood to the Middle East for 2 years, he is far from discouraged. He moves forward with a determination to persuade the Arab states and Israel to accept the United States-backed formula for peaceful division of the Jordan Valley waters.

His success may mean the difference between war and peace. It will also mean:

Resettlement of about 200,000 of the 900,000 Arab refugees who have been in border camps in Egypt, Syria, Lebanon, and Jordan for 7 years.

The generation of electric power in the Jordan Valley, bringing with it the richness of newly irrigated soil; homes and green fields for tens of thousands; a better way of life for all in the explosive Middle East.

It's a difficult assignment, but Johnston is not an ordinary man. He has virtually made the Middle East his home since 1953, demonstrating the patience of a Job in the Holy Land; entreating with Syria, Lebanon, and Jordan on one hand; negotiating with Israel on the other.

"Tough, yes," he told me in Cairo, "but impossible of solution—no."

"WATER WAR" FOR JORDAN?

The eyes of the military experts are focused on the Gaza Strip, bloody El Auja and the sands of the Negev and Sinai Deserts.

But, the eyes of the diplomats are riveted on Johnston and the Jordan Valley to the

north, where feverish behind-the-scenes efforts have been going on for months to avert what the Eisenhower administration fears almost as much as the current disturbing desert border clashes—

A "Water War" over the Jordan Valley.

Johnston's reclamation and resettlement experts listened avidly to our description of forts have ben going on for months to try's plan to settle 1 million poverty-stricken peasants. They said they were aware of the project, describing it as apparently "mighty impressive."

There was general agreement among the diplomats that establishment of "Liberation Provinces" throughout spacious Arab states for the 900,000 refugees sitting on Israel's tense borders would remove the chief cause of war.

Johnston's plan for the Jordan Valley, therefore, looms high on the horizon. For it would open the way to new opportunities for the Middle East where Communist Russia is seeking to exploit Arab bitterness against Israel with its Red Czechoslovakian arms shipments to Egypt.

Thus, we have the sharp contrast of two missions in the Middle East where I saw war in the making.

1. Johnston, skillfully seeking agreement on a plan that would give the three Arab states about 60 percent of the water and Israel about 40 percent; Johnston working against ancient hatred and antagonisms to bring order out of chaos.

2. Communist Russia, seeking to expand its influence into the Arab world; pursuing a reckless policy that can only mean conflict unless it is checked by the Western World.

Johnston's approach to the problem is unorthodox. His job is made all the more difficult by the inane refusal of the Arab overlords to even acknowledge that Israel exists.

So, he negotiates with the Arab League technicians first in Cairo, Beirut, Amman, Jordan, or Damascus. Then he hops across frontiers to talk with the Israelis.

At this moment, he is encouraged by the willingness of both sides to discuss their technical objections to his program, though there are some skeptics who doubt much will come of his prolonged mission.

TVA SETUP IN EAST

Generally, Johnston's plan provides for a water development in the Jordan River Valley along lines of the Tennessee Valley Authority. It would divide the Jordan's waters between Israel and Syria and Jordan. Powerplants would be constructed on the headwaters of the Jordan and on its tributary, the Yarmuk River, and irrigate large areas in the three countries.

More important, it would permit resettling of at least 200,000 Arab refugees in the valley of the lower Jordan.

The entire scheme would cost $121 million. It would be money well spent because the alternative is: A "water war" in the north.

For Israel, water is the crucial element in its fight for economic survival. Israel's climate is characterized by a long dry spell from April to November, and a short rainy winter. The Jordan is the only river of any size in the country. The Yarkon River, Israel's second, is fed from an accumulation of springs near Tel Aviv.

The new state's overall national plan is designed to bring surplus water from the Jordan tributaries in the north to the Negev in the south.

Topping all is the Yarkon-Negev pipeline—the Big 66—most dramatic and biggest project of its kind ever undertaken in the Middle East.

At one end, the Yarkon flows into the Mediterranean. At the other end, the southern Negev Desert—hope of Israel's future—has remained unproductive because of lack of water.

But this situation has started to change with the advent of the "Big 66" which will carry almost half of the Yarkon's waters 60 miles to the south for irrigation.

"Tahal," the Israel Government's Water Authority, envisions the day soon when the water of the "Big 66" will bring fields and plantations to the barren east and northeast of the Gaza Strip, where men now are fighting and dying on a thirsty land.

"BIG 66," FIRST STAGE

Four months ago, Israeli President Isaac Ben-Zvi set into operation the first stage of the "Big 66" network.

The water moves south through giant underground pipes manufactured in Israel. Three pumping stations life it 650 to 800 feet to meet the plateau elevation in the south. Smaller pipelines and channels then stream it off into the settlements and villages.

Israel estimates 75,000 acres will be irrigated when a second branch of the Yarkon pipeline is opened. They estimate that about 2½ acres of irrigable land is needed for each farming family, so the plan is sufficient to support 30,000 families.

Compare this with the situation during my first visit to Israel in the final hours of the war in 1949:

Only 57,500 acres were irrigated in all of Israel when the republic was established. But, by December 31, 1955 the irrigated area will reach almost 250,000 acres.

And Tahal envisions the day within 10 years when 750,000 acres will be irrigated to cover the industrial and domestic needs of 3 million people. Israel's population today is near 1,800,000.

THE STAGE IS SET

Thus, the stage is set in the Middle East for the struggle for water—its most precious commodity.

Said Johnston:

"The differences between the Arab states and Israel on technical aspects of the water plan are now so small * * *"

So small—yet so big that men are willing to die for the precious fluid.

For the Arab world, the Johnston plan brings peace, not a Communist political penetration.

The Jordan Valley offers a new and better way of life for 200,000 Arab refugees.

Egypt's "Liberation Province" theory can be adapted by the Arabs to care for thousands of others, including the 250,000 still huddled in the tension-filled Gaza Strip.

I recommend you keep an eye on the Jordan Valley as well as on the flaming desert frontiers.

For was it not the prophet Isaiah who foretold the blessing of green lands where peace reigns:

"The wilderness and the dry land shall be glad thereat; and the desert shall rejoice, and blossom as the lily."

ISRAEL: WAR OR PEACE—SANDS OF THE NEGEV HOLD HOPE OF A BRIGHT FUTURE

(By Erwin Savelson)

Surrounded on three sides by hostile Arab states, and bounded on the fourth by the Mediterranean, war-threatened Israel still looks south for its rendezvous with destiny in the triangle-shaped Negev Desert.

The Bible is Israel's supreme authority for its hope of a fruitful future in this sliver of land which reaches from Beersheba to the Gulf of Eilat (Aqaba), the republic's "Window to the East."

The Israelis say the Bible tells them that the Negev was a store of rich treasures in ancient days, yielding earthly sustenance for millions of people and rich minerals for the glory that was Solomon's.

For 2 days, I crisscrossed the southern Negev with a convoy commanded by Capt. Rolfe Sommerfeld of the Desert Corps—just as I ranged over the massive "Liberation Province" in Egypt's hot Libyan Desert between Cairo and Alexandria, east of El Alamein.

In the Negev, I watched laborers from Europe, Iran and Iraq and from the Druz Moslem sect, some of whom fought for Israel against the Arabs, blast through rocky ridges and sandstone hillsides to build "Burma Roads" to the Dead Sea and the Bay of Eilat.

In Egypt's "Liberation Province," I saw men and machines level Libyan mounds, slice huge long ditches to receive tributary waters of the Nile, rip away eroded sand-swept spaces to create living space for better days.

Once again, I saw man engage in his ceaseless struggle for survival, pitting his endurance and ingenuity against the wilderness to restore lost outposts of civilization.

Here was man at his best.

In the Negev, he was pointing the way toward reclamation of ancient riches so that a free democracy might achieve a decent standard of life. In the "Liberation Province" he was pinning his revolutionary hope on a master plan to raise the level of the future for 1 million poverty-stricken persons.

SOLUTION FOR PEACE

Join the two plans and what do we have?

A perfect solution to the strife in the Middle East—an answer to peace or war in the Holy Land.

A perfect solution to the ever-present danger to peace in the 900,000 Palestine Arab refugees who have endured 7 years in camps in the Gaza tinderbox strip, in Syria, Lebanon, and Jordan.

For Egypt's "Liberation Province" reform is indicative of the Arab world's ability to wage peace—not war—if it so wills.

Stability and progress would be advanced at a dizzying pace in the Middle East; the costly strife of Gaza, El Auja, and Khan Yunis, where I saw war in the making, would vanish if:

The 900,000 refugees are resettled in spacious Arab lands.

Toward that end and in a statesmanlike approcah, the United States and Britain have offered to arrange an international loan to help resettle them and finance development and irrigation projects in regions where they would be self-supporting.

Israel is prepared to make maximum compensation for properties lost by the refugees when they were cut off from their lands by the armistice lines drawn in 1948. The United Nations only waits the calls to give assistance.

The lone requirement:

Arab acceptance of this humane "liberation province" approach.

The stumbling block:

Arab unwillingness even to recognize the existence of Israel.

The result:

Intervention by Communist Russia to gain a foothold in the strategic Middle East by exploiting to the hilt Arab bitterness against Israel; setting the stage for a war that eventually could involve the Big Powers by channeling guns, tanks, planes, and submarines to Egypt.

No one will gain by war in the Middle East except the Communists. No one will gain from this intrigue but the Communists who are bent on fulfilling an ambition nurtured since Czarist days to achieve an outlet on the Mediterranean or Persian Gulf in the oil- and mineral-rich Middle East—even at the cost of conflict.

The stakes are high. Take Israel's for example:

Its stake in the battle with the Negev wastes is very high since the Machtesh Gadol, a deep desert depression into which I descended from mountainous heights with Captain Sommerfeld's convoy, is the home—so I was told—of geological treasures.

You now hear a new word in the land below the Scorpion's Trail, a winding and twisting highway cut out of the side of a mountain, leading into the desert plain below. It is: Uranium.

Israel scientists advised me that their researchers at the Weizmann Institute of Science in Rehovot have developed means of extracting uranium from Negev phosphate ores, found principally in the Machtesh and used for fertilizers. There were admissions, however, that the phosphate thus far has been found to contain low grade uranium.

But phosphate is not the only mineral target of the Israelis. As we bounced over the Negev roads, they told me of looking ahead to discovering such desert treasures as:

NEGEV TREASURES

Magnesium, bromide and salt plus the potash already existing in the flat salt pans of Sodom on the Red Sea; gypsum at Sde Boker, Prime Minister David Ben-Gurion's desert retreat; clay, iron and manganese in the Wadi (huge gully) Ramon copper and manganese at the Wadi Nehoushtan and ornamental stone at Eilat on the Red Sea—from where King Solomon's treasure-laden ships once sailed to distant lands.

Israel is alive to the wonders which await its people if it can triumph in the desert from Beersheba west to the Egyptian border, east to Sodom and the Jordan Mountains and south to the Bay of Eilat—its gateway to the East.

With dreams of abundant oil at Helets (the quantity of oil in this field has not been determined as yet) in the north, minerals in the south and flourishing farmlands in old Holy Land wastelands, Israel looks ahead with hope of victory in the Negev.

The same type of war is being waged by the builders of Egypt's "Liberation Province" where they told me victory is in sight in that nation's first great reform attempt in centuries to lift the yoke off a million peasants.

But Israel and Egypt will need peace to achieve such lofty aims—a peace which Israel has offered but which the Arabs do not talk about, except on terms which would, in effect, decimate Israel.

BEN-GURION'S VISION

The Middle East can take to heart the words of Prime Minister Ben-Gurion, staunch advocate of the drive to the south, who told me I would "never know the real Israel, the Israel of future generations, until you've stood on the shores of the Red Sea."

Upon my return from the long journey to the land of Eilat, Ben-Gurion again envisioned great and new civilizations in the desert, stating:

"We are under no obligations to accept the heritage of desolation from the past, for it is within our power to reforest the waste, to fertilize the sand dunes, to dig wells, to build and revive the dust of the earth, to redeem its minerals and natural treasures.

"Indeed, this is the true conquest of the land; the great mission we are called upon to undertake in our own day."

There is no other alternative to the question of war or peace in the Middle East.

The "true conquest" of the land means peace for Israel and the Arabs. The "true conquest" means new homes for the 900,000 refugees.

The other choice: War.

ISRAEL: WAR OR PEACE?—DEATH LURKS IN 10 PLAGUE SPOTS OF MIDDLE EAST

(By Erwin Savelson)

Israel has 10 frontiers where war may explode.

That's a lot of territory to watch for a nation the size of New Jersey with a population of 1,800,000, surorunded as it is by hostile Arab states with 45 million inhabitants spread over an area nearly two-thirds the size of the United States.

At the moment, the world's attention is focused on the fighting on the Egyptian-Israeli border in the Negev Desert.

But war also threatens in other hot spots—ranging north from the Straits of Tiran where the Gulf of Aqaba (Eilat) meets the Red Sea to far-flung Lebanese-Syrian outposts in the north.

Just check off these names and paste them in your military hat. For if the full-fledged war which the United States and free world are striving to prevent does come, blood will flow unnecessarily in:

1. The Gaza strip.
2. The demilitarized zone of El Auja.
3. The desert frontier around El Sabha, where last week Israelis claimed they killed 50 Egyptians and the latter claim 200 Israelis perished.
4. The seaport of Eliat and the Straits of Tiran.
5. The Israeli-Jordon frontier around Jerusalem.
6. The territory in Jordan known as the Nabius-Jenin-Tulkarm Triangle northeast of Tel Aviv and pointed directly at the plains leading to the Israeli seashore town of Natany.
7. The Hebron Hills below Jerusalem.
8. The region around Ein Gev opposite Tiberias on the Sea of Galilee, adjacent to the Syrian border.
9. The Jordan Valley where dispute over use of the Jordan waters and draining of the malarial Huleh swamps for new Israeli farms and settlers threatens to explode in a Water War unless Eric Johnston's United States-backed development plan is accepted by both sides.
10. The Lebanese border.

And the flow of blood in these hot spots would be unnecessary because there is a solution to the current strife caused in the Middle East by Red Czechoslovakia's shipments of arms to Egypt.

The solution is:

Resettlement of 900,000 Arab refugees—who have been in Gaza, Jordan, Syria, and Lebanon for 7 years—in "Liberation Provinces" such as I saw in Egypt's Libyan Desert.

The "Liberation Province" plan advanced by this newspaper has evoked the wildest interest among diplomats and would, they agree, erase the No. 1 obstacle to peace in the Middle East.

It would mean new hope and life for the refugees who were cut off from their Palestine properties by armistice lines drawn in 1948.

That was the year the outnumbered and ill-equipped Israeli Army staged what its historians now describe as "Operation 10 Plagues."

They severed the Arab "jugular vein" in the Northern Negev, ended isolation of surrounded Negev settlements, trapped sizeable Arab forces in the desert—all of which led to the Rhodes Island armistice agreement in February 1949.

CAN ISRAEL REPEAT?

Can Israel repeat its bold defensive tactics of 7 years ago?

The answer lies in whether it can obtain security guarantees and arms to guard its many explosive frontiers against the new might pouring into Egypt via the Communist pipeline.

At this writing, it appears the free world, reappraising the situation and anxious to maintain a balance of power between Israel and the Arabs, may provide some arms to offset the Red-made superiority piling up on the Arab side.

If the West is unable to head off a deadly arms race or unable to persuade the Kremlin to halt its dangerous incursion into an area long regarded as vital to defense of the free world, you can expect serious trouble in any of the 10 hot spots discussed above.

Though Gaza and El Sabha are making headlines now, the Gulf of Aqaba, from where King Solomon's treasure-laden ships sailed thousands of years ago to the East, may be the area of the next serious and dangerous flareup.

Israel has developed a port in the small strip of land it occupies on the Gulf of Aqaba at Eilat. But it cannot use the gulf to reach Africa and the Far East.

The west shore of the gulf belongs to Egypt, the east shore to Jordan and Saudi Arabia. At the bottom of the gulf is the Red Sea. The way to the sea is blocked by two small Egyptian-controlled islands in the Straits of Tiran. They are Tiran and Sanafi where Egyptian batteries overlook the straits while their ships patrol the waters.

A few months ago, a British freighter was fired upon while passing through. Some Israeli-chartered ships, flying foreign flags, managed to slip through in recent years. But that was before Egypt demanded 72 hours notice before permitting any foreign ship to negotiate the straits.

Egypt also refuses to permit any Israeli shipping through the Suez Canal, linked to the Red Sea by the Gulf of Suez.

Israel has repeatedly demanded Egypt permit its ships free access through the straits. It has tacitly warned of a determination to protect such passage of ships whenever necessary.

So, look out for a conflagration in the Straits of Tiran if Egypt keeps up its blockade and Israel decides to run the gauntlet.

North of strife-ridden, El Auja, El Sabha, and Gaza are the other explosive frontiers.

Facing the Nablus-Jenin-Tulkarm Triangle are scores of new Israeli settlements, alerted around the clock for any possible thrust by Jordan Arab Legion troops, based only 10 miles from Israel's Mediterranean seashore towns.

In Jerusalem, you can still look from your hotel window at Arab Legion troops patrolling walls of the Old City a few blocks away.

At Ein Gev, on the eastern shore of the Sea of Galilee, Israeli fishermen throw nets into the landlocked water, but always watchful for Arab marauders from neighboring Syria.

These are some of the hotspots where a war, spurred on by arms from Communist satellite states, is imminent unless the West acts to check the flames.

In Cairo, Maj. Gen. Abdul Hakim Amer, War Minister and Commander in Chief, hastened to assure foreign correspondents that Egypt's purchase of Red-made arms does not mean war.

In Jerusalem, Prime Minister David Ben-Gurion told me:

"If Nasser wants peace, he can have it right now. All we want is an honorable peace."

A few days later, Ben-Gurion repeated his offer in the Israeli Knesset (Parliament). There has been no answer to date from the Arab world which still refuses even to recognize the existence of Israel.

New war maps may show 10 new "plague spots" of death, destruction, and sorrow in the Middle East.

Ten "Liberation Provinces" would be so much better for the Arabs, Israel, and the free world.

ISRAEL: WAR OR PEACE?—SECURITY OF FREE WORLD AT STAKE IN MIDDLE EAST

(By Erwin Savelson)

The diplomats in Jerusalem and Cairo told me:

"It's necessary to neutralize military advantages held by both sides to minimize the danger of war."

In simple language they meant:

They are having nightmares over the prospect of Red-manufactured subs lurking in the Mediterranean.

In diplomatic language they meant:

Neither Israel nor the hostile Arab States surrounding the little republic should have more guns, tanks, planes, and even seapower than the other.

They call that the balance of power.

That was all right in 1950. The free world then hailed the Big Three—United States,

Britain, and France—for assuring Israel and the Arabs that they would not tolerate attempts by either side to wrest territory from each other by force.

But, the Middle East applecart has been upset by the Communists. Why?

It has been a military axiom almost since the days of Ghengis Khan:

"The power which controls the Middle East controls the world."

RED ARMS ON WAY

This is the stake of the free world in the Middle East today. And that stake will soon be threatened by:

Red-made subs in the Mediterranean for the first time in history, perhaps 6 to 12 of them. It's enough to make American and British admirals sit up nights.

Red-trained technicians in Egypt. There is only a handful around Cairo now. But the number will soon increase to dozens.

The arrival of 6 to 10 ships carrying Red Czechoslovakian arms at Port Said—part of the deal with Egypt.

The shipment of several hundred planes and jet fighters to Egypt via the Communist pipeline.

A top-ranking American observer in Cairo advised me that the Russians are trying to move in en masse to achieve their dream of getting a foothold on the strategic Middle East.

"They're all around us," he said.

And, from what reporters hear and see in the Middle East, new and stronger pronouncements and actions must come from the free world if a full-fledged war—spurred by Red-produced weapons—is to be avoided.

Though the Israel-Arab area is the hottest at the moment, there are other tension zones in the Middle East which are causing concern in Washington, London, and Paris. A few are:

The unrest in French North Africa.

Demands of the Greeks in Cyprus for self-determination.

The anger of Arab States over the Iraqi-Turkish pact linking those countries to a Western-Middle East defense setup.

The dispute between Egypt and the Sudanese who will soon vote on whether they prefer to become in independent state or part of Egypt.

Aware of these tensions, the Soviets have moved in to exploit the trouble, particularly the struggle between Israel and the Arabs; providing the arms to Egypt which upset the balance of power in the Middle East.

Aware of this, the West has offered its aid in trying to solve the chief cause of strife between Israel and the Arabs:

The presence of 900,000 Palestine Arab refugees on Israel's tense borders. One of the proposed solutions to this problem is the establishment of projects similar to the Egyptian "Liberation Province."

Elimination of the refugee problem would be the first step toward thwarting Russia's Middle East expansionist ambitions—for it would remove the No. 1 obstacle to peace talks.

It is estimated the heavy equipment being shipped by the Red Czechs will cost Egypt $60 million to $85 million.

"It's at bargain prices," a military expert said.

It is esetimated that 10 "Liberation Provinces" can be created to resettle the 900,000 refugees, give them a new and better way of life and remove the principle cause of strife.

"The spirit of conciliation and of the good neighbor brings rich rewards to the people and to the nations," Secretary of State Dulles has told Egypt and Israel.

Ten months ago, Prime Minister Nasser, of Egypt, told correspondents he does not believe Russia will make aggressive moves in the Middle East, adding:

"We would renew the mistrust and fear of foreign domination to enter such a pact (Middle East defense pact) with the West."

But Secretary Dulles' statement does not sound as if he was plotting how to bring about foreign domination of Egypt.

The Middle East tinderbox presents perhaps the most serious threat to free-world security since the end of World War II.

The seriousness of the situation was admitted to me in Europe and Africa, and as late as 48 hours ago by one of our most informed and respected diplomats.

His concern was expressed upon receipt of reports that at least 200 planes and 100 tanks would be shipped by Red Czechoslovakia to Egypt as part of their deal.

"It'll knock all hell out of the balance of power we've been trying to maintain," he confessed.

Expressing interest in the Liberation Province plan for resettlement of the 900,000 refugees, 250,000 of them sitting in the dangerous Gaza Strip, he added:

"If we can at least get them to sit down and talk about the refugees we would open the door to peace talks. In fact, it would be the first step toward closing the door on the expansion ambitions of the Communists.

"I hate to think of the consequences if the Russians are ever able to really get a grip on the Middle East."

ISRAEL: WAR OR PEACE?—END OF HOSTILITIES WOULD RESULT IN ARAB PROSPERITY

(By Erwin Savelson)

Three years ago, upon returning from Israel and the Middle East, I wrote:

"Democracy has a vital stake in keeping Israel strong and free. For Israel has lined up with the free nations opposed to any Communist encroachment in the Middle East."

Here is another observation from 1952:

"The road ahead for a reborn Israel is no easier today than it was in 1948—it may even become rougher in the next few years."

What was true in 1952 in Israel and the Middle East is just as true today.

My fourth on-the-spot survey in 7 years leads to no other conclusion but this:

The destiny of Israel and the oil-rich, vital Middle East, is now linked more than ever with the fate of the free world.

Granted peace, Israel is in a position to contribute materially to the prosperity of the entire region and to its own 1,800,000 citizens.

Plunged into war, Israel is now in a position to give a good defense account unless confronted by overwhelming superiority of armaments and firepower channeled into hostile Arab hands by Red Czechoslovakia—with the blessings of the Kremlin.

The choice is not Israel's. The final decision rests with the free world.

I asked one of the new nation's top level diplomats in Jerusalem:

"What is the future?"

He smiled, looked somewhat longingly at an equally important diplomat from a free world nation lunching with us, and replied:

"Tell me what the free world will do to help bring the peace we all want, to help insure our security now that the Arabs are getting heavy Communist arms and I will tell you Israel's future."

I received the same answer from almost every Israeli during my new survey of the land from Dan on the northern border and into the empty Negev desert wastes. But they also talked of their hopes for the future.

In Tel Aviv, health officials talked about the fact that the annual birth rate was about 50,000 against a death rate of 10,000, giving the country a natural increase of 40,000; not counting new immigrants.

Trade authorities seeking to emphasize how Israel can live with its neighbors, pointed to the new treaty it has signed with Islamic Turkey to purchase 50,000 tons of wheat in return for $2.5 million in exported goods.

My friend, Justice Shalon Kassan, the first civil jurist appointed to preside over the Galilee, home of tens of thousands of Israeli Arab citizens, told me somewhat proudly:

"We're spending tens of millions of dollars for new roads, schools, homes, health centers, and municipal and religious institutions in regions populated by our Arab citizens. Such development is an important part of Israel's future."

WHAT PEACE BROUGHT

This was only part of the fruits of peace—if you can call 7 years of an uneasy truce with 7 hostile neighboring Arab states peace—as I saw them after 7 years.

What other blessings has this tenuous peace given to Israel?

An increase in population from 750,000 to nearly 1,800,000.

A rise in national income from 220 million Israeli pounds to 1,426 million at the end of 1954.

An increase in consumption of electric power from 260 million kilowatt-hours to 820 million in 1954.

An extraordinary rise in land under irrigation from 412,000 acres to 925,000.

A boost in industrial production from 121 million Israeli pounds to 780 million pounds.

A rise in total exports from $5,500,000 in 1948 to $84,300,000 in 1954.

Yet, with all this progress, Israel is still a long way from economic self-sufficiency, blocked as it is from trade with its Arab neighboring states by a ruthless blockade.

No wonder many prominent Americans among a United Jewish Appeal delegation which I greeted abroad told me that a permanent peace would open new frontiers of prosperity for all the Middle East.

Everywhere people ask about Israel's future—but it is a future linked with the ultimate solution of many problems.

In Cairo and Jerusalem, diplomats agreed that resettlement of the 900,000 Palestine Arab refugees—cut off from their properties by the 1948 armistice lines—was first and foremost on the list.

RESETTLEMENT PROBLEM

The solution: Resettlement of hundreds of thousands of refugees in liberation provinces such as the one created by Egypt in the Libyan Desert and described for the first time for Americans in this series.

Problem 2: Development of the Jordan Valley. The solution: Adoption of Eric Johnston's plan to divide the Jordan waters between Israel and the Arabs, opening the way for resettlement of 200,00 more refugees in reclaimed soil in the lower Jordan Valley.

Problem 3. Communications. The solution? Establishment of a free port in Haifa for Arab states. Israel looks upon this proposal with favor.

Problem 4: Border clashes. The solution? Creation of physical barriers with firm international control to prevent raids by either side.

Problem 5: Trade. The solution? Israel would buy substantial quantities of food and other vital products from the Arab States and furnish them with the industrial and agricultural products it now is able to export.

These are the issues which will affect the future of Israel. The only obstacle to their solution is a stubborn insistence by Arab overlords to refuse even to recognize the existence of Israel.

In Cairo, Prime Minister Nasser sought to assure me that he has no fear of Red aggression; that he bought arms from Red Czechoslovakia—at bargain prices—for "defense" only.

But I was not assured. Not when reports indicated Red-made submarines would, for the first time in history, break out of the

Black Sea to penetrate the Mediterranean—the free world's lifeline to the Far East.

Such is the future Israel faces. But somehow, after viewing the state for the fourth time, gazing in awe at its progress and looking upon the spirited populace, I am convinced Israel will also weather this storm.

When I left Lydda Airport aboard a TWA liner, I felt I was leaving a child I had come to know well.

This time it was a healthier and sturdier child, no longer a baby, still anxious to fulfill its destiny as a democracy at peace with the world and its Arab neighbors—but unafraid of the challenges of the unknown future.

At the end of the long journey to the Middle East, I realized there are men—in Israel and even in Arab lands—who cry for peace.

But there still is no peace in the Holy Land.

There will be none unless the free world acts with courage and vision.

Building a Sound Peacetime Farm Program

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mrs. ST. GEORGE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the address by Secretary of Agriculture Ezra Taft Benson made in Chicago on December 1, 1955.

This speech sets forward in clear, honest language the hopes and efforts of the present administration to put American agriculture back on a sound track.

We have got to have a dynamic program in the future. We cannot return to a program that proved its worthlessness and brought our farmers to their present plight.

The address follows:

BUILDING A SOUND PEACETIME FARM PROGRAM

As all of you know, the question of what this Nation's farm policy of the future shall be is very much in the news. I know that you are as determined as I am that the Republican Party shall always consistently champion the cause of a prosperous, free, and expanding agriculture.

The Republican Party has a long and illustrious record as the true friend of the American farmer. That reputation has been built in no small measure because our party has steadfastly espoused the same basic principles in which most farmers believe.

We have respected the rights of farmers as individuals. We have emphasized the need to help farmers help themselves. We have visualized the role of Government in agriculture as that of a partner—not a master.

I have been reading of late that there is no room for moderates in the Democrat Party—that there isn't even such a word in their vocublary. To me that means there is no room for farmers in the Democrat organization—for most of the farmers I know are moderates, and rightly proud of it.

There is a farm problem—and it is a difficult one. There is this difficult problem because the same Democrats who have all of the easy answers now were never able to develop a workable, peacetime agricultural program during all their years in office.

Agriculture is a dynamic industry. It has special problems not generally encountered in other pursuits. In addition, farming in America has been going through a great technological revolution—a revolution which will bring lasting benefits to both farmers and consumers but one which poses real problems during the period of adjustment.

Agriculture has also had to face the dislocations which have always marked the changeover from war to more nearly normal markets and conditions. Difficult though this experience has been, agriculture is making the transition with less difficulty than ever before following a major war. You will recall the collapse of farm real estate valuation and the wave of mortgage foreclosures which came after World War I. In contrast, farm real estate valuations today are at the all time peak and mortgage foreclosures are near the record low.

Nevertheless, the Democrats have chosen agriculture as the major domestic battlefield for 1956. They did this through a process of selection. First there was the abortive attempt of the prophets of disaster to talk the country into a depresison. Instead the general economy moved ahead at a record rate.

Then there were the minor skirmishes, such as the scurrilous assault upon the President's churchgoing activities. Of course, that backfired.

Next the Democrat leadership apparently decided it would be smart politics to capitalize upon agriculture's troubles. The same people who had shackled the farmer with price controls and regimentation—the same people who had sought to ram the Brannan plan down the throat of agriculture—suddenly began popping up all over the place with quack remedies and discarded nostrums.

Despite the basically sound health of American agriculture, I seriously doubt that it could survive the witch's brew now being stirred up in the Democrat cauldrons. I have been in this business long enough to know that there are no quick and easy answers. Even when the best possible farm program is evolved, it is unlikely to bear the imprint of such agricultural experts as Jake Arvey and Carmine DeSapio.

The efforts of Governors Harriman and Stevenson to outbid each other in this realm of what they think is agricultural planning have already reached ludicrous proportions. When Adlai Stevenson recently flip-flopped back to rigid, 90 percent price supports and then threw in his version of the Brannan plan for good measure, I watched with some interest to see if Averell Harriman could top that. He did. He even chided Adlai for being too moderate.

It might be worth noting that such a well remembered moderate of the New Deal as Henry Wallace has thrown up his hands in horror at the frantic farm proposals of the Democratic presidential hopefuls.

Even though there is nothing flexible about the price-support plans of the Democrats' spokesmen, there appears to be plenty of flexibility of conscience behind their public pronouncements. It has always seemed to me that truth has an important place, even in political argument.

Therefore, it was with some amazement that I read last week a report by the Democrat National Committee's special advisory committee on agriculture. Even allowing for the fact that this committee is comprised mainly of former political appointees of the Department of Agriculture, I had not expected to see it come forward with so many demonstrably false statements.

There was the flat statement that the Eisenhower administration "immediately upon coming into office" had "put into force the sliding scale of flexible-price program behind a smokescreen of greatly exaggerated 'surpluses.'" The fact is that flexible price supports for the basic commodities are just beginning to become operative with the 1955 harvests. The act which made this possible was not even approved by Congress until August of 1954. Flexible price supports for a variety of nonbasic commodities were flexed in both directions by the Democrats over a long period of years.

Furthermore, the two former Secretaries of Agriculture who signed this statement—Brannan and Wickard—once favored flexible price supports, as their boss, President Truman, did. In fact, flexible price supports for the basic commodities were a part of both the Republican and Democrat platforms in 1948. And the Agricultural Act of 1949, approved by a Democrat Congress, had as its very heart a system of flexible supports.

I wonder, too, how much this question of surpluses has been exaggerated. There is no exaggeration in the fact that the Federal Government today has some $7.5 billion invested in farm price support operations. The cost of storing commodities owned outright by Commodity Credit Corporation is $1 million a day. Virtually all of this accumulation was piled up under a system which the Democrats now say is a solution to the farm problem.

A storage program is not a market—nor is a Government bin a customer. And it is markets that we need, and customers we must have.

Moreover, it needs to be emphasized again and again that it was not high price supports that resulted in high farm prices and incomes during the war and postwar years. It was war that produced them—the destruction of war, and the inflation that goes with war. No political party can or should take credit for wartime prices unless it also assumes responsibility for the war and the bloodshed.

Now I should like to discuss what kind of a farm program agriculture needs and wants. Farmers are in a cost-price squeeze. For nearly 5 years, farm prices have been declining while prices paid by farmers for goods and services have remained near their peak levels.

Some of agriculture's most perplexing questions developed because an emergency price-support program, born of wartime needs, was permitted to continue long after the emergency had ended.

From the end of World War II back in 1945, until the end of 1952, there was little real effort by the Democrats to evolve a workable, peacetime farm program. Instead, production incentives were continued in the face of dwindling demands. Even when supplies began building up to dangerous proportions, production controls provided in the law were not invoked. The throttle was kept wide open and nobody bothered about the brakes.

There were plenty of warning signals during the latter part of 1951 and throughout 1952. The parity ratio, which measures prices received by farmers against those they pay for goods and services, tumbled from 113 in February of 1951 to 94 by the time this administration took office in January of 1953. That's a decline of 19 points in less than 2 years. Ten points of that decline occurred in the last 7 months of the Truman administration.

The new administration inherited a large and fast-growing inventory of various farm commodities. We inherited the falling prices that go with accumulating surpluses. We inherited a legal situation under which production controls could not be made effective until 1954. And we also inherited a law which required us to support the six basic commodities at 90 percent of parity through 1954.

Now the same people who handed us this neat package of carefully fused bombs are blaming us for the explosions.

This administration has been kept busy for nearly 3 years putting out the fires,

cleaning up the debris, and attempting to rebuild our agricultural economy upon a solid foundation. It has not been an easy job. But we are making substantial progress.

We have been recapturing lost markets abroad. United States agricultural exports during the last fiscal period were up 11 percent over the 1952–53 fiscal year. We are moving aggressively to increase these farm exports even more. For the first 3 months of the current fiscal year, exports were 20 percent higher than for a year earlier.

We have been utilizing record quantities of Government-owned surplus foods in school lunch programs and in welfare distribution at home and abroad.

This administration has acted swiftly and vigorously to provide assistance to farmers hit by such natural disasters as flood, drought and early frost.

The rural electrification and telephone programs have been aggressively pushed forward. The borrowers are in stronger financial position than ever before in the history of REA. They have already paid off nearly half a billion dollars in loans and in both programs less than 45 borrowers are behind in their payments.

We are willing and ready to do anything that is economically sound and fair to all of our people.

We moved effectively to ease the price decline brought on by heavy marketing of cattle 2 years ago through direct purchases of beef. Now we are undertaking a similar program for pork to meet a price problem stemming from unusually heavy hog marketings this fall. The Department of Agriculture is cooperating fully in a promotional campaign launched by the industry to increase consumption of pork products.

This year the average American will eat about 20 more pounds of red meat than he did 4 or 5 years ago.

We have increased expenditures for agricultural research and education. We are seeking to develop new crops which may do for the Great Plains and elsewhere what the soybean and hybrid corn have done for the Midwest.

The adjustment in dairy-price supports made early in 1954 has shown solid results. Consumption has moved steadily higher, Government purchases and inventories of dairy products are down sharply. And dairy farmers are now receiving higher prices for milk as a result in the better balance between production and consumption.

We can point to these and other important accomplishments in building toward a sound agriculture. Yet the business of meeting new challenges in a dynamic industry such as agriculture is never finished. We must constantly strive to broaden, strengthen and improve our farm policies to meet changing needs and conditions.

At a recent meeting with the President, we agreed upon a 6-point program to implement the present plan. This includes:

1. A stepped-up program of surplus disposal and expansion of exports.

2. A vigorous purchase program to remove market gluts wherever they occur and assist farmers in adjusting to market demands.

3. An enlarged program of soil conservation and incentive payments to divert cropland into grass, trees, and forage, particularly in drought areas.

4. Expansion of the rural development program for low-income farm families.

5. A stepped-up program of research, emphasizing lower costs of production, new uses for farm products, new crops, and expansion of markets.

6. A speedup in the Great Plains program in cooperation with the 10 States involved. (This is a program concentrated in the area between the Rocky Mountains and the Corn Belt—generally the Nation's grazing and wheat center—to make better use of the land and achieve a better balance of production.)

We shall make recommendations to the Congress in January along the lines of these six points. We are now putting the finishing touches on those recommendations. Obviously I cannot now discuss them in detail. But I can give you a general idea.

There will be a program which will aid farmers in shifting from harvested crops to grass. This idea, which has wide acceptance, has been called a "soil bank" by some and an "acreage reserve" by others. The scope of the program we shall recommend and the precise nature of it cannot now be reported. I can say, however, that our proposal will be geared primarily to better land use.

Its impact will be chiefly in areas where topsoil is being wasted in growing crops not needed by today's markets. It will mean better soil and water conservation; it will mean added income to agriculture and it will have the effect, at least for a time, of bringing about a reduction in the overall volume of agricultural production. This will be no nostrum, no one-shot remedy, no cure-all. It will be constructive. It will help, along with other programs, to move us in the direction we must go.

We shall also propose changes in the production control program which will give farmers more freedom. There are crops now under control where controls are not working, where controls work more hardship than benefit. For these crops we shall recommend the necessary modifications.

We shall propose vigorous programs of surplus disposal, both the strengthening of present activities and the development of new operations. This will be done in an orderly fashion without disrupting markets at home or abroad.

Since July 1, 1953—that is, in the past 28 months—we have moved out of the CCC inventory approximately 434 million bushels of wheat, 309 million bushels of corn, 2.6 billion pounds of dairy products, and more than 4 billion 400 million pounds of cottonseed products.

In February 1954 the CCC held peak stocks of 1.2 billion pounds of cottonseed oil. We have not only disposed of these stocks, we have moved an additional 250 million pounds that were acquired in the meantime. Most of these stocks were exported. They were sold mainly for dollars and at competitive prices.

We are determined to pull down the hoard of surplus built up under the old program, and to reduce our acquisitions. This surplus is the corpse of past unworkable programs. It is beginning to smell. We propose to move out this corpse so that we can deal with living things. Once this overhang is removed, prices will start working up again and farmers can look to a better day of freedom and prosperity.

These approaches to the farm problem make sense. Sensible people will recognize that fact. It will stand up well in comparison with what is offered by the opposition, now vacillating between a return to the bankrupt program of the past and a headlong plunge into the Brannan plan.

The Need for New Maturity in American Political Life

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, I think there can be little question but that American political life is of vital concern to all of us in the House of Representatives. But this is a very large problem with many facets. One of the most important of these lies in the maturity, or lack of it, in that political life.

This subject was dealt with in admirable fashion by one of our colleagues, STEWART L. UDALL, of Arizona, in a recent address before the Sunday Evening Forum in Tuscon, Ariz. Mr. UDALL, after discussing the present state of our political maturity with great thoughtfulness, goes on to state that he feels optimistic about the chances to increase that maturity and he offers a program which he feels would do much to make it possible.

Because it is both thoughtful and penetrating, I should like to include the text of the speech as a part of my remarks. The body of the address follows:

THE NEED FOR NEW MATURITY IN AMERICA POLITICAL LIFE

(By Representative STEWART L. UDALL, October 16, 1955)

I had a definite purpose this evening in choosing to discuss the quality of American political life. In the future we will, I fear, fritter away our opportunities for leadership if we are intemperate or short-sighted or narrow in our views. And on the other hand, if we fully understand and develop the attitudes and beliefs and principles that have made us a great Nation, we will be able to make the great decisions that will test our leadership in the years ahead.

Not long ago one of our eminent Washington political reporters, James Reston of the New York Times, tersely summarized our predicament in these words: "We are in more than an arms race. We are in a race with the pace of our own history, and the pace is so swift that our habits of mind and our institutions are lagging behind."

Similarly, H. G. Wells summoned his generation to battle nearly half a century ago with the utterance, "Life is a race between education and catastrophe," and that was at a time when even catastrophe, by our standards, had predicable boundaries and was not synonymous with annihilation.

Whichever description you prefer, the race is on, and it is a good bet that this generation will survive only if it learns to run and read (i. e., to educate itself) simultaneously. We in this country have learned the hard way in the past two decades that history cannot be escaped—and never stands still.

The central question now would seem to be whether we can manage to meet history halfway—whether we can acquire sufficient wisdom and adaptability to pass through the fateful years just ahead to safer ground beyond.

Like Pyrrhus in ancient Greece, many nations in this century have been the winners of military "victories" that cost them more than they gained. And now our newest weapons have left civilization a margin for error that is perilously thin. Plainly, we need a new maturity in public affairs, both here and abroad, if we are to reach accommodations which will avert catastrophe. As never before the time demands leaders who can conduct our affairs with regard for hard realities, and yet inform their actions with vision and spiritual strength.

How should this crisis of leadership be met?

And where may we look for new answers to the new problems which confront us daily?

Our leading political philosopher, Walter Lippmann, has attempted lately to suggest some answers. In his book, The Public Philosophy, he has described what he calls the

"mounting disorder of western society." Events, he says, tend to outrun public opinion in the democracies, and he has no trouble in concluding that elected leaders are, for the most port, "timid, insecure men." Their political cowardice derives, he asserts, from being too fearful of a mass opinion which is often so outdated or unenlightened that it discourages creative thought and independent action.

Lippmann, it would seem, looks back with longing on the early morning of our Republic when Adams, Madison and Jefferson acted almost entirely on the promptings of acquired wisdom, and impassively awaited public response.

Pausing to look back upon the great decisions these men made, we cannot help but see some of the faults which divide our counsels and weaken our policymakers today. For example, it is anticipated in some quarters that men in politics see a mandate of the people in every opinion poll. Yet, these polls only purport to show what people are thinking at a given time, and quite often an enlightened public policy may run counter to the dominant opinion of the moment. In fact, it is quite likely that the leaders of our Government often have access to intelligence which may suggest that the long-term national interest lies in a policy or tactic which might be unpopular or misunderstood if it were forthrightly announced.

It is all too obvious, I think, that we are in need of a new public philosophy which would permit wise men to enter the seats of power and freely govern. Beset by exceedingly grave problems, we can ill afford to gamble on anything less than the highest order of leadership and intelligence.

Many political scientists (and practical politicians, too) advocate overhauling our Constitution and political system as a means of insulating public men from intolerable pressures and freeing them for high statesmanship. Here are several concrete proposals which are frequently discussed today:

1. Presidential terms might be extended to 6 or perhaps 8 years, with no right of succession. (We all have been witnesses of late to some of the unavoidable strains placed on our policymakers by the demands of an impending election.)

2. Congressmen also might be given longer tenure. (President Eisenhower, for one, has spoken up in favor of a 4-year term for Members of Congress.) A constitutional amendment along these lines should increase the chances that Members of Congress would take the long view and put first things first. During the 1954 campaign I had the feeling several times that the Eisenhower administration had not been in power long enough to formulate and try out new policies, and much of our debate was, as a consequence, unsatisfactory and highly inconclusive.

3. Our outmoded system of political campaigns, which usually paralyze our leadership for months on end could be modernized.

4. Congress could act to modify the seniority system, which ignores quality of service and rewards mere longevity to the end that the national will sometimes is thwarted.

If they could be enacted forthwith, these reforms might help transform our national life. However, short of a political miracle, it is highly unlikely that any of these changes will be brought about in time to influence the decisions our generation faces.

Clearly, then, we must somehow generate a new statesmanship from within the existing governmental framework. And if, as the President has suggested, we must contemplate a 50-year cold war, there may be time yet to create a moderate political climate in which statesmanship can flourish.

In our history as a Nation we can point both to periods characterized by national self-restraint and to eras when irresponsibility reigned. Some historians have formed a judgment that immature political conduct was the decisive factor in setting in motion the train of events which culminated in the Civil War, and the same certainly can be said of the Spanish-American War. In both instances, repressible conflicts became irrepressible, mainly because politicians willed it and fanned unreasoning popular passions to suit political purposes. Reconcilable differences could not be negotiated when inflexible attitudes were adopted, and even so great a man as Lincoln dared not swim against the tide. In the end he, too, was powerless to prevent the horrible conflict between our States. The leading historian of that sad era, James Garfield Randall, has scored its politicians, including Lincoln himself, as a "blundering generation."

We also are in danger of becoming a "blundering generation" unless we are wise enough to leave our diplomats and elected leaders freedom in which to negotiate settlements and pursue their best conceptions of the long-term national interest.

Fortunately, at least sporadically, the country has demonstrated mature self-control. The reaction of the country and the Congress to the startling inspection plan proposed at Geneva by President Eisenhower was heartening; and we stood together in the China coast crisis last winter and spring in a way which reflected confidence and national unity. Looking backward, we should be proud—and even mildly astonished—at the vision and statesmanship which enabled us to execute the Marshall plan and set up the North Atlantic Treaty Organization. This willingness to sacrifice for the general good required a broad, mature outlook by the political leaders of both parties and strong support by citizens at the grassroots level.

As a freshman Congressman, I have been deeply stirred by the role played this year in foreign affairs by Senator WALTER GEORGE, the chairman of the Senate Foreign Relations Committee. This man, in the twilight of a brilliant career as a lawmaker, has helped all of us recapture some of that breadth of spirit which is the real greatness of our country. What he has done to guide our foreign policy in recent months perhaps exceeds the great work done a few years ago by the late Senator Arthur Vandenberg.

In mid-April, at a time when the situation in the Far East seemed to hang by a thread, he delivered an impromptu address in Washington to the newspaper editors of America which may have marked a turning point in our foreign policy.

It is well to recall the circumstances at the time he spoke. Red China's Chou En-lai at the close of the Bandung Conference only a few hours before, had announced unexpectedly that he was willing to talk with the United States about relieving tensions in the Far East. The State Department had issued an immediate reply that the United States was not interested in such talks.

At this moment in history, then, Senator GEORGE spoke. He told the newspaper editors he thought we should be "big enough" to consider the Chinese offer, and when the President and Secretary of State returned to Washington the next day his advice was heeded. They countermanded the original reply, and fruitful talks subsequently were arranged.

More than anything I have read, this extraordinary speech by Senator GEORGE exemplifies the sober thought we need in these trying times. For instance, he said:

"I think it important that we know precisely the thinking * * * of our friendly nations * * * on the important problems that have arisen in the Far East and precisely what adjustments, if any, we should be willing to make to meet changing times and changing conditions.

"That is not appeasement. It never has been and never will be appeasement for any strong power to say to another power that it is willing to sit down and talk about the problems that concern you and concern the world."

Senator GEORGE also confessed that he changed his mind as events occurred, and he advocated the patient, step-by-step approach in dealing with other nations.

Something else the Senator said also foreshadowed a new public philosophy for America:

"We didn't seek world leadership. You don't get it by seeking it. World leadership comes to a nation, if it comes at all, because of the superb and supreme heroism of its people; because of their devotion to duty, private, and public, because of their tireless exertions to bring it about.

"Above everything else, it comes to a nation when it is great enough and big enough and strong enough, when mighty impulses are running through the world, to rise to the challenge of stirring times."

I would suggest to you that Senator GEORGE personifies the spirit that qualifies us for leadership among the free communities of the world. Would anyone deny that if we had a few more public men like him (men who have bold, growing minds, whether their ages are 36 or 57 or 78) our citizens would always rally behind those who govern?

What, then, is this new maturity we are talking about? Let me attempt to describe it:

1. It is an attitude which would place the national purposes first, and thereby build a broader sense of responsibility and put competing local prejudices into a proper perspective.

(It is a peculiar, but well established fact, for example, that certain Members of Congress make a career of opposing mutual security programs, even though both political parties recognize them as vital to this Nation's security. Using arguments and methods which sometimes border on the demagogic, they play upon the ignorance of the people concerning the importance of such legislation rather than seeking to educate their constituents to the value of these programs.)

2. It is the belief that national unity should be a paramount consideration, and that forces tending to divide our counsels through secondary issues should be resisted. (Our Yalta post-mortem is in point here.)

3. It is based on the conviction that any venture is a gamble and that men must have enough courage to pursue the course prompted by their best judgment and be quick to revise it later according to a better judgment. (For example, our flexible attitude in dealing with Marshal Tito's Yugoslavia has paid big dividends.)

4. It is a spirit which would decline to use vital national policies for partisan purposes. (There is still altogether too much partisan use made of foreign policy issues, particularly at present when differences between the views of the two political parties on the big issues are largely verbal.)

5. It is the principle that the interests of other nations always should be weighed in the scales, and that we should strive to understand the motives of neighbor peoples.

(At the NATO Interparliamentary Conference in Paris last July a member of the House of Commons commented to me that India's neutralism and unwillingness to see the world in terms of blacks and whites had a rather striking parallel in the outlook of our country in the years just preceding World War II.)

6. It is a frame of mind that would avoid military and political absolutes and would set up, instead, as many limited objectives as possible, directing our diplomacy to the

achievement of these useful ends, however undramatic they might appear.

(We all recall the naval-blockade, China-coast-landing-party school of thought as applied to the Far Eastern crisis, and we can be thankful that more mature judgment prevailed.)

7. It is the belief that negotiation should be undertaken wherever there is a chance that it may be fruitful, and that our negotiators should be ensured enough freedom of action that wise bargains can be struck.

(In the days to come, particularly in our dealings with Russia and Communist China, our President and diplomats are going to need elbowroom in which to make concessions and negotiate settlements. Unless negotiators have something to concede there is no point in talking.)

8. It would seek out and cultivate the virtues of humility and patience in our dealings with other nations and peoples.

(Our good friend, Ambassador Carlos P. Romulo of the Philippines, is a firm believer in this principle. To illustrate this point he told recently of a visit Mrs. Eleanor Roosevelt made to India. When met by reporters as she deplaned at New Delhi she was asked for a statement but declined, saying she had come only "to learn." This, he said, increased our prestige in India immeasurably.)

9. It is the spirit which would cherish those attitudes fostering mutual regard among men, not losing sight of the inner man and his Maker.

10. And last, this new maturity would reaffirm in word and deed the worth of the enduring ideas and institutions which make democracy the hope of mankind.

(In the long run our greatest asset is the freedom we enjoy under the Constitution, just as fear, suspicion, and repression of individual freedom are the long-term liabilities that ultimately will destroy the Communist governments of the world.)

These, then, are some of the attributes of the new maturity we need in American public life. It is my faith that we can achieve most of them without benefit of superhuman effort if only we will meet the challenges that beckon to us on every side. It would be unfair to expect our politicians to pull themselves up by their bootstraps and become minor statesmen overnight. The main effort, if we are to improve the caliber of our statesmanship, must come from citizens who will not settle for timid or short-sighted leadership and will drive demagogues and irresponsible men from the temples of government.

We would do well, I think, to recall the adage of Plato's Republic that the punishment of wise men who refuse to take part in the affairs of government is to live under the government of unwise men.

We face an uncertain future, but we can prevail if we look to the future with courage and high confidence in the rightness of our cause. No generation ever has confronted problems such as we face, and ours is, therefore, a great adventure where determination and wisdom yet may carry off the long-sought prize of an enduring peace.

Let me conclude finally with the magnificent peroration that Winston Churchill uttered last March in his final speech to the Commons as Prime Minister:

"There is time and hope if we combine patience and courage. All deterrents will improve and gain authority during the next 10 years. By that time, the deterrent may well reach its acme and reap its final reward. The day may dawn when fair play, love for one's fellow men, respect for justice and freedom, will enable tormented generations to march forth serene and triumphant from the hideous epoch in which we have to dwell. Meanwhile, never flinch, never weary, never despair."

Postmaster General Summerfield Says We Can Break Even With Higher Rates

EXTENSION OF REMARKS
OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. REES of Kansas. Mr. Speaker, under approval of the House, I am including with my remarks a statement by the Honorable Arthur E. Summerfield that appeared in the January issue of the Nation's Business. It is entitled "We Can Break Even With Higher Rates." In view of the importance of the subject matter, I believe the Members of the House will be particularly interested in reading this statement.

The statement follows:

The United States Post Office Department has a new look—and a new spirit.

The new look is dramatized by the eye-catching red, white, and blue colors which now modernize mail boxes and postal trucks.

But the improvements taking place in the postal establishment—which serves more of our citizens more intimately and more frequently than any other Government department—are far more fundamental and much more significant than this new color scheme.

Never before have the post offices of the United States handled so much mail volume, so quickly, so efficiently, so economically.

Deficits are lower. The postal deficit of $362,700,000 for the 1955 fiscal year is less than half of the all-time high reported deficit of $727 million for fiscal 1952.

When our team of executives recruited from industry assumed responsibility for the management of the Post Office Department January 20, 1953, we found:

The Post Office Department had no certified public accountants on its payroll although its financial transactions exceeded $20 billion a year.

There was no modern personnel department to meet the needs of 500,000 employees.

No training program was being used.

The salary structure contained innumerable inequities and offered no real incentives for advancement to supervisory positions.

Although the Post Office Department handled more than 50 billion pieces of mail annually, it had no materials-handling engineers.

The worst highway safety record in Government.

No public information services were being used to help the public help itself to better mail service or to provide communication channels between management and employees.

No basic review of its transportation policies and methods had been made in 25 years.

Nearly 40,000 postmasters reported directly to Washington on even the most trivial problems.

Management control tools and methods were so completely lacking that when I first called for a financial report on the previous months' operations, I was told that such data would not be available for 18 months; that such reports were considered historical documents and never intended for management control purposes.

In 3 years the Post Office Department has been overhauled and reorganization is nearly complete.

Tried and proven concepts of modern business management have been introduced and the results are becoming increasingly apparent to the public.

The faster, more efficient, and more economical mail service is due in part to these improvements.

Mailers and postal patrons benefit from more than 70 changes in procedures. Post offices in most major cities are open longer and mail is collected later. More than 5,000 city letter carrier routes are being added annually. Modern rural-delivery service is being expanded constantly. New services are being added—and others simplified. The new certified mail provides important benefits of registered mail, including proof of delivery, at lower cost. A new money order procedure eliminates forms and reduces time spent in line. New pamphlets help the public help itself to better mail service.

The internal procedures of handling money,, bookkeeping, and financial reporting have been greatly streamlined. Payrolls are being handled by modern punchcard checks and equipment in 15 centralized locations. The daily task of processing and accounting for 1,500,000 paid money order forms is centralized in the new Kansas City Money Order Center which will ultimately use the most modern electronic equipment. Simpler financial procedures generally will achieve a total reduction of 5,000 positions from the overhead. This program relieves postmasters of unnecessary paperwork, gives them modern business methods, and enables them to concentrate on the major job of moving the mail.

A nationwide safety program has already reduced motor vehicle accidents from 13 to 8 per 100,000 miles. Even better results are anticipated.

Broader and better use is being made of all types of transportation by employing the one best equipped to do the individual job speedily, efficiently, and economically. This means expanded use of trucks and tractor-trailers, bus lines, highway post offices, and air cargo carriers; using the unused space on scheduled airliners for the experimental movement of 3-cent mail; a better coordination with railroad operations; and revision of schedules to deliver the mail on the day it arrives at destination post offices.

With the opening soon of the Wichita, Kans., regional office, postal operations will be decentralized into 15 regions and 91 districts, and operated on a home-rule basis.

The first coordinated progressive personnel program in the Department's history has been established. The installation of a sound salary structure, based on position evaluation, provides 508,000 postal employees with fair wages, incentive to advance in the career service, and compensation related directly to duties performed.

The Department has leased more than 900 new postal buildings, valued at approximately $45 million, through its commercial leasing activities from January 1953 to November 15, 1955. The new lease-purchase program by which buildings are bought out of rent, includes 27 further projects approved as of November 15, 1955. This will create $14 million in new construction. Both programs use the financing and construction capacity of private industry.

Close cost control has been established over the 85,000 motor vehicles the Post Office Department uses (of which 25,000 are owned by the Government). Postmasters are charged for the use of this equipment and personnel to make them cost-conscious. A Post Office Department fleet is being developed consisting of four basic standard production-line trucks which will do the same job better than the 7 types of special built, often hand-made vehicles formerly purchased. The estimated savings are 20

percent in purchase prices and 20 percent or more in operating cost.

Practical training programs aimed at improving personnel and mail service—involving 10 courses of instruction ranging from tying bundles of letter mail to executive development—have been launched. The suggestions and incentive awards program has been modernized, and the Department received, in 20 months ending November 15, 1955, double the number of employee suggestions offered in the previous 5 years, with savings estimated at $2,261,000. Uniforms are being redesigned, standardized, and brightened effective this month, although employees having garments of the previous design in good condition will be permitted to wear them until January 1957.

Unnecessary service units are being eliminated. Approximately 3,000 small post offices have been closed, at a saving of more than $4 million, with the patrons generally getting better service through rural delivery.

Practical experiments and research are being carried on continuously. Those now under way include: (1) a variety of motorized conveyances for city carriers; (2) an automatic mail facing machine; (3) automatic sorting by electronic scanning; (4) self-service equipment for post office lobbies; and (5) mechanical parcel post sorting.

The first nationwide effort to attract desirable new career employees into the postal service was launched in December 1955. Display posters in 10,000 post offices and on 16,000 Air Force recruitment billboards in 3,000 communities are being used for a 30-day period, outlining salaries and benefits of postal employment.

Despite the progress made in modernizing the mail service and reducing its cost, the Post Office Department faces two serious problems.

One is the inadequacy and the deterioration of its physical plant. Many post offices were built 50 or even more years ago. Far too many of our postal facilities are badly run down, outgrown, outmoded.

In some larger cities, facilities are so inadequate that mail is sorted outside post offices on the sidewalks or in the alleys, rain or shine. At numerous points, trucks cannot squeeze into the small post office loading and unloading areas. Many post offices and mail terminals are dingy, badly in need of renovation and better lighting, and completely lacking in modern equipment to speed mail distribution.

To correct these conditions will take time and money. We cannot continue to ignore these needs, particularly since they grow increasingly worse as the mail volume of this dynamic and growing country is constantly increasing. It is now 45 percent greater in volume than it was 10 years ago.

The other and more serious problem concerns the fiscal plight of the Post Office Department. The postal deficit accumulated since World War II—during a period of unprecedented prosperity—has now reached $4,600,000,000 and is costing taxpayers more than $100 million a year in interest alone.

Despite the efficiencies and economies we have been able to make, the Post Office Department now faces a yearly deficit of about $500 million. Nearly $200 million of this is the cost of the recently enacted pay raises and other employee benefits.

Basically, our failure to operate on a more nearly break-even basis is due to the fact that postage rates today are essentially the same as they were in 1932. Meanwhile, the cost of nearly everything the Department buys or uses has more than doubled, as have most household or business expenses.

That is why we are recommending moderate increases in postage rates on first-, second-, and third-class mail to Congress.

We believe Congress and the American people appreciate the need for reasonable rate increases so that their Post Office Department may improve its services and facilities and operate on a self-supporting basis as do the postal establishments of most major nations. Our neighbor, Canada, for example, has shown losses in only 3 of the past 20 years with an overall surplus for these 2 decades of $89,523,932.

Many Members of Congress have polled their constituents on this question of postage rates. So has the Post Office Department. In all parts of the country, the people queried indicated that they favor, usually by margins of at least 3 to 1, increasing postal rates to make the Post Office Department self-supporting. Public opinion here is apparently no different than in Europe where competent observers state that a postal deficit would not be tolerated.

If these rate increases are granted we can complete the job the Post Office Department set out to accomplish nearly 3 years ago: provide better service, lower costs, reduce the postal deficit, and operate on a break-even basis.

Then the Post Office Department can provide the most efficient service possible to meet the constantly expanding needs of this most prosperous Nation on earth.

This Year and Years to Come

EXTENSION OF REMARKS
OF
HON. JAMES P. RICHARDS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. RICHARDS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a striking editorial entitled "This Year and Years to Come," published in the Evening Herald, Rock Hill, S. C., on January 4, 1956:

THIS YEAR AND YEARS TO COME

As we start this new year, two statements are being repeated in a number of ways:

Russia and world communism have been gaining:

America and the free nations of the world have been slipping.

So, many Americans, like people in other free nations and probably like people in nations under Communist dictatorship, are asking questions about the future which reflect worry and even fear:

What will Russia do next? And after that?

What will world communism do this year and in the years to follow?

And it is after such questions that we ask ourselves: What can we do to try to stop the Russians? to try to block communism's long-term program to take over the whole world?

Such thinking is wrong. All wrong.

For example, look at a football game. Which team wins, the one that just plays a defense, or the one that carries the ball?

To win, your team has to get the ball across the goal line. Carry it. Pass it. Kick it. But hold on to the ball, advance, keep the other team on the defensive.

Part of last year, we carried the ball against the Russians. That was done by President Eisenhower's address to the United Nations. By President Eisenhower taking the top position of world leadership at the first Geneva meeting, the meeting of heads of nations.

Then Russia got the ball. Maybe we fumbled.

We can recover.

We are still the stronger team.

We are stronger in our moral position. (Although we have been weaker in our propaganda about it.) Stronger in the honesty of our desire for peace in the world. Stronger in combination with the other free nations in industry, in the initiative of free men.

Stronger because we want for human beings around the whole world those freedoms which their instincts cry for.

Let's carry the ball again. Carry it this year. Plan to carry it for many long years to come; for that is the only way we can expect our way to win.

President Eisenhower, we hope, is regaining the strength to re-enter the struggle. Meanwhile, we of the American people can encourage others of our team to really carry the ball.

We can encourage the men in our Government. Those in the executive branch. And particularly those in the Congress. For us South Carolinans, that means Senators JOHNSTON and THURMOND. For us in the the Fifth District, it means Representative RICHARDS in his highly important position of chairman of the House Foreign Affairs committee.

Above all, we can ourselves start thinking—and talking—constructively instead of defensively. For what is thought and talked by the people across the United States in time determines not only the talking and thinking in Washington but also the actions of our Government throughout the world.

We can win the long struggle for a free world.

We must win.

Stewards of the Soil

EXTENSION OF REMARKS
OF
HON. JAMES I. DOLLIVER
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. DOLLIVER. Mr. Speaker, Paul A. Johnson, author of the following, is one who has long experience and great knowledge of problems of soil and water conservation:

STEWARDS OF THE SOIL

(By Paul A. Johnson)

"To America much has been given; much is expected of us." Reading history from the standpoint of cause and effect, one may wonder if America, as a nation is not following in the footsteps of older nations, a path that leads to destruction.

In Iowa, we are a land between two great rivers, perhaps the richest large area of fertile topsoil that any people in history ever had to farm and make their homes on. There were older nations, once great and powerful, highly civilized, world leaders, that also flourished between two great rivers, the countries of Chaldea, Assyria, and Babylonia, rich, powerful, mighty in war, highly cultured with the people fed in abundance, on food raised from fertile soil, soil that was maintained, irrigated, and built up.

Today their great cities are just mounds in desert sands. They ceased to use the soil wisely, deserts marched in, marshes grew, and they perished as nations becoming only names on the scroll of history.

It is a story repeated many times. Rome, world leader in a period of history longer than that of any other nation, kept peace with well-fed legions that marched over well-built roads to every frontier of her em-

pire. Her then fertile soils produced wheat and oil that fed, not only her soldiers but her people. A republic existed that framed a system of laws that the world still uses. She gave the world a large part of its language and for a long period demonstrated a republican form of representative government. Until her soil exhausted, her legions hired mercenaries, her opportunities for Roman citizens gone, emperors became the rulers, and Rome declined.

Italy today is mostly a poor country. A big share of its food is imported. With the exception of the marshes that Mussolini drained, her soils are exhausted and shallow. Her story just another one on the pages of history that tells that the strength of a nation depends on the good use of the soil.

There was handwriting on the wall of the palace that told an ancient king that his kingdom was overthrown. Written on the fields of Iowa there is God's handwriting in the gullies, the land cancers, that cutting back up the slopes forecast the end of profitable farming if there is continued abuse of the soil.

No better system for rushing topsoil off the slopes was ever devised than up and down hill farming. The billions of tons of fertile topsoil that has gone down the rivers to build the Mississippi Delta has carried with it more potential bushels of corn and grain, more tons of hay and forage than can be made up by all the commercial fertilizer than can be bought and used.

Since the first white settlers came to America, we have cut down and destroyed the forests. Left behind, in all too many instances, are the slashings that cause destructive fires, fires that not only destroy far more trees than are used for lumber, but also fires that burn up towns and people. One can still remember the Moose Lake-Cloquet fire in northeastern Minnesota and its tragic loss of lives.

Older nations like Germany have planted 2 trees where 1 was cut down. They managed their woodlands as a national asset to be preserved and improved through scientific cutting. America today is starting to replant the barren slopes denuded of forest cover. Seed trees are left. Young trees grown on Government and State nurseries are set out by hand. At last even the lumber barons realize that if wood is to be had, it must be grown, as the virgin forests shrink both in size and quality.

In North America, South and Central America and Africa, the rain forests are moisture storage reservoirs that equalize and spread out the rainfall, temper the climate. They are balance wheels lessening both droughts and floods. Stripping these forest belts has upset this natural balance. Floods are larger and more numerous; droughts longer and more frequent; dust bowls develop as a result of removal of protective grass coverings; snow piled on mountain slopes, causes large destructive floods as summer sun melts it rapidly without the shade of trees. In New England, in the Midwest, in the Northwest, floods result with loss of life and property largely because of the removal of forest cover.

God has been good to our Nation; not only in the great natural resources: soils, forests, mines, fisheries, but also in the kind of folks that came here to the land of opportunity to make their homes and to build an America. They were the hardy adventuresome folks willing to try a new life in a new land that God had made ready for them. They left behind them the traditions and hatreds of the old world. Mingling their blood streams they built a new race of folks. They developed new traditions, new ideas, a new form of government which as Lincoln said was "Of the people, by the people, and for the people"; they stated that, "All men are created free and equal"; that they are endowed by their Creator with certain inalienable rights, among which are life, liberty, and the pursuit of happiness. That governments are formed to protect these rights, to serve the people, who are the government not creatures of the state.

These folks brought with them a deep seated belief in God, God, the giver of all great and perfect gifts that man receives. Accepting this belief, they became "Stewards of His bounty." Americans fought, suffered and died that this concept of government and freedom should endure. The right to free enterprise became the American way. It has made and kept America a land of opportunity.

The choice has been ours, the knowledge of how to preserve and even increase the resources that God gave to us is ours. Ours to use or not to abuse. In the past, there has always been an accounting of the use of or the abuse of God's gifts to man. Can we here in America expect less of an accounting?

Soil and water conservation must start up on the slopes where the rain falls. In a Christian America, our desire to preserve and build up the soil starts with our belief in God. Conserving God's gifts to man is practicing Christianity. It is assurance of the future of our children, and their children, that America will continue as a land of opportunity, a land where Christianity can flourish and communism and atheism cannot prevail. Cause and effect are the lessons that history shows to us as her pages unroll. It is there to read; it is truly patriotic to leave a farm better than when we took it over.

There is a just pride in fertile acres, in well-kept buildings, in sleek, well-fed livestock. These show not only a love of farming but a love of our Creator. They are an incentive to do our best. There is another incentive; soil- and water-conservation methods give the largest acre yields, the largest net profits, the highest management return. Farm values increase and the family has a just pride in a well-kept farm home. There is a satisfaction that comes from work well and skillfully done, a deeper satisfaction in working in partnership with God.

Life, on earth, is made up of two parts: Earning a living; living a life. The two together make for happy homes.

To us in America much has been given, much is expected from us. Are we good stewards of what God has given to us?

Bastogne Monument

EXTENSION OF REMARKS
OF
HON. CLARENCE E. KILBURN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. KILBURN. Mr. Speaker, the attached is an article which appeared in the Tribune-Press of Gouverneur, N. Y., and the St. Lawrence Plaindealer in Canton, N. Y., written by Mr. Mason Rossiter Smith, editor and publisher of both these papers, in my congressional district, the 33d of New York.

I hope the Members will read this article which may contribute in some way toward obtaining for Brig. Gen. S. L. A. Marshall, author of the text inscribed in the Bastogne Monument, the recognition which he so thoroughly deserves.

MONUMENT AT BASTOGNE COMMEMORATES BATTLE OF BULGE

(By Mason Rossiter Smith)

When you search for it in your atlas, it's but a pinpoint in the vast and intricate embroidery of Europe. As you drive through the lovely green, gently rolling countryside which surrounds it in the summertime, this hardly seems a place men would choose for war.

But the small Belgian village of Bastogne has been tried in battle many times before, and over the centuries the soil of the Ardennes has been enriched again and again with the blood of men contesting for mastery of this land.

Only 11 years ago this week thousands of Americans—among them many brave young men from our own St. Lawrence County—joined in the Battle of the Bulge to fight and die in heroism and sacrifice in support of the faith and traditions which have made our country the greatest in the world.

Today a handsome monument shaped in marble in the form of the five-pointed star our soldiers wore as a shoulder patch during the war, stands high on a hill overlooking Bastogne. It is a memorial erected by the Belgian people to commemorate not only this historic victory of American arms, but, even more, the love of freedom and the deep and abiding friendship which Belgium shares with us.

Its tall pillars bear the names of every American State, and all United States Army and Air Force units which participated in the Battle of the Bulge. A carillon, concealed in one of the pylons, sounds on the quarter-, half-, three-quarter hour and hour—a gift of the American Legion post of Antwerp, Belgium. Engraved in large Roman lettering on the interior walls of the monument is the moving story of the historic contest—all in English.

Rarely printed in America—hardly known at all in this country—it ranks, I think, with the greatest of American patriotic literature. Better than any piece I have ever read before, it tells—more by way of suggestion than by actually expressing it in words—why men have been willing to leave their homes and families to fight for their country. There is no more moving story in American history.

Deeply touched by it when we visited the monument this past summer, as we motored from Luxembourg into Belgium, we searched the inscription for the name of the author, but finding none, determined to obtain it together with the original text from Washington upon our return home.

That search constitutes a story in itself. It began in the office of Congressman CLARENCE E. KILBURN, who traced it for me through the State Department to the Army and finally to the author himself.

It was concluded by correspondence with the "Nuts" Museum in Bastogne (its title commemorates the defending American commander's famous reply to German demands for surrender) which, as subsequent investigation discovered, publishes a souvenir booklet containing the text of the inscription—credited to somebody else.

For strangely enough, the real author has received scant recognition for his services—even by the Belgian authorities who originally requested our State Department to provide a suitable text for the monument.

In processing the request, the State Department turned to the Army, and the Army sought out a former member of its wartime historical section, Brig. Gen. S. L. A. Marshall who by this time—the monument was raised in 1949 and dedicated in 1950—had retired from active duty with the permanent rank of colonel and was now associated with the Detroit (Mich.) News. Colonel Marshall had previously permitted

the Belgians to make free use of the material in his book, "Bastogne: the First Eight Days" in pamphlets sold to aid their charities, so it is not surprising that he should write the text for the monument as an act of goodwill, with no thought of compensation or copyright.

The Army, in turning over the text to the Belgian authorities, appears to have requested that Colonel Marshall's name be placed under the completed inscription on the monument. But it isn't there—and, surprisingly enough, an abbreviated text of the story sold in Bastogne as a souvenir, lists a mythical Colonel Armstrong (no first name or initials given) as the author.

Meanwhile, a few copies of the inscription were printed for distribution in the United States by friends of Colonel Marshall. One of the most treasured volumes in the Tribune-Press library, indeed, is a copy of this little booklet—autographed and forwarded to me recently by the author himself.

This is the text:

"This memorial and the earth here surrounding are dedicated to the enduring friendship of the peoples of Belgium and the United States, who forged a bond from their common struggle to defeat the enemy of all free peoples.

"Among the mountains of the Ardennes and at the crossroads where sit its villages, the arms of the United States, supported by the courage and faith of its friends in this Belgian countryside, won a victory which will be remembered as long as there are free men to tell the story.

"During the Christmastide of 1944 and as the New Year came, the last crisis of the Second European Campaign began and ended there. It opened with defeat. It closed with the enemy routed and in final retreat.

"For the armies of the United States, in numbers of men engaged, in the courage shown by all forces, in the intrepid decision of their leaders, and in final accomplishment, it was the great battle of their history.

"For the people of Belgium, it was the final stand against an enemy who for nearly 5 years had violated their soil and vainly tried to crush their national spirit. It was the last act of the great liberation.

"Lacking a common speech, these forces together met their great emergency in the same exalted way. The uniformed ranks of the United States fought for this soil with as great devotion as if it had been their homeland. The Belgian civilians unarmed, refused to abandon it in the face of the oncoming enemy.

"By this mutual confidence and by the help which came of it, the defense was made possible. Here was launched the counterattack which did not end until tyranny had been crushed in Western Europe.

"The campaign takes its name from this quiet countryside. In the history of nations it is called the Battle of the Ardennes.

"But the extent of the enemy's early success fixed upon it a more popular but unofficial title. Men know it as the Battle of the Bulge.

"It opened on December 16, 1944, with an attack by the German enemy which broke the American front, enveloped the Ardennes country, and at its extremities reached almost to the River Meuse.

"It closed in the final week of January 1945, with the last of the enemy departing the last remnant of soil gained during the advance.

"The German enemy had been long in planning his attack and was greatly skilled in concealing it.

"The plan was born in early September 1944, while his forces were withdrawing eastward from these mountains, and except around the approaches to Antwerp, were being driven from Belgium by the liberating armies.

"It was then that the enemy high command decided that a last supreme effort might reverse the tide of war if staged in the most favorable season.

"The far object was to be the port of Antwerp. The far hope was that its capture would split the Allied armies apart, deny them their major base of supply and compel at least one of them to sue for peace.

"Toward fulfilling these hopes, the enemy husbanded his reserves during the fighting of the autumn, and raised fresh divisions.

"Mid-November was the appointed time, chosen because in this place and climate, it is of all seasons the most fog-laden. Thereby surprise would be helped and the defending aviation would be ineffective against the attacking armor.

"The place had been long decided. In the spring of 1940, the enemy had made his fortune by an armored advance through the seemingly impassable Ardennes upland. It was intended to repeat this maneuver.

"Events conspired to enlarge his second opportunity. Following the great advance of the summer, the American positions became stabilized along a line which ran through Germany just eastward of the Belgium and Luxembourg borders.

"It was a quiet front for the most part, used for the training of green divisions and the resting of those grown battle-weary. Of such forces, in a strength of less than four divisions, was composed the one American corps which stood directly in the enemy pathway.

"Thus as the weeks passed, it was chance, more than foresight, that the area against which the enemy had been storing his strength became the most thinly defended part of the long Allied front.

"But November came and went and the battle was not begun. The three enemy armies of the attack simply awaited the hour. The expected new divisions had not been made ready in time.

"Of what was to come, there still was no strong foreboding in the opposite camp. In the first days of December, it was noted that the enemy front was being strengthened by fresh divisions coming into the line. The whereabouts of his armor, and whether it might be concentrating in the north, remained a mystery, wrapped in impenetrable fog.

"So while there were muffled warnings, there was no final alert. In the threatened sector, the troops watched and rested, feeling no extra concern. Nor was there greater alarm in higher headquarters. Though the signs and portents read that the enemy might be preparing an attack, all military reason argued that this was pretension.

"For 6 months past the enemy had known only crushing defeats. His armies were already wasted. He was not in position to waste them more. His policy now could be served by only one grand object—to prolong the war and bargain for a more favorable peace. Facing toward winter, his forces had settled for the first time in permanent defensive works. So placed, they could make the Allied advance slow and costly and could store their own strength for the spring. What advantage he now possessed would be lost if he sallied forth.

"Such was the logic of the situation, both as viewed by commanders in the Allied camp and as reviewed on the other side by those who must carry the battle.

"But the dictator who had personally ordered the plan, and who was planning to direct its execution, was not logical. In defeat, he remained a dreamer. For logic, he substituted intuition. This was the mystery still not understood, that it was futile to reason about the unreasonable.

"Reckless of the fears of his generals, he now sat watching the weather.

"On December 14, his intuition told him that the hour was almost at hand. The fog lay thick over the country. The outlook was that it would not lift. His new formations were in place. His massed armor was at its rendezvous. He ordered that the attack would begin on the morning after tomorrow.

"He had brought together 25 divisions for the breakthrough, of which 17 would be used in the beginning.

"The brunt of the attack would be carried by the two panzer armies which the fog had well concealed. They were to move straight forward. The infantry divisions, well supported by heavy formations of antitank and antiaircraft artillery, would block to the north and south of the salient, holding and extending the flanks as the armor drove through the center.

"He expected to see his armor holding bridgeheads across the River Meuse by the second night of the battle.

"He expected to close Belgium within his hands before its defenders could react to his daring.

"He expected to destroy at one blow fully a third of the divisions opposing him in the west.

"He expected that these effects would be decisive.

"His dreams took no account of distance. It was 65 miles to the Meuse and 125 miles to Antwerp and the way to an Allied surrender was infinite.

"Still, he believed in his plan with a fervor not less than frantic.

"However vain his illusions, history records that in one thing he accomplished greatly. He had managed to screen from his enemies an operation which concentrated one quarter million men.

"It was this which made his not too clever plan diabolic.

"The battle began with fog and darkness, in men's minds as well as of time and weather. Briefly the quiet front was shaken by the heavy fires of artillery. From Monschau in the north to that point in the south-running line where it turned the far corner of Luxembourg, the barrage gave warning.

"It was an alarm meant to stir the world. But only the men directly under the guns heard it.

"Along the 80 miles of threatened front, they were awakened. They stood to arms and awaited what would come.

"But the hour was late and their strength was very small.

"The barrage fire lifted even as the dawn broke a dawn without light for seeing, such was the fog.

"Behind this screen, the enemy storm battalions pressed forward, seeking the weakly guarded places, turning the flanks of strong points in the line.

"At noon the dictator heard from his chief adviser: 'The fight goes well: we obtained complete surprise.'

"All that day as he looked at the maps of battle, he could believe that victory was at hand.

"His armored host advanced in the evening twilight, storming a field already stricken by defeat.

"Against the blow, the thin defending line tried bravely to rally. It was overwhelmed and broken under weight of fire and metal.

"And so passed the first day. In distance gained, the attack was not prodigious. But it had nigh completed the wreck of the defending corps.

"The crust was broken: The Ardennes door lay open. Already the tide of invasion moved on Belgian soil.

"Through three great gaps in the line the spearheads were advancing. Toward St. Vith from both flanks around the Schnee Eifel. Toward Bastogne after leaping the River Our.

"These are the rocks on which the defense of the Ardennes must anchor.

"These are the citadels which its would-be conqueror must take.

"The key to control of its roads lie in these cities.

"Lacking the roads, the fight could not be won.

"And so on the field the crisis mounted hourly, as more men and metal poured through the shattered line.

"But fast though the danger rose, men did not see it, except the few who shared in the fire fight.

"Between the armored host and the vital prizes, there was no organized defense line or men for the making of it, but only occasional batteries and scattered forces of rear area troops.

"Against these elements, enemy paratroopers already were moving, and enemy saboteurs dressed in the guise of friends.

"Of reserves, the Theater had but two divisions, undermanned and underequipped, and resting in France from battles recently fought in Holland.

"These were but a token of what the situation required. It could be saved only by bringing many divisions out of line from north and south, and from Britain, and rushing them to the Ardennes.

"Such were the naked terms of the contest, made so by the scale on which the attack was mounted.

"But on the first day the reaction was not in keeping. Among the defenders the strength of the challenge went unseen.

"Even men at the front had seen but a few battalions moving. The weather concealed the mass coming forward by every road and trail. As sensed by command, it was at worst a local battle, perhaps an assault by three divisions or four.

"But by God's grace and the hearts of determined men a miracle already was occurring by which in the end the situation would be saved.

"In the north near Monschau there is a ridge called Elsenborn which is nature's bastion, guarding the road to Liege and the far-off ports.

"In the very hour when the enemy loosed his lightning, and American corps was attacking near this ground.

"As the shock of the enemy guns and armor fell on these divisions, their right flank folded back and stood fast on the heights of Elsenborn.

"On the hills near Monschau the line of American guns beat time with this movement and their fire withered the enemy corps on the right.

"Together, the working of these forces at the beginning denied the enemy his chance to expand his salient toward the great cities and the sea.

"Together, they were an anchor of strength to the higher commanders when on the next day the situation became more clearly revealed.

"By then the armored spearheads were deep in the country.

"The line was broken. The enemy had engaged in massive strength. His armies threatened the whole position in the west.

"These things at least were clear amid the battle's confusions. The word was flashed to the capitals of the world and everywhere men's thoughts turned anxiously toward the Ardennes.

"From the hour the Allied command and its armies came to grips with the danger, there was neither doubt about what had to be done or indecision in the doing of it.

"The strategy elected by the defenders proposed but two main objects—to strengthen the shoulders which still held firm against the enemy flankward pressures, to man the bastions which still might hold in the Ardennes center.

"The first step would limit the drive and then confine it, denying it grand objectives from the start.

"The second would set the anvil for the hammer, insuring the ground for successful counterattack.

"So went the plan. So went its execution.

"From out of the north American armor rode to St. Vith, at first a combat team and then a division.

"From out of the south, a garrison rode for Bastogne. It counted one airborne division and a team of armor. On the ground it would link with a battalion of tank destroyers sent from the north.

"With these scant forces there rode the chance for swift decision. Time and situation had not permitted more.

"Elsewhere as armies realigned to face the battle, their divisions marched to wall-up the threatened flanks. There was just time enough to look where the ground was strongest, take position and then face toward the storm and fire.

"Right under the guns, the odd-ments joined the fighting, repairmen, clerks, police, and drivers of trucks. They picked up arms and moved to a threatened crossroads, or blew a bridge or guarded the precious stores.

"In Britain, the newly arrived formations were alerted to go by air to defend the line of the Meuse.

"The base of supply in France reorganized to feed the battle; its convoys going elsewhere were halted and faced about.

"Along the general front running from Switzerland to Holland the allied armies shifted weight toward the danger zone.

"In the United States there was swift reapportionment of training forces to provide replacements for the wasting infantry line.

"Thus in one round of the clock the Allies gained unity of action, and the signals were called for the month-long struggle on ahead.

"Momentous decisions had been taken. There remained the weeks of execution wherein deeds would match thoughts and courage would prove equal to the plan.

"At St. Vith the enemy already swarmed over the country. But the rescuing armor arrived in time to block the road, blunt the blow and cripple the enemy power during the crisis hours.

"The spearhead of the panzer army in the north rolled off the flank of this defense and on past Stavelot. Then in the defiles beyond the River Ambleve it was trapped and held by the new forces of the counter-attack. The fighting was within 20 miles of Liege.

"The race to Bastogne was won by the American column; it closed in just in time to confront an enemy armored corps. The fighting began before the defenders could take position. They organized under fire from enemy guns.

"In this way began the siege now famed in history. The lines of Bastogne held firm though the storm beat all around. By direct assault the enemy armored corps tried to gain the city. Its men and metal were driven back at every point.

"And so the defeated armor flowed on around Bastogne, still seeking to gain the line of the River Meuse.

"Its spearpoint reached almost to the door of Dinant before it was stopped by the fire of the new American line.

"Even so, the defeat of this southern panzer army was made sure by the stand made at Bastogne. When the armor bypassed this isle of resistance, its power was maimed and its forces were slowed down.

"The hope this spelled reacted like a magnet upon the general force of the counterattack. To the south of the Bulge an American army had been attacking eastward. It was called now to halt and wheel to the north. Its nearest corps moved out upon this mission. From out of the corps, one division struck toward Bastogne.

"So while Monschau and St. Vith doomed the attack of the northern forces, Bastogne and the armor advancing to its relief squeezed hard on the southern flank.

"The weather at last turned cold; there were gales and snows deep drifting. A general change was wrought on the battlefront.

"The loss from exposure grew great as the loss from fire. Attacking in snow suits, the enemy could scarcely be seen. The village became the chief prize in the daily struggle, as men fought for shelter and for warmth.

"The folk of the Ardennes opened their hearts and hearths to the defenders. They shared with them their food, their blankets and their fuel. They tore up their bedsheets for use in concealing men and weapons. They nursed the wounded and helped to comfort the ill.

"But the weather's curse was also in part a blessing. The cold cleared the skies so that airpower could again take wing. Its fighter-bombers caught the foe in his hour of greatest extension. The trains of guns and armor were closed up tight along the roads. So the air strike took toll of his strength all along the columns while from both flanks riflemen, guns, and armor beat his spearheads back.

"By Christmas Eve the enemy knew that his plan was defeated.

"Yet the fight flamed higher still on Christmas Day.

"On the next day the American armored column from the south broke through to Bastogne and the corridor thus won was never broken.

"But still the enemy persisted in the siege. And still his forces of the attack struggled to break the vise now closing from both sides of the salient.

"The period of surprise having passed, the panzer armies were now committed to the vain task of trying to batter their way through.

"Instead of beginning a gradual withdrawal, more men and more guns were sent forward to the Bulge in the effort to hold what was gained and expand the front if possible.

"That stage of the battle which followed the passing of the American crisis was the most blood-letting of all.

"None of the ground of the Ardennes was given back. There was no sudden strategic retreat. Every hill and roadway had to be rewon by the fire power and by paying a price in the lives of valiant men.

"When at last toward the close of January the enemy could stand American forces from both sides of the salient threatened a general envelopment, his surviving units backed away, still fighting with utmost desperation. But the power which they carried out with them was small indeed compared with that which had been scattered and broken on this ground. The storms which beat upon the Ardennes throughout the battle at last had quieted; so had the last full fury of the tempest of Germany tyranny.

"Though the full story of the fight cannot be told here, it will be sung through the ages.

"There is hardly a town or village in this upland area which has not served as a shield and fortress for troops of the United States.

"The scars of the fight are still marked on the land, the forest, the bridges, and the dwelling places.

"But the memory of what was done continues high and unscarred in the hearts of two peoples.

"In the battle fought here, 76,890 Americans were killed or wounded or were marked missing.

"On no other soil the earth over has more American blood been spilled in the course of a single battle.

"The number of Belgians who died or suffered wounds or great privation helping these friends from overseas in the common defense cannot be known.

"They together share the true glory, though many of the heroes of this field are unsung and some of the bravest deeds were unseen.

"The comrades and countrymen who knew them in their great hour gave their sacrifice its highest meaning.

"By continuing the battle until won, they paid the dead the perfect tribute of faith and courage.

"Of these dead and of all who fought here, the now living may attest the greatness of the deed only by increased devotion to the freedom for which they braved the fire."

International Congress for the Peace of the World

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I would like to include the Washington report about the International Congress on Christian Culture for the Peace of the World which will take place in Ciudad Trujillo, the Dominican Republic, from February 28 to March 6. It is gratifying to note that my dear friend, the Reverend Dr. (Father) Joseph F. Thorning, associate editor of World Affairs, will be one of the principal speakers. Without doubt, the gathering of numerous spiritual leaders, all men of good will, should accomplish a great deal to bring about understanding among all the peoples, all the races, and all the religions of the world. Faith in God is our chief resource in the present crisis. Religion means love of God and love of our neighbor. Obviously, whatever can be done to strengthen the foundations of our culture is bound to have a good effect on mankind. In this connection, it may be recalled that the Dominican Republic offered a refuge to people flying from the Nazi terror and that religious freedom is guaranteed in the Dominican constitution. The initiative of Generalissimo Rafael Leonidas Trujillo in setting the stage for this international congress is worthy of all praise. The program follows:

DR. THORNING IS INVITED TO CONGRESS ON CHRISTIAN CULTURE

WASHINGTON, December 30.—The Reverend Dr. Joseph F. Thorning, Carrollton Manor, Md., specialist on inter-American affairs and associate editor of World Affairs, a magazine published in the Capital, is one of the first scholars of the free world invited by Auxiliary Archbishop Octavio A. Beras, of Santo Domingo, to be a principal speaker at the International Congress on Christian Culture for the Peace of the World that will meet at Ciudad Trujillo, the Dominican Republic, from February 28 to March 6. Archbishop Beras is the president of the organizing committee of the congress, while the secretary general is the distinguished Dominican intellectual, Dr. Salvador Iglesias. The conference is being convoked in connection with the International Exposition of Peace and Fraternity of the Free World which is now underway in the Dominican Republic.

The Most Reverend Salvatore Süno, titular archbishop of Perge and Apostolic Nuncio to the Dominican Republic, will officiate in the Cathedral of Santo Domingo at 9 a. m. on Tuesday, February 28, when the delegates to this international congress will chant a solemn veni Creator, imploring the blessing of the Holy Spirit upon the work of the conference. The Apostolic Nuncio will also deliver an address of welcome to the delegates at this opening session in the basilica.

On the same day, an inaugural address will be given, in the auditorium of the University of Santo Domingo, by Generalissimo Rafael Leonidas Trujillo, whose leadership has been responsible for notable progress in the republic during the past 25 years. At noon, the delegates will pay their respects to the Apostolic Nuncio. At five in the afternoon, the keynote address of the congress will be delivered by the Most Reverend Octavio A. Beras, auxiliary archbishop of Santo Domingo.

Among the subjects to be discussed, according to the provisional program just made public, will be Peace in the Christian Family; Peace in the Industrial World; Peace in the World of Farm Work; Peace Programs for Youth Leaders in City and County; Peace and Harmony Among all Races; Christianity: the Fountainhead of Human Dignity and Human Rights; the Unifying Role of Catholic Church in Modern Society; and Christian Leadership on a World Scale.

The program will include visits to many historic monuments in Ciudad Trujillo, to the 40 national pavilions of the International Fair, and to the social welfare centers of the capital. One night will be devoted to concert of sacred music and another to Dominican folklore, dancing, and songs.

On Sunday, March 4, a solemn mass for the delegates will be celebrated in the Shrine of Our Lady of High Grace. Lunch will be served that day in the St. Ignatius Loyola Polytechnic Institute which is directed by the Jesuit Fathers. There will also be an excursion to San Cristobal and to the huge Rio Haina sugar mill.

On Wednesday, March 7, the delegates will visit Cibao, often called the bread basket of Santo Domingo. This trip will include inspection of country schools, institutes for teacher training, and centers of scientific farming. The day will conclude with prayers and benediction in the famous Shrine of Our Lady of Thanksgiving.

The World Congress delegates will be entertained by Gen. Hector-B. Trujillo Molina, President of the Dominican Republic (a brother of the Generalissimo) at a gala reception in the National Palace. The final act of the conference will be a solemn Te Deum in the Cathedral intoned by the Most Reverend Ricardo Pittini, Archbishop of Santo Domingo.

Compliments to the Walnut Grove Products Co., of Atlantic, Iowa

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. JENSEN. Mr. Speaker, the Walnut Grove Products Co., of Atlantic, Iowa, has had a long and successful career in manufacturing and distributing Walnut Grove stock feeds, which has gained great popularity all over the Middle West.

They learned long ago that there is no substitute for honest, proper advertising, to acquaint the people with the values of their products. Walnut Grove is now taking the lead to effectively publicize the food values of the best food on earth, healthful, muscle-building, tasty cornfed pork and beef.

Last week the board of directors of the Walnut Grove Products Co. announced their decision to set aside 50 cents from the sale of each ton of swine and beef feeds manufactured by the company.

The money to be given to a livestock organization devoted to the promotion and education of the value of meat and meat products. I have no doubt but what many, many other companies in the breadbasket of America will follow Walnut Grove's lead in their desire to induce this American people to eat more of the wonderful food and which will benefit all who eat it and produce it.

My compliments go to President A. E. Kelloway and his board, may success crown their efforts.

State of the Union Message

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. VANIK. Mr. Speaker, the President's state of the Union message today certainly provoked no surprises and very little congressional discussion. I can support most of what the President has requested in his message. However, I fear that the message is distinguished by its omissions and its inadequacies.

In his discussion of the discharge of world responsibility, very little is recommended beyond the making of long-term commitments for assistance to economic development of friendly nations abroad.

A great claim is made for the development of national fiscal integrity and a balanced budget. Very little recognition is given to the times which have changed the atmosphere of the Nation from a war economy to a peacetime economy. In the volatile Near East dispute between the Arab States and Israel, the President urges that we promote a fair solution and that both sides will make the contribution necessary to achieve that purpose. Where does leadership appear in these words?

It was, indeed, surprising to have the President tell us about his desire to continue the Federal-aid highway program. There has been very little argument on this subject for years. All reference was omitted to the conflict in financing proposals which proved to be the roadblock to the adoption of a workable highway program in the last session. The nonpartisan, noncontroversial issue of occupational safety received consideration in two separate instances in his message.

On the schools issue, Congress was deadlocked on the proposal of integra-

tion. Where does the administration stand on that issue?

In the 1st session of the 84th Congress the House of Representatives passed legislation reducing the retirement age for women to age 62 and provided for compensation benefits to the totally disabled at age 50. The House has clearly spoken on this subject. What guidance can Congress receive from these words:

In developing improvements in the system, we must give the most careful consideration to population and social trends and to fiscal requirements.

Is the President for or is he against the House bill?

On the question of civil rights, a bipartisan commission is recommended. The issues on this subject are resolved and the lines are already clearly drawn. A bipartisan commission would serve no other purpose but the occasion for delay in enacting an effective civil-rights program. Congress knows the subject matter and Congress is bipartisan. A commission would serve no useful purpose.

In his message the President said: "Change is the inexorable law of life." His message promises none. It reflects an America becalmed by Executive decree.

Additional Cotton in the "Set-Aside"

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. GATHINGS. Mr. Speaker, on last Thursday, December 29, I wrote to Secretary of Agriculture Benson suggesting that he utilize the full authority of his office in placing an additional 1 million bales of cotton in the "set-aside."

Under leave to extend my remarks in the CONGRESSIONAL RECORD, I place this letter in the RECORD.

DECEMBER 29, 1955.

Hon. EZRA TAFT BENSON,
The Secretary of Agriculture,
Washington, D. C.

DEAR MR. SECRETARY: Under the "set-aside" provisions of the present agricultural laws, the Secretary of Agriculture is authorized to reserve as much as 4 million bales of cotton to insure the domestic economy and to provide an adequate supply of cotton in the event of emergency.

Having had the privilege of talking with hundreds of cotton farmers in recent weeks, I have found that they are deeply perturbed and depressed about their high-production costs. Year by year they find that they are paying more for the things they have to buy to carry on their operations, and, at the same time, they have seen a continuing decline in the price of cotton at the market place. This cost-price squeeze is driving great numbers of our people from the land and placing heavy burdens and added problems on our urban citizens.

By utilizing the full powers that Congress has placed in your hands by enactment of the Agricultural Act of 1954, this action on your part would serve to stabilize the price of cotton and would give the farmer a more equitable return for the product of his labor. It was the intention of those of us who drafted this legislation, that you be given this authority to cushion the shock of just such a situation as now exists throughout the cotton-growing areas.

For this reason, I urge you to utilize the full powers of your office in exercising the maximum set-aside for cotton prior to the announcement of price-support levels. Our American farmer should receive the maximum protection of the law and our national security program must have the full benefits of an adequate set-aside in case of a national crisis.

Such action on the part of the Department would increase the present set-aside by 1 million bales and would benefit not only the cotton farmers but also the business economy of all areas producing cotton.

It would, in addition, increase our ability to cope with any contingency that might occur in this far from peaceful world and would take into account the increasing demands created by an expanding American economy and a growing American population.

I urge you take this action immediately.

Yours very sincerely,

E. C. GATHINGS.

Fruits of Freedom

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. PELLY. Mr. Speaker, the President's message on the State of the Union which the House has just listened to with great interest and respect will brighten the hearts of the American people and likewise those of other freedom-loving nations. In foreign and domestic issues we have had renewed evidence of leadership dedicated to equality, individual dignity, and justice.

The President has invited a comparison of "fruits of freedom" here and elsewhere as against the record of the Communists, and he pointed up our progress in the field of civil rights. It is especially gratifying to note in his message a determination to continue this progress. In this regard I applaud his recommendation that charges of lack of voting rights and economic pressure on Negro citizens be examined by a bipartisan commission—and promptly.

Through the past 3 years, as the President pointed out with pride, our stature in the free world has increased because we have made more progress than ever before in a similar period to give all citizens equality in justice, in opportunity, and in civil rights. But the President emphasized the great need to expand this progress, and I for one look forward to the program he promised to give us to accomplish this objective.

Recently I read that our colleague the gentleman from New York [Mr. POWELL] had named me with 14 other Representatives as possible "key regional leaders" to fight for justice in civil-rights matters. When I saw this report I immediately wrote the gentleman from New York, saying he could count on me. Since then I have personally assured him of my desire to actively support a civil-rights legislative program. President Eisenhower's message points in the direction we must move, and I will be proud to continue supporting such a program.

Liberian Presidential Inauguration

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. POWELL. Mr. Speaker, may I take this opportunity of congratulating the Republic of Liberia in general and, especially, the President of Liberia, His Excellency William V. S. Tubman, on the occasion of the presidential inauguration.

The daily press has given reports of the attendance of the Soviet delegation as indicated in the attached clipping from the Sunday, January 1, 1956, copy of the New York Times. The American delegation has not received the publicity it should have from our own press. It is an excellent delegation composed of the following individuals: United States Ambassador to Liberia Richard Jones; former Senator Robert Upton, New Hampshire; Lt. Gen. Leon Johnson; Mrs. Robert Vann; Mr. Asa Spaulding; and Mr. Garfield Kass.

It is to be regretted that no Member of the United States Congress attended the ceremonies. I, personally, would have gone—even at my own expense—if the convening of the second session of the 84th Congress had not conflicted with the celebration.

The article referred to follows:

RUSSIANS ON HAND FOR LIBERIA FETE—ARRIVAL OF DELEGATION FOR TUBMAN'S THIRD INAUGURATION STIRS MUCH SPECULATION

(By Leonard Ingalls)

MONROVIA, LIBERIA, December 31.—Representatives of 35 countries and the United Nations are gathering here for the inauguration Monday of William Vacanarat Shadrach Tubman for his third term as President of the Republic of Liberia.

One delegation, that of the Soviet Union, has been a subject of particular interest and speculation. Nearly everyone is wondering whether its appearance here is just another of the friendly visits Soviet officials have been making lately to various parts of the world or whether there may be some deeper significance.

Four years ago the Soviet Union did not accept an invitation to President Tubman's second inauguration. This time Moscow has sent a delegation led by a fairly high Soviet official, Alexander P. Volkov, chairman of the Soviet of the Union, one of the houses of the Supreme Soviet.

In their conjecturing over the meaning of the Russian visit here, diplomatic observers have concluded it is a fairly obvious indication of the Soviet Union's growing interest in Africa and its desire to spread Soviet influence on the African continent. Liberia, whose government sent representatives to the Asian-African Conference at Bandung, Indonesia, earlier this year, seems quite

pleased as well as curious about the Soviet representation at the inauguration.

SOVIET AID SEEN POSSIBLE

Since Liberia is an economically poor country that needs large amounts of foreign assistance for development, there has been some speculation on whether the Soviet representatives may be exploring the possibilities of establishing a mission here and of offering economic assistance.

At a diplomatic reception this afternoon Mr. Volkov read a message to Mr. Tubman from Marshal Kliment E. Voroshilov, Chairman of the Presidium of the Supreme Soviet of the Soviet Union. Marshal Voroshilov said he hoped the presence of the Soviet delegation in Liberia would serve the cause of establishing friendly relations between our two countries.

Mr. Tubman expressed pleasure at the message and said he also hoped for friendly relations between the Soviet Union and Liberia.

In two other formal presentations President Tubman received the grand cordon of the Order of Leopold, highest decoration of the Belgian Government, and an original copy from the West German Government of the commercial treaty of 1855 between Liberia and the Free Hanseatic Republics.

With the inauguration only 2 days away, the capital city of Monrovia is a scene of intense activity and excitement. Its buildings gleam with coats of paint, the streets are heavily decorated with bunting in red, white, and blue, the Liberian national colors, and many roadbuilding projects are nearing completion.

One sour note in the festivities is a controversy between the Government and contractors over the construction of an extremely modernistic new silver-domed capitol building. There is some doubt whether the scheduled dedication of the building as part of the inauguration festivities will be held.

Barratt O'Hara Paid High Honor by Cuba

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. HOFFMAN of Michigan. Mr. Speaker, overdue and well-earned recognition of meritorous service just came to our distinguished colleague the gentleman from the Second Congressional District of Illinois, a former resident of Berrien County in the Fourth Michigan Congressional District, where he has many friends, is loved and respected by many. But let the News Palladium of Benton Harbor and the Herald Press of St. Joseph, Mich., tell the story.

Permit me to read:

BARRATT O'HARA PAID HIGH HONOR BY CUBA

Congressman BARRATT O'HARA, of Chicago, native of St. Joseph and one-time twin city newspaper reporter, today was the recipient of Cuba's highest decoration—the Order of Military Merit of Distinction—at a presentation ceremony scheduled in Havana, where he flew at the invitation of President Batista.

The presentation was to be made by President Batista personally, after which the former twin-city newsman was to be honored by the Cuban Congress.

FIRST HONOR FOR CIVILIAN

It will be the first time such an honor has been conferred on a civilian.

Now 73, Representative O'HARA is the only Member of the United States House of Representatives who is a veteran of the Spanish-American War which liberated Cuba.

O'HARA served with old Company I of the 33d Michigan Volunteer Infantry. The company was comprised chiefly of twin city youths, many of who left high school to enlist. It was one of the first American units to land on Cuban soil and took part in all major military actions which ended Spanish rule in the Western Hemisphere.

From St. Joseph, O'HARA went to Chicago, where he carved out a distinguished journalistic and political career. He served as lieutenant-governor of Illinois and has long been a Democratic Congressman.

During Congressman O'HARA's flying visit to Cuba he will visit old battlefields, including San Juan Hill, where the famous Rough Riders participated in a fight that helped break the siege of Santiago.

It has been O'HARA's custom annually on February 15, anniversary of the sinking of the United States battleship *Maine*, to address the House of Representatives in Washington.

Archbishop Cushing Cites Need of God in 1956 Message

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. McCORMACK. Mr. Speaker, I am pleased to include in my extension, the text of a living New Year's message, issued by His Excellency, Most Rev. Richard J. Cushing, D. D., archbishop of Boston. The New Year's message of Archbishop Cushing is one that should appeal to, and find response from, all persons, without regard to religious convictions, who believe in God and His law and His word:

ARCHBISHOP CUSHING CITES NEED OF GOD IN 1956 MESSAGE

In an era of unprecedented prosperity our greatest need is still help from God, says Archbishop Richard J. Cushing in his annual New Year's message.

The text of the message follows:

A thought often given expression by poets and philosophers is that life is short but life's lessons are long in the learning. As we begin the New Year of 1956 we may remind ourselves that no one of us can live to the point of becoming completely wise and self-sufficient. There is always something new to learn, some uncharted field of experience to explore, some new disappointments to bear within resignation to God's will. These sobering truths teach us our dependence upon God and upon one another as creatures of God.

Upon Almighty God first of all.

STILL HELPLESS DESPITE POWER

In an age in which we have attained undreamed-of power over the resources of nature we sense nevertheless our human helplessness. Never before have so many been at the mercy of so few. Never before has strength been so complicated by weakness and power so productive of frustation and insecurity. We have vainly sought in the researches of historians and psychologists the explanation of this seemingly contradictory prevalence of both force and fear in our modern life.

If we are fearful even while we are so strong, it can be only because our strength comes to us from a higher source and we have been acting as though it were our own. The God of our fathers has disappeared from our thinking only to reappear in the yearnings of our deeper selves which worldly pleasures and man-made plans of living have left unsatisfied. In an era of unprecedented prosperity we are forced to admit that our greatest need is help from God. Even amid comforts and conveniences that release us so generously from the struggle for existence we can find rest and peace only by lifting up our minds and hearts to Him Who made us to enjoy the contemplation of His divine beauty.

Because we need God so much and because God is so far removed from us in His infinite perfection we must look for the way that will lead to Him in the service of our fellow men. It is gratifying that we have made such long strides toward the ideal of a united world, that national barriers are becoming more penetrable and collective responsibility is replacing rugged individualism as the guiding principle of our social philosophy.

Let us be sure, however, that we see this idea of a united world in its true perspective. It was presented to us by Christ our Lord, who suffered and died that all men might realize the human dignity with which His Father had endowed them. It was reasserted four centuries ago by Christian social philosophers who saw the inconsistency of extreme nationalism in a world which the progress of science was so rapidly forcing into a pattern of social and economic unity. Today a terrified humanity is instinctively groping toward this ideal as the one hope of averting the global annihilation which a third world war must inevitably bring about.

COMMON EFFORTS POINTS TO GOD

Let us begin the year 1956 by recognizing first of all how little and insignificant we are as individual men, and how much we need the strength that comes to us from the tradtions of the past and from the cooperative effort which 20th-century social organization makes possible. Let us recognize on the other hand that it will profit us nothing to be helpful to one another unless our common efforts are directed ultimately towards our unification in the love of God. It is because we are independent on God that we are so independent on one another. Only by sanctifying our relations with one another in the warmth of supernatural charity can we remove the contradiction of a godless society among men who belong body and soul to God.

If our efforts to construct a better world are inspired by love of God and unqualified submission to God's law, we need have no fear for the future. With this thought in mind I wish you all a happy New Year—a year that may be happy not merely in the possession of material security and increasing prosperity, but happy in the awareness that with God in our hearts and in the works of our hands we are in direct contact with the Source Itself of true happiness and abiding peace.

Flood Control Is Everyone's Concern

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. SCUDDER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I desire to include an article from the Santa Rosa (Calif.) Press Democrat dated December 28, 1955, containing information from the

Army Corps of Engineers to the effect that the Coyote Valley Dam would have cut in half the $4 million in damage inflicted in the Russian River area during the recent floods in California.

This article points out the necessity of initiating construction of this vital project at the earliest possible time. Initial construction funds were approved during the first session of this 84th Congress. The people of Sonoma County approved a $5,598,000 bond issue to provide their full share of the costs of this project, but sale of the bonds has been delayed by a lawsuit which questioned the sufficiency of the local contribution in view of cost adjustments since authorization of the project by the Flood Control Act of 1950.

The people met their local obligation in good faith in accordance with the act of 1950. Adjusted costs revealed that an estimated additional amount of $1,165,000 will be required to accomplish the initial plan for flood control in the Russian River Basin.

On January 3, 1956, I introduced H. R. 7930 authorizing the additional appropriation. The bill was unanimously approved by the House Public Works Committee on January 5 and has been ordered reported favorably.

On behalf of the hundreds of people who suffered personal discomfort and millions of dollars of damages because of the flood in the Russian River Basin, I sincerely urge approval of this bill by the Congress at the earliest possible date. To emphasize the necessity of this project in the prevention of future damage to life and property, I respectfully refer your attention to the following article:

ENGINEERS SAY COYOTE COULD HAVE HALVED $4 MILLION RIVER DAMAGE—WOULD HAVE DROPPED CREST 2 TO 4½ FEET

(By Fred Fletcher)

The swollen Russian River last week caused direct flood damage totaling $4 million, and the Coyote Valley Dam would have prevented $2,100,000 of it.

The dam, if in operation, would have reduced the highest crest recorded at Guerneville during the flood by 2 feet—to 45.9 feet, or almost a foot below the crest recorded in the record-setting 1940 flood.

These are estimates made yesterday by the United States Army Corps of Engineers.

The damage total is for overflow damage alone—not for "storm damage"—and is for damage to private and public property along the Russian River itself, not its tributaries.

It is a preliminary estimate, one subject to daily revision as the Army engineers' damage survey gets deeper into detail.

A survey of damage along the tributaries is underway.

The effects of a theoretical operation of the Coyote Dam during the flood were calculated separately by the Army. They were based upon the known operating capacity of the projected 122,000-acre-foot dam northeast of Ukiah, and known peak river stages and flows at various gage points on the river last week.

Both sets of estimates came from the Army engineers' San Francisco district office.

MEETING LAST NIGHT

Some of the figures on the estimated effects of Coyote Dam were brought out last night by Col. William F. Cassidy, Chief of the Engineers' South Pacific division, in a meeting of top Sonoma and Marin County officials in Ignacio.

The Alexander Valley area appeared to have suffered the most damage. The preliminary estimates assigned a $1,200,000 figure to that broad overflow area.

The damage at Guerneville and to the sea was estimated at about $1,000,000.

All estimates were based upon a knowledge of property values, partly from surveys for the Coyote project, plus field surveys of damage by crews now in the area.

WITH DAM HELP

The Army said that if the multiple-purpose Coyote Dam had been in operation last week, it could have accomplished this:

Reduced the peak flow and river crest at Hopland by 12,000 cubic feet per second and 4.2 feet, respectively. The peak flow was about 38,000 CFS, the highest crest 26.8 feet.

Reduced the peak flow at Cloverdale from 46,000 CFS to 25,000 CFS, and the crest from 30.9 feet to 26.3 feet, or 4.6 feet.

Reduced the peak flow at Healdsburg from 70,000 to 61,000 CFS, and the crest from 26.16 to 23.66 feet or 2½ feet.

Reduced the peak flow at Guerneville from 90,000 to 84,000 CFS, and the crest from 47.9 feet to 45.9 feet, or 2 feet.

BENEFITS ELSEWHERE

Colonel Cassidy and Representative HUBERT B. SCUDDER (R-Sebastopol) last night also pointed out that completed flood control projects in California provided distinctly measurable flood protection last week.

Sacramento, dry in all the flooding, unquestionably would have been inundated were it not for Shasta Dam and the recently completed and filling Folsom Dam, they said.

The Friant and recently completed Pine Flat Dams kept Fresno, the State's second largest inland city, from flooding.

OTHER ESTIMATES

Earlier yesterday, Colonel Cassidy came up with these estimates for northern California:

Completed flood-control projects saved millions upon millions of dollars last week.

Those under construction could have saved $100,600,000.

Those authorized but not started would have saved another $19 million.

All the above plus those projects still in the planning or discussion stage would have prevented a possible $175 million in damage.

Representative SCUDDER said last week's disaster has given him a "fighting chance" to get a Federal resurvey of long-discussed but dormant flood-control projects between San Francisco and Oregon.

He said he hopes to persuade the Flood Control Subcommittee of the House Public Works Committee to visit northern California and recognize its problem.

Among other dormant projects mentioned was one once authorized for Richardson Bay in Marin County, and several on the Eel. Only active Federal flood-control project in the region now is the Coyote Dam project, construction of which now is stalled by a taxpayers' suit.

RIVER NEEDS SPACE

Colonel Cassidy also had some pertinent advice for the two boards of supervisors attending last night's Ignacio meeting.

"You must leave space for old man river to go through," he said.

The northern California floods last and this week, and the recent floods in New England, he said, showed that buildings have been placed knowingly in the path of past floods.

He described a new motel he found in a tour of damage areas yesterday. It had a water mark 7 feet high on the walls. The builder knew that water reached that height at that spot only 5 years ago, he said.

Mentioning a permit system, he obviously was referring to possible county-level legislation. He said such improperly located buildings not only suffer damage themselves but restrict the flow of swollen streams, adding to flooding.

Only 2 weeks ago, Paul L. Nichols, Sonoma County flood-control and water engineer, suggested that the supervisors here consider legislation prohibiting construction or other activities in natural water courses except under county permits. The suggestion is under study.

Do You Know You Can Lose Your Civil and Retirement Pay Even for a Traffic Violation?

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. MULTER. Mr. Speaker, I would like to call the attention of my colleagues to an article entitled "Do You Know You Can Lose Your Civil and Retirement Pay Even for a Traffic Violation?" written by York D. Mathes, which appeared in the April 1955 issue of the Federal Bar News.

The article is a summary of an analysis made of Public Law 769 of the 83d Congress, entitled "To prohibit payment of annuities to officers and employees of the United States convicted of certain offenses."

On January 3, 1956, I introduced a bill, H. R. 7933, to repeal this statute, which has been referred to as one to reach disloyal persons, but which, in effect, is much too broad in scope.

The article follows:

DO YOU KNOW YOU CAN LOSE YOUR CIVIL AND RETIREMENT PAY EVEN FOR A TRAFFIC VIOLATION?—YORK D. MATHES SUBMITS EXCELLENT CONVENTION COMMITTEE REPORT

(EDITOR'S NOTE.—Below is a summary, abbreviated of an analysis made of Public Law 769, 83d Congress (68 Stat. 1142). It affects potentially several million persons, the past, present, and future employees of the United States; and their dependents. While it was prepared at the request of a committee of the association for its use, it seems likely it will interest all members of FBA. The statute has been referred to as one to reach disloyal persons. But its scope is much broader.)

1. As a practical matter the tragic consequences of the cited legislation probably will be visited on very few, if any, disloyal persons. If it is not extensively amended, or repealed, it will work a serious injustice on a substantial number of loyal, but unfortunate employees; and on dependents who have not done anything inappropriate, much less wrong.

2. In the Jerry Kluttz column of the Washington Post for March 7, 1955, the statement was made that 14 persons have been denied pension, and 50 more are being investigated. The article also says the statute was enacted to deny a civil-service pension to Alger Hiss. If so, it is somewhat analogous to destroying the Pentagon Building to capture one escaped prisoner.

3. The act cites about 75 criminal statutes, which as a rough estimate describe probably 250 different offenses. With respect to each, any, and all of said offenses the act provides in section 1 (68 Stat. 1142):

"* * * There shall not be paid to any person convicted prior to, on, or after the date of enactment of this act of any of the following offenses described in this section, or to the survivor or beneficiary of such person so

convicted, for any period subsequent to the date of such conviction or the date of the enactment of this act, whichever is later, any annuity or retired pay on the basis of the service of such person as an officer or employee of the Government:".

4. Paragraph (2) of said first section, (which follows the enumeration in par. 1 of said criminal statutes), and to which the above quoted language is equally applicable, reads:

"Any offense," * * * (excluding 18 U. S. C. 13, which adopts existing State statutes as to Federal reservations therein), "which is a felony under the laws of the United States or of the District of Columbia (A) committed in the exercise of his authority, influence, power, or privileges as an officer or employee of the Government, or (B) committed after the termination of his service as an officer or employee of the Government but directly involving, directly resulting from, or directly relating to, the improper exercise of his authority, influence, power, or privileges during any period of his service as such an officer or employee."

5. The language just quoted defies exact analysis or definition, or the statement of any boundaries upon which one would be willing to advise a client to rely.

6. Title 18, United States Code, section 284, is one of the statutes cited in paragraph (1) of section 1. Conviction for violating that statute entails the forfetiure described by Public Law 769. The existing section 284 is somewhat ambiguous and it will be recalled that the Government recently sought, unsuccessfully, to obtain a construction thereof which would have given it a much broader application than it has at this time. Said section 284 makes it an offense to act as agent or counsel for "prosecuting any claims against the United States" "involving any subject matter directly connected with which such person was so employed or performed duty * * *." Under the construction urged by the prosecution, a lawyer who once was employed by the Government must hesitate to advise ("counsel") anyone, even a relative, about "any subject matter" with respect to which he was formerly employed by the Government (whether free or for a fee is immaterial). For example, an employee or former employee of the VA would be running some risk if he advised his wife how to make a claim for the Government Employee's Group insurance payable upon the employee's death. The subject matter is insurance in both instances. That "subject matter" is one of several within the jurisdiction of the VA. If he did so advise (and conviction followed), he and his widow, according to the terms of Public Law 769, would forfeit the civil-service retirement pay otherwise payable to each. To be sure, the illustration is extreme, and probably absurd practically. But that is the proper way to test language in a criminal or a forfeiture statute. The important point is that statutes involving criminal penalties, or forfeitures of money payable, ought to be very explicit in describing the offense. Of course there ought to be great conservatism in creating offenses, and in applying forfeitures. Public Law 769 does not meet either test. The offenses which can result in forfeiture of retirement pay range down from really serious felonies to offenses which are hardly more than improprieties in the absence of the statute making such conduct an offense. An analytical appendix hereto is available for perusal at the association office but its length precludes publication.

7. Paragraph 3 of said section 1 of the act enumerates as bases for forfeiture a conviction "prior to, on or after the date of enactment" for "perjury committed," "under the laws of the United States or of the District of Columbia (A) in falsely denying the commission of an act which constitutes any of the offenses described in paragraph (1) or (2) of this section, (B) in falsely testifying before any Federal grand jury or court of the United States with respect to his service as an officer or employee of the Government, or (C) in falsely testifying before any congressional committee in connection with any matter under inquiry before such congressional committee; or subornation of perjury committed in connection with the false denial or false testimony of another person as specified in this paragraph."

8. Obviously every good citizen deplores perjury. Nevertheless every experienced trial lawyer knows that some false testimony, (which may or may not be "perjury"), is fairly frequent in the trial of cases, albeit convictions for perjury or "false swearing" are comparatively rare. Therefore the paragraph just quoted from the statute probably will become pertinent only rarely. This fact does not determine the question of whether it is wise to include the offense of perjury. It is appropriate to raise the question whether it is any more reprehensible for a former employee of the Government to commit perjury than it is for a minister of the gospel, or other citizen to commit perjury. This suggests the general question whether it is sound criminology to vary the penalties of persons convicted of offenses, most any offenses, according to their previous occupation (viz, Government employee, railroad employee, or other) rather than according to the circumstances surrounding the commission of the particular offense. At least for the past 30 years the consensus seems to have been that the penalty to be imposed for the commission of an offense ought to be governed largely by the circumstances, surrounding the denounced conduct. It is quite unlikely that whether the defendant was an employee of the Government, or a railroad company, or a bank, has been considered as one of the factors properly influencing the penalty to be imposed upon him for an offense that is not peculiar to his occupation.

9. Another group of persons whose annuities are to be forfeited under said Public Law 769 (and such forfeiture applies also to their "survivor or beneficiary"), are those who have "failed or refused * * * upon the ground of self-incrimination" (it is difficult to see how one can fail on the ground of self-incrimination), "to appear, testify, or produce any paper, record or other document, with respect to his service as on officer or employee of the Government, or with respect to any relationship which he has had or has with a foreign government in any proceeding before a Federal grand jury, court of the United States or congressional committee; * * *."

10. It will be noticed that the forfeiture as to the individual and as to his "survivor or beneficiary" occurs upon his failing or refusing. No judicial inquiry is provided. No suggestion that he has committed any offense is implicit in the statutory language here mentioned. On the contrary the forfeiture occurs because he asserts a right given him by the Constitution of the United States; to wit, not to present evidence of self-incrimination (fifth amendment). In view of a distressingly extensive erroneous impression as to the scope of the fifth amendment to the Constitution, I remark here that it embraces a great deal more subject matter than is here discussed. Apparently forfeiture is applicable only if he relies on a right given him by the Constitution. Quaere: Is this valid constitutionally? It is impossible to say what is the significance of the statutory language when he "fails" to appear. Compare *United States* v. *Rumley*, 345 U. S., 41, 97 L. ed. 770). No comment is here attempted as to the meaning of the statutory language "with respect to his service" as applied to various books and papers.

11. The next ground for forfeiture of annuity prescribed by the statute is in paragraph (b) of section 2. That section forbids payment to one who "knowingly and willfully has made or makes any false, fictitious, or fraudulent statement or representation, or * * * has concealed or conceals any material fact, with respect to his * * *" (membership or support of the Communist Party, or any element thereof), "or any other organization, * * *" advocating (a) the overthrow of the Government by unconstitutional means, "(b) establishment of a communistic dictatorship in the United States, or (c) the right to strike against the Government of the United States."

Similar forfeiture occurs because of knowingly making false statement concerning the person's conviction of any of the offenses described in the first section of the act, or failure to appeal, or testify, or produce records "as specified in subsection (a)" of section 2. This forfeiture also applies against the person's "survivor or beneficiary."

12. Section 3 of the act apparently undertakes to anticipate constitutional objection by providing that the amounts contributed (plus interest thereon shall be paid to the person whose annuity is forfeited, less any annuity theretofore paid him. It also provides that "such person shall not be required to repay any annuity properly received by him which is in excess of the amount of his own contributions with interest." (If forfeited per statute how could it be properly received?)

13. Section 6 defines certain terms used in the act. It provides that the word "annuity" "does not include any retirement benefit of any person to whom such benefit has been awarded or granted prior to the date of enactment of this act insofar as concerns the conviction of such person, prior to such date, of any offense specified in the first section of this act, or the commission by such person, prior to such date, of any violation of section 2 of this act."

Manifestly these savings clauses do not avoid the result that the act deprives one of a vested right, much more valuable than that saved.

14. Section 4 provides for restoration of the convicted person's right to receive annuity if he shall have been pardoned by the President. The legislative history indicates consideration in respect to said section 4 as applied to two Members of Congress heretofore convicted of one or more offenses and who were pardoned. Of course the pardoning power also exists as to offenses hereafter committed and in the event of such pardon the forfeiture prescribed by said Public Law 769 would not be effective for any period subsequent to the date of the pardon.

15. While the references herein are to annuities, all that is said is equally applicable to retired pay of members or former members of the Armed Forces. However, as to former military personnel the forfeitures of the statute do not apply to any benefit under laws administered by the Veterans Administration. An exactly opposite provision expressly forfeiting such benefits also (other than insurance contracts) was contained in S. 3720.

16. Section 10 added by the Senate enlarges the statute of limitations as to sundry offenses.

17. There exists considerable doubt as to the validity of the provisions in the act forfeiting the annuity rights of the survivor or beneficiary of the employee or former employee so convicted. Article III, section 3 of the Constitution provides that "no attainder of treason shall work corruption of blood, or forfeiture except during the life of the person attained * * *." The scope of said constitutional protection was considered in *Bigelow* v. *Forrest* (9 Wall. 330, 19 L. Ed. 696); and *Wallack* v. *Vanrisivich* (92 U. S. 202, 23 L. Ed. 473).

18. Clause 3 of section 9 of article I provides that "No * * * ex post facto law

shall be passed." As to events which occurred prior to September 1, 1954, it may well be that the act is invalid not only with respect to "his survivor or beneficiary" but also with respect to the employee, assuming he entered the employ of the Government before September 1, 1954. This portion of the Constitution was considered in *Lovett* v. *U. S.* (328 U. S. 303–330, 90 L. Ed. 1252); *Ex parte, etc., Garland* (71 U. S. 33, 18 L. Ed. 336); *Burgess* v. *Salmon* (97 U. S. 381, 24 L. Ed. 1104); *Cases* v. *U. S.* (131 F. (2) 916 (certiorari denied), 87 L. Ed. 1718). See also *Inland Steel Co.* v. *National Labor Relations Board* (170 F. (2) 247).

19. As to those persons entitled to retirement annuities (and this is not limited to those already retired) prior to the effective date (September 1, 1954) of said act, it appears that said act may be invalid so far as it would deprive any such person of one or more of such existing rights. Those rights would seem to be protected under the following portion of the fifth amendment to the Constitution, viz: "No person shall * * * be deprived of life, liberty, or property without due process of law * * *." (See *Lynch* v. *U. S.* (292 U. S. 571).)

20. To be sure, the above mentioned constitutional objections with respect to vested contract, or other right to receive annuities, will be unavailable to persons who enter the employ of the Government subsequent to September 1, 1954, and probably those who were previously in the employ of the Government but were not within the purview of the pertinent retirement statutes. In this connection it is of some importance from a practical, as distinguished from a legal, standpoint to consider the potential detriment to the Government of this type of legislation. It singles out Government employees (and members of the military forces), from the rest of the population and imposes upon such groups penalties far more severe than the penalties imposed upon the other elements in the population for the same offenses. (Moreover the amount of penalty in any one case is purely accidental.) It must be borne in mind that we are not dealing here only with treason, or acts somewhat related to treason, or with disloyalty to the Government, or indeed with only "felony," ancient or artificial. On the contrary, the act deals also (in par. 1 of sec. 1 thereof), with what properly may be termed ordinary police measures. If there be conviction these severe forfeitures would apply, notwithstanding that perchance the circumstances were such that in the criminal case the court would impose the minimum statutory penalty, and suspend it. It is no answer to say that everyone can avoid the penalties by avoiding the violation of any of the statutes cited. A number of those statutes can be violated quite inadvertently. For example, an autoist can inadvertently drive on a prohibited area of a Federal reservation, or a lawyer in one of the Government agencies might routinely sign an opinion dealing with a contract with X company, which might be a subsidiary of the Y company, in which such Government lawyer owns 10 shares of stock. He might not notice the name of the company or recall at the moment the fact of his share ownership; or, if he did, he might not know of the relationship between the two corporations. Negotiating a loan or collecting a lawyer's fee, under perfectly honest and honorable conditions can result, in some circumstances, in such a forfeiture of annuity (38 U. S. C. A. 218–221). Likewise an employee acting in perfect good faith in an emergency might conceivably forfeit all of his retirement rights, e. g., a Treasury guard believes he sees a man trying to burglarize an office of the Treasury and in the melee incident to his attempt to arrest the intruder he uses more force than the jury later concludes upon calm reflection he ought to have used under the circumstances, and kills the man. Thus the killing of the intruder is manslaughter, for which he is convicted. That is a felony. It was committed "in the exercise of his authority and power" as an official. Hence forfeiture of his annuity follows by reason of paragraph 2 of section 1 of said Public Law 769. Many other illustrations could be stated in support of the conclusion reached upon the present analysis, to wit, that the statute is unfair to the employees and to the Government; and probably will result in more harm than good from the Government's standpoint alone, ignoring entirely the question of fair treatment of employees as such, and any question of constitutionality (as to some classes of persons).

21. I have not discussed in any detail the portions of the statute pertaining to conflicts with committees of the Congress. In principle what has been said as to the criminal offenses largely applies to such other conflicts. In a number of such investigations conflicts arise that are wholly unrelated to any questions of loyalty or security. There are additional considerations, the discussion of which reasonable limitations of space prevent.

22. Quite apart from fair treatment of employees, who also are citizens, the statute will be detrimental to the Government. It ought to be repealed, or at least radically amended.

An American Crime

EXTENSION OF REMARKS
OF
HON. HENRY J. LATHAM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. LATHAM. Mr. Speaker, on February 8, 1955, my colleague, Hon. ALBERT H. BOSCH, introduced House Resolution 137 to create a select committee to conduct an investigation and study of the forced repatriation program carried out by our military and civilian authorities in the years 1945–47. This resolution was referred to the Committee on Rules of which I am a member.

On May 3, 1955, the gentleman from New York, Mr. BOSCH, appeared before our committee in support of his resolution. To date, no action has been taken by the committee.

Under leave to extend by remarks, I include an article from the December 21, 1955, issue of the National Review entitled "An American Crime." This article was written by Mr. Julius Epstein and deals with the subject matter of House Resolution 137. I commend this for the careful study of my colleagues on both sides of the aisle:

AN AMERICAN CRIME

(By Julius Epstein)

Modern military history hardly knows a more atrocious crime than the forced repatriation of millions of anti-Communist prisoners of war and civilians to their Soviet executioners. It also hardly knows any other crime which so completely slipped the minds of the people who committed it.

The crime was committed by the three Western Allies, the United States, Great Britain and France, in the years 1945, 1946, and 1947. Based upon a painstaking research into the history of forced repatriation after World War II, the following facts are beyond any doubt. No conspiracy of silence will ever eradicate them from the record of history.

1. At least 2 and possibly as many as 5 million anti-Communist prisoners of war and liberated civilians were returned, against their wishes, to the Soviets to be hanged, shot, or imprisoned in Siberian slave labor camps.

2. We not only forcibly repatriated prisoners of war and civilians but also former Soviet nationals who had fought within the ranks of our own military forces in Italy and elsewhere, against the Nazis. Some of these Soviet defectors who had enlisted with our army were even decorated and given citations for outstanding bravery beyond the call of duty.

3. The crime of forced repatriation was not only committed in Europe but also on American soil. In some cases—for instance at Fort Dix, N. J.—we had to dope Soviet prisoners of war captured in German uniforms in order to deliver them to their executioners, waiting on Soviet boats in American ports.

4. American military authorities who carried out this crime were well aware of the fate that awaited the forcibly repatriated prisoners and civilians.

5. Pentagon high brass as well as State Department officials were well aware that the forced repatriation of Soviet nationals, captured in German uniforms (as for instance those held in American camps, and hundreds of thousands in Germany, Great Britain, Austria, Italy and France), was unlawful. Acting Secretary of State Joseph C. Grew warned our delegation at Yalta against the conclusion of any agreement with the Soviets which might result in forced repatriation. The Yalta Papers contain his telegrams to our Secretary of State Stettinius, then at Yalta. In these telegrams, Grew entreated Stettinius not to violate the Geneva Convention. He also referred to the official diplomatic note of February 1, 1945, in which the State Department, over Grew's signature, had already explained to Mr. Nikolai V. Novikov, Soviet representative in Washington, why we could never forcibly repatriate Soviet nationals taken prisoner in German uniforms. The reason was simple: They were captured in German uniforms and had therefore to be treated as German prisoners of war. Grew quoted the Geneva Convention which does not permit the retaining state "to look behind the uniform." This was an excellent doctrine, long shared by all civilized nations. But this important diplomatic note was not included in the Yalta Papers as released by the State Department on March 16, 1955. (After the discovery of the existence of that note, and of its absence from the Yalta Papers, I asked Secretary of State John Foster Dulles to make the note available to me. Mr. Dulles was kind enough to do so.)

6. The Grew note as well as his most competent warnings to Mr. Stettinius were in vain. Our Yalta delegation, including Mr. Alger Hiss, overruled Grew, the State Department's opinion, the Geneva Convention, and the time-honored American tradition of asylum for political exiles. Our delegation then entered into an agreement on the exchange of prisoners of war and liberated civilians. This agreement was signed on behalf of the United States by Gen. John R. Deane on February 11, 1945.

7. While forced repatriation was undoubtedly the direct result of the Yalta deal, the Army's own official historian, Col. Harold E. Potter, has stated that even the Yalta agreement could not justify forced repatriation: it did not contain any reference to the use of force. According to Colonel Potter's well-documented report, it was the arbitrary interpretation of the Yalta agreement by our Joint Chiefs of Staff which caused the use of force and the tragedies of 1945–47.

8. The still top secret Army document "383.7–14.1 Forcible Repatriation of Displaced Soviet Citizens—Operation Keelhaul" contains the most complete description of the crime. The mere fact that the Army chose the code name "Operation Keelhaul"

proves that the Pentagon was aware of the atrocious and criminal character of forced repatriation. According to Webster, "Keelhaul" means, "To haul under the keel of a ship, either athwartships or from bow to stern, by ropes attached to the yardarms on each side. It was formerly a punishment in the Dutch and British navies and a method of torture used by pirates."

9. That President Truman was likewise well aware of the character of forced repatriation was revealed to the whole world by Truman's Secretary of State, Dean G. Acheson. On October 24, 1952, Mr. Acheson enumerated in an excellent speech before Committee One of the United Nations General Assembly (32 pages, legal size, single-spaced) why forced repatriation of prisoners of war has always been considered a crime against humanity and incompatible with the Geneva Convention. Speaking of the anti-Communist North Korean and Chinese prisoners of war in U. N. custody, Mr. Acheson thus upheld the principle of nonforcible repatriation:

"It was quite unthinkable to the United Nations command that is should use force to drive into the hands of the Communists, people who would be resisting that effort by force. That was the attitude taken by the United Nations command. It was the attitude taken by all other governments whose troops were in Korea and who would be required to carry out this forcible return if it were instituted. So far as I know, there has been no member of the United Nations outside the Communist group that has ever suggested that it was right, proper, legal or necessary to return these prisoners by force."

And to show that the principle of nonforcible repatriation not only applied to the Korean situation, but was an old principle of international law, Mr. Acheson went back in history. He quoted 15 international treaties entered into by the Soviet Government since 1918 ,all of which contained a clause preventing forced repatriation of prisoners of war. To give just one example, the treaty with Turkey, signed by the Soviet Government at Moscow on March 28, 1921, contained the following article 2: "The mutual repatriation of prisoners shall be effected with their consent. Forced repatriation shall in no way be admissible."

But Mr. Acheson not only dealt with Korea and the peace treaties signed and ratified by the Soviets since 1918, but also with Soviet behavior concerning forced repatriation in World War II:

"Those are treaties signed by the Soviet Union Government. As Mr. Casey, the Foreign Minister of Australia, told us the other day, in World War II the Soviet Union, in an ultimatum to the commander of the German troops at Stalingrad on January 8, 1943, guaranteed to all who surrendered that, after the end of the war, they would be allowed to return to Germany, or to any country where war prisoners might desire to go. Later, in the Budapest area, a similar offer was made to German troops. And this is very interesting: a Soviet Union publication refers to these episodes as expressing the highest act of humanitarianism. And I agree with that. That, indeed, is the international practice, the international law, in relation to this subject."

Acheson's speech of October 24, 1952, was in truth the strongest possible indictment of Acheson's own government. If Acheson was right in saying that forced repatriation of North Korean and Chinese prisoners of war was wrong, improper, illegal and unnecessary, and if he proved his point, then it was certainly wrong, improper, illegal and unnecessary to repatriate by force between two and five million anti-Communist prisoners of war and civilians after World War II.

INVESTIGATION NEEDED

These are the facts. Their documentation—especially the documentation of the barbarous acts committed by our own troops at Plattling, Lempten, Linz, and many other places where our MP's cracked skulls, and thousands of Soviet nationals committed suicide rather than be forced to go back to the Soviet executioners—would require a big volume; and I hope that some day this volume will be published, though it would take a grant from Dr. Hutchins' Fund for the Republic to get the job done. But the job cannot be done before a congressional inquiry a la Katyn Investigation has brought into the open a few top secret facts:

1. Who was it at Yalta who made the innocuous Stettinius overrule Grew's warnings and the established policy of the Department of State?

2. Who was the driving force among the members of the Joint Chiefs of Staff, responsible for the arbitrary interpretation of the Yalta agreement in favor of forced repatriation? Who had sold to the Joint Chiefs of Staff the idea that force should be used? Were members of G–2 involved?

3. Was there any secret Yalta agreement, written or oral, that stipulated the use of force?

4. What was the attitude of the Judge Advocate General of the Army whose office has repeatedly expressed the opinion during the last 40 years that forced repatriation of prisoners of war who had enlisted in the enemy's army contradicted international law? Did he ever protest against the Joint Chiefs of Staff's interpretation of the Yalta agreement? Did he ever try to cancel the instructions sent by the Joint Chiefs of Staff to the European theater headquarters?

5. Why did the Army also forcibly repatriate Soviet nationals who had fought as enlisted officers and men with our own forces in Italy? (Since they were by no stretch of the imagination prisoners of war, the Yalta agreement clearly did not cover them, no matter how it was interpreted.)

6. Why is the Pentagon still maintaining the high secrecy classification of all official documents dealing with the forced repatriation of anti-Communist prisoners of war and civilians 10 years ago? How can such a classification be justified in view of the President's executive order according to which the only valid reason for withholding information from the press and the American people is the endangering of our national security? How could the release of the truth about forced repatriation, 10 years ago, endanger our national security?

Since only a congressional investigation will get the answers to these—and some other—questions, I suggested in early 1955 that a resolution be introduced on the floor of the House of Representatives. This was done. On February 8, 1955, House Resolution 137 was dropped into the hopper of the House by Congressman ALBERT H. BOSCH (Republican, New York). It called for the creation of a select seven-member committee to investigate the "facts, evidence, and extenuating circumstances of the forced repatriation program carried out by our military and civilian authorities in Germany and other countries in the years 1945–47, under which millions of anti-Communist prisoners of war and civilians were forcibly repatriated to Soviet-controlled countries, and to fix the responsibility for such program."

The preamble of the Bosch resolution reads as follows:

"Whereas the forced repatriation to Soviet-controlled countries of millions of anti-Communist prisoners of war and civilians by American military and civilian authorities in the years 1945–47 in Germany and in other countries brought death and misery to untold thousands of these anti-Communists before Soviet firing squads, on Soviet gallows, and in the Siberian slave-labor camps; and

"Whereas this forced repatriation was in violation of the rulings in implementation of the Yalta agreement on prisoners of war, made public by the Department of State on March 8, 1946; and

"Whereas the forced repatriation of prisoners of war who had enlisted in the enemy's army was in contradiction to the opinions of the Judge Advocate General of the Army, as expressed during the last 40 years; and

"Whereas the forced repatriation of millions of anti-Communist prisoners of war and civilians represents an indelible blot on the American tradition of ready asylum for political exiles; and

"Whereas the forced repatriation and annihilation of millions of anti-Communist prisoners of war and civilians of Russian, and Ukrainian, Polish, Hungarian, Baltic, and other origin, is still poisoning our spiritual relations with the vigorously anti-Communist peoples behind the iron curtain, and is therefore impeding our foreign policy: Therefore be it

"*Resolved*, That * * *."

From the point of view of political ethics, the Bosch resolution is one of the most significant resolutions ever introduced in the American Congress. It is probably the first time in American history that Congress has been asked to investigate a crime of such magnitude, a crime committed by an American administration.

NO NEWS REPORT

But no American wire service carried the story. No American newspaper printed a single line about it. Were it not for a few letters to the editor of the New York Herald Tribune, a few articles in Patrick F. Scanlan's Tablet, and some remarks in O'Donnell's, Pegler's and E. F. Tompkins' columns, no American would have ever seen a word in print about Congressman BOSCH's iniative.

The resolution itself was immediately sent to the House Committee on Rules (Chairman: HOWARD W. SMITH, Democrat from Virginia). Some weeks after its introduction, Congressman BOSCH defended House Resolution 137 before the Committee on Rules. The Committee did not act, nor did it kill the resolution. It is still pending.

Only vigorous action of those organizations and individuals who are earnestly interested in the Bosch resolution will induce the Rules Committe to send House Resolution 137 to the floor to be debated, voted upon and adopted. And so, fully aware of an author's commitment not to plead special interests, I ask for an exceptional privilege. I ask to be allowed to address the readers of this article with a request: please, use your influence upon your Congressman to assure the success of ALBERT H. BOSCH'S House Resolution 137.

Address by Hon. John W. McCormack, of Massachusetts, Before Massachusetts Chiefs of Police Association, Revere, Mass., November 30, 1955

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include remarks that I made at a luncheon of the members of the Massachusetts Chiefs of Police Association held in Revere, Mass., on November 30, 1955:

Mr. Chairman, the position and duties of a police official and police officer are of an

importance that cannot be emphasized too strongly. The apprenticeship of a police official or member of a police force never stops. He must constantly be alert mentally and physically. For upon his shoulders rests primarily the responsibility of maintaining internal order. If it were not for our police forces, officials and patrolmen, standing as the guardians of the law, ever alert to maintain order and protect the law abiding, the small minority—the criminals and the reckless minded—would quickly turn any community into one of fear. The presence and the restraining influence of the police officer—and by "police officer" I mean officials of all ranks and the patrolmen—plays a most important part in maintaining law and order. As we view them as a whole, realizing that they, like everyone else, are human beings, we see that so few err or fail in performing their duties.

A member of a police force, I have said, is a guardian of the law. But he is more than that. He is a friend. He not only fearlessly protects the public against the criminal, never knowing when his life might be imperiled, but the real member of a police force is ever alert to help the sick, the afflicted, and the poor. And very few fail in this humane impulse and activity. We find him the friend and confidant of the youngster, of the aged, as well as the sick, the afflicted, and the poor. He is recognized by a uniform, but somehow or other we feel happier when we see him. But he is even more. In the first instance he is a judge.

I think one of the gravest responsibilities anyone can have is where he has to pass in judgment on other persons. When the average person thinks or talks of a judge, he thinks of a judge in a courtroom. But how many persons realize that a police officer patrolling his route or beat, so to speak, is, in the first instance, a judge—that the sergeant, lieutenant, captain, police chief or commissioner must constantly, in the first instance, make judgments of great import to others. And in this respect they are judges.

As an example, how many of us can remember as youngsters when we took apples from a tree in an orchard, or stole a ride on a streetcar, or did other things prohibited by law, and we were caught—and instead of bringing us into court, with the resultant court record, the police officer took us home to our parents or warned our parents from whom we received parental punishment—instead of a court record. I could give many other illustrations of where they are judges.

Your apprenticeship days never end. There is always something new to learn in law and evidence and procedure; there is always something new to learn in human nature. Yes; there is always something new to learn in the efforts and technique of the criminal to carry out his criminal intent, and something new to learn how to prevent, or detect and apprehend them.

The efforts of the criminal in his attack on society and individuals never ends. He usually operates secretly to succeed in his crime without detection and arrest and conviction. No one knows when he is going to move. The individual who stands between him and the great majority of our people who are law abiding, is the police officer and our police forces. The "cop," and this term is not used derisively, but as a complimentary characterization, where would we be without him. I believe in giving "credit where credit is due."

When a police officer or police official does anything wrong, it usually receives wide publicity. But for every one who goes wrong, there are thousands who are courageously, and in an honorable and trustworthy manner, performing their duties. As a citizen—as a lawyer of many years and an active trial lawyer before I was elected to Congress—and as a legislator—not to flatter you but to pay you a deserved compliment—it is my opinion that there is no group of public or private officials and employees who perform their duties more honorably, more courageously, or more honestly than do the members of our various police forces.

And last but not least, their love of and loyalty to country has never been questioned. I have yet to hear of any police official or police officer who is a Communist.

In closing, I extend my congratulations to Police Chief Gillis of Beverly, Mass., in his election and his induction today as president of your splendid association. Chief Gillis will give to your association an outstanding administration. I also extend to the other officers installed today my congratulations. I know, like Chief Gillis, they will perform their duties with ability and loyalty.

The Serious Situation in Agriculture

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, January 5, 1956

Mr. HUMPHREY. Mr. President, the January issue of the Missouri Farmer contains an article that very dramatically emphasizes the seriousness of the situation in agriculture today.

In an attempt to get a better understanding of the farm situation, Jack Hackethorn, public relations director of the Missouri Farmers Association, sent out about 100 letters to bankers, farm leaders, and farmers asking the question:

A young man in good health has $25,000, and wants to start farming. In view of present conditions and realizing this young man wants to make money next year, what type of farming would you advise?

The article summarizes the 70 replies received. It is significant to note that the bankers almost unanimously advised the young man not to enter farming, if he expected to make any money on the investment. It is even more significant because of the failure of most people to understand how much of an investment is required to get a start in farming.

Mr. President, I ask unanimous consent that the article be published in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TO MAKE MONEY—HOW WOULD YOU INVEST THIS IN FARMING TODAY?

A stunned agriculture faces the year 1956. Almost every commodity can trace its beginning back to the soil, and yet the national economy continues in its refusal to face up to the importance of equitable treatment for those who tend and till the land. While take-home pay for others has enjoyed unprecedented new heights, farm income has experienced a 25-percent slump in the past 4 years. Sharp adjustments are being made in rural communities. But at every turn farmers bump up against climbing costs and lower returns. And while a flurry of solutions have been offered to atone for this strangling squeeze now confronting agriculture, it becomes evident that those in the country are rapidly losing patience with the political bickering which so continually keeps the issue in the spotlight. Many are now voicing the opinion that the variety of long-range proposals do not strike at the root of the problem, and that at best seem only half-hearted attempts to promote economic betterment.

Recently more than 100 active farmers and leaders were asked, "In view of present conditions, how would you advise a young man who wants to start farming and has $25,000 to invest?" Their answers told of the underlying concern which they feel for their business—but then, let the farmers themselves tell the story.

"The best I can figure this out," replies W. R. Kendrick, of Albany, "he had better get a job for a year or so and leave his money in the bank. The price of livestock would not be too dangerous but the machinery needed would cost so much. I think he would lose part of his investment and all of his labor."

"If the young man is going to start farming in spite of the present price squeeze, his best bet would be grade A dairy, but," reminds Whitney Rockenbach, of Cuba, "he must like cows and be willing to work with them constantly. Start with good cows and fairly new, used machinery."

"I only know one kind of farming and that is grain, pasture, and livestock," answered Jim Briscoe, Tipton. "A farmer cannot possibly make money farming under 75 percent of a fair price next year unless he has abnormally high yields of everything. I've been in it since 1932 and never seen that kind of a season yet. If people in business and those with salaries don't believe this let them take 25 percent off their sales or salaries. Then they can really get the feel of 75 percent of a fair price."

"In my opinion, cattle feeding is the only thing you could make money on the first year," says Robert Taylor, of Elsberry, "so I would invest the $25,000 in cattle and feed. Machinery is so high that by the time you pay for it and put in a grain crop, you couldn't expect to make much money. Farming is a gamble."

"Believe dairy farming may have the best long time outlook, as well as a very good chance to make some money next year, but the high cost of farm equipment makes this a tough time to start farming," states R. E. Hoffman, of near Novingear. "Belonging to a balanced farming ring will help. Seems to me the most successful farmers now are those who specialize in one or two lines of livestock.

"I don't see much future for a young man starting out with $12 hogs and cattle at present prices with an outlook of worse to come." cautions Frank Boatright, of Shackleford. "To a young man with $25,000, I wouldn't advise any kind of farming if he wants to make money under the present conditions. Wages from a job and interest from the money will make him more than farming now. He would have a lot more in the end."

Bill Sherman, of Foley, wrote, "I'd recommend grain-crop farming on a renter basis. Perhaps some hogs this fall if the market seems stronger. But $25,000 isn't much to begin farming with today, and I doubt if very many young farmers want to go in deeper than this or can afford to with the 'not so bright' outlook. Renting is a slower way to get into the business but there's less risk involved."

Dean Smith of Pollock was more optimistic than many as he replied, "Would advise livestock farming in general. Sheep are among the top money makers year after year. The lamb and wool crop will almost pay for the breeding flock. I think that in the next few years cattle will take an upward trend—now is time to get in."

But a Henry County banker had this to say. "I have been an active farmer most of my life though am now in banking. If I were young and had $25,000, I wouldn't be interested in any kind of farming opera-

tion under present conditions. The income derived from farming is far too low for the amount of money required to own and operate a farm. It is necessary for most of our farmer customers to have outside incomes in order to meet their obligations."

Plan around high cost farm machinery and specialize, Adolph Berendzen of Eugene recommends. "Buy an average 160 acres and build facilities to handle 4,000 or more laying hens. Also plan for a dairy herd, or feed steers. With the high cost of farm machinery I would work out a system to farm with a minimum of equipment."

From Pattonsburg, Glenn Maize had a short answer, "If he wants to keep his money together, he'd better stay out of farming—best bet would be wheat raising or sheep."

There is still some measure of stability in grain farming, reminds Frank Kolks of Glasgow, as he advises, "With grain production, he will have some idea of what he will receive for his product for there are support prices on grains, but none on livestock. At present prices there is no profit in livestock."

Dairy farming, is the suggestion of Chester Haak, of Moberly, if the young man is willing to work. "However, I can't see any bright spots in the farming picture at the present time—I cannot see why the farmer is not entitled to 100 percent of parity."

Another vote for dairying with stress on grade A came from C. E. Letsinger, of Mansfield. "While $25,000 wouldn't set a man up in a big way, it would give him a start. I am convinced that this enterprise will provide a moderate living and retire the investment in southwest Missouri quicker than any other type farm operation. Of course I am assuming the man is willing to work."

"I honestly believe that if I were a young man with this money to invest I would never jump into any type of farming at the present time," begins Harvey Young, Jr., a Kirksville banker. "I make this statement with the idea that very little money has been made in our area this year on the farm."

From up near the Northwest corner of the State, Orlen Kelley, Nodaway Countian writes, "Under present conditions any young man with $25,000 would be foolish to invest in any type farming unless we get a farm program through the Government which includes production controls, or subsidies, or something that will help agriculture attain a fair share of the national income—otherwise he'd just as well take his chances in a crap game."

Grayson McCrea, Maysville said, "Today hogs went to the lowest level in 14 years. My 35 head of cattle in dry lot will have to weigh twice to bring their dollars back. The average farm investment in the United States, according to USDA, is $35,000. Those with this investment make up 13 percent of the population, but are receiving only about 7 percent of the income. Your man has $25,000. That is a lot of money. Could be that he should be counseled to find industrial work. Invest nothing but his time, sit on the $25,000 and save himself a lot of worry."

Going into an even more detailed answer, J. W. Waitman, of Tina, had this to say: "In view of present conditions my advice is to invest his money in E bonds, postal savings, or other place where his capital will be safe and readily available. Then if he must farm, obtain a job as a hand. Some other line of work would most certainly give greater income," this writer states. "I give these reasons against an investment in farming at this time. Land values don't reflect the drop in net farm income. Prices on machinery and supplies are out of line. Farmers have the ability to, and probably will, overproduce every important commodity. Supports will be 7½ percent lower for 1956." Waitman then cautioned, "We are probably nearing the end of a period of boom during which credit sales have risen to fantastic heights. When this end is reached, look out." Among other comments, this Carroll Countian asked, "Will farmers be forced through their own organizations to set up agencies at primary markets to buy up and destroy all commodities failing to move at predetermined prices?"

A banker effectively explained that there are factors which greatly limit a farmer's choice of enterprise and that once set up for one commodity's production it is not easy to switch to another. "* * * farming is a slow turnover and long-time proposition and the individual cannot advantageously jump from one type of enterprise to another. So our choice for a particular individual is limited at the start," remarked Henry Hamilton, Marshall.

This is a $64 question, remarked Howard Shirkey, Ray County farmer. "If the young man can't be talked out of the idea of going into farming, my observation would be as follows: Rent a general-purpose farm for a few years, if possible, while he acquires essential farm machinery and foundation livestock within the limits of his capital. This will give him time to get necessary experience in price and production problems which are so closely related to farm income at this time."

"Your question is a rather big order," wrote Bryan Hoermann, Greencastle. "I doubt that he could expect to make money for the coming year, but if he would put next year against at least 5 coming years he might expect to do all right with a diversified program. Beef cows are now selling way below what they are really worth. Hogs and sheep are all low. Something is going to change or land is going to go down."

GO EASY

Hope of improvement was suggested by Richard Morris, of Gilman City, as he advised, "Take it easy, invest only a small part of his capital. Rent a farm, use a minimum of used machinery. Specialize in sheep and dairy cows. The farming situation should improve in 2 or 3 years."

A farmer and State senator, W. M. Quinn, of Maywood, gave his reply in this way. "My advice is that he keep his $25,000 in cash in some good bank until the farm economy improves to the point where he could expect a fair return on his labor and investment; he cannot expect it under present prices and conditions. Having been actively engaged in farming for the past 40 to 45 years, I am convinced the national economy will in a few years reach somewhere near the level of those engaged in farming, or vice versa."

Robert Hill of Columbia, farmer and executive manager of the Missouri Bankers Association, stated bluntly, "I would urge him not to start farming. He cannot make a fair return on his investment."

Another warning came from J. E. Finlay, Sturgeon. "I wouldn't advise investing $25,000 in the farming game under present conditions. It looks dangerous to me. If the boy has to farm and has to make money in 1956, I'd say grow only crops with a Government guaranty and take the loan."

DOES HE ACCEPT RISK?

George Young, Howard County farmer and member of the Missouri House of Representatives was critical of Government farm policy. "If he wants to make money next year, I don't think he wants to try farming. Until we get a Department of Agriculture friendly to farmers—one which is willing to do something about the present farm decline—I don't think we can expect much. I would advise him to consider a long time before acting. But, if he's vitally interested, and accepts the risk, I recommend he go into some specialized field—perhaps poultry or hog feeding where he'll not have to get too much money tied up in land or machinery."

"As long as CCC buys it at present price, grain farming would be the safest bet now," John Schanzmeyer of Freeberg, wrote. "In the long run though, get all kinds of stock—especially sheep and good wool goats if there is a lot of brush land on the farm. That's what we're doing and making a little even on hogs!"

Replying from deep in the bootheel, J. S. Wallace, who is chairman of the House Agriculture Committee in the Missouri General Assembly, had this to volunteer. "I have a farm of 320 acres. I am farming in cotton, corn, wheat, and hay. I also have some cattle and hogs. But cotton is the only crop we can make any money on—and Mr. Benson has cut our acres down so low we can't pay taxes. I would advise this young man to go in some other business."

Odie Riley, of Boone County, is another farmer who cautions, "I would hesitate very much to advise a young man to start farming at this time. If he is determined to stick to it for "better or worse," I'd suggest diversified farming. He would have to be a lover of the soil and livestock. Present conditions are far out of balance for the farmer. There is a large surplus and I see no end in sight. When things we produce get cheaper, we have to sell more to get a certain amount of money. Now we are selling below cost of production. How long this will last we can't tell. That golden promise of 100 percent in the market place has turned green. We just can't find that market place."

If a man is to start farming now he needs good land, good buildings, and should raise small grain, corn, hogs, and cattle, thinks J. A. Duffin, of Vienna. "However," he adds, "I do not believe he would make money next year, as prices are too low to offer a chance of a profit. If he were able to stay in the business, prices might increase in a few years as we might get the 90 percent or 100 percent parity which the farmer deserves. We would have to curtail production to get full parity, but that is what we need. Because the farm population is decreasing, we are going to have to have better farm organization to get fair prices. We need a workable union for farmers such as there now is for labor. The present program of flexible supports won't work."

FARMING IS WORK

"Here is my answer to your $64 question," L. H. Kullman, of Warrensburg, replied. "I never did believe in putting all eggs in one basket. So I'd advise a general, diversified type of farming. I fully realize that this type of farming will tie a person down much more than strictly grain farming. But if a farmer thinks he is going to get by on an 8-hour day and 5-day week he'd better not try farming in the first place."

Farmers aren't sharing in the bounding prosperity that has touched other elements of our economy, states Andrew Diercks of Jefferson City. "If this man wants to make money next year, he'd better keep his $25,000 and seek a job in the city * * * no matter what type of farming he goes into, the squeeze is on."

A bank farming representative suggests a plan for large volume and high efficiency as a possibility. Marion Murray of Chillicothe explains, "Keep the entire amount for use as operating capital and rent the most productive farm available in a fertile area that can be handled with four-row equipment. Get set for high hog volume by spring of 1957 when prices should be better. In the meantime it may be better to seal corn. Plan with landowner to build a large, self-feeding trench silo. Consider picking corn early at 30 percent moisture and use forced air drying. Put stalks and leaves in the trench. Sow small grain on corn stubble for fall pasture. Depending on the amount of pasture, use common 600-pound cattle or young wet cows to consume the large volume of roughage on a quick turnover basis. Work

in 500 to 1,000 head of July feeder lambs and finish on small grain pasture."

WATCH DEBT

"Don't plunge too heavy," says Jerry Main who is just getting started himself on a farm near Bucklin. "Diversify, but practice intensive, not extensive operations. As a long-range investment buy young beef cows. Spend a minimum for machinery. Get into hogs, chickens and a few milk cows for quickest returns. Keep as near out of debt as possible."

From Gallatin, E. R. Vyrostek's reply reflects the toil and tears which for many years have characterized the farmer's position in our economy. "During the time I was 30 to 40 years old I farmed 320 acres, hired no help but at harvest time. I have gone broke three times, flat, worked as a farm hand for a coupla' years, jumped in debt up to my ears, and here I am at 75 years young owning 126 acres—except for $900 debt. The wife and I raised five boys and one girl." What does Vyrostek think of the future for farmers? "Even in the face of coming events, it is my honest belief that a young couple with a real like for farming can make a go of it, make money, and enjoy life."

Adequate Ground Army

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks I wish to include the following timely editorial from the Boston Daily Globe, December 12, 1955:

ARMS WITHOUT THE MEN

Have nuclear weapons lessened the need for a large standing army? Many would have answered this affirmatively back in the days when the United States possessed a monopoly over them.

But that monopoly long since has vanished. And whether or not the use of such weapons can be avoided in case of war, it is clear that an adequate ground army is more vital than ever before to our defense. To this, the failure of the Geneva Conference has added emphasis.

Yet it also is clear that the United States cannot afford a peacetime standing Army, say, of 3 million. The answer seems to lie, then, in the Reserve components.

To strengthen them, Congress passed the watered-down Reserve Forces Act of 1955. It was enacted last August, when the bloom was still on the ethereal spirit of Geneva. Its purpose was to increase, eventually, the size of the Ready Reserve from 1,500,000 to 2,900,000.

As part of this strengthening, the Army had hoped to get 100,000 predraft-age youths into active training in the first year. Instead, there comes now a report from the Army that only 1,224 youths have started training in the first 3 months of the new program.

This is hardly a good showing. The evidence seems clear, moreover, that the Army, which is doing its best to make the program work, cannot be blamed.

The responsibility may rest, rather, with Congress or the public. Congress refused to pass Universal Military Training; perhaps this represented the popular will. But it also refused to allow a compulsion clause, which woul penalize refusal to fulfill Reserve duties, to take effect until 1957.

After 2 years' service, the draftee has faced 6 years in Reserve—on paper. But this Reserve is a paper army. Less than 1 percent have joined a unit. No law said they had to. Congress has created a dangerous period of hiatus for 2 more years. It had been hoped that predraftage youths could help take up the slack.

The only alternative to compulsion, and a better one in an informed, free society, is voluntary popular support. Will this be forthcoming?

Chief selling-point of the new teenage program has been that youths from 17 to 18½ years old could avoid a 2-year draft by volunteering for 6 months' active duty, and then serving 7½ years in the active Reserve with 48 drill nights and 17 days of summer training a year.

But a recent cartoon in the Army Times pointed up the fact that of the 100,000 youngsters becoming eligible for the draft each month, only 10,000 are drafted. In February, only 6,000 will be called.

With such 10-to-1 odds, the cartoon showed youths rushing into a "Beat the Draft Gambling Joint" while a recruiting sergeant told Congress outside that it ought to be shut down.

There never were odds, however, that could not be changed by later events. Youths and their parents, moreover, should weigh the new program's advantages. Active duty can be finished after 6 months, before starting college, and employers are assured that one's active military obligation has been satisfied.

Here in Massachusetts, the program should deservedly benefit the State's famed 94th Reserve Division, commanded by Maj. Gen. Ralph A. Palladino, and one of 10 divisions selected to grow to full strength of 14,700 by 1960. The Bay State, too, can take some pride in being second only to New York in recruiting for the program.

But more must be done. The Nation's security is everyone's business, and now depends to a great extent on the program's success. If that is to be achieved, public understanding and cooperation are necessary.

UNCLE DUDLEY.

The Late Vera Buchanan

SPEECH
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 3, 1956

Mr. ZABLOCKI. Mr. Speaker, many deserving and glowing tributes have been paid to our late colleague, VERA BUCHANAN, by Members of Congress. They clearly show the place that she has held in our hearts.

I also want to pay my humble homage to the memory of this remarkable lady who has been called to the far beyond so early in life. Her warm, friendly spirit, and her strong courage will be missed by all of her colleagues in the House of Representatives.

Mrs. BUCHANAN'S unselfish and devoted service to her constituents will be greatly missed by the people of her district in Pennsylvania. Her devotion to her husband when he was a Congressman, and the manner in which she carried on after him, have been an inspiriation to many of us. She made significant contributions to constructive legislation, and her humanitarian principles were constantly in evidence in her actions and speeches on this floor.

I wish to extend my sincerest sympathy to Mrs. BUCHANAN'S family upon their tremendous loss. May they draw some consolation from the knowledge of the fact that we share their sorrow, and from the hope that the Almighty has called her to be among His very own.

Dixon-Yates and the Power Outlook

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. AUCHINCLOSS. Mr. Speaker, under the permission granted me, I am glad to insert in the RECORD with a few remarks of my own a copy of an article appearing in the September 1955 issue of the Guaranty Survey, published monthly by the Guaranty Trust Company of New York, entitled "Dixon-Yates and the Power Outlook." This is a factual statement, approached from a strictly business point of view, and I believe Members of Congress will be interested to read it.

I can fully understand the political overtones involved in this controversy, and I would be the last to condone any rascality which might be connected with this or any other Government project, but it is evident that confusion has arisen in the minds of many concerning the fundamental business principles inherent in this transaction. I think the Guaranty Trust Co. has done a public service in publishing this article, and I submit it to my colleagues for their consideration:

DIXON-YATES AND THE POWER OUTLOOK

One of the evils that arise from too much Government in business is the tendency for a clear-cut economic question to become shrouded in a fog of political irrelevancies. Partisan maneuvering, sectional jealosies, and sheer obstinacy can distort a simple issue almost beyond recognition. The result is likely to be either no solution at all or a makeshift and belated settlement that satisfies no one.

THE SMEAR CAMPAIGN

This is the fate that seems to have befallen the much-debated Dixon-Yates contract. A straightforward, businesslike, orthodox agreement to meet the growing need for electric power in a limited area has been caught up by the political winds, inflated into a symbol for the whole issue of private versus public power, and converted into ammunition for the 1956 presidential and congressional campaigns. Although the President has ordered that the contract be canceled the assault against it rages on, giving evidence, if more were needed, that the real purpose of the attack was not to prevent the execution of the agreement but to serve the ends of practical politics. In the course of the controversy, regional antagonisms have been created which may persist for years, and the area facing a shortage of power has been left with very uncertain prospects of meeting its problem in time.

Now that the contract is in process of being canceled and is presumably dead, its merit or lack of merit as a fair business

proposition is no longer important in itself. What is important at present is the continuing effort to use it as a means of discrediting the whole principle of power development by private enterprise.

The attack on Dixon-Yates has borne all the earmarks of a "smear" campaign. Charges of numerous kinds have been hurled against it and the persons connected with it, in disregard of essential underlying facts and, in some instances, even of the terms of the contract itself. Free use has been made of such familiar political mudballs as "plot," "deal," "windfall," and "give-away."

It has been charged, for example, that the whole transaction was a plot to scuttle the Tennessee Valley Authority. Actually, there was nothing in the contract to injure TVA or curtail its activities. It was TVA itself that informed Congress in 1953 of an impending power shortage in the area it served, and it was Congress that refused to authorize TVA to spend $100 million for a new steam generating plant. This refusal was not surprising in view of the fact that in 1950 TVA (which had started as a river-improvement agency combining flood control, navigation, and hydroelectric development) had set up an expansion program scheduled to alter its generating capacity from 85 percent hydroelectric and 15 percent steam in 1950 to 37 percent hydroelectric and 63 percent steam by 1957.

The administration's attitude toward TVA was clear. In June 1953, the President expressly disclaimed any intention of destroying TVA but referred with disapproval to the practice of taxing the whole country to provide cheap power for one region, enabling that region to take industry away from other sections. Later he elaborated this view, in part as follows: "If the Federal Government assumes responsibility in perpetuity for providing the TVA area with all the power it can accept, generated by any means whatsoever, it has a similar responsibility with respect to every other area and region and corner of the United States. * * * No one in this administration has any intention of destroying or damaging TVA or of diminishing its effectiveness in any way. But this is not the same thing as fastening on the Federal Government a continuing and never-ending responsibility which I frankly do not believe is logical nor, in the long run, in the best interests of the country."

HOW THE PLAN DEVELOPED

The action of Congress in refusing TVA's request for additional funds left the question of new generating capacity still open. In his budget message of January 1954, the President stated that arrangements are being made to reduce, by the fall of 1957, existing commitments of the Tennessee Valley Authority to the Atomic Energy Commission. * * * This would release the equivalent amount of Tennessee Valley Authority generating capacity to meet increased load requirements of other consumers in the power system and at the same time eliminate the need for appropriating funds from the Treasury to finance additional generating units.

The arrangements referred to by the President consisted of discussions between the Bureau of the Budget and the Atomic Energy Commission on the question of negotiating with private companies for additional power at Paducah, Ky., to satisfy the increasing demands of the AEC installation there. The negotiations ended with the signing of the so-called Dixon-Yates contract between AEC and the Mississippi Valley Generating Co., formed jointly by Middle South Utilities, Inc., of which Mr. Dixon is president, and the Southern Co., of which Mr. Yates is board chairman. The subsidiaries of the two parent companies are the major suppliers of power in the regions adjoining the TVA area on the west and south, respectively.

So the alleged plot to scuttle TVA boils down to the fact that Congress refused to appropriate funds for TVA's program to expand its steam generating capacity, and the administration, in line with its clearly stated policy, proceeded to arrange for AEC's additional power requirements. If the contract had been carried out, TVA would have received power from the Dixon-Yates company at Memphis and delivered a like amount to AEC at Paducah. It would have been relieved of future additional obligations to AEC and thus would have been in a position to meet the growing demands elsewhere.

COMPETITIVE BIDDING

It has also been complained that no competitive bids were sought and that one unsolicited bid was summarily refused. The fact is that competitive bidding is usually not practicable in connection with contracts of this type and hence that established precedent is on the side of negotiated agreements. AEC had negotiated contracts with two private companies during the previous administration without competitive bidding, and these contracts had gone into effect without arousing criticism.

Organized companies with the proven competence and the financial backing to execute a large power contract are few. In this case, the Dixon company and the Yates company might conceivably have been invited to bid against each other. There was, however, good reason to believe that a joint contract would yield the Government better terms than an agreement with either company acting alone. Not only were the two parent companies enabled to share the risks involved, but one major risk—that of being caught with large excess capacity in the event of cancellation of the contract—was actually reduced.

A power company selling electricity under contract to a single buyer with the right of cancellation must have (1) a strong prospect of finding an alternative market for the power within a reasonable period and (2) the financial resources to bear the cost of excess capacity until such a market is found. The Dixon-Yates group appeared to be the only one that met these requirements.

As for the rejected competitive bid, the Bureau of the Budget explained that it was refused because of its uncertainty and indefiniteness, because there was no established organization to do the job, because the entire financial risk would have fallen on the Government with no real ceiling on the Government's liability, and because the proposal would have provided no clear savings to the Government as compared with the Dixon-Yates proposal.

TERMS OF THE CONTRACT

The terms of the Dixon-Yates contract also have been criticized. It has been charged, for example, that the rates the Government agreed to pay were extortionate. Actually, the cost to the Government, based on estimated costs of construction and operation, exclusive of all taxes, was figured by AEC at 3.55 mills per kilowatt-hour. This compared with net costs of 3.79 and 3.86 mills then being paid by AEC to two private companies and with costs of 3.78 and 3.83 mills being paid to two TVA plants. The annual rate of return on the power company's equity investment, also based on estimated costs, would have been 9 percent, as compared with a reported average of 10.5 for all electric companies in 1954.

It is essential to bear in mind that this estimated 9 percent return was not to apply to the entire capital investment of more than $100 million, but only to the company's proprietary interest of $5½ million. The remainder of the investment was to be in the form of loans and securities at an estimated annual interest cost of 3.6 percent. This would have brought the overall return on invested capital to about 3.85 percent a year.

The cost estimates on which the foregoing figures are based were agreed upon by teams of experts representing the Government and the company as being the most reasonable that could be arrived at in advance. Like most long-term power contracts, including TVA contracts, the agreement provided for rate adjustments in the event that actual costs proved to be higher or lower than estimated costs. Possible benefits from lower costs and possible losses due to higher costs were to be shared. There was a limit, however, on the company's benefit, in the form of an absolute ceiling of 10.9 percent on the annual rate of earnings on the equity investment. Up to this limit, the Government was to receive 50 percent of the benefit through lower rates for power. At present tax rates, the Government would also receive 52 percent of the remainder in additional tax revenue. Beyond the profit ceiling, all benefits from reduced costs were to go to the Government.

If construction costs exceeded the estimate by 12½ percent or less, the loss was to be shared equally. Above that limit, the company was to bear the entire burden. Excess operating and maintenance costs due entirely to increases in prevailing fuel prices and general wage rates were to be borne by the Government, subject to the stipulation that AEC could supply fuel if it found that it could do so more cheaply than the company. If operating and maintenance costs rose because the company paid more than the prevailing wage or because it used more labor and materials than estimated, the excess cost was to be borne by the company.

These carefully drawn provisions for the sharing of risks stand out sharply in reply to the loose allegations that the contract "guaranteed" the company's profit. Actually, it did nothing of the kind. Unexpectedly high costs could have eliminated the estimated 9 percent return on equity altogether. The only risk that the company was not required to bear, in whole or in part, was the risk of higher operating and maintenance costs due entirely to general price and wage increases—which, obviously, were completely beyond the company's control.

THE REAL ISSUE

Space limitations prevent detailed consideration of other charges—such as, for example, the statement that the contract would have obligated the Government to pay large sums for power not used, and that it would have allowed the company to obtain the plant at the Government's expense. Examination shows that these complaints are as weakly supported as those discussed above.

It is impossible to escape the concluison that the assault on Dioxn-Yates had little to do with the terms and conditions of the contract. These merely formed a flimsy pretext for an attack whose real purpose was to provide an issue for the 1956 political campaign and to throw discredit on private power in general with a view to influencing the future course of power development.

There is no doubt that the United States faces a period of rapid expansion in electric power. Some expert estimates place the increase in demand from 1950 to 1960 as high as 100 percent. What form is future expansion to take? Is it to be shaped by the careful balancing of costs against benefits that is inherent in unsubsidized private business enterprise? Or is it to be determined by governmental authority, whereby the State's-power of compulsion is invoked to force the taxpayers to underwrite and support projects which may be dictated by civic pride or political favoritism rather than real economic justification?

A tangible example of this question is now pending in Hell's Canyon on the Snake River between Idaho and Oregon. Advocates of

public power favor the construction of a great Federal dam at an estimated cost of nearly $400 million. A private company proposes to build three small dams, producing almost as much power at less than half the cost. The Federal Power Commission, for obvious reasons, has approved the private project. Yet the plan has been assailed as a giveaway, a betrayal, and a piecemeal development of the river. It is difficult to see what is being given away except the ability of one section to obtain a Federal subsidy at the expense of others.

THE LURE OF "PUBLIC POWER"

The phrase public power has a strange lure for many minds. It suggests a project owned by all the people and operated for their common benefit. Private power, on the other hand, seems to connote an enterprise which, being operated for private profit, must therefore deprive the people of part of the benefit that should rightfully accrue to them. The attraction of public power is especially strong in connection with the development of a conspicuous natural resource such as a waterfall or a steeply dropping river.

Neither of the phrases actually means what the words are often taken to imply. In reality, public power means an industrial project owned by a governmental body, constructed by compulsive authority, paid for by the taxpayers, and often operated for the benefit of a favored group. Whether public or private, the power must be paid for, and the payment must cover essentially the same costs—interest on the invested funds and the purchase of labor and materials. The essential question is, under which type of organization is the power likely to be produced most economically and paid for by those who benefit from it?

As for the natural resource aspect of the question, this too is misleading. True, falling water is a gift of nature, but so are coal, oil, gas, metals and minerals, and the productive powers of the soil. All industries and trades use natural resources, directly or indirectly. Does this mean that all industry, commerce and agriculture should be public rather than private? The natural resources, including the falling water, have relatively little value until extracted, cultivated, or otherwise made useful by human effort. The effort, which is privately exerted by individual men and women, is the real cost of the final product and accounts for by far the greater part of its price.

COMMON FALLACIES

In the current controversy over further power development on the Niagara River, the advocates of public power apparently assume that, because the water is a natural gift, the power to be generated from it would also be a natural gift and should not be allowed to fall into private hands. This is a fallacy. The power would be the result of a heavy expenditure of labor and capital, which would have to be paid for whether the power were produced by a public or a private agency.

There is another alleged advantage of public power which proves upon examination to be purely fictitious. This is the supposed saving due to the fact that public power agencies are exempt from taxation. Surely nothing could be more obvious than that taxes saved by a power agency are lost to the public treasury and must be recovered from some other source, so that what the people appear to save as consumers of power they must give back as taxpayers. There is no saving to the people as a whole. There may be—indeed there is very likely to be—a saving to some at the expense of others; in that case the tax exemption operates as a hidden and therefore particularly vicious form of subsidy. In any case, the real cost of power to the people as a whole is the cost of actually producing it, and taxes do not enter into the calculation.

In the final analysis, the question of public versus private power is simply a question of industrial organization. After centuries of unhappy experience with public control of economic activity, the peoples of the western world decided to try the private form. The payoff has been rich in terms of efficiency, equity and freedom, and the principles that have made it so apply to productive effort in general. Why should the generation of power be a unique exception?

Water, the Root of the Problem

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks I wish to include the following truthful editorial from the Machinist, the official weekly newspaper of the International Association of Machinists, which appeared in the October 27, 1955, edition:

HAD ENOUGH?

Two of the most prized possessions of New England working people have been washed away in recent years—their homes and their jobs.

In both cases, water is at the root of the problem. The two floods within a month in New England washed away hundreds of millions of dollars' worth of homes. The erosion of jobs has been slower, but it is just as much connected with the water problem as the floods.

New England is crisscrossed with fast-moving streams. The Nation's first small industries were located on them. They utilized the rushing water to turn the mill wheels.

Later as the region became highly industrialized, the factories outgrew their water wheels. The private electric companies came with power from steam. But they clung to obsolete equipment and paid tribute to a pyramid of parent corporations. It was—still is—a high-priced operation.

Then came the hydroelectric developments in other areas. The Tennessee Valley Authority harnessed the rampaging Tennessee River to control floods, improve navigation, conserve the land, and generate low-cost power. Huge public power projects were opened in the West.

Many New England companies either moved to the hydroelectric regions where power cost is low or transferred expansion planned for New England to those other areas. The result was the loss of thousands of jobs in New England. The loss has been frequently blamed on the high cost of labor. Actually, New England is the second lowest wage area in the country. The facts show industry migrated largely because of high-cost power.

Now in the past month unharnessed New England water has killed scores of people, destroyed thousands of homes and washed out factories. Possibly the best flood-control system could not have prevented all the damage. However, we have seen that, while other areas are being inundated, the TVA region in equally heavy periods of rainfall opens and closes its network of dams to produce an orderly runoff without floods. The impounded water produces low-cost power.

It seems to us that now is the time for our Governors, Congressmen, and Senators to extend to the Northeast the one method of flood prevention which can pay in part for itself, for full scale flood prevention is a costly matter.

That method is an area-wide system of multiple-purpose dams and reservoirs which can use the flood water impounded in preventing floods to generate power to help pay the cost. Only that cute phrase "creeping socialism" invented by the private power companies stands in the way.

No one spoke of "creeping socialism" when Gov. Allan Shivers of Texas called for Federal relief during the drought in Texas in 1953. No one speaks of "creeping socialism" when the governors of half a dozen Northeastern States properly ask for Federal flood-relief money this year.

Yet the private power companies inspire the cry of "socialism" when it's suggested that Federal money be used to do the flood-prevention job the thorough, sensible way. That way is through multiple purpose, power-producing dams and reservoirs. Lives could be saved, homes and plants could be better protected, and jobs could be created. Isn't it time for a little "creeping progress" in New England?

Juvenile Delinquency

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. ADDONIZIO. Mr. Speaker, at this time when widespread juvenile delinquency is of so great concern to the country, the following report by the United Veterans' Organization of Essex County To Fight Juvenile Delinquency will be of interest to the Congress.

Eight public meetings were held in Essex County, N. J., at which the following authorities on the subject testified: Dr. Herscel Libby, Dr. Hirsch L. Silverman, Dr. Raphael Russomanno, Lt. Col. Paul H. Goodwin, Lt. Larry H. Jackson, Sgt. Barda Sizemore, Peter Fujarczyk, Sheriff Neil G. Duffy, Lt. Dominic Spina, Edward C. Krah, William A. O'Toole, Philip E. Gordon, and Joseph A. Liddy.

The following high-school students also appeared under the chaperonage of Louis Bernheim: Joan Rose, Joan Meyers, Arthur Lloyed, Michael Freedman.

The delegates who appeared at the meetings and who helped to draft the report are:

American Legion: John Monaco, Richard Schuler, William Lyons.

VFW: Edward Simandl, Roy C. Walker, William Butler, Dominic Spina, Henry Mehrtens, Robert D. Trott.

Civic group: Samuel Stewart, Herbert Weiner, Columbus Johnson.

AMVETS: John Orlando.

Spanish American Veterans: George W. Milligan, Newton Smith.

Civic Veterans League: Samuel Sachs.

Catholic War Veterans: William Howe, Eugene Walsh.

City and State employees: Jack Forbes Smith, Alfred R. Gail, David Lawrie.

County employees: James W. McGrady.

DAV: Joseph Tenner, James McDermott, Louis Norulak.

Cooties: Edward Barry, Robert Gaswind, Angus McNaught, Louis Bernheim.

JWV: George Geller, Irving Feldman, Harold Turner.

Ukranian American Veterans: Peter Grentus.

Lithuanian American Veterans: Michael F. Kidzuz, Peter G. Guoba.

Sports: Vinnie Carlessimo.

Music: John Brown, Jerry Grant.

Prisoners of War Chapter: William Barnes, Joseph Pallito.

Labor: Martin Block.

The report follows:

HOME

Where a child is reared with a sense of filial respect and regard as a cardinal virtue; where a child from earliest years has come to know and realize from within that he cannot shame his parents, and stops to think before he even attempts to plan a crime what the reaction of his parents will be; where a child truly respects parents themselves worthy of respect because of their personal honesty and characterful living; where in the child's democratic, yet strict home life he has come to know his responsibilities, and has learned basic rules and even regulations of daily living; where in family-unit living young children have come to know values of education and schooling, plus the true reverance of religion that is practiced in day to day activity, and decorum personally coupled with regard for the elders in the household and in the family—there will we find no delinquency. For it is most often in the home that the cure for delinquency will be ultimately found.

Some parents, in trying to give their child care and independence, get themselves so involved, and in many ways go to far, and by so doing deprive the child of needed family security and guidance. Unknowingly the parents are forcing their child to stand on legs to weak to hold them. Some parents dare not direct their child after he reaches 16 years of age. Parents should grow up with the child but it is certainly wise to remain more mature than the child.

We believe that the primary elements of sex education should be the responsibility of the parents much more so than a school course. The family relationship is between parents and in feeling tones with the child. We believe the parents should take their children to Church and Sunday school regularly and set a good example for the children. Do not do things you would object to your child doing. Accept a more personal responsibility for building your child's character and do not depend upon schools and other agencies to do the job for them.

Many parents put their own social life above the life with their children. Family gatherings should be held more often; the problems of the children should be discussed with them. Parents should make it a point to be at home certain nights and make the family a better unit. Mothers and fathers should have a regular bed check on the child. When children go out the parents should know where they have gone, what time they return home and, most important, whom they are with and what they plan to do.

Parents should not give children spending money unless they earn it. Give them chores to do about the house.

Children should be encouraged to join organizations such as the Boy Scouts, Girl Scouts, 4–H Clubs, Police Athletic Leagues, Drum Corps, and to attend well supervised city playgrounds. Parents should join with their children in these activities. Do more things with your child than for them. This is sure to work.

The family car is a problem. Exercise greater judgment before you allow your child to use it.

Make a periodic room check. Turn everything over to find out if there is something the child is hiding that he should not have about his person. If the child is spending too much money—where is it coming from? Exercise control of movies and television the child sees, watch the reading matter. An old time woodshed spanking is not wrong as punishment.

We believe parents should discuss wearing apparel with the child. See that the child is neatly dressed and he will have pride in his appearance.

POLICE

We must establish a Commission to study delinquency in all its forms, to make recommendations and to seek legislation and be given governmental support to implement its suggestions practically and functionally.

Mobilize all resources of the State, including private organizations, State and local agencies, and individual citizens, to formulate a joint attack on this disturbing problem, and utilize to the full all needed educational, scientific, social welfare, and religious groups.

The State must be encouraged and induced to assist in the development and improvement of local probation services and in the recruitment and training of probation officers, properly trained and with insight into the problems of the adolescent in our present-day world.

Special custodial schools should be established where the worst offenders can be sent for 24-hour-a-day care and psychological help and thus be removed from poor home environment.

Enactment of legislation to hold parents and guardians of the children personally responsible for whatever damage—property, personal, civic—caused by the children due to negligence and disinterest on the part of such adults.

Identification cards issued by the school system for all boys and girls at the age of 16, including photographs, to be retained until the 18th birthday. This will afford positive identification to police and business houses.

Adopt a positive policy in the supervision of public places that might influence the youth, such as poolrooms, social clubs, confectionery stores with jukeboxes and bagatelle machines, demand the loitering in front of taverns be stopped. Irrespective of special duties, all policemen should be instructed to take an interest in any and all violations that they might see from the juvenile level as well as from the adult violation.

All teen-age clubs should be registered along with a listing of all members. A strict curfew should be enacted at 11 p. m. to see that all teen-agers are off the streets unless accompanied by a parent or someone of responsibility. The police should be empowered to enforce this to a "t."

More police officers should be placed on a walking beat during the hours children are out of school to give better supervision to local neighborhoods.

Where it is found that the parents are to blame, due to neglect, a program should be put into effect to show the delinquent parent just what damage these juvenile delinquents can do.

The police department should be allowed to enlarge its PAL program. Officers should be assigned to this duty and should be supervised by well-trained instructors who qualify for a teen-age program.

Penalties for repeated juvenile offences should be increased. Offenders who repeat often should be considered first as criminals and second as juveniles. In such cases newspaper publicity should be allowed to use names to serve as a deterrent to parents who do not heed the early signs of delinquency in their child.

JUDICIAL AND LEGISLATIVE

Legally, "delinquency" has been the label attributed to acts of depravation, narcotics, speeding, burglary, stickup, purse-snatching, or mugging accusations when a so-called minor (in the eyes of the law) is involved in such or related acts. Psychologically, however, such misbehavior indicates not a "problem child" involved in a crime, but a child with problems who sometimes uses the crime as an outlet for phobias, complexes, emotional difficulties, even deep-seated neuroticism requiring psychotherapy and psychological counseling and guidance.

Each case of delinquency must be treated and investigated as an individual case. Judges in juvenile courts must have available full information before passing judgment. This requires enlargement of the investigative arm of the judge. Moneys must be appropriated for this purpose. Lack of sufficient information can impair the judicial decision for the handling of each case.

Reestablishment of such programs as the CCC (Civilian Conservation Camps) under the guidance of such men as veterans of war service that the boys can look up to. These leaders should be properly trained in the handling of youths.

The draft laws should be revised to eliminate the long wait many youths have before being drafted. Many employers feel that a boy who will be drafted is a poor risk since training the boy will be wasted when he is called into service. This leaves many youths, at an extremely impressionable age, free to roam the streets with too much time on their hands.

Stricter laws that will hold parents responsible for the delinquent acts of the juvenile. Fines or jail terms should not be beyond the scope that a judge can hand out to a parent who has shown a lack of interest in the action of the child. In cases of damage to civil or private property the parent should be made to pay for the damage.

Stronger measures are needed to handle the narcotics offender. Juveniles found to be under the habit of drugs should immediately be sent to institutions for the cure of the habit. Postinstitutional care should require regular visits to a doctor who can find any renewal of the drug habit before it secures too firmly a hold.

For those that are convicted of selling narcotics to juveniles extremely severe penalties should be given. The death sentence would not be too severe for these sellers.

SCHOOLS

While delinquency has in many cases its starting causes in the home it may also come as a result of occurrences in the school system. Often learning difficulties are an important cause of wrongdoings of the child. In today's schools the overcrowded conditions leave little room for individual care. Where a child has learning difficulties he often uses the outburst as a means of expression. This leads to eventual delinquency. Many times the educators fall back on the excuse that classes are too large as a coverup for their own failings. We must make a greater effort to build new schools and more classrooms and at the same time insist that our educators give more attention to the care of those potential juvenile delinquents.

We must have more supervised recreation centers with properly trained instructors in them. Playgrounds must be kept open longer hours with sufficient activity to keep the children busy. Youths must be encouraged to build character by use of the hands as well as the mind.

We feel our educational system should sponsor programs of adult education with emphasis on the care of youth. Many parents need and want such instructions and our school systems are ideally suited to this purpose.

Closer relation between the courts and the schools should be established in order that both may follow similar courses in dealing with delinquents.

We feel that schools should arrange to have classes attend courts where punishment is meted out to juvenile offenders in order to see that punishment is the end result of juvenile delinquency.

A reappraisal of our vocational school setup should be made. Too often a child is put into a vocational school as a means of punishment.. We feel that these schools should be used to teach youths, that do not do well in a regular school, a trade at which he can earn a living and become a useful citizen.

We have found that the system of parent-teacher conference should be expanded in order that parent and teacher may exchange ideas about the individual student. In cases where the child has shown habits that might lead to delinquency a child welfare worker should sit in on the conference in order to coordinate the study of the child.

Every classroom teacher should be given instructions in the recognition of early signs of narcotic use. We feel that youths will assist in breaking up of narcotic rings if the habit is stopped early.

PRESS

The newspapers of a community can be a potent force in fighting juvenile delinquency. We feel that by playing down lurid stories and playing up the penalties of crime more of our youths will see the end results are not as glamorous as they seem.

We feel that there are times when the press does not press hard enough on juvenile cases. Strong, forthright, and vigorous campaign to destroy juvenile delinquency. A strong campaign by the press to show the damage, both financial and physical, caused by delinquency will bring the public to the realization that more moneys must be expended in preventive action rather than in corrective action. This should bring to the public the needs of schools, juvenile courts, and for an expanded police force.

Another campaign by the press, who are molders of public opinion, should be for Cadet Corps that will take the youths in hand to teach them subjects useful to the community. A campaign should be undertaken to build the Women's Aid Corp. who service our hospitals and relief work. Such campaigns will attract the youths and take up that excess time they have.

The press should be allowed to use the names of offenders who are repeaters. We feel that by publicizing such names and the sentences meted out it will cause many parents and youths to pause and reflect on the public disgrace they will face.

The Late John D. Dingell, of Michigan

SPEECH
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 3, 1956

Mr. ZABLOCKI. Mr. Speaker, I should like to join my colleagues in paying tribute to the memory of the late Honorable JOHN D. DINGELL, of Michigan. It was a shock to me to learn of his passing last September, when I was home in Milwaukee, and whence I went to attend his funeral in Detroit. His loss will be felt deeply by our Nation.

It was a privilege and honor for me to serve in the House with such a distinguished, hardworking, and conscientious man as the late JOHN DINGELL. For many years, he fought courageously for the interests of our people, and for legislation intended to raise the standard of living throughout the Nation. He was dedicated to high moral, social, and political principles in his spheres of action.

JOHN DINGELL will be missed by his colleagues, and by the people of Michigan whom he served so well and so long. It is our mutual consolation and hope that his son, who has been chosen to represent the people of the 15th district of Michigan, will carry on the work and the ideals of his father in these Halls of Congress.

To our late colleague's family, I extend my deepest sympathy and the prayer that the Almighty Creator may grant him peace in eternity.

Eavesdropping Project

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following interesting editorial from the Boston Post, Boston, Mass., October 15, 1955:

DESTROYING THE COURTS

Admission by the faculty of the University of Chicago Law School that Federal jury rooms were bugged with hidden microphones to eavedrop on the deliberations of Federal juries has raised a storm in Washington.

This eavesdropping project, started in September 1952, under a grant from the Ford Foundation, is under probe of the Senate Internal Security Subcommittee. The committee has been told that the research group intends to continue to plant secret microphones in Federal jury rooms.

The Federal courts have apparently surrendered all their considerable power to regulate and direct the Federal court system. The bugging of Federal jury rooms is so clearly illegal and contemptuous of the courts that it is simply incredible that Attorney General Brownell hasn't moved to indict those responsible for this outrage.

The Federal judge who authorized this secret bugging of a jury room in Kansas must certainly have taken leave of his senses, and deserves the strongest kind of censure. If counsel for either the Government, plaintiff or defendant had been guilty of any such breach, a contempt citation would have been issued forthwith.

The jury system is far from perfect, but it is not going to be improved by secret eavesdropping in jury rooms. That kind of police-state research can only tear down the confidence of the people in the jury system, and, by the same method, destroy the courts.

If microphones can be secretly planted in Federal jury rooms with the consent of the judge and without the knowledge of jurors, counsel or litigants, where is the line to be drawn against wire-tapping intrusion?

Federal courts have some very strict precedents against wire-tapping evidence. Why then is a private research project permitted to eavesdrop on one of the basic rights of the American citizen—the right to secret consideration of evidence by a jury?

The Justice Department is shirking its sworn duty if this outrage is overlooked. The Justice Department lost an important case against a Communist agent named Judith Coplon because the evidence against her had been developed from a wire-tapped telephone conversation. Certainly the wire tapping of a Federal jury room is a matter of grave concern to the Justice Department. Why then hasn't there been a move to deal with the jury room wire tappers?

Our President

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. DEROUNIAN. Mr. Speaker, the following article, which appears in the January 6, 1956, issue of U. S. News & World Report, expresses the feeling of many millions of Americans:

THE MAN OF THE ERA

(By David Lawrence)

Through the annals of time we have always revered the soldier. In the face of an unknown destiny, he has dedicated his life to the service of his fellowman. On his return from war, his crusade won, we have hailed him with exultant cheers—and then his life-work has usually ended.

In this era the tale is different.

We applaud the achievements of a great soldier, but we ask him to stay on in another kind of active duty—to serve us in the battle to maintain peace.

In 1942, the great soldier of our times landed his armies on the shores of North Africa.

In 1944, the same leader, commanding the huge forces of many Allied nations, invaded the coast of France in a military feat of great skill and unprecedented magnitude. It meant victory in 1945 and the end of World War II.

We recall the beaming faces in a crowded metropolis, ticker tape flung like ribbons across the streets of New York City, as the military hero was welcomed home by a grateful country.

But leadership of armies was not to be his only form of service. In 1952 the same soldier was summoned to higher duty—to be Commander in Chief of all the military forces of the most powerful nation in the world, and at the same time to assume the responsibilities of the Chief Executive of the entire Government.

Here was a rare opportunity to test the soldier—to learn whether among his talents was an ability to steer the ship of state through the shoals of factional strife at home and through the storms of diplomacy abroad into the quiet waters of national and international serenity.

The conscience that commanded tens of thousands of young men to go to their death in battle twinged at the thought of the many more tens of thousands who might have to go to future wars, and of the millions of innocent men, women, and children who might be the victims of an atomic disaster.

To the tremendous task of peace, the soldier devoted himself. Thrusting aside protocol and precedents, he offered to go anywhere in the world at any time to make every effort to advance the cause of peace.

The Geneva Conference of 1955, at the summit, widely characterized as a failure, was not a failure for the great soldier. He went with peace in his heart and came away

still believing that man can find some other way to resolve international disputes than by organized murder.

Then the hand of God intervened. Was it a mystic warning to us all in the midst of our indulgence in the excesses of materialism? Did we really deserve peace?

The heart of the soldier faltered. The whole world stood aghast—worried that he might be taken from us. The prayers of hundreds of millions of people fervently petitioned the Almighty to preserve this man—his energizing force for peace.

The power of God can humble the greatest of soldiers or statesmen and take them from us at the moment of their greatest glory.

There come to mind the lines of Walt Whitman eulogizing the stricken Lincoln:

"O Captain! my Captain! our fearful trip is done,
The ship has weather'd every rack, the prize we sought is won."

But today the "fearful trip" is not yet done. The ship has not weathered every rack, and the prize is not won. The world is still half-slave and half-free.

These are the days when the mysteries of divine guidance are no more revealed to us than before but His omnipresent influence can, if we accept it, rule mankind. It can shape human behavior. It can apply a restraining hand to an evil purpose. It can help us win in the long run a victory for honesty, for freedom and for justice. The destiny of the whole world is in the hands of those statesmen who can interpret faithfully the commands of the Almighty.

We happily are witnessing now the gradual recovery of the soldier-statesman from an illness which might have been fatal had the Lord willed it so.

Maybe this means that the crusade of the soldier-statesman is to go on and that the years of his own usefulness as the servant of his people are to continue until his mission is fulfilled.

There is ahead for Dwight Eisenhower the greatest of all calls to duty—service to the world.

For Dwight Eisenhower is the man of the era. He is the Captain who can steer the ship of state safely through dangerous seas amid the hazards of mutual suspicion and the frequent provocations to war.

On the horizon already are the dim outlines of the shore. There the true victory can be won, sooner than most of us imagine. There, rooted in the unorganized and unasserted will of the men and women of all nations, is the means by which to assure peace.

To that shore, God willing, the Captain, our Captain, must sail on until this divided world is united in freedom—until the "fearful trip is done."

Report on Gold Section of Western Governors Mineral Policies Conference, Sacramento, Calif., November 7–8, 1955

EXTENSION OF REMARKS
OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. ROOSEVELT. Mr. Speaker, on November 7–8, 1955, in Sacramento, Gov. Goodwin J. Knight called a Western Governors Mineral Policies Conference. In addition to some 500 persons from the 11 Western States, South Dakota and Alaska, there were the following six governors in attendance: Gov. Goodwin J. Knight, of California; Gov. Robert E. Smylie, of Idaho; Gov. Charles H. Russell, of Nevada; Gov. J. Bracken Lee, of Utah; Gov. Milward L. Simpson, of Wyoming; and Acting Gov. Stephen L. R. McNichols, of Colorado.

Western Governors Mining Advisory Council: The Western Governors Mining Advisory Council was formed in February of 1953 by Governor Earl Warren of California, now Supreme Court Justice Warren, at the suggestion of former Gov. Douglas McKay of Oregon, now Secretary of the Interior. The powers of the Western Governors Mining Advisory Council are severely limited. They may make recommendations only to the governors of the Western States and the governors are in no way bound to follow such recommendations. The council is made up of men appointed by the respective governors in whom they have confidence. It may vary in number as each governor may desire. It has been customary to rotate the chairmanship and also the vice-chairmanship of the council each year so that neither officer may succeed himself.

The governors of the Western States insist that the recommendations of the council be both reasonable and feasible.

One of my esteemed constituents, Dr. John R. Lechner, 629 East 99th Street, Inglewood, Calif., has reecntly forwarded to me the report of the gold section of the Western Governors Mineral Policies Conference held in Sacramento on November 7–8, together with the resolution adopted by the gold section. Many of those who are interested in the mining of gold and the problem of gold backing of our currency will, I believe, find this of interest.

The report and resolution follow:

REPORT ON GOLD SECTION OF WESTERN GOVERNORS MINERAL POLICIES CONFERENCE, SACRAMENTO, CALIF., NOVEMBER 7–8

Nineteen sections representing principal minerals in the 11 Western States met in separate meetings at the Western Governors Mineral Policies Conference at Sacramento, November 6–8 to analyze their major problems and to make recommendations to the governors of these States for united action.

Perhaps the most important of these sections was the gold section. On Sunday afternoon, 14 members of the gold committee, under the chairmanship of L. L. Huelsdonk, met at the Senator Hotel to discuss the problems of this section of the conference, and to arrive at a plan and organization for the meeting the following day. As a result of the discussion at this organization meeting, a resolutions committee was appointed to draft a suitable resolution for the consideration of the entire section on Monday. Harry Sears, Charles Gilmore, J. C. KempVanee and Dr. Lechner were appointed, and these men met on Sunday evening to carry out their duties.

The resolution which was drafted on Sunday night, was presented for approval at the Monday meeting of the entire section, with nearly 100 in attendance. Dr. Donald H. McLaughlin presided at this section meeting. Although there was ample opportunity for discussion, and with only one dissenting vote, the resolution was adopted.

Following the adoption of the gold resolution, several members of the section commented on the need for public enlightenment on this vital issue. Mrs. Kitzmiller spoke of the opportunity and the responsibility of members of the gold section to inform the public of the relationship of the gold problems to the preservation of our currency reserve, and urged those present to support such a program financially.

A motion was then made by Dr. Lechner and seconded by Charles Hendel of Nevada, that a permanent subcommittee be appointed with full power to act.

It was then moved by Moss of Arizona, and seconded by Robert Wilson of Taylorsville, Calif., that this subcommittee be empowered to raise and disburse moneys needed to conduct its educational program. Dr. McLaughlin then appointed as members of this permanent subcommittee the following: L. L. Huelsdonk, chairman; J. C. KempVanee, treasurer; Dr. John R. Lechner, secretary; Charles L. Gilmore, attorney; and Harry Sears, research.

Members of this new subcommittee met on several occasions during the 8th and 9th, discussing plans for the work of this committee. It was decided to establish an advisory council, consisting of 1 representative from each of the 11 Western States to help guide the work of the executive committee. As soon as the appointments are made to this advisory council, suitable stationery will be printed, and the subcommittee will go to work on a program consistent with the policies outlined by the governors conference.

RESOLUTION BY GOLD SECTION

Whereas there are three principal rights basic to the jurisprudence of all free countries; the right of personal liberty, the right of personal security, and the right of private property; and

Whereas the arbitrary and absolute control exercised by the United States Treasury over the production and disposition of domestic gold is in direct violation of these fundamental rights of free men; and

Whereas the Government has usurped the right of private enterprise to sell newly mined gold to industry and to the arts in contradiction to the fundamental laws of the land, and has denied individuals the right to own, buy, or sell this commodity in open competition; and

Whereas this restrictive and monopolistic policy by the United States Treasury has given special advantages to a small group of manufacturers privileged to buy gold for industry, while at the same time imposing such rigid restrictions upon the gold producer that 95 percent of primary gold mines have been forced to close down, leaving vast potential sources of supply undeveloped; and

Whereas the sale of gold from our Federal gold reserve to private industry and to the arts, which annually exceeds in amount the total domestic production of gold—together with the progressively declining production of new gold, is dangerously dissipating the United States gold reserves, which rightfully belong to the people of this country, who have been led to believe that these reserves have been safely held for their protection as a guarantee for the stability and security of their dollars: Therefore be it

Resolved, That members of the gold section recommend to the governors of the Western States that they urge the Congress to restore to the gold producer the right to sell gold as a commodity to industry and to the arts, and that there shall be a free market for all newly mined domestic gold; and be it further

Resolved, That the governors of the several States represented at this conference be urged to request their respective legislators to memoralize the Congress in support of these two vital bills.

The Marks of a Free Man

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. RAY. Mr. Speaker, at the annual interfaith breakfast held on Staten Island, New York, on December 11, 1955, under the auspices of the B'nai B'rith of Staten Island, Rabbi Charles E. Shulman, of Riverdale Temple, New York City, delivered the address which I am happy to place in the RECORD today. The timeliness of the subject, the simplicity and freshness of the speaker's approach, and the effectiveness of his statement led me to ask his permission to place the address in the CONGRESSIONAL RECORD. I commend it to the careful attention of all Members of the House.

The address follows:

THE MARKS OF A FREE MAN

The American way of life could have no finer example of its uniqueness and its greatness than this gathering of distinguished American citizens in all walks of life met at the invitation of the B'nai B'rith of Staten Island to honor an outstanding resident of the community and attended by members of the Catholic, Protestant, and Jewish faiths who have not only saluted a common flag that protects them all equally but who have often shared the pride and joy of working together as friends in the larger community. You honor more than the person of a faithful American who has exemplified the American creed. You honor and affirm anew the principles which have kept us a Nation and which will, under God's grace, continue to do so in days to come.

The chairman, in his introduction of me, stated that as a former Army man he was sorry that I had served as a chaplain in the Navy during World War II because I could not appreciate sufficiently the lot of Army officers and men under Navy transport during the war. For his benefit, I would like to tell him that almost 2,000 of us in the Navy were transported to our first destination in the Southwest Pacific by a ship in command of Army personnel. There was an Army chaplain aboard, a member of the Salvation Army sect. And I was even pressed into playing the marimba for him at times in keeping up the morale aboard the ship. Besides it is always a moot question as to whether the Army or Navy is God's holy area of military service. I recall the story of the man who asked his friend to join the "Army of the Lord." His friend told him he already belonged to the "Army of the Lord." "What denomination do you belong to?" the first demanded. "The Baptists" was the reply. To which the man said, "Listen, brother, you're not in the Army. You're in the Navy."

A gathering of this character is essentially an unwritten expression of the faith we have in our free type of government and our appreciation of our free institutions. And it is eminently fitting on this occasion that we consider the marks of a free man. It is important that we speak of such a theme often and anon these days when the false propaganda of dictatorship would delude the world into believing that freedom can be anything less than the ideal we in America cherish and enact when we function at our best. I have been in countries dominated by both Fascist and Communist oppressors and I can tell you that one must see what passes for freedom in other parts of the world to appreciate how blessed the American people really are in their good fortune.

The first mark of a free man is confidence. He is unafraid in his daily living. He is natural in his pursuits. It is not so in lands that are enslaved. They used to tell a story of the Russian dictator Stalin as they told it of Hitler and Mussolini. The dictator walked into a movie incognito and sat in the last row. Suddenly his picture was flashed on the screen and everybody rose in salute. He remained seated enjoying the spectacle of his power when suddenly an usher poked him in the back and whispered harshly: "You'd better get up too if you know what's good for you. I don't like him any more than you do. But you'd better get up. It's safer."

Confidence is displayed by free men not only in their government, but also in their neighbors. Confidence breeds trust. You will not find much trust where there is no freedom. How can one trust another when the state compels uniformity of thought and rewards espionage? The greatest asset that America possesses is mutuality of trust exemplified by the democratic way of life and inspired by the Bible words: "Behold how good and pleasant it is for brethren to dwell together in unity." Unlike the lands of oppression our unity is not forced unwillingly from us. We give voluntarily of ourselves in obeying our laws and serving our commonwealth. It is a pity, I think, that we always tend to give more freely of our lives and labor in time of war than in peace. The great American philosopher, William James, once wrote a short essay that bears rereading in our time. It is called "The Moral Equivalent of War." He points out that if people in a democracy could be prevailed on to make the sacrifices in peacetime commensurate with what they do in wartime for their Nation a long step could be taken in insuring more durable peace in the world. Democracy is basically an adventure in cooperative living. Our system of government is founded on the concept of equality before the law. No man is good enough to rule over another. And while we often stray from this precept we cannot forget its solemn lesson. If we ever strayed too far from it our freedom would be in great danger.

A second mark of a free man is humor. Only the free can laugh at themselves and their neighbors. In a dictatorship men are afraid to laugh. I know no greater cleansing agent to help restore people to sanity than laughter. Nothing can quite show more clearly the immaturity of prejudice and bigotry than the element of humor. Take the matter of smugness in religion, something that ought to concern us in this interfaith meeting. There is a wonderful story told to illustrate the folly of exclusiveness in worship of a God who made us all and whose tender mercies are over all His works. A colored man passed a fashionable church. He thought he would like to worship there, and spoke to the minister about joining the congregation. The minister told him that God did not wish us to change our denominations, that he had better go home and talk this matter over with God. The colored man returned in a short time. The minister asked him whether he had talked it over with God. And if so what did God say? The colored man told him: "God said to me, Sam I've been trying to get into that church myself for 25 years and ain't had any luck. No use your trying."

Sometimes we reveal our own lack of understanding and faith in our fellowmen in the excitement of a moment of disturbance. It is typically American and typically a free man's way of reducing human shortcomings to their proper level through humor. There is the story of the man who belonged to the expressive holy roller sect. He had entered a church for prayer. In the course of the minister's sermon he became excited and jumped up and shouted "Hallelujah! Amen, brother." Two ushers rushed over to him and whispered: "Here, what are you trying to do?" "I'm getting religious," he said. And before they could stop themselves they said: "This is no place to get it."

A third mark of a free man is healthy mindedness which gives scope and imagination to his life. It is no accident that some of the greatest adventures on earth were first undertaken on American soil, and they were undertaken by people who had the health to enable them to dare move in new directions. They cleared the forests and conquered a wilderness with only the protection of a covered wagon. They fought each other in a terrible civil war in order to establish the right of a Negro to be free on free soil. They established the first public school in the history of the world in order that every child could have the means of improving his lot and gaining greater enjoyment of the world into which he was born. They were the first people on the face of the earth to give women the right to vote and to encourage her participation in the arts, sciences and government; and they dreamed great dreams of other people rising on improved standards of living to democratic heights where the common man would be released from his burdens and live as an equal partner in the world's destiny.

Sometimes the free man in America becomes careless. Sometimes he loses his healthy mindedness and he for the moment is faithless to the American ideal, a disappointment to peoples elsewhere. I was in Morocco a short while after the people in Cicero, Ill., had rioted in a diaspora of intolerance toward a Negro war veteran who had rented a home in their midst. The Arabs were making capital of that mistake, egged on by Communist agitators who value power more than freedom. But in spite of our mistakes we are a healthy people because our freedom makes us healthy minded. The Romans, centuries ago observed that the physical life is closely tied to the mental attitudes when they spoke of "mens sana in corpore sano." Our traditions and our instincts on the whole guide us into channels of mutual respect. And while we have a long way to go to achieve a more perfect union we have done remarkably well in welding our diverse raees and stocks and faiths into a great nation.

A fourth mark of a free man is hope. He sees his life and the life of his nation as a goal. That goal may be distant, but the incentive to labor is the actual realization of the dream, not the fulfillment. I imagine that the newly published volume on Robert Louis Stevenson and his wife will stimulate Americans anew to the rereading of some of Stevenson's charming essays. One that we remember from our student days is called El Dorado and reminds us that it is not the arrival at our destination that gives our lives such zest and enjoyment, but the travel toward it.

America is seen by her free citizens as a nation in being. We have before us unclimbed heights, unrealized goals. Yesterday when we were children we traveled in trains and ships spending days and weeks to get to our destination. Today we move swiftly in airplanes and tomorrow the distances of the earth will become as naught. Now we depend on coal and oil for our energy. Who knows what great revolutions of life lie before us as we follow President Eisenhower's call to support the movement of atoms for peace? The freeman constantly hopes that as his hand produces the goods that make life a physical luxury so his mind will keep pace and recognize the common need of all men to warm their hands by the common fire of life. In America this hope has shown itself in the inventive genius of people. Nothing that is made is not subject to improvement. It is shown in the distribu-

tion of our wealth and the average American today lives with greater comfort and opportunity than kings and princes used to. The freeman's hope is seen in the dignity of labor and the acknowledged place of the laboring man in society. And it is seen in the brighter religious conscience of free citizens. For they do not let others remain hungry in their land and their record of helpfulness to other nations through point 4 and technical assistance programs is essentially an example of religious ethics applied in an economic manner. Whatever dictator countries offer other nations has proved to be in conformity to a plan to enslave them and to develop at their expense. Whatever our free people have offered other peoples has been in terms of humanity and the hope of elevating them sufficiently that they might perceive the advantages inherent in the freedom which enables a man to decide his own destiny.

But the free man must not lose this hope. He must not be discouraged by the enormity of the problems that lie before a shrunken world. He must not be aghast at the terrible destructive power in the hydrogen bombs his scientists have created. The Jewish sages of antiquity tell a parable of Moses the law giver, standing on the lonely mountain top and seeing the promised land that he would not enter. He turned to his God to challenge Him. "Why did you take me at the burning bush to be the leader of this people?" he asked his God. "Why did you rob me of my youth and manhood in their service, and now deny me my reward of the promised land?" And God answered him: "When you stood at the burning bush and I told you to go tell Pharaoh to let the children of Israel go, what did you say? You said you were tongue-tied. I had to tell you that your brother Aaron would speak for you. You had no faith in yourself, and I forgave you that. Then you wanted to know in whose name you would be speaking if Pharaoh asked you by what authority you came. I had to tell you, 'tell him I Am sent you'—God sent you. You doubted your God and I forgave you that. But when in the wilderness your people were thirsting for water and I told you to speak to the rock, what did you do? You struck the rock and said in effect, 'what do I care about these people?' There is no promised land for him who has no faith in humanity, in his fellow men."

When a teacher loses that kind of faith he cannot teach adequately. When a judge loses that kind of faith he cannot judge justly. When a clergyman loses that faith his tongue loses its eloquence. When a political leader loses that faith he becomes cynical. When a scientist loses that faith, he becomes indifferent.

Confidence, humor, health, and hope are present when an assembly of American people of varying races and faiths meet under a common flag to remember their free common heritage. It augurs well for a country when we can hold meetings such as this.

Sports in the Soviet Union

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. HILLINGS. Mr. Speaker, I wish to place in the RECORD an article which was written by Mr. Robert T. Hartmann, chief of the Washington bureau of the Los Angeles Times, concerning a football game he observed during his recent visit to the Soviet Union.

The article follows:

NINETY THOUSAND JAM MOSCOW STADIUM—RUSSIANS RED HOT ABOUT FOOTBALL—THEY'LL EVEN PLAY BALL WITH THE WEST

(By Robert T. Hartmann)

Moscow, October 23.—A big Red machine was held to a 2–2 tie today by an underdog squad of fighting Frenchmen who came a lot closer to capturing Moscow than Napoleon did.

This is my idea of how sports writers do their leads, so nobody but sports fans can understand what they mean. In plain English, very little of which is heard here, this means the French and Soviet soccer teams played to a draw at Dynamo Stadium before 90,000 football fans.

In Paris, a headwaiter was quite excited when he heard we were going to Moscow. He said we must see the big international match scheduled for Sunday. The Russian headwaiter at the National Hotel here said the same, proving all headwaiters are kin.

It was just like the UCLA–SC game at Memorial Coliseum in Los Angeles. Following a week of good weather, it begins to drizzle just before game time. And the traffic jam—in Russian "traffikd jam"—is just as bad.

We sat amid a covey of Parisian patriots, who hollered "Allez, Allez" throughout the affair. The Frenchman next to me should have bought two seats, but here all men are equal. This, though, was a living testimonial to superior French cooking and the only time I could get a full breath was when he stood up to "Allez" some more.

There were a bunch of French movie stars on hand, among them Danielle Darrieux, and when I stood up to see her I lost 3 yards.

It was a good clean game. Only one Frenchman got knocked cold by the Soviet goalkeeper and this was an accident, according to the British referee and two Bulgarian line umpires.

The French wore blue jerseys and the Reds naturally wore red. There was one Negro player on the French squad but the Soviet squad was strictly Caucasian.

The Russians are really wild about this sport. One comrade sitting behind us kept shouting at the Soviet team, "You're playing like a bunch of peasants just in from the collective farm."

The outstanding player was a baldheaded Frenchman who must have got that way bouncing the ball off his skull. He was all over the mushy field and saved many a situation before the final gun—I mean whistle—since this is a peace-loving country.

Ungrateful Nation?

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following excellent editorial from the Manchester Union Leader, Manchester, N. H., which appeared in the issue of Tuesday, October 18, 1955:

UNGRATEFUL NATION?

(By William Loeb)

The tragic death of William Teto, who served 13 years as FBI undercover agent inside the Communist party, points the finger at a real problem. Teto, after his job inside the Communist party was completed for the FBI, received no further payments from the Government.

Although his normal life and work had been interrupted, it was almost impossible for him to find employment. In addition, he was subjected to planned vilification by the Communist Party apparatus. The difficulties he found himself in caused his health to break down, and ultimately, resulted in his death.

Teto's problem was not limited to him alone. In too many instances, it is the fate of those who enter the Communist Party to discover, for the benefit and protection of this Nation, the plots, plans and personnel of the Communist conspiracy in this country.

These men and women risk their lives, lose their reputations in the community, and suffer continuing hardship, sometimes over a long period of years. Then, when their turn comes to testify and tell what they have discovered, their usefulness in that position inside the Communist Party comes to an end. They are then cast aside by an ungrateful government without further consideration or assistance.

This does not seem fair or just, by any standard of personal or national morality.

This writer recently came across another such man. Like Teto, he had to see his mother die, burdened down with the sorrow of thinking her son was a Communist, and not being able even to whisper in her dying ear that he was, in truth, a patriotic American. Like Teto, when his job was over, he also was cast aside. Were it not for the assistance of certain patriotic private individuals he, too, would be in dire need today. As was Teto's fate, he did not escape vilification from the Communist Party. Indeed, he continues to be the victim of their smears.

The practical matter is that it is going to be harder and harder to recruit patriotic men and women to ferret out the Communist conspiracy if they know that at the end of that difficult and dangerous task, they are to be discarded without receiving tangible recognition.

But, above all, this neglect is not the proper and patriotic way to treat these people. As much as a soldier in war, they have well served their nation. We make every provision for the medical care, education, and hospitalization of our veterans and for pensioning them when disabled. Can we do less than this for men and women who also have served their nation bravely?

Virginia Referendum

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I include an article by Mr. Robert Van Deusen, Washington secretary of the division of public relations of the National Lutheran Council. The article, which appeared in the current issue of the Lutheran, follows:

VIRGINIA REFERENDUM

(By Robert Van Deusen)

Racial integration in the public schools promises to be one of the hottest issues of 1956. Resistance to the Supreme Court decision is growing and efforts are being made to sidestep its requirements.

In Virginia, the problem will focus in a popular referendum. Voters will decide on January 9 whether to call a constitutional convention to amend the State constitution. The amendment would alter section 141, which prohibits the use of public funds for support of private schools, so as to permit the payment of tuition to students attending private schools.

This constitutional change is one of the recommendations of the Gray commission, after studying the practical implications of the Supreme Court decision. The commission's report suggested that school districts which wish to eliminate segregation be permitted to do so. Its main thrust, however, was in three proposals designed to postpone integration or bypass it entirely, in those parts of the State where this is preferred:

1. Assignment of pupils and teachers to various schools on the basis of health, aptitude, availability of facilities, and general welfare, without regard to race.

2. Tuition grants to pupils who are unwilling to go to integrated schools or whose local authorities decide not to operate such schools, and who go to private nonsectarian schools.

3. Modification of the compulsory education law, so that no child can be compelled to attend an integrated school.

The big problem faced by Virginia voters is whether they are willing to sacrifice their long tradition of free, compulsory, public education, for the sake of preserving a system of racial segregation whose days are numbered. One pitfall is met by the stipulation that pupils must attend nonsectarian private schools to be eligible for tuition grants. But voters should consider these questions:

Where will the thousands of children who elect not to attend public school go? Are enough private schools in existence to handle them? If new ones are organized, where will they be housed? Who will administer them? Where will teachers be secured? Will the quality of instruction equal that of public schools?

How will tuition grants be handled? Will they be paid to the schools? If so, will the State have any control over the curriculum? Would they not then become "public schools," subject to the Supreme Court decision? Or will they be paid to the parents? If so, how will the State check up on their actual use for payment of tuition? If the compulsory attendance laws are relaxed, what if parents decide not to make use of any school?

Even though sectarian schools are ruled out in Virginia as being eligible for tuition grants, will not the breaking of the historic distinction between public and private schools provide a precedent which can be used in other States by those who seek public support for parochial schools?

The Virginia Council of Churches has taken the courageous stand of opposing the revision of the State constitution. Whatever the result of the referendum, the churches will have gained in stature by taking an unpopular position on the basis of Christian principles.

Delay in Construction of Coyote Valley Dam Detrimental to Public

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. SCUDDER. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I desire to include an editorial from the December 22, 1955, Santa Rosa (Calif.) Press-Democrat entitled "Sonoma County Loses Two Ways if Dam Delayed."

Residents of the Russian River Basin area in Sonoma and Mendocino Counties, Calif., were hard hit during the floods in California. Expert estimates from the Army Corps of Engineers reveal that the Coyote Valley Dam would have reduced the $4 million property damage by at least one-half, and perhaps even more.

A delay in the sale of the bonds voted by local residents will put off the start of construction for at least another year, subjecting the area to possible further flood damage and resultant loss of life and property.

H. R. 7930, which I introduced January 3 and which has been reported favorably by the House Public Works Committee, authorizes the additional funds necessary to carry out the Federal obligation. Passage of this bill will resolve questions as to sale of the bonds within the time limit specified, and permit construction to commence at an early date.

As evidence of the necessity for expeditious congressional approval of the bill, I submit the following editorial:

SONOMA COUNTY LOSES TWO WAYS IF DAM DELAYED

In case you're wondering why District Attorney Joseph Maddux is doing everything possible to secure earliest possible high-court hearings on the Coyote Valley Dam litigation, there are two good reasons.

One is that if the bonds cannot be delivered on schedule, both start and completion of the dam will be delayed by at least a year. That means one or more additional years that heavy flood damage will take place.

The other reason is that the bonds were sold at a time when the money market was such that the taxpayers of Sonoma County received an extremely favorable break on interest.

Since then, the money market has become less favorable for sellers, more favorable for purchasers, of bonds. And the more interest the county has to pay, the greater your tax bill must be to cover that interest.

Unless the bonds are delivered, free of lawsuits, by January 16, the buyers can withdraw their offer of 2.58 percent average interest. In that case, new bids would have to be called.

Bond experts think that today the interest rate would be around 3 percent. And that would amount to more than $590,000 additional to be met by the taxpayers of Sonoma County. Instead of a tax rate of 9 cents to cover interest the rate would be 10½ cents per $100 assessed valuation.

Other costs, of course, would also be involved if the bonds cannot be delivered by January 16. It would cost around $2,000 to print new bonds. Another $1,000 would have to go to readvertise that the bonds are for sale.

Those are the costs that affect all taxpayers.

Flood damage, while restricted to those who live along the Russian River, is even more costly. In the first heavy storm of 1955, damage was estimated by Col. J. A. Graf, of the Army engineers, at $2 million.

That damage, to relatively few people and in just 1 storm, is nearly 4 times the probable added interest costs that would be spread among all taxpayers, and over many years.

Delay in selling the bonds would be an extremely serious and costly matter.

Flood Protection, Relief, and Rehabilitation

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. PHILBIN. Mr. Speaker, on October 24, 1955, the Subcommittee on Water Resources and Power of the House Committee on Government Operations held a hearing at Springfield, Mass. Under unanimous consent, I include in the RECORD the text of my statement to the subcommittee.

The material follows:

FLOOD PROTECTION, RELIEF, AND REHABILITATION

(Statement of Congressman PHILIP J. PHILBIN before the House Special Subcommittee on Water Resources and Power, Springfield, Mass., October 24, 1955)

Mr. Chairman and members of the committee, I heartily welcome you all to Massachusetts and express deep gratitude for the opportunity you have extended me and my colleagues in the Congress to present our views on water resources problems that have arisen in our State and area as a result of recent disastrous floods.

Let me assure you I greatly appreciate the able attention and study which my good friend from Alabama, Mr. JONES, and all the members of your committee are giving to these questions. Since there are many witnesses to be heard today I will confine my own remarks as much as possible.

Several other members of the Flood Prevention Committee of our Massachusetts congressional delegation, of which I am chairman, all distinguished colleagues of ours in the House, are here present and desirous of presenting their views.

I recognize that some of the problems connected with the flood may not in a strict sense fall under the jurisdiction of this committee. However, many of them are definitely relevant to your current studies on water resources and flood control and remedial measures which Congress may take at the next session.

I have in mind, of course, that the esteemed chairman of this committee, Mr. JONES, is also a high ranking and very valuable member of the House Committee on Public Works and, in that capacity, is fully conversant and very well informed on essential flood control projects throughout the Nation.

Now, it is hardly necessary for me to detail in extent the loss of life and damage to property caused by recent and repeated floods in our area. Great tropical storms swept over much of the Northeast last August 19, and the week before last, pouring a deluge of heavy rain over the countryside for hundreds of miles.

Rivers and their tributaries overflowed their banks, hundreds of small dams broke or overflowed, many people lost their lives, hundreds of homes were completely washed away, roads, bridges, public communications, water and sewer systems, and business establishments and industries were destroyed or damaged in varying degrees, rich farmlands were gutted and covered with silt and debris. The ensuing destruction, havoc, and distress were widespread. Our section was struck with cataclysmic force. As yet we are unable to estimate all the damage. Many communities were paralyzed and crippled, not only by the first storm, but by the second which followed just a few days ago.

I want to make it clear to the committee that all appropriate agencies of the Federal Government under the direction of our great President, who flew from Denver to Bradley Field, Conn., personally, to supervise relief and rehabilitation operations, have rendered a very great service and have extended valuable assistance. I will not take the time here to enumerate those cooperating agencies, but without exception they worked together, with the Red Cross and with State and local agencies to restore public services, to bring order out of the chaos, to help get our economy back on its feet and, above all, to relieve human misery. They did wonderful work. We are all very grateful for these efforts even as we are mindful that a great deal of work of further relief, rehabilitation, and flood control must be accomplished before many stricken areas can return to normal, and before they can be given maximum protection against loss of life and property from devastating natural disasters in the future.

Of all congressional districts in this State, I believe that the one I represent sustained the most serious damage here. Lives were lost, homes were carried away, people left homeless and industry and business sustained tremendous losses and damage. But there is hardly a section of our great State which was not affected and damaged in some way. Our neighbors to the south, the people of Rhode Island and Connecticut, suffered greatly. The same is true of Pennsylvania, New Jersey, and New York. The situation in our own State is indeed most difficult and with humility and deepest respect, I would bespeak your consideration of the following proposals.

1. Immediate appropriations by Congress of adequate funds to proceed with studies and construction of flood-control projects already authorized, and wherever necessary, in the Connecticut River Basin, the Thames River Basin, the Housatonic River Basin, the Blackstone River Basin, the Hoosic River Basin, the Neponset River Basin, the Charles River Basin, the Merrimac River Basin, and in all the tributaries and branches of these streams, including industrial and other smaller dams, which constitute so much of our water resources throughout the State of Massachusetts and New England.

It is clear that we must have Federal flood control and we must have it as soon as possible. Delay will be fraught with grave possibilities of fresh disaster. Our flood committee, of which I am chairman, is studying many specific projects. The entire situation is being reviewed by the Army engineers and we propose to press for earliest possible action by the Congress so as to secure adequate protection against future floods.

2. A second proposal which has been widely discussed and which I would like to suggest at this time is the urgent need for flood insurance and natural disaster insurance. Following the terrible Worcester tornado of 1953, I introduced in the Congress a number of bills seeking to cope, on a national basis, with great natural disasters. Among them was H. R. 6129. This bill would create a Government-owned corporation to insure against all natural disasters such as floods, tornadoes, droughts, forest fires, earthquakes, hurricanes, and all disturbances and conditions of such impact and severity that it becomes necessary for the President to declare disaster areas in any part of the Nation.

As you know, at present, flood insurance or disaster insurance cannot be procured from private insurance companies because, under normal insurance practices, its cost is prohibitive. Under the proposed bill, the Government would reinsure disaster policies designed to cover every part of the United States against the ravages of all natural disasters.

We can take notice of the fact that these natural disasters can and do strike, often like a bolt from the blue, at any time and at any place.

I believe that, when they have had the opportunity to study this proposal in its entirety, that the private companies would be willing to cooperate with the Federal Government in such an undertaking and would welcome a system whereby these heavy periodic disaster losses could be insured with Government support. This insurance would not interfere in any way with current insurance coverages because it would not go into effect in any area until the President has declared an emergency. It would constitute an additional, valuable, ready Government device for coping with great disasters. I would like to insert in the RECORD, with your permission, the text of H. R. 6129.

3. Expansion of the Weather Bureau to permit and promote greater Federal participation in weather and climatic research by the establishment of an appropriate Commission to make recommendations looking toward the accomplishment of this end.

I have prepared a tentative draft of this proposed legislation and with your permission would like to insert it in the RECORD. It contemplates a long-range program of research, coordinated with Weather Bureau activities, to speed intensive study of weather problems and to inaugurate as early as possible more effective hurricane and storm warning systems.

This is something, I think, that has been greatly needed in the Nation for a long time. As you all recall, Congress recently substantially increased the appropriations for the Weather Bureau to amplify present services. However, I think that a much broader basis is required in order to integrate the gathering and dissemination of information and forecasting of weather and climatic conditions. Such a system, if adopted, could very conceivably be used in coordination with civil defense and the armed services to warn our civilian population against approaching military attack. It would also aid our farmers, our shipping and air industries.

4. I also think that the Congress will have to strengthen and expand our machinery for disaster relief and rehabilitation. For one thing it should be more closely coordinated in the Federal Government and with the State and local communities. It should be put on a permanent basis.

Furthermore, I seriously doubt that situations of such magnitude can be satisfactorily handled by Government loans alone. Many people have lost their homes, but are still saddled with mortgage debt on nonexisting property. As a practical matter, they cannot possibly undertake further staggering debt on new homes because, even if it could be negotiated, it would snow them under financially, and it is unfair to American citizens so grievously afflicted to give them the feeling that they are objects of charity.

Many worthy business men employing our citizens are in the same predicament. The Small Business Administration has done a fine job under its present authority. But many businesses wracked by floods cannot survive under the burdens of heavy additional debt. Some consideration must be promptly given to the equitable and humane problems of putting these groups into the status quo ante—the position they were in before disaster struck them.

If proposals are to be adopted on a large-scale calling for huge Government funds for relocating entire communities—and such proposals are already under serious study by high-ranking Federal officials—the problems of rendering adequate financial aid to those who desire to remain in their present locations in order to save them harmless should also be carefully appraised.

These losses are far beyond the resources of individuals, or the State and local government. They will require the assistance of the Federal Government.

That will be costly. But so is foreign relief and aid; so are agricultural subsidies; so are great public projects in other sections of the Nation. The stricken people of the Eastern Seaboard who contribute so much in taxes to the Treasury are also entitled to the generous help and assistance of the Federal Government. I most respectfully urge that you carefully consider our plight and take every measure you can to assist us with rehabilitation and in safeguarding our area and every other area of the Nation, as well as it is possible for Congress to do, against the ravages of great natural disasters.

In conclusion, let me simply say this. Our need is very great, my friends. We have been sorely stricken, almost beyond description. Our own people have responded with extraordinary courage, resourcefulness, and compelling determination to try to reestablish their homes, their industries and their communities. But if ever we needed it, we now need the sympathetic help and assistance of the Federal Government to ward off the effects of these disastrous flood and to set up adequate safeguards against possible future visitations of great natural disasters, so unpredictable in their advent and point of attack, and so paralyzing and devastating in their consequences.

If this fine committee of the House comprised of our able, esteemed colleagues from other sections of the country working so diligently and intelligently under the leadership of our energetic, genial and capable friend, the distinguished gentleman from Alabama, can help us in any way to realize the objectives in this field which we in Massachusetts feel must be so urgently pursued, then we will indeed by very grateful.

Let me thank you all, Mr. Chairman, for bearing with me and giving your valuable time, and, most of all, for your sincere and sympathetic consideration of our very serious problems.

And now, with your permission, I should like the honor of presenting to you our distinguished colleagues, all members of our congressional delegation Flood Committee, Mr. HESELTON, Mr. DONOHUE, Mr. BOLAND, and our beloved friend and colleague, Mrs. ROGERS, all of whom desire to present their views. Our distinguished colleague, Mr. WIGGLESWORTH, also a member of the committee is presently overseas on official business and will undoubtedly want to present his views to you upon his return.

The Late Vera Buchanan

SPEECH
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 3, 1956

Mr. REUSS. Mr. Speaker, sympathy and understanding, joined with a dedicated devotion to duty, were the characteristics of Mrs. VERA BUCHANAN which make her passing such a great loss to all of us in this House, as well as to the citizens whom she so ably represented.

Serving with her on the Banking and Currency Committee, as a freshman member I benefited greatly from her conscientious example of public service. She gave freely of her warm friendship, and the compassionate qualities of her concern for the welfare of the men and women of her district were an inspiration to all of her colleagues.

The personal loss I feel at VERA BUCHANAN'S death, after only 1 year of service together in this House, is a measure of —and a tribute to—the heart and soul of a great American.

Charles D. McCarthy Retires

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. KEOGH. Mr. Speaker, a familiar figure is gone from the New York City scene. In November of 1955, Charles D. McCarthy retired after having served faithfully for 23 years as doorman at the RCA Building, 30 Rockefeller Plaza, New York City. Charlie, as he is known to his many friends, had been on the job since April 26, 1933, 4 days before the center's second office building was occupied. He was never without a cheerful greeting for one and all, and will be greatly missed by those who had come to know him. It is my hope that he will enjoy many happy, peaceful years of rest which he so richly deserves. I should like to include the following article which appeared in the New York Herald Tribune of November 20, 1955:

DOORMAN AT RCA TO RETIRE—ADMINISTRATOR FOR 23 YEARS

Charles D. McCarthy, who was doorman of the RCA Building at 30 Rockefeller Plaza before there were tenants to open the door for, is retiring next month in the position of a man who has taken Rockefeller Center into partnership.

"We have been very fortunate in the tenants we have had in that they take a pride in being here," he recalls. "But, of course, we try to be as nice to them as we can."

An erect, stately man with a square ruddy face, Mr. McCarthy donned the brown uniform of a special officer doorman at No. 30 on April 26, 1933, 4 days before the center's second office building was occupied. He's been there ever since, rain and shine, with a ready grin for his tenants, "the people who have equity here."

Mr. McCarthy, who is called Charlie by most of the tenants, and Mac by most of the RCA executives, could have retired last year when he was 65. He chose instead to stay on until the end of the year because, as he explained, "I felt that in the pursuit of happiness, this was the place for me to be a little longer. But in the inexorable movement of time your physique gets a little older and I did think I needed a rest. After all, I'll be 67 next April 20."

From his station at the red canopy in front of the building, Mr. McCarthy's job, as he explained, is, "administrator of the most valuable piece of property in the world—as far as parking is concerned." His is the final word on who shall move on and who shall be allowed to rest on the street between 49th and 50th Streets, in front of No. 30.

After retiring, Mr. McCarthy plans to live a quiet life with his wife, Eva, in their home at 1936 East Tremont Avenue, the Bronx, which is a part of the Metropolitan Life Insurance Co.'s Parkchester development. Before he came to the center, Mr. McCarthy was a floorwalker for Cimbels and Arnold Constable's and now, he said, looking down at his high-laced black shoes, "I'm going to sit down and do some reading."

Interview on WNAC–TV, Boston, Featuring Hon. John W. McCormack, Conducted by Lester Smith, Special Features Department, December 6, 1955

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a question and answer interview in which I participated over WNAC–TV station of Boston, Mass., on December 6, 1955. This television program interview was conducted by Lester Smith of the special features department with Les Smith of the same station the questioner.

The interview follows:

LES SMITH. Good evening, everyone, I am Lester Smith, of the WNAC–TV, Yankee Network Special Features Department.

Following the policy of the Yankee Network—to keep its viewers and listeners completely posted on affairs which affect not only our community, but our State and our Nation as well—we are again very happy to have with us tonight another of the distinguished members of the Massachusetts congressional delegation in Washington to discuss topics of importance in world affairs. We are happy to welcome the Honorable JOHN MCCORMACK, the majority leader in the House of Representatives in Washington. Congressman MCCORMACK, we are happy that you were able to join us.

Congressman MCCORMACK. Thank you, Mr. Smith. I am very happy to be with you.

LES SMITH. The events of the last few days—the last few weeks—and the last few months, Congressman, have sort of jumbled themselves together into a patchwork which has made a lot of people in this country very apprehensive and concerned over the way the turns of events are going in the world situation. To your mind, as matters stand today, how are we faring in the world as a whole?

Congressman MCCORMACK. Throughout the world, Mr. Smith, as we look it over, we have got to develop policies that will enable us to have a better—a stronger—position. You use the word "faring"—I think it is a very good word. Since last July and the so-called summit meeting, the situation throughout the world has not been favorable to us and psychologically, we are in an unfavorable situation and position. It is not too late to get back and recover and obtain our affirmativeness. But we can't—we shouldn't—delay too long. Because, the only thing the Communists respect is what they fear; and, that is military power and strength greater than they possess. They respect only firmness in the field of diplomacy where you have definite leadership, not uncertain leadership that changes from day to day and week to week—and where that firm leadership in the field of diplomacy is supported by that which the Communists respect—namely, military power and strength.

LES SMITH. Congressman, there was a reference made, just recently to the effect that perhaps the Soviet Union prefers this so-called cold war stalemate to either full peace or a full-scale war with the United States. What do you think of that reference?

Congressman MCCORMACK. Well, in my opinion, I think that that is their probable state of mind. All we can do is weigh the probabilities; and, what the probabilities in the mind of a Communist are is rather hard to weigh. You, and I, and others—thinking the way we do—can weigh the probabilities in our minds and in other's minds; but, on this matter we are dealing with the minds of world-killers who are out to impose communism by revolution, force, or otherwise upon all of the other peoples of the world. Frankly, I do not think that they want a full-scale war, now. But, we have ever got to be on the alert with our Intelligence working every minute of the day with all the other facilities of our country and of every other free country working ever to be on the alert. And, the reason I do not think they want an all-out war is because the nuclear bomb is so destructive that if they undertook to murder, so to speak, some other country—before they did it they'd commit suicide themselves. So, I think they are using this smile, this, mask of a smile to try and deceive people. And remember, behind the mask of that smile is that same cruel mind that has sent millions of persons to imprisonment and to their death. So, I think what they want is a status quo, which the so-called spirit of Geneva has developed for their benefit, while continuing their work of subversion wherever they can and taking over country after country.

LES SMITH. Congressman, the recent events in the last few days in Berlin, insofar as the actions of the Soviet Union are concerned—what are their basic significances?

Congressman MCCORMACK. It is another one of their moves. They feel that there is weakness among the countries of the Western world. They're probing. They're hoping that we will manifest uncertainty. Berlin is a symbol to countless of millions of peoples and the free world—the Western world cannot afford to let them get by with that. The United States has got to pursue a firm policy. I admire the American High Commissioner to Germany the other day when he rode through East Germany. That is something that the Communists understand; but, if we vacillate, if we engage in uncertain actions, if they obtain their victory there—a psychological victory—it will be most harmful to the free world's cause. So, that is one place where we have got to be firm, very firm.

LES SMITH. Now, let's dwell on one other point for a moment. We, of course, realize the danger spots that exist in various sections of Europe, the Far East, the Middle East. What in your mind are the key danger spots with which we have to be concerned?

Congressman MCCORMACK. Well, there are several spots. There is southeast Asia—all of southeast Asia—South Vietnam. There is Formosa, the Pescadores, Matsu, Quemoy—the British have possessions like Hong Kong. And there is Malaya and Thailand—the latter is a very important country to us—and Indonesia. These are important because if they get southeast Asia our whole far-eastern defenses are outflanked and we would have to come back to the continental defense—Hawaii and Alaska. Then, there is in the Near East, the Egyptian threat against Israel—Egypt trying and determined to destroy that little nation of brave people over there; and, in that area they are the only people, the only friends we have there. There's the weakening of NATO, the status quo in Europe, and behind the Iron Curtain they're saying to non-Communists that the Western World has let you down. In other countries like Italy, they are saying to non-Communists, "Why do you doubt our sincerity? Even President Eisenhower says we are sincere in our desire for peace." So, it is a worldwide pattern; and, Berlin is a more recent evidence of the hardened minds of the Communists and their determination to undermine us by every means possible short of general war. We have got to be watchful for that—it is a calculated risk—but short of general war—as I see it they plan to take over country after country and to weaken the Western cause. And, we have

been weakened. But it is not too late for us to recover if we only determine to do so.

Congressman, if we may, may we go back for a moment, and take up the question of the seriousness of the problem involving Israel and the Arab States? At the moment, of course, there is the tremendous problem of the Egyptian purchase of arms from Communist satellites and the question of "if" and "where" Israel is to get arms. Is there a solution there?

Congressman MCCORMACK. Well, Israel is a nation of about 8,000 square miles. It has about 1,500,000 people. It is a democracy in fact as well as in name. It is western minded. The people of Israel are our friends. The Egyptians—the Arabs—you never could rely upon in World War I or World War II. Egypt alone has over 40 million population. If in the course of 2 years they are able to develop their manpower, that is their military manpower, a nation like Israel could be in a very dangerous position with not more than a 250 thousand to 300 thousand maximum army. America could not and should not permit Israel to be exterminated and America should furnish arms. But that is not the solution alone. America should so inform the Kremlin firmly, because they are the ones selling the arms to Egypt and Nasser. We should tell them that not only the United States, but also Great Britain and France under no condition intend to see the free people of Israel exterminated or weakened. Furthermore, might I make this observation, Mr. Smith, that Nasser, who is the Prime Minister of Egypt, would never dare think of buying arms from any Communist nation if he had any fear of the United States. It is our weakened, uncertain leadership that has brought about that feeling of confidence on their part, where they go to a Communist nation and buy arms; and yet we are powerful America. We have got to get back to the basic policy of peace through strength and firmness, and leadership—not bullying but firm leadership on the highest governmental level and in the fields of diplomacy.

LES SMITH. Well, that brings up in some respects the question I was going to ask you, and perhaps you can elaborate a bit, that is, "In your mind, what is the most effective way to meet Russia's cold war"?

Congressman MCCORMACK. The most effective way is to have America aroused—our people informed. Our people will make every sacrifice necessary when they are given information. The American people are fighters. We fight for what we believe in—in the right of the sanctity of the home; freedom of speech; freedom of religion; freedom of the press—those great rights that are ours and are contained in the Constitution. Those are intangibles, that free men and free women, when they possess them, will fight to preserve. We have got to have a military organization that commands the respect, through fear, of the Communist leaders, because they are out to conquer the world and to subject all the peoples of the world to Communist persecution and death. So, the price we pay is the price for our preservation and for freedom; and, it is far better to err if we are going to err, on the side of strength than on the side of weakness and that is one of the basic positions I have taken as a Member of the Congress of the United States.

LES SMITH. Well, Congressman, as the majority leader in the House of Representatives, I believe we have about a minute or so left, would you care to make some reference to the bi-partisanship of our foreign policies?

Congressman MCCORMACK. Well, fortunately, we have a very strong bi-partisan policy today because the Democratic Party is united on foreign affairs. The Republican Party is very badly split and divided; so, the Democratic Party is the unifying force in our bi-partisanship. But, now, bi-partisanship does not mean that we cannot constructively criticize; or constructively suggest; or that the right of dissent is taken away from us in America.

Henry Cabot Lodge the other night at a Republican gathering—and it was rather strange that the Ambassador should give Democrats advice in the field of foreign affairs, at the Republican gathering—said, however, that they would tell of the present administration's achievements in the field of foreign affairs and let the people judge. I am satisfied with that; but with one more addition that we should tell them of the "non-achievements" and then let the people judge. With that I will be satisfied.

LES SMITH. We are sorry that we are just about at the end of our time and again, our sincere thanks to you for joining us. It has been the pleasure of the Special Features Department of WNAC–TV and the Yankee Network to be able to talk tonight with the Honorable JOHN MCCORMACK, majority leader in the House of Representatives.

The Late John D. Dingell

SPEECH
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 3, 1956

Mr. CELLER. Mr. Speaker, I wish to add my voice to the many that have eulogized our distinguished late colleague JOHN DINGELL. I knew him from the time he came to Congress, and learned to have an affectionate regard for him, as I am sure he had for me.

Just as cream rises to the top of the bottle, so he, in a short time, rose and grew in his ability and effectiveness as a Member of the House. He won the admiration of all the Members for his integrity of purpose, high aims, exemplary character, and excellence in parliamentary procedure. He rendered excellent service as a ranking member of the Ways and Means Committee. His words on the floor of the House always carried conviction.

Unfortunately, in the last few years, illness pursued him. May we say that the Good Lord wished to see an end to the suffering he endured and bestowed upon him an endless sleep. Even when suffering with pain, he insisted on coming to committee meetings and to the floor of the House. He bore his pain unflinchingly and uncomplainingly. He was indeed a stoic.

JOHN DINGELL's constituents loved him and honored him, and returned him to office many times. They placed upon him this accolade of distinction for having the courage of his convictions and for his devoted service. He is now succeeded by his son who, I am sure, will walk in the paths hewn out for him by his revered father. Like father, like son. The mantle of his office now falls upon him. From what I have already seen and know about him, he will keep the memory of his father alive in this House by distinguished service, honor and integrity.

Violation of the Constitutional Guaranties of Members of the Armed Forces Under the Status of Forces Agreement of the North Atlantic Treaty Organization

EXTENSION OF REMARKS
OF
HON. FRANK J. BECKER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. BECKER. Mr. Speaker, in the light of the resolutions and discussions in the last session of Congress with reference to the Status of Forces Agreement of the North Atlantic Treaty Organization, I have made a thorough investigation of the entire situation and am, herewith, citing these facts which have convinced me more than ever before of the necessity for the elimination of this constitutional violation:

VIOLATION OF THE CONSTITUTIONAL GUARANTIES OF MEMBERS OF THE ARMED FORCES UNDER THE STATUS OF FORCES AGREEMENT OF THE NORTH ATLANTIC TREATY ORGANIZATION

Up to 1951 when our military personnel were sent to any foreign country and accused of committing a crime or a violation of a local law, they were subject to trial by a court-martial of their own command and were not turned over to foreign governments to be tried in a foreign land by foreign courts. Since the signing of the Status of Forces Agreement in 1951 by the United States Government and its ratification by the United States Senate in 1953, whenever a member of the United States military personnel is accused of a crime while serving in a foreign country and that country requests the accused to be turned over to it for trial, we must abide by its request.

One must understand that before this treaty, when a GI was accused or arrested, the United States military forces could determine, when requested by a foreign government, whether the young man should be turned over, and this would take place only where the man was accused of a very major crime and evidence against him was overwhelming. This system should be continued and the constitutional guaranties of American soldiers upheld.

In order to understand this agreement fully, I am setting forth a description of article VII of the agreement so that one may properly understand exactly what it does and its purpose:

Article VII of the agreement prescribes the circumstances under which the sending or receiving States will have either exclusive or concurrent jurisdiction to try offenders. In those situations where both states have concurrent jurisdiction articles VII prescribes which state shall have the "primary" jurisdiction. Exclusive jurisdiction implies that only one state has the right to try an offender, as in a case for example, of security offenses which are against the laws of one country but not of another. If an offense violates the laws of both states, both states may have jurisdiction. However, the state that has the right to try the offender in the first instance, and in this sense may be said to have the prior or superior right to try the

offender, is deemed to be the state having the "primary" jurisdiction. This does not imply, however, that in the ordinary case a person may twice be in jeopardy. Paragraph 8 of article VII expressly provides: "Where an accused has been tried in accordance with the provisions of this article by the authorities of one contracting party and has been acquitted, or has been convicted and is serving, or has served his sentence or has been pardoned, he may not be tried again for the same offense within the same territory by the authorities of another contracting party." This section safeguards an accused against double jeopardy. This, however, is subject to what may be deemed a military exception to double jeopardy which does not prevent the military authorities of a sending state from trying a member of its force for a violation of rules of discipline arising from an act or omission which constituted an offense for which he was tried by the receiving state.

This means that military personnel are not exempt from double jeopardy because after their conviction in a foreign court, they may be tried and convicted by a court-martial held subsequent to the serving of their original sentence.

It must be further pointed out, that members of our diplomatic service have immunity when in foreign countries.

"Diplomatic immunity" simply means that our diplomatic officials, both of our embassies and our consulates, are immune from prosecution by foreign countries for crimes of which they may be accused. And yet these same members of our diplomatic corps go there by choice. They do not have to go if they do not want to. But our military personnel, some of whom enlist and a great majority of whom are drafted into the service involuntarily, are sent to foreign countries, not because they want to go, but simply because once they have been sworn into the military forces and the uniform of the United States Government is placed on them, they have to do exactly as they are told. They not only must do as they are told and ordered, but in the event of war or fighting, they must die if necessary in order to carry out the order that was given to them when they became members of the military forces. Therefore, it is very difficult to understand, in the light of this comparison alone, why the military man should be excepted, and certain agreements made whereby he loses the guaranties of the very Constitution that he is supporting and willing to fight for.

After testifying before the House Foreign Affairs Committee in July on this subject, I decided that since I was going to Europe on other business, I would make arrangements to visit a number of our military personnel who had been tried in foreign courts and were serving sentences in foreign prisons.

I left New York by plane on August 5, 1955, and flew to London, England. Through the cooperation of the American Embassy and our military officials, arrangements were made for me to visit several English prisons for the purpose of interviewing our GI's personally and getting their stories and reactions.

Accompanying me was Maj. W. Charlotte from the United States Provost Marshal's Department and Captain Barnes of the Judge Advocate's Department, who informed me that I was the first Congressman to visit our GI's in prison.

My first visit was to the Wormwood Scrubs Prison, where, after discussing the reason for my visit with the governor, I was permitted to interview three GI's imprisoned there. They were brought in one at a time, and a guard was stationed in the room with us.

I went over each case separately, the cause of the arrest, the trial, and the conviction, as well as the sentence. These three were serving from 1 to 3 years. Each one of them stated that he would have had a fairer trial before a United States Military court-martial.

I spent another day with Major Charlotte and Captain Barnes on a visit to the Maidstone Prison in England. At this prison I interviewed four GI's imprisoned there and the story was the same. They felt that they had been let down. It was not my thought to judge the innocence or guilt of these young men. I do feel, that so far as the English courts were concerned, they were treated fairly in accordance with their system.

I spent another day at Scotland Yard and at the Sessions Court in London where one of our GI's was up for trial. However, he pleaded guilty, and after a very good argument by his defense counsel, he was given a light sentence, a fine, which was paid.

I then went to France, and here was another highly difficult situation. In the French courts, and under French law, a man is presumed guilty and must prove his innocence. This is completely the opposite of American law.

Here again, I interviewed young GI's in prison. I traveled from Paris to Fontevrault Prison and interviewed two GI's. Their stories were pathetic. I saw them together and talked to both at the same time, as they were convicted of the same crime. Both of them stated that they did not know what was going on during their arrest and at their trial. They were assigned French counsel and an interpreter. Everything went on in French and they could not even get the drift through the interpreter. They both stated that everything was not interpreted to them and the next thing they knew they were sentenced to 5 years each. These two cases have had much publicity in the United States papers because of the harsh sentence. I visited another young GI at the Hotel Dieu (prison ward hospital) in Paris. He was quite satisfied and was the only one that I know of who was. He had not been brought to trial as yet, but will have been by this fall. He also intimated to me why he was satisfied to be tried by a French court and I am not at liberty to state his reason here.

I have avoided mentioning any names, as I did not in any way want to hurt further these young Americans. The two at Fontevrault Prison also stated that they should have been tried by a court-martial and they would have known what was going on and would have felt they had a fair trial.

The Status of Forces Treaty had not been signed in Italy as yet, I was informed when I visited Rome.

After my journey abroad, I am more concerned than ever that this treaty should be revised—for the following reasons:

First. All through American history, the American flag followed our soldiers wherever they went and was their protection.

Second. There is distinct violation of the constitutional privileges and protection for our military personnel under this treaty.

Third. Today, as soon as they are shipped to foreign soil, where the treaty is in force, our soldiers no longer have the protection of the Constitution. Why? Because they cannot be tried by a jury of their peers in a foreign court. They cannot have their own American counsel defend them. There certainly is a "hostile atmosphere." By this I simply mean, without casting any reflection upon the integrity of any foreign people, that in many areas where our troops are stationed, the people do not want them there. The people do not understand why they are there, either, and I find little is done in these areas, intelligently, to inform the people why our troops are there.

Fourth. There is an erosion of the right of appeal. While our GI's have the right of appeal, it is far different from the American judicial system and a man runs a real hazard by filing an appeal. Why? Because, if his appeal is lost, the higher court has the right to add to the sentence, and in many instances does so. For example: if a man is sentenced to 1 year on a charge where he could have been given up to 5 years, the appeals court could give him and usually does, the balance of the other 4 years. I understand that this is done to prevent appealing. Even in our courts-martial system, a man has an automatic review and further appeal.

Fifth. There have been many citations of cases and trials of American servicemen in foreign countries. There also is the question of the penalties prescribed in certain foreign countries, either those with whom we have agreements or with whom we may sign these agreements in the future. Violations of the laws of these countries, laws that are absolutely unknown to the average American citizen, may bring penalties that are far beyond anything ever thought of in American jurisprudence.

We must remember that we have troops serving with air base in countries such as Morocco and Pakistan and others. If we look into the history of these countries, insofar as penalties for violations of civil laws are concerned, we will find that in many, many instances people there, instead of being sent to prison, would lose a hand or a foot, an arm or a leg, or even an eye for offenses which in our country would be mere misdemeanors. Imagine what could happen if steps are taken to sign agreements such as this with these countries. We must also remember that while this agreement ostensibly was arranged for the NATO countries and the United States, that a similar agreement has also been signed and is in operation in Japan. So it is possible that agreements may be signed with these other

countries. I think you will agree with me that this must be stopped and our feelings made known to the President of the United States through a resolution of the Congress.

There are many other arguments for revision of this treaty. It must be noted that for quite a number of years we have been hearing and reading about the demands for the protection of the civil rights of the people of the United States for one cause or another. Secondly, we have been hearing and reading constantly about citizens of the United States being called either before the courts or before congressional committees and using the 1st, 5th, and 14th, amendments in order to avoid testifying or giving information. All of these protections are parts of the Constitution of the United States. Many of the people who are on trial or being interrogated before the congressional committees use the fifth amendment to avoid giving information as to their own participation in the Communist cause to overthrow the Government of the United States by force or violence, or to avoid giving information as to whether they belong or ever did belong to any Communist front organization. All of these rights are provided for these people in our Constitution, even though many of them are working for the destruction of the very Constitution behind which they seek protection.

Justice John Marshall, the Chief Justice of the United States Supreme Court (1775–1835), in the early days of the Republic, clearly ruled and defined that:

> Service in the Armed Forces of the Republic of the United States shall not abrogate or nullify the constitutional rights of an American citizen.

What then becomes of the constitutional rights of hundreds and thousands of servicemen who are in foreign countries involuntarily and who are sent to jail by foreign courts for breaking some local laws? The military justice committee of the New York County Lawyers' Association has been working on this matter since 1954. The committee has been negotiating with the Defense Department following the expression of the opinion by the association committee that the Status of Forces Agreements with the NATO countries and Japan did not secure to Americans in the Armed Forces the same legal rights a defendant would have in the United States. It was held by the committee that American defense personnel were not on foreign soil of their own free volition as in the case of a citizen traveling with a passport and the Government should not sign away, even in a mutual defense pact, the rights guaranteed by the United States Constitution.

With reference to the editorial of the New York Law Journal of September 22, 1955, the committee states:

> The Defense Department later informed the Senate Military Affairs Committee that in the first 6 months of 1954, only 33 American servicemen were sent to jail by foreign courts. In the opinion of the lawyers' committee, unless the 33 receive the same standard of protection they would receive under our Constitution, it was 35 too many.

That is the whole point involved in the Status of Forces Agreement. It is immaterial how many or how few are involved. The real question is the whittling away of the constitutional guaranties reserved for every American citizens whether he be in the Armed Forces on domestic or foreign soil.

I am convinced that the Status of Foreices Agreement violates the ruling mentioned above of Chief Justice John Marshall, the greatest authority on the Constitution of the United States.

At the last session of Congress, that is, the first session of the Eighty-fourth Congress, resolutions were introduced calling upon the President and State Department to work with any country with whom we had signed a Status of Forces Agreement for the purpose of eliminating it and returning to the conditions that prevailed through all the years up to 1951. Congress should pass a resolution calling upon the executive branch of our Government to nullify this Status of Forces Agreement.

I have noted with great interest a recent report in the press that the Defense Department has directed our military commanders abroad to take all possible steps to assure fair treatment of American military personnel facing charges in foreign courts. The following story appeared in the New York Times of December 6, 1955:

> The Defense Department has laid down strict procedures to be followed by overseas commanders to protect to "the maximum extent possible" United States military personnel tried in foreign courts.
>
> A new directive to all military commands says Defense Department policy requires that all steps be taken to assure "fair trial and fair treatment" of men and women facing charges in foreign civil courts.
>
> The directive orders overseas commanders to follow the trials closely, provide free counsel if necessary, check on prison conditions and protest through diplomatic channels if they consider the trial or sentence unfair.
>
> Under so-called status of force treaties, United States service men overseas can be tried by foreign courts for crimes committed while they are off duty. In turn, foreign troops stationed here are subject to United States laws.
>
> The new directive safeguards the interests of United States military personnel as specified by the Senate when it ratified the status of force treaties in July, 1953. While most of the procedures have been specified, the directive incorporates them in one document.

I have cited heretofore the very many reasons why this agreement should be eliminated from the NATO treaty. The very fact that the Pentagon now is taking cognizance of this situation and is belatedly taking some steps to provide some degree of protection does not, of course, solve the problem of the violation of the constitutional rights of our servicemen.

It must also be noted that whenever I have discussed this with our State Department people, the only answer that I have been able to get from anyone, anywhere, at any time, is the fact that this agreement was brought about as a matter of necessity, and that we must realize that foreign troops serving in the United States or on United States territory may be tried in our civil courts for the violation of the laws of our country. The fact remains that there are practically no foreign troops serving in this country. Only a few are here, for such purposes as special training, and I feel certain that it will be in the best interest of our country to have these men tried by their own courts-martial and not by our civil courts. The few that are serving here certainly do not justify us in sacrificing the constitutional rights of hundreds of thousands of young Americans serving abroad.

It must be recognized that the Congress has no power to alter or change this agreement. However, I have introduced House Joint Resolution 438 for the purpose of securing the support of Congress in requesting the President to bring about the elimination of this Status of Forces Agreement and trust that it will receive favorable action in this session of Congress.

An Appeal for the Farmer

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. EDMONDSON. Mr. Speaker, as this 2d session of the 84th Congress gets under way I do not want the sun to set on our first full day's deliberations without a fresh appeal for action—and action at the earliest possible date—to halt the downward spiral of farm prices and restore our farm income to fair levels.

Peace is undoubtedly our number one national objective, but I do not believe any fair-minded person can question the fact that our number one problem within the United States economy is the mounting problem of American agriculture.

In the January 3 copy of the New York Times, there is an excellent dispatch from Des Moines, Iowa, which begins as follows:

> As the new economic year begins, many of of the Nation's farmers have come to regard themselves as poor children with their noses pressed against the toyshop windows.
>
> After years of riding on top of the postwar prosperity wave, they have now been dumped on the beach. From the record levels of early 1951, farm prices have dropped as much as 25 percent. Ten percent of this decline occurred in 1955.
>
> All this has happened in a year when stock dividends attained new highs and average take-home pay for workers set a record.
>
> To add to the farmers' general unhappiness, farm costs have failed to match the deflationary trend of farm prices. In some instances, the things farmers must buy are now actually higher than they were in 1951.

In my own State of Oklahoma, where farm problems have been compounded by long and bitter years of drought, these blunt statements fall short of describing the gravity of the situation.

Literally thousands of Oklahoma farmers, who own productive farms and good dairy and cattle herds, are today eating three meals a day only because they are holding down some kind of job in town, or on county or State roads, to offset their losses on farm operations.

In many farm families, the wives and children are also working off the farm, in order to make ends narrowly meet—and it has not been a bright Christmas in many of these households. Food relief rolls are at record heights, and still increasing in rural areas.

The future is darkened by the prospect of further cuts in farm price supports, under the administration's new "modified parity" formula. A further cut of 5 percent, in the overall picture, will be bitter medicine indeed for America's hard-hit farmers and their families.

Surely there is a sound and sensible answer to our farm dilemma, which does not require further drastic cuts in farm income. There must be ways in which our foreign exports of farm products can be recovered, and ways in which our farm surpluses can be used to advantage and good purpose in the cold war and in meeting our own domestic needs, without shoving the farmer completely off the economic ladder.

Let us give to the farm problem the high priority of consideration and legislation which it rightly deserves. Let us demand from the Secretary of Agriculture the fair and helpful action which it is his duty to give our farm population.

Let us see that prosperity in 1956 does not bypass the American farmer.

The New York Times article follows:

FARMERS PINCHED BY FALLING PRICES AND RISING COSTS—WHOLESALE INDEX, AT 119.4 FOR INDUSTRY, IS DOWN TO 83.3 FOR AGRICULTURE—SOME SUFFERING LOSSES—FURTHER DETERIORATION SEEN AS UNITED STATES LOAN SUPPORTS ON BASIC CROPS ARE PARED

(By Seth S. King)

DES MOINES, IOWA.—As the new economic year begins, many of the Nation's farmers have come to regard themselves as poor children with their noses pressed against the toy shop windows.

After years of riding on top of the postwar prosperity wave, they have now been dumped on the beach. From the record levels of early 1951 farm prices have dropped as much as 25 percent. Ten percent of this decline occurred in 1955.

All this has happened in a year when stock dividends attained new highs and the average take-home pay for workers set a record.

To add to the farmers' general unhappiness, farm costs have failed to match the deflationary trend of farm prices. In some instances, the things farmers must buy are now actually higher than they were in 1951.

This is well illustrated by the Government's price index of wholesale commodities. Figured on the 1947–49 base, the index in December for industrials was at 119.4 percent. The index for agriculture was at 83.3 percent, the lowest since June 1946. In 1946 farm prices were at 78.3 percent, 2.8 points higher than the industrials.

NO IMPROVEMENT IN SIGHT

For 1956 there is little statistical hope for improvement in this situation. The United States Department of Agriculture has predicted a 5 percent drop this year over last year, and the outlook for individual farm products seemed to bear out this gloomy appraisal.

In this part of the Midwest, the bulk of the farming is based on a corn-hog-fattened cattle operation. The rotation of crops may include oats and alfalfa, but these are largely grown for feed. The only other cash crop of any importance is soybeans.

In 1955 many farmers in Iowa and other Corn Belt States west of the Mississippi were hit hard by the drought. This State's corn production was 12 percent lower than 1954's and 8 percent below the 10-year average. But this reduction in the yield did not have any strengthening effect on the market. At the moment there are 437 million bushels of corn stored in Government bins and on Iowa farms. This is more than half the normal supply raised in this state each year.

In addition, the total corn crop throughout the Nation was 7 percent larger than in 1954. In many sections the land diverted from other crops went into corn and thirty-five new counties in States outside Iowa increased their corn production enough to be classed as "basic corn areas."

All this has meant that the cash value of corn has decreased. Last year a farmer could get Government price supports at about $1.54 a bushel when corn was $1.20 in the open market. This was at 88 percent of parity.

But this year the new "modified parity" formula goes into effect. Under this, the parity is figured on the average of the last 10 years instead of the old 1909–14 average. The effect of this will be to lower supports about 5 percent.

Added to all this will be a new and more stringent acreage allotment. To be eligible for price supports, a farmer must agree to plant no more corn than is allowed by this allotment, which is governed by the total national supply. In 1956 this allotment is expected to be about 10 percent smaller than in 1955.

Since most midwestern farmers feed part or all of the corn they raise to hogs or beef cattle, the market prices of corn can be offset by putting it into an animal instead of selling it.

But such an operation is profitable only if the price for the animal is greater than the cost of the feed it took to fatten him.

At this time hogs are eating considerably more than they are worth. At the close of the 1955 market year, they were bringing around $10.50 a hundred pounds at interior Iowa and Nebraska markets.

The cost of raising these animals to market weights varies with different farmers. But it is generally agreed that it takes from $13.50 to $15.35 a hundred pounds to accomplish this.

The price of hogs dipped below $15 last fall, and the profit from the record numbers sent to market was either negligible or nonexistent. Some of them, in recent weeks, have been sold with serious losses.

Finally, the price of soybeans dropped to $2.08 a bushel last fall compared with $2.54 in 1954. The support price on these was lowered to 70 percent of parity in 1955 by order of the Secretary of Agriculture. Last year 372 million bushels were raised and this was a record amount. At the end of the marketing year, the price had climbed back to about $2.15. But there were still towering piles of soybeans in storage and the support prices may be lowered again next year in the hope that more will be forced onto the market.

The generally discouraging outlook in the Corn Belt was matched by dim prospects in the wheat areas.

For the winter wheat crop now in the ground and the spring crop to be planted later this year, the support level has been set at 76 percent of parity or about $1.81 a bushel. The 1955 crop was supported at 82½ cents, or $2.08.

Surplus supplies of wheat are greater than for any other commodity and the acreage allotments of 55 million acres now in effect are the absolute minimum the law allows.

All this adds up to a certain drop in income for 1956. Last year many farmers in the wheat areas said their income was from 10 to 15 percent lower than in 1954. Many of them expect their 1956 income to be from $1,000 to $2,000 less than in 1955.

Exactly how badly hurt the farmers now are and how much more they will suffer in 1956 are still highly debatable issues. There can be no question that they made less money in 1955 than they did in 1954 and they are probably going to make less in 1956 than they did last year.

Lowered farm income was beginning to be felt in some phases of midwestern economy. Iowa retail stores reported Christmas sales held even with 1954's. But farm implement sales were down last fall below a year ago and the banks were beginning to report the need for greater efforts in collecting loans.

Cathedral of the Pines—A National Shrine

EXTENSION OF REMARKS
OF
HON. PERKINS BASS
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. BASS of New Hampshire. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

CATHEDRAL OF THE PINES,
Rindge, N. H., November 28, 1955.

Congressman PERKINS BASS,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN BASS: Regarding the proposed joint action by you and Senator STYLES BRIDGES of introducing legislation by the Congress of the United States to effect recognition of the altar of the Nation in the Cathedral of the Pines, Rindge, N. H., as a national shrine I do want you to know that we are most grateful to have your continuing help and interest in securing this further assurance by the Congress that every life is as precious and of as much meaning as another, that there should be national recognition given for the lives of all Americans sacrificed in war service.

This proposed effort is not to further memorialize the military alone but all Americans who sacrificed their lives in war service—those in the uniforms of the military and those in or out of uniforms of other organizations also in war service. The proposed action by you and Senator BRIDGES, if effected, will correct in particular a lack of national recognition for the debt we owe for the sacrifice of the lives of women as well as of men. I am quite sure the American women will appreciate what is done in this matter.

The Bureau of the Budget is assured no cost of any kind to the Government is involved in this proposed action.

I am in receipt of a communication under date of November 10, 1955, from Col. Charles B. Shaw, officer in charge, the American Battle Monuments Commission, that the Commission has not erected in the United States a monument or memorial recalling the sacrifices of the men and women in war service, both the military and the civilian.

Referring to correspondence under date of April 20, 1953, from the Secretary of the Interior to the Honorable Hugh Butler, chairman, Committee on Interior and Insular Affairs, the thought was expressed that eventually the Tomb of the Unknown Soldier in the Arlington National Cemetery will commemorate American war dead of all wars. I doubt this because there are now the WAC's, WAVES, and WAF's—certainly this Unknown Soldier's Tomb can hardly become

a memorial for the sacrifices of the lives of women.

The Cathedral of the Pines with all of its appointments is held by the Cathedral of the Pines trust whose trustees are members of differing faiths charged with maintaining and perpetuating this cathedral "dedicated to Almighty God as a place where all people may worship."

The Altar of the Nation was dedicated in 1950 by the late Rev. Dr. Henry Sloane Coffin, president of the Union Theological Seminary, as a memorial for all the American war dead. The Altar of the Nation has been given national recognition for the tributes of the following have been placed at the Altar of the Nation:

The President of the Uinted States (three times).

Each of the Governors of the 48 States.

The national commanders of the following national patriotic organizations: American Legion, Veterans of Foreign Wars, Jewish War Veterans, AMVETS, Marine Corps League, Fleet Reserve Association, Military Order of the World Wars, Veterans of the Y. D., United Spanish-American War Veterans, Disabled American Veterans.

Sons of the American Revolution by three of the president generals.

Daughters of the American Revolution by President Generals Carraway and O'Byrne.

The Overseas Press Club of America, Inc., by Louis P. Lochner, president.

Service organizations: The Salvation Army, by Col. Ralph T. Miller, provincial commander; the YMCA, by General Secretary Jay A. Urice; the Knights of Columbus, by Luke E. Hart, supreme commander.

The General Federation of Women's Clubs, by Mrs. Theodore Chapman, president.

For the scientists, by Mrs. Robert H. Goddard, widow of the inventor of the rocket bomb who gave his life in service to his country.

The American Federation of Labor, by George Meany, president.

Farmers' organizations: The Grange, the 4-H Clubs.

Fraternal organizations: Masons, DeMolay, Order of the Eastern Star, Odd Fellows and Rebekahs, Knights of Pythias, Kiwanis, United Commercial Travelers, Order of Scottish Clans of New England.

It is fitting that the Altar of the Nation, the first national recognition recalling the sacrifices of the lives of all the American war dead, is in New Hampshire, New England, for here came and here were born the sons and daughters who strove for better living, freedom, and independence, and who were among the first to sacrifice their lives for America.

The Altar of the Nation is expressive of the character of the people who founded this country—rugged and useful. This altar is no great example of artist's sculpturing. The Altar of the Nation is mostly built of the rough rocks wrenched from the cathedral grounds by the pioneers, who took possession of this land in 1760, and their descendants. These rocks recall man's struggle and intent in creating America. The three huge blocks of verde antique marble forming the top of the Altar of the Nation came from the quarry in Cardiff, Md., through which runs the Mason-Dixon line and thus symbolizes the North, the South, and the Union. Incorporated into the face of the Altar of Nation are the tributes of stones from each of the 48 States, bound together to express the unity and strength of a grateful Nation in this memorial to all her war dead, and stones as tributes from Eisenhower, Marshall, Leahy, MacArthur, Nimitz, Halsey, Bradley, Summerall, Ridgway, and Doolittle.

The Altar of the Nation is useful because representatives of 35 different faiths have conducted, each in its own way, services of divine worship before this altar—Roman Catholic, Protestant, Jewish, and other faiths; white, black, and yellow—thus giving meaning to "one Nation, under God, indivisible."

Almost half of the people of America signify they see no necessity for supporting the authority for both the moral and the civil laws—the church, synagogue, temple, or meetinghouse—for they belong to no church of any sort in any way. Because this altar is unique it is arousing curiosity on the part of some of these seventy or more million people of America sufficiently to get them here. There is abundant proof accumulated over these first 10 years of establishment of the Cathedral of the Pines that few, even those who said they "did not believe in God" left the cathedral knoll without some sense of appreciation of or obligation to Almighty God. According to the State troopers and the local police on traffic duty there have been almost 2 million visitors to the Cathedral of the Pines from all of the 48 States, the Territories, and from every country of the world, yet Rindge is a very small hill town and far away from any large center of population. Recalling this response, please remember publicity has not been asked for, not one cent has been paid for advertising, and there has been no solicitation in this cathedral effort except for the stones from the States and the commanding officers of the Armed Forces.

All faiths are invited to use without charge the Cathedral of the Pines, its appointments, the parking fields with attendant traffic police, and the services of the entire cathedral staff. There are never any collections taken at any service, sacred concert or daily organ meditation, there are never any parking charges nor tickets of admission. The entire support of the Cathedral of the Pines is voluntary and unsolicited.

Noted members of the clergy, educators, lawmakers and many of the outstanding businessmen of this country have expressed their appreciation of the Cathedral of the Pines with its Altar of the Nation.

It has come as a shock to a great many visitors to the Cathedral of the Pines to learn that nowhere else in America is there national public recognition given for the sacrifice of the lives in war service of those of the American Red Cross, of the Salvation Army, the YMCA and K. of C., nor for the lives of the scientists sacrificed in war service in the laboratories, nor for the sacrifices of the lives of men and women in war service killed in the shops and factories. Where else is national recognition given for the sacrifice of the lives of the war correspondents who braved the heaviest gunfire to get the news to boost the morale of the men at the front and the folks back home? or for the sacrifice of the lives of all the pioneer women killed defending their homes whilst their men were answering their country's call?

I know we agree there are degrees of sacrifices; that is, the sacrifice of life in armed conflict or the sacrifice of life by disease or by accident but while in the uniform and a member of the Armed Forces. It seems to me that if the latter are national heroes and buried in the Arlington National Cemetery the sacrifices of the lives other than they who as truly gave their lives for all of us should not be forgotten and that national recognition by the Congress of the United States of America of the Altar of the Nation in the Cathedral of the Pines in Rindge, N. H., should thus be accorded this memorial appointment of service to God and country as it has been by the individuals and organizations heretofore listed.

Sincerely,

DOUGLAS SLOANE,
Founder.

Benefits for World War II and Korean Veterans

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article from the November 1955 issue of Redbook magazine entitled "What Veterans and Their Families Should Know Now," written by Harvey V. Higley, Administrator of Veterans' Affairs. I believe this to be a very timely article which will be of great interest to veterans and their families.

The article follows:

WHAT VETERANS AND THEIR FAMILIES SHOULD KNOW NOW—KOREAN RETURNEES HAVE A NEW GI BILL OF RIGHTS—WORLD WAR II BENEFITS ARE CHANGING AND EXPIRING—HERE ARE ANSWERS TO A VETERAN'S 30 MOST IMPORTANT QUESTIONS

(By Harvey V. Higley, Administrator of Veterans' Affairs)

Our grateful Nation has granted a wide variety of benefits to veterans and their dependents. Nearly 8 million of the 15 million World War II veterans have participated in the GI bill education and training program. Already an additional million Korean veterans have joined their ranks. More than 4 million GI loans for homes, farms, and businesses have been guaranteed or insured under World War II and Korean GI bills. During 1954 VA contact representatives assisted more than 12 million veterans and their dependents.

Under the law, the VA cannot approach the 21,500,000 veterans to inform them of their personal status in the veterans' benefit program. The VA discusses individual cases only if and when veterans or their dependents decide that they want to claim a benefit. Then the VA can help them determine what they are entitled to and assist them in filling out the proper forms.

Several of the most important veterans' benefits have deadlines. We suggest that each veteran prepare a memo book of dates on which his GI insurance premiums are due, the cut-off dates for GI loans, and the starting and final deadlines for educational benefits.

Here are the answers to the most important questions asked by veterans and their dependents:

LOANS

Question. For what purposes may a veteran get a GI loan?

Answer. Three types of loans are permissible: 1. To purchase, construct, or improve a home. 2. To buy a farm, farm land, stock, feed and seed, farm machinery, and other farm supplies and equipment. 3. To buy a business or otherwise to enable a veteran to undertake or expand a legitimate business venture.

Question. How much loan entitlement does a veteran have for various purposes?

Answer. Sixty percent of a home loan, or a loan for a farm on which there is a farmhouse, is guaranteed, up to a maximum of $7,500; 50 percent of a real-estate loan, up to $4,000; 50 percent of a non-real-estate loan, up to $2,000. The total maximum entitlement is $7,500.

Question. What is the maximum duration of loans?

Answer. Farm real-estate loans can run up to 40 years; business real-estate loans, to 30 years; home loans to 25 years; non-real-estate loans, to 10 years.

Question. Where can a veteran obtain a loan?

Answer. From any private lending institution that is willing to grant one. In rural areas where the VA finds that GI home loans are not available from private sources, it will give direct loans, but the VA is limited by the funds it has available.

Question. Does it make any difference whether the lender grants his loan on the basis of Government guaranty or Government insurance?

Answer. Yes. It makes a big difference. Insured loans use up a veteran's loan entitlement only to the extent of 15 percent of the amount borrowed, but lenders usually make them only for non-real-estate, business, and farm purposes. Guaranteed loans use up much more, if not all, of the entitlement and are made mostly for home loans.

Question. Will a veteran be able to get a GI loan indefinitely?

Answer. No. The deadline for World War II veterans is July 25, 1957. For Korean veterans, the cut-off date is January 31, 1965.

Question. Can two or more veterans pool their loan entitlements to buy real estate, a business, or a farm?

Answer. Yes. The VA sees to it in such a case that each veteran is protected and is not liable for more than his own share of the loan.

Question. Can a veteran get a loan for a home or business if he buys it jointly with a nonveteran?

Answer. Yes, but only the veteran's portion of the loan will be guaranteed or insured by the VA.

Question. Does the VA guarantee veterans against faulty construction or materials in the homes they buy?

Answer. No. The VA does, however, make a minimum of three inspections during construction of a new house to make sure it conforms with VA's minimum property requirements.

Question. If a veteran sells the home he bought with a GI loan, is he entitled to a new loan for purchase of another house?

Answer. Ordinarily, no. But if ill health, condemnation of the property, or unforeseeable transfer to another job location forces a veteran to sell his home, the VA may grant him a second loan, provided that the first one has been repaid in full.

Question. What can a veteran do if he wants to buy a certain home, yet the VA refuses to guarantee the loan because its appraiser has set a valuation lower than the price demanded by the seller?

Answer. He can only negotiate with the seller to meet the appraised value. If he attempts to make a hidden side deal by paying the difference between the seller's price and the VA valuation, he is subject to prosecution and can lose all his veteran's benefits.

HOSPITALIZATION

Question. If a veteran needs medical care, what can the VA do for him?

Answer. In Veterans' Hospitals, the number one priority goes to all veterans who need treatment for service-connected disabilities. Number two priority belongs to wartime veterans who have service-connected disabilities, but who need treatment for nonservice-connected disabilities. Number three priority goes to all wartime veterans who have no service-connected disabilities. In order to get treatment, members of the third group must sign a sworn statement that they cannot afford to pay for medical attention elsewhere.

Question. If a veteran needs emergency treatment in a non-Government hospital, will the VA reimburse him for the expenses?

Answer. Yes; but only for service-connected disabilities and if there were no Government facilities available and if a delay would have been dangerous. Also, the hospital must get immediate authorization from the VA for the treatment.

Question. Can a disabled veteran remain indefinitely in a VA hospital?

Answer. He can stay as long as need for hospitalization exists. After that, if his condition prevents him from earning a living and if he needs a home, he may be sent to a domiciliary home.

Question. If a veteran needs a medical check-up because he doesn't feel well, can the VA give him an examination?

Answer. No; the VA is not permitted to do this under the law. Medical examinations may be given only in connection with VA benefits.

INSURANCE

Question. Is it possible to convert Korean GI term insurance to permanent plans?

Answer. Only disabled Korean veterans who have convertible term policies because of service-connected disabilities may convert their GI insurance.

Question. Are peacetime veterans entitled to any GI insurance after discharge?

Answer. They have the same insurance privileges as Korean veterans.

Question. A Korean veteran has 120 days from discharge to obtain term insurance. If he applies early, does he lose his 120 days of free indemnity?

Answer. If the veteran states in his application that he wants his insurance to go into effect at the end of the 120-day period, he will suffer no loss. He must remember, however, that the deadline for application and first payment is 120 days, not 4 calendar months. If he is late, he loses his entitlement.

Question. How is GI insurance money paid out if the veteran failed to specify the method of payment?

Answer. It is paid to the beneficiary in 36 equal installments. The beneficiary can select a longer rate of installment payments, but he cannot get the money in a lump sum.

Question. If a veteran allows his World War II National Service Life Insurance to lapse, can he have it reinstated?

Answer. If he has a term policy, it can be reinstated during the term period. If he has a permanent policy, it can be reinstated at any time by paying all the back premiums. In both cases, the veteran must meet health requirements.

EDUCATION AND TRAINING

Question. Who is classified as a Korean veteran?

Answer. Anyone who served in the Armed Forces between June 27, 1950, and January 31, 1955, is entitled to some benefits of the Korean GI Bill. For service begun in this period, a veteran is entitled to educational benefits at the rate of 1½ days of schooling for each day served before his discharge or the end of his first enlistment.

Question. How much money will a Korean veteran get to finance his education and training?

Answer. For full-time training he will get $110 a month if he has no dependents, $135 if he has one dependent, and $160 if he has more than one dependent. This amount is for tuition, maintenance, fees, supplies, books and equipment.

Question. Is there a VA restriction on the amount of money a veteran may earn through part-time employment while attending school under the Korean GI Bill?

Answer. No. Regardless of his earnings, his monthly allowance remains unchanged as long as he is taking a full-time course in school.

Question. What are the time limitations on the educational and training benefits for Korean veterans?

Question. Is there a VA restriction on the

Answer. A veteran must have begun his course of study within 3 years from the date of his separation from service. It is not sufficient merely to have made an application. Those veterans discharged on or before January 31, 1955, must finish by January 31, 1963, or 8 years after discharge, whichever is earlier. Those discharged on or after February 1, 1955, must finish by January 13, 1965, or 8 years after discharge, whichever is earlier.

COMPENSATION AND PENSIONS

Question. What is the difference between disability compensation and pension?

Answer. Compensation is payable to veterans whose disabilities are due to service. Pension is payable only to totally and permanently disabled veterans whose disabilities are not due to service and whose income from other sources does not exceed certain limits.

Question. If a veteran's disability increases, can he have his compensation payments increased?

Answer. Compensation can be increased in proportion to the disability. A certificate from a private physician will be sufficient basis to reopen a veteran's case.

Question. Does the law provide disability compensation for peacetime veterans?

Answer. Yes, at the rate of 80 percent of the wartime scale. If the disability is due to armed conflict (during peacetime) or to extra hazardous service, compensation is provided at full wartime rates.

Question. Can a World War II veteran still file a claim for disability compensation?

Answer. Yes, he can file at any time.

Question. If the widow of a Korean GI remarries, will she lose the monthly $92.90 indemnity payment she has been receiving?

Answer. No. Remarriage does not bar the widow of a Korean veteran from receiving full indemnity payment for 120 consecutive months.

Question. Is there a time limit for filing claim for reimbursement of expenses for burying a veteran?

Answer. Yes. The claim must be filed within 2 years after the date the veteran was buried. Up to $150 is payable toward the burial expenses of eligible wartime veterans and disabled peacetime veterans.

Increase Rates of Education and Training Allowances for Veterans

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. FOGARTY. Mr. Speaker, Mark Twain is credited with having referred to the weather as something that everyone talks about, but no one ever does anything about it.

I have heard, frequently, the same kind of criticism about legislative enactments by the Congress. Everyone talks about what is wrong with the law, but nobody does anything about it. I would like to claim a place in history for having inspired the 84th Congress to do something about the shortcomings of the education provisions of the Veterans Readjustment Act of 1952—that is Public Law 550 of the 82d Congress.

I am today introducing legislation which will provide a general increase in the rates of education and training al-

lowance payable to veteran trainees enrolled under title II of the Veterans Readjustment Assistance Act of 1952.

The bill I have introduced is restricted to increases in rates of payments for education and training only and in no manner affects the eligibility requirements for those veterans who desire to qualify; also, the bill applies only to veterans of the Korean conflict. No basic change is intended or implied; all that is asked is that this session of Congress recognize some basic facts—and do something specific to help veterans meet the problem which those basic facts have created.

Basic fact No. 1 is—the Congress of the United States provided a machinery whereby the veteran of America's wars could get an education and so readjust himself to society, thus helping himself to be a better citizen and, at the same time, helping his country to make better use of the veteran as a member of society who is making the maximum contribution of which he is capable.

Basic fact No. 2 is—the veteran in school today is finding it very difficult to make ends meet; this strain jeopardizes his opportunity to be a good student, a good graduate, and hence, a good citizen who can provide his country with the maximum benefits of his talents.

My proposal asks only that we recognize these two facts and provide an increase in the allowances provided for in Public Law 550, as amended.

I would like to remind my colleagues that we live in a day when the spotlight is on the need for aid to education.

In the area of the sciences which, to our own personal knowledge, take on ever greater significance with each forward thrust of mechanical, electrical, aeronautical developments—to say nothing of developments in the atomic field—there is a woeful lack of students devoted to the subject of study and exploration. It has been my personal experience that a student worried by financial harassment is not the best possible student. A little worry may be a good thing—but if we want the young men who were foremost in our minds when we enacted the Veterans' Readjustment Act to be good students—and future good scientists, or scholars—or even mighty good citizens—we should do whatever we can to reduce this worry factor to a minimum. For this reason, I have become acutely concerned with the need for an increase in these educational payment rates.

The Congress has considered and enacted two so-called GI bills—in 1944 and 1952. To the best of my recollection when these proposals were first broached there was no suggestion of a bonus or reward or pension. There was a recognition—and I have to admit that this plea made the greatest impression on me—that because of war, a large segment of the youth of our country had been lifted from the natural stream of youth who would, in the normal course, attend college. In addition, there was a recognition of the fact that many young men and women who, under normal circumstances, would not attend college, had been made more mature by their wartime experiences and had become educable material. Unless I am gravely mistaken, this was the moving cause behind the GI bills. There was, too, the readjustment phase—during which young men and women could get themselves better prepared to assume their proper places in the democratic society which is ours—with emphasis on education constantly rising.

That was the reason for the GI bills, in their educational aspects. It has now reached the point where it is so difficult for eligible and qualified and eager young men and women to continue in school because of the increase in the cost of living and the cost of education since the basic laws were written that the very purpose of this excellent legislation is being frustrated.

The GI bills, so-called, were never intended to be a complete subsidy. However, they were intended to be a great inducement—and a substantial help—to each veteran in obtaining a good education—to the betterment of himself, his family and our society.

Statistics are, to many, a bothersome thing, and I will not annoy you with them. I know I can rely on your intimate knowledge of the fact that it costs more today to obtain a degree in an institution of higher learing that it did when the original GI bill was passed in 1944.

The increase in the rates of payment to veterans which my bill asks for are small enough. But—and I urge my colleagues to consider this well—the need for an inducement to our veterans to go to school, to stay in school, to acquire all the knowledge which a good education can provide is far greater today than it was when the original GI bill was enacted.

The whole pattern of this legislation has been one of assistance. I say again, never was it thought there would be a complete subsidy.

Times have changed—the need has changed only in the sense that it has grown greater. Costs have changed in two areas—they are greater and what is more fearful, they maye become discouraging. We had faith in these veterans as defenders of our country. We should be proud of our continuing faith in them as crusaders for our country.

Help them to get the best possible education and we need have little fear for the future of their children, who, after all, see America through their father's eyes, whether it is a good and intelligent approach to Americanism or a discouraged and disillusioned portrayal of the attitude of the American Congress.

A Program for Our National Parks

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. ENGLE. Mr. Speaker, I am very glad to note in the President's message that he proposes to stir something up in reference to the national parks. I know that the National Parks Service has been working on a program for about a year now, called mission 66. I understand that this program is anticipating a development and management plan that will put our parks in shape. With the anticipated increase in visitors to the parks—80 million by 1966, I believe these parks are of tremendous value to the people and a great economical asset, and they have been going to pot by overuse and lack of funds to properly develop and maintain them. I, for one, am going to do all in my power to get a good, long-range program for the national parks, so that our great national heritage in the national parks will be put in proper shape and not allowed to be further abused or rundown.

As chairman of the Interior and Insular Affairs Committee of the House of Representatives, I am going to push so that this program will be submitted to us at the earliest possible date.

Remarks of Len Jordan, Chairman, United States Section, International Joint Commission, Before the Oregon Farm Bureau Federation, Salem, Oreg., November 15, 1955

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, there follows the studied and informative address of the Honorable Len Jordan, Chairman, United States Section of the International Joint Commission, before the Oregon Farm Bureau Federation at Salem, Oreg., on November 15, 1955. Chairman Len Jordan is a distinguished former governor of the State of Idaho, who is also serving with ability and distinction as chairman of the United States Section of the International Joint Commission:

I am greatly pleased that you asked me here to speak to the annual meeting of the Oregon Farm Bureau Federation. Back through the years I have come to have a very special regard for your fine oganization and the high principles for which you stand. Because all of my life I have lived close to the soil, I share with you an unswerving dedication to sound farming practices and the rewarding satisfaction that comes from taking good care of our land and water resources. My interest therefore is not purely speculative, but derives from many years of practicing conservation and working daily with the problems of resource development.

Then, too, I am always pleased to have an excuse to come back to Oregon. My family home is Enterprise, Oreg. Enterprise is the Oregon gateway to the Hells Canyon country. I attended public schools there and finally graduated from the University of Oregon. It was there I met my wife, who was also an Oregonian. I shall always be grateful to this State for all that

was done to provide me with an education. I remember, too, how the $25 per month which Oregon provided for her veterans made it possible for me to stay in school.

Here in Oregon, it is good to renew many old and highly valued friendships, not the least of which is with your able and distinguished governor. Paul Patterson and I are friends of long standing—not only were we classmates at the University of Oregon, but for part of a year when we were doing graduate work, we lived together. So I take personal pride in his fine record of accomplishment and, knowing his qualifications as I do, I predict for him, should he seek it, a great future in the service of his State and Nation.

I am reminded that Salem is the home of another great Oregonian who is making good in the major leagues—the Secretary of the Interior, Douglas McKay, whom I came to know and respect when he served you well as governor. Back in Washington, he is discharging one of the toughest jobs in the Cabinet with complete fairness and with dignity and skill. In the 10 months I have been in Washington, I have found it both pleasant and productive to consult with him frequently on matters having to do with water-resources development.

As Chairman of the United States Section of the International Joint Commission, it is my duty along with my two colleagues to safeguard the interests of the United States in our dealings with Canada over boundary waters and rivers which cross the boundary. Our instructions under the treaty of 1909 with respect to boundary waters are very well defined with the result that we are able to proceed amicably and equitably with such splendid joint projects as the Niagara River remedial works, the St. Lawrence seaway project, and the gigantic power project in the International Rapids section of the St. Lawrence River at Barnhart Island.

Unfortunately, the principles having to do with rivers which cross the boundary are not so explicit as those principles for rivers forming the boundary. Thus, with respect to the Columbia, we find ourselves occupied with the Canadian section in discussions of diversions, of fish versus dams, and of downstream benefits from headwater storage. I shall not at this time detail either our differences or our areas of agreement.

I should like to repeat, however, that the United States section is eager and willing to discuss development plans for the Columbia River that will be of benefit to both countries.

On April 12, 1954, when, as Governor of Idaho and chairman of the Northwest Governors' Power Policy Committee, I made a speech before the Pacific Northwest Trade Association at Portland, Oreg., in which I said:

"I am pleased that in our Northwest Governors' Power Policy Committee we have enjoyed the active participation of Canada. Not only the Province of British Columbia but Canadian utilities as well have served with us and we profit by their service. Our interests are so closely integrated that it would be folly to plan separately. Much of the ultimate success of maximum river development will depend on how well we can integrate our planning.

"Adequate annual storage as close to headwaters as possible is absolutely necessary to efficient river system power production. Records indicate that about half of the annual run-off of the Columbia takes place in the 3 months of May, June, and July. Recorded flows at The Dalles show a variation of from a low of 40,000 cubic feet per second to a record high of nearly a million cubic feet per second. Several of the best storage sites are on the Canadian side. The Mica Creek site alone could store 10 million acre-feet of usable annual storage. In addition to at-site production, downstream benefits from such storage are substantial. We urgently need a cost and benefit allocation survey for upstream storage as an equitable basis for agreement with our Canadian neighbors. No other single accomplishment would lend greater stimulus to river basin progress than this."

These quotes indicate how I felt 18 months ago, before I even knew there was to be a vacancy on the International Joint Commission. I have not changed my mind.

I tell you frankly that the reason I went to Washington, D. C., to work on the Eisenhower team in the field of water resource development was because I believe in the rightness of the administration policy.

But before we discuss the policy of the present administration, let us have a look at the water resource picture of 1953 when the new administration moved in.

For 20 years, first in the Tennessee Valley and later in the Pacific Northwest, we had drifted—and at times almost galloped—toward a Federal monopoly in water resource development—toward a philosophy that the Federal Government has an obligation to supply the electric power for these regions (just why in these two basins and not elsewhere is not clear).

In support of this philosophy there evolved a school of thought whose disciples believe that the Federal Government can meet the situation bigger, better, quicker, and cheaper than anyone else. Just why these "Federal-or-nothing" zealots limited their sphere of conquest to water resource development is also not clear.

It would seem that since the Federal Government owns about two-thirds of the area of the 11 Western States, the possibility of federally owned sawmills to process the timber—of federally owned mines to develop the mineral resources—of federally owned fish canneries to harvest the salmon run—of federally owned farms and livestock ranches to utilize the crop and grazing lands—all of these should have been attractive to the Federal-or-nothing schemers.

But it may be that these last mentioned programs to develop the resources that belong to all of the people would have come along later in their timetable of conquest. Certainly it is easy to see that the control of the electric power of an area is a very alluring and exciting goal in power politics.

There is a special kind of challenge in the political power that is inherent in the control of the electrical power of a region.

Electricity has come to be a necessity in your home, on your farm, in the business houses and industrial plants of the Nation. It is almost as essential as the water we drink and the air we breathe. Under conditions of scarcity, Federal officials who control the production and distribution of electricity in a region of Federal monopoly can dictate the location of industry, the rates which users must pay, and the amount of energy available. They are not subject to regultaion by the Federal Power Commission or by State regulatory commissions as are non-Federal agencies. They have within their hands the economic life or death of the customers or of a community under this monopoly.

This might not be true if there were always an ample supply of energy available, but history has demonstrated that in these areas where a Federal monopoly exists, the region lives from one crisis to another, from one power shortage to another, depending on the whims of an always reluctant Congress to provide money for additional power. Such areas live in a perennial power shortage.

We have seen here in our own Northwest various electricity customers pleading for additional power from a system that produced not enough to go around. This is not a healthy situation. It is not good for America when political officials, whether they belong to my party or the other fellow's party, are in a position to grant or deny the right of any American citizen to start or expand a business.

Unregulated monopoly is not good—whether it be private or public monopoly, it results in arbitrary management, in indifference to the wishes of the people to be served, and it removes all incentive toward economy and efficiency, the two factors which are so essential to a free economy.

But let us assume for a moment (and certainly for no longer than is necessary to emphasize a point)—let us assume that the Federal monopoly advocates have entirely overcome the resistance locally—that not one single voice in the entire Northwest speaks out in opposition to their Federal-or-nothing philosophy—the question then is: Just what chance have they dollarwise to keep their promises for 100 percent Federal development?

First, we must consider the demand—what kind of money will be needed to keep ahead of the load growth? A joint committee representing all the non-Federal agencies in the power business in the Northwest appeared before a committee of Congress last spring with some figures. They have agreed, and they have officially and publicly declared that it will require $3 billion in the next 10 years to provide an adequate power supply for this region.

Future needs will require an average expenditure of $300 million a year.

Do you know what has been the average appropriation for the Northwest for the last 10 years including the free-spending appropriations to complete war emergency commitments? Past appropriations have averaged $150 million a year.

Do you realize that during the last 10 years, the Northwest, with about 3 percent of the population, has had approximately 40 percent of all the money of the whole United States that has been appropriated by Congress for hydroelectric development?

Now I ask you, is it realistic to assume that the other 97 percent of the people in the other 44 States of the Nation are going to continue to put 40 percent of the total appropriations for hydropower into 1 limited area?

And I ask you further, do you believe that in this day when the emphasis in Washington is on a balanced budget and a reduction of the Federal debt—when the trend of this administration is definitely away from Federal monopoly—do you think for 1 minute that the Federal-or-nothing candidates here in the Northwest who ask you to support their philosophy can bring home twice as much money for hydropower as you have had in the past?

I'm sure you don't believe any such thing and I don't think they do, either. Here is another case of political sophistry that we could pass off for the fraud that it is if it were not for the very serious effect that their tactics of delay and obstruction have on the orderly development of our water resources. I shall have more to say about this later.

Other Senators have taken a much more realistic attitude when faced by the inability or unwillingness of the Congress to appropriate Federal money for projects already authorized for Federal construction.

Witness the case of the Coosa River project. Last year Senators SPARKMAN and HILL, together with 8 of the 9 Alabama Congressmen, introduced and secured the passage of a bill to deauthorize Federal construction of hydroelectric dams on the Coosa River in Alabama and permit that construction to proceed by an investor-owned utility, the Alabama Power Co. Because, they said, the project had been authorized for many years and, loyal Democrats that they were, they were never able to get money for its actual construction from either the Roosevelt or Truman administrations.

Witness also a similar case in Oklahoma. Last year, Senators KERR and MONRONEY secured the passage of a bill to deauthorize construction of hydroelectric dams on the Grand River in Oklahoma and to authorize

the Grand River Dam Authority, a State agency, to proceed with that construction. They also had waited 10 years for Federal appropriations.

These Senators and Congressmen from Alabama and Oklahoma are realists. They recognize the practical political fact that it had not been possible to secure from the Congress controlled by their own party and under Presidents of their own party, the money that was required for necessary hydroelectric development in their own States.

I hope you will pardon me for relating a few personal experiences to point up the transition that has taken place in the field of water-resource development in the past 4 years or from one administration to another.

When I became Governor of Idaho in January 1951, the Federal monopoly advocates were still in the saddle, but riding with some caution. They had suffered some setbacks at the polls because the voters of the Northwest were alerted to the danger of a valley authority for the Columbia patterned after the Tennessee Valley Authority and had in most instances defeated the candidates who espoused the valley authority concept. The three Northwest Governors—McKay, Langlie, and Robins—had in 1948 openly and publicly declared against any form of a Columbia Valley Authority.

The most pressing and interesting prospect for resource development from where I sat in the spring of 1951 was the renewal of a proposal by the Bureau of Reclamation to construct a high dam at Hells Canyon. Personally this had great interest for me.

It was in 1932, at the depth of the depression, that my wife and I, with our three children—Steve, aged 7 months; Joe, 3½; and Patsy, 6—moved to an Idaho sheep ranch on the Snake River just below Hells Canyon. There were no roads, no schools, no churches, few neighbors. The roof-pitched hillsides—"steep as a cow's face," we used to say—were covered with bunchgrass that was abundant and lush and nutritious.

Despite the inconveniences and occasional hardships, this epoch in our lives was full of rich and rewarding experiences. Nine years later, we emerged with excellent health, a wholesome respect for plain living and hard work, and an abiding determination to conserve and protect the bounteous resources of nature.

Many times I have dreamed of the day when the tremendous power potential of the river would be harnessed for man's use. And from personal experience I know some of the vagaries of the river.

Moreover, as Governor, I was interested in the development of my State. I was aware of the tremendous short-term prosperity my State would enjoy with the spending of that kind of outside money.

Few people realize to what extent the Snake is a "working" river. It is the lifeblood of Idaho. Nearly 3 million acres in southern and eastern Idaho are irrigated from its waters and possibly another million acres are available to be reclaimed when economic conditions warrant. The headwaters of the Snake are used and reused for irrigation. In most years all of the water in the river near Twin Falls is diverted at Milner Dam for irrigation.

Hells Canyon is downstream from all present or future irrigation in Idaho. Not one single acre could be irrigated from Hells Canyon storage. The high dam advocates have always painted a rosy picture of the availability of power revenues to subsidize future irrigation projects. But more of that later.

Of all the tributaries of the mighty Columbia, Snake River is by far the best regulated. Contributing at Hells Canyon no more than 10 percent of the average annual flow of the Columbia, this one-tenth part which is Snake River now has in use and under construction about 9 million acre-feet of irrigation and flood control storage—practically as much storage as exists in the other nine-tenths share—or all of the rest of the entire Columbia system. To be more specific, if the entire Columbia system had storage in the same ratio as Snake River above Hells Canyon, the system would have about 90 million acre-feet which is more than 3 times as much storage as the Corps of Engineers considers necessary for their main control plan.

As a consequence the Snake is not a "flooder." In the flood season of 1948, it contributed less than one-half the flood flow of Salmon River and less than one-third the flood flow of Clearwater River.

President Truman had endorsed a high dam for Hells Canyon. Naturally it had the blessings of the Bureau of the Budget and of Secretary of the Interior Chapman and of Commissioner of Reclamation Strauss. Having failed once before in securing an authorization, they apparently decided this time to enlist local support by working out the draft of the authorization bill from the Boise office of the Bureau of Reclamation.

Among other things the sponsors of the Federal high dam promised to meet two essential requirements, viz:

1. Protection of present and future water rights for irrigation.

2. Use of power revenues to subsidize reclamation of approximately 300,000 acres of new land near Mountain Home, Idaho.

These were laudable objectives. Many conferences were held in my office between officials of the Bureau of Reclamation who were instructed to draft a bill and various State officials and other interested Idaho people. Some of us even made a trip to Washington, D. C., to consult with Secretary Chapman, Commissioner Strauss, and others.

Our intense research and scrutiny began to point up some very disquieting facts. Congressman BUDGE, of Idaho, himself an able water lawyer, was among the first to suspect that Idaho's water rights were being placed in jeopardy. This was a shocking discovery and was supported by all of our legal advisers.

Our counsel contended that the right of the Federal Government to build hydro powerplants derived from the Constitution, either the navigation or general welfare clauses; that for this reason, words written into an authorization bill intended to guarantee protection to private irrigation rights, present and future, could not possibly supersede the paramount constitutional right of the Federal Government to control the waters of the Snake River; that some future administration might conclude that water flowing through the turbines at high Hells Canyon to sustain the production of electric energy might better serve the public interest than if this same water were consumed upstream by present or future irrigators. To date, no one has convinced me otherwise.

On the other hand, a like development by non-Federal interests would definitely be subject to and controlled by State law under which both our Constitution and numerous statutes declare that the use of water for irrigation has a higher preference than the use of water for power.

Meanwhile, Governor Langlie had assigned competent engineering personnel to assist in scrutinizing the economic feasibility of the high dam. After much research and many consultations, our engineers working together reached the conclusion that the Department of Interior proposal to build a high dam at Hells Canyon was not the best plan for the development of that stretch of the Snake River. (The rightness of their conclusion is borne out by the recent unanimous decision of the Federal Power Commission which, after hearing evidence for nearly 2 years, approved the applications of Idaho Power Co. to construct three dams at a cost less than half that of the single high dam.)

Our investigations further disclosed that the Bureau of Reclamation figures on cost of supplying water to land to be reclaimed in the Mountain Home project would exceed $1,200 per acre, about $200 of which could be repaid by the landowner, while similar land could be bought with water and with improvements for about $400 per acre. I believe in reclamation; I like to see the desert made productive with water, but someone has to pay for these projects. Is it fair, is it justifiable, to spend taxpayers' money for a dam that would cost 2½ times as much as its comparable alternate just in order to take advantage of reclamation law which permits power revenues to be used, under certain conditions, to subsidize irrigation? The subsidy in this instance would be about $1,000 per acre. Someone in the future would be charged enough more for his electricity to pay not only the excessive cost of the high dam but also the excessive cost of the irrigation subsidy.

I am sure there are better ways to get water on the Mountain Home project.

Having reached these conclusions, I was completely disillusioned with the promises of the high dammers to safeguard our water rights and to provide subsidies from power to reclaim new land. That is why I felt it was my duty to go to Washington late in the spring of 1952 and oppose, before a committee of the Congress, a bill to authorize Federal construction of a high dam at Hells Canyon. I think my appearance there on that mission was probably the reversal of a pattern. Over the years it had become the accepted custom for a governor to go periodically to Washington, hat in hand, pleading for handouts. I know that many of the Congressmen on the committee were shocked to hear me say that Idaho did not want some $400 million of Federal money spent for a high dam on our border; that I feared such a project would jeopardize our water rights and that I believed we could best develop our own river under our own State laws subject, of course, to such Federal regulations as required of the licensee by the Federal Power Commission as a condition of the granting of a license.

Late in July of 1952, I was invited to Denver, as were many others, to confer with Candidate Eisenhower and staff on matters of importance to my State in the coming campaign. Among other matters, a water resources policy was discussed because it was of such vital concern to my Idaho constituents.

At this Denver meeting we set up a conference of Candidate Eisenhower and his staff with the Western Governors at Boise, Idaho, to further discuss problems of the West. Here again at Boise, late in August, among other matters we discussed the importance of a sound water resources policy.

Naturally we were pleased when, early in the campaign General Eisenhower expressed his confidence in the American people and his belief that our future in water resource development lies with the people and not solely with a Washington bureaucracy. He said:

"We insist that this must be done through partnership, through first of all getting the wisdom, the power, and the facilities that are available in the locality and bringing in the Federal Government, not as a boss, not as your dictator, but as a friendly partner ready to help, and to get its long nose out of your business as quickly as that can be accomplished.

"We hold that these projects are far better planned, developed and operated with the full cooperation and wisdom of the local authorities than they are by putting them exclusively under the direction of some longhaired bureaucrat sitting behind a desk in far away Washington, D. C."

What a gratifying relief to have such a fresh, new look into the problem. The President has faith in America. He has faith in the American people, in their ability to solve their own problems, to stand on their own feet, and to carry on the traditions of their forefathers.

The Eisenhower administration believes in a dynamic and expanding economy for the United States. It believes that by unleashing the ability, the determination, and the ambition of the American people, the economy will continue to expand, the output of goods and services will continue to rise, living conditions will constantly improve, wages will keep pace with the economy, and that the United States, guided by this buoyant confidence, is approaching greater horizons of progress than many of us could foresee.

But, you say, what are the tangible results of this program?

We are at peace, and uneasy though it may be, it has raised the hopes of people throughout the world to the highest point in many years.

We are at an alltime level of prosperity. Our gross national product stands today at an annual rate of $390 billion. Our personal disposable income is $272 billion. We have never approached these figures before.

We have more people at work, more jobs, more employment than every before, and these people are receiving more take-home pay with more purchasing power than they ever had before.

I agree that the one discordant note in the entire picture is the fact that farmers are not sharing proportionately in this prosperity. It is very difficult to overcome the very damaging consequences of an inherited farm program that was never right or workable from the outset. There is no easy answer to the farm problem. You may be sure of one thing—this administration will not return to the high rigid price support program which contributed substantially to our present condition. Your fine organization has cooperated fully in trying to find a workable solution to the vexing problem. I am sure that you will continue to advise and work with the best talent which this administration can devote to the task of improving the farmers' share of the national prosperity.

But, returning to the matter of water resources—

President Eisenhower, in his state of the Union message to the 1st session of the 83d Congress, said:

"The best natural resources program will not result from exclusive dependence on Federal bureaucracy. It will involve a partnership of the States and local communities, private citizens, and the Federal Government, all working together. This combined effort will advance the development of the great river valleys of our Nation and the power that they can generate."

I am amazed that anyone would criticize the President's type of approach to this great public program. The partnership idea means people working together. There is nothing new or startling in this approach. It is simply the reactivation of a time-tested American custom. It means that the Federal Government will continue to sponsor those projects which, because of international or other extraordinary conditions, cannot be undertaken locally. It means that local interests, public or private, will be encouraged by the Federal Government to go ahead with necessary power projects on their own. It means also that in some instances the Federal Government will share the cost of a project with local interests.

I call your attention now to a splendid example of international partnership achieved by this administration. I refer to the great St. Lawrence seaway and power project. This billion-dollar development comes under the purview of the International Joint Commission. Last month I had the pleasure, with my colleagues from both the United States and Canadian sections, of a 2-day inspection of the works. When completed this project will provide a 27-foot navigation channel from the Great Lakes to the Atlatnic, and a powerplant which in total output will be second only to Grand Coulee. The local sponsor in this instance, working with the Federal Government on the United States share of this development, is the Power Authority of the State of New York.

You may be surprised to know that during the period 1906 to 1953, some 27 partnership projects were constructed in 13 States. In these cases the Federal Government was operating on a partnership basis with States, municipalities, and with private corporations.

You may be surprised to know also that of these 27 projects, 12 were built under Republican administrations and 15 were built under Democratic administrations.

Not until this administration advocated a return to sound principles did the word "partnership" assume an evil connotation, and then only in the minds of a few frustrated people who seek to play power politics with power development.

At least three partnership proposals are being discussed that affect Oregon directly.

A meritorious bill sponsored by Congressman HARRIS ELLSWORTH presently before Congress would authorize the partnership construction of the Cougar and Green Peter-White Bridge projects here in Oregon.

Both are flood control projects and units of the partially completed Willamette Basin project. Their construction would prevent flood damage estimated at $2,500,000 annually.

The Corps of Engineers would build Cougar and Green Peter-White Bridge dams. The power facilities, including re-regulating dams, may be constructed under FPC licenses by the local interests, or by the Corps of Engineers as agents, and paid for by the local interests. The power facilities would be owned by the non-Federal agencies and operated at their expense.

The dams remain the property of the Federal Government, and except for the power facilities, are to be operated and maintained by the Corps of Engineers. The licensees pay to the United States the proportionate shares of the cost of construction, operation and maintenance of the dams that are allocated to power, as determined by the Corps of Engineers and the FPC.

The bill authorizes the Corps of Engineers to enter into agreements with the licensees for operation of the dams and reservoirs to secure the maximum multiple benefits from the projects.

This legislation permits construction of two critically needed flood control projects at a saving of approximately $40,000,000.

The bill does not specify local participants but the Eugene Water and Electric Board, an arm of the city of Eugene, Oreg., had indicated a desire to participate in the Cougar project. The Pacific Power & Light Co., of Portland, Oreg., has stated its willingness to participate in the Green Peter project. The dams are located within the respective areas served by these utilities.

A unique application of the partnership principle is embodied in the bill introduced in Congress last spring by Representative SAM COON to authorize the building of John Day Dam on the Columbia River between The Dalles and McNary. Under the provisions of this bill, John Day Dam would be designed, built and operated by the Corps of Engineers and ownership would at all times remain in the Federal Government. Investor-owned utilities are willing to sponsor this project but provision is made for the participation of other local interests, public or private, which meet certain specified requirements.

Under this bill the Federal Government would assume costs of navigation, flood control, and other so-called nonreimbursable benefits. These costs are estimated to be about 10 percent of the total cost of the $310,000,000 project.

Local interests would supply the major share amounting to $273,000,000 which would be in the nature of a prepaid contract for the power output of the project for a period of 50 years.

Encouraged by the administration's policy of cooperation, proposals for dam construction have come from many and various applicants. Here are some examples of recent activity. Last week the Federal Power Commission granted licenses to Grant County Public Utility District in Washington to construct the Priest Rapids and Wanapum Dams on the Columbia. These two dams are to replace the single Priest Rapids Dam which had been originally set up for Federal construction, but was deauthorized, with administration approval, so that the local public power agency could proceed.

A group of investor-owned utilities, after completing preliminary surveys, have applied to the Federal Power Commission to build Pleasant Valley and Mountain Sheep Dams on the Snake River below Hells Canyon. Many more projects are being studied—some with varying degrees of partnership participation, others with none. All come under FPC and State regulation.

Until this new wave of confidence in the administration policy took effect, more dams were needed than there were sponsors to build them. That situation is changing rapidly—but please remember that dams are not paid for by political ballyhoo, propaganda, or wishful thinking but by cold cash at the damsite. It takes time to work out the details of the shift of emphasis from all-Federal to Federal-plus-local responsibility. These non-Federal sponsors consisting of local public agencies and privately owned companies are now ready and eager to assume their responsibilities to supply the power needs of their respective service areas.

The one and only reason why these objectives may not be met is because the people who insist on Federal-or-nothing development may be able to block or delay the progress. Personally, I question the sincerity of those who continually carp about the administration's partnership program and at the same time have no solution to offer except Federal development or no development.

I think we should make it crystal clear now that any power shortage that develops in the region must be charged to those people who use every possible device to confuse, delay, and obstruct the orderly and time-honored American way of developing our water resources.

Justice MacCrate Retires

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. KEOGH. Mr. Speaker, last month one of Brooklyn's most distinguished judges retired. Justice John MacCrate served with distinction for 35 years in the second judicial district of the New York State Supreme Court. Prior to his election to the court in 1920, he served a 2-year term in the

House of Representatives. One of Brooklyn's most beloved figures Judge MacCrate is well known as an orator and much in demand as a dinner speaker. Truly a devoted public servant—a gentle, kindly man whom it has been my privilege to have as a friend for many years. I can think of no finer tribute to Judge MacCrate than the following article by James P. McCaffrey which appeared in The New York Times of December 26, 1956:

JUSTICE MACCRATE TO LEAVE BENCH—POPULAR JURIST, A BROOKLYN HISTORIAN, TO RETIRE AND BECOME REFEREE JANUARY 3

(By James P. McCaffrey)

One of Brooklyn's most popular jurists will retire on Saturday as a result of having reached the statutory age limit of 70 years.

He is John MacCrate, who has been a member of the supreme court bench in the Second Judicial District for 35 years. He has been assigned to the Second Department's Appellate Division since 1948.

Looking much younger than his years, the retiring jurist will become an official referee on January 3. He will be assigned quarters in the Brooklyn Supreme Court or the nearby Borough Hall.

During his long career on the bench Justice MacCrate has been noted for the common sense that has marked his opinions. Nor was he averse to letting a bit of dry humor slip in between the lines of his formal decisions.

His friends describe the soft-spoken, white-haired dean of the Brooklyn judiciary as one who has never forgotten his long-time neighbors in the Greenpoint district of Brooklyn. Although an enrolled Republican, he has often bragged that many of his closest friends are topflight Democrats.

POPULAR DINNER SPEAKER

Even though his judicial duties have kept him busy, Justice MacCrate has been a close student of Brooklyn's history. This, coupled with his renown as a speaker, is a factor in the many invitations he receives to address civic, religious, and political affairs.

A few months ago Justice MacCrate accepted a bid to address the 75th anniversary dinner of the Society of Old Brooklynites. He told a close friend the night before that he did not have the slightest idea what his subject would be.

But at the dinner the jurist held his audience spellbound by recounting what had happened in Brooklyn on the day the society was organized. It was learned later that he had slipped into the Brooklyn Public Library on the morning of his scheduled speech and had memorized front-page stories hidden in the bound volume of the Brooklyn Daily Eagle.

Justice MacCrate said last week in his chambers at the courthouse, 45 Monroe Place, Brooklyn, that he was in good health. He attributed this to his habit of taking long walks, particularly through the narrow streets of Brooklyn Heights.

Justice MacCrate's family came from Scotland, where the jurist was born, to the Red Hook district of Brooklyn before the turn of the century. The future justice got his early schooling in that area and he likes to recall that his high-school principal, Isabelle Ennis, encouraged him to study for the bar, which he did at New York University Law School. Another friend who urged him on later became presiding justice of the appellate division. This was the late Harry E. Lewis.

SERVED IN CONGRESS

Justice MacCrate had no difficulty getting the Republican nomination for the House of Representatives from Greenpoint in 1918. With the help of his Democratic neighbors, including the late Peter J. McGuinness, he also won the Democratic nomination in that party's primary. He had no real opposition on election day.

As a result of his activities in Washington during the 2-year term, Justice MacCrate was nominated for the supreme court bench in 1920. Although the second judicial district was considered predominantly Democratic, Justice MacCrate was elected. It was the same year the late Warren G. Harding won the Presidency with a landslide vote.

Justice MacCrate lives with his wife, Flora, at 134 Milton Street. They moved into this home when they were married 44 years ago. They have two sons, Robert, a lawyer, and John, Jr., a real estate and insurance broker, and three grandchildren.

Participation of Youth

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include therein portions of a speech which I made before the Junior Chamber of Commerce at Leominster, Mass., on October 24, 1955.

The material follows:

"Young people throughout the Nation must not only interest themselves but must participate actively in public affairs, if democracy is to remain strong," said Congressman PHILIP J. PHILBIN addressing the Leominster Junior Chamber of Commerce last night.

"Our system presupposes the active participation of our citizens," said PHILBIN, "but large numbers of Americans often stay away from the polls and it is becoming more difficult every day to get qualified citizens to service their communities."

"More than ever people are completely engroused with their own affairs and occupied by the many demands of modern day living. That is quite understandable and necessary from the individual point of view," said PHILBIN.

"But if the democratic way is to retain its vitality and achieve its maximum goals in the world and in strengthening and building this great Nation, trained young people will have to assume some of the responsibilities of the leadership which will be theirs in the future."

"And the people as a whole must ever maintain a lively interest and keep constantly on guard in order at every level to insure honest, capable government, expressive of the popular will and the American ideal of freedom."

PHILBIN declared that "your new organization of able, aspiring, young business and professional men can do much not only to promote your own group interest, but by the example of your vigorous spirit elevate the tone and level of community contributions."

PHILBIN said that business, industrial, and professional leaders were as vital as political statesmen to the proper development of the country.

"We are coming into great, revolutionary changes in business and economics stemming from continuing, astonishing advances in science."

"There are more opportunities in American business than ever before," he said, "because the national economy is moving ahead in leaps and bounds. Immediately confronting us is the greatest age of all history, if we can only preserve world peace. But in any event we will need business leaders of patriotism, marked capacity and and social consciousness. They will be recruited from the ranks of your generation.

"And they will have to know, just as those charged with leadership today should know, that in a free enterprise competitive society, if it is to endure against radical panaceas, true national prosperity and opportunity must extend to all.

"If in our philosophy and practice, we maintain proper balance in our economy between legitimate self-interest and human social needs, the American people of every class is destined to move steadily in the direction of unparallelled prosperity."

Meanwhile, let us resolutely build our national strength. Tensions have eased somewhat. Smiles have replaced scowls in Soviet diplomacy. But the Marxist plot still surges toward world conquest. Neutralism impairs the unity and strength of the free world. Great problems and dangers confront us from the Communist conspiracy.

But I think that if we remain strong and powerful, militarily, economically and spiritually, we have nothing to fear.

Commenting on the current diplomatic impasse, PHILBIN said, "It is our task as well as our duty to press for peace even in the face of discouragement. In time, if we persevere in our militant devotion to freedom and properly develop our strength, God willing, there is a good prospect for world peace."

The Congressman congratulated and lauded the junior chamber for its efforts and predicted that it would enjoy great success and render distinctive service.

An Address by Justice Albert Conway

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Justice Albert Conway, chief judge of the Court of Appeals of the State of New York, at the annual dinner of the Colonel Francis Vigo Post, No. 1093, of the American Legion held in Brooklyn, N. Y., and at which Justice Conway was the guest of honor:

I should like to speak of a subject which it seems to me should be of moment to you as members of the patriotic organization which you represent as well as to every thinking person. The world today consists not of land and buildings or of mines and forests or of any material things. They would be the same whether we lived under our form of government with a written constitution binding both the sovereign and the subject or under a dictator. For all intents and purposes today America consists of the ideas and ideals of the children of today. It is for them that we are doing all the things which we think are so important. For them we are building our churches, our schools, our universities and our businesses. In about 30 or 40 years they will have to take them over and manage them. They will be our prelates, our ministers and rabbis, our governors and senators and representatives—one of them is on his way to becoming our President. They will be the supervisors and other officers, and will manage our towns and counties, our cities and States, and this Na-

tion. We may join the United Nations and we may make treaties but if the children of today do not approve of what we have done they will change our policies and put an end to our treaties and leagues and pacts. Our fate in city, State and Nation, and indeed, the fate of humanity, is in their hands.

This, it seems to me, is a very great challenge to you and me because it depends upon how the children are educated what they will be. Will they have disciplined minds? Will they have the desire to acquire qualities of leadership? Will there be instilled into them the will to learn and to achieve? It is not guesswork or speculation but absolute certainty that in all walks of life the leaders of 30 or 40 years from now will come from the children who are between 10 and 20 years of age today.

Ideas are nurtured, if not implanted, by parents, by the church, and by the teachers in the schools, and children as they grow older spend more time with their teachers than with their parents or in their church. Thus, we may say that teachers have equal responsibility with parents to see to it that the children are taught to think straight, to understand the ideals behind our form of government which have made us the most powerful Nation in the world in the short space of approximately 175 years and to help them become honorable and upright participating citizens in our Republic. There is a parable that comes down to us from the third century which expresses what I have in mind respecting teachers. This is the parable. A patriarch sent his three emissaries on a circuit throughout the towns of his land to check on elementary and intermediate teachers. His emissaries came to one town and found neither elementary nor intermediate teachers. Thereupon they said to the inhabitants, "Bring us the watchmen of your town." The inhabitants brought before them the city guards and the watchmen at the gates; but the emissaries said to the inhabitants, "Why, these are not the watchmen of the town—these may, under certain circumstances, be the destroyers of the town." Whereupon, the inhabitants asked, "Who then are the watchmen of the town"; and the emissaries answered, "Your teachers and instructors."

What I think we must fear and guard against is the possibility that our youth through the leadership of ignorant or frustrated or even ill-intentioned men or women, with the twisted ideas natural to such individuals, may destroy for mankind the fulfillment of the dream of freedom which man has had since he came upon this earth and which in America we have enjoyed to a greater degree than any people heretofore. In your youth and mine there was instilled into children love of God and country. See that that is continued. The blueprint of the ideas of the children of America today is the America of the future. It is as simple as that.

Two Free Men

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I include the following editorial from a recent issue of the St. Louis Post-Dispatch marking the anniversaries of two of our Nation's most courageous editors, Josia W. Gitt, editor and publisher of the York (Pa.) Gazette and Daily and William T. Evjue, editor and publisher of the Madison (Wis.) Capital Times:

TWO FREE MEN

Two of the truly courageous editors in the United States—and unhappily there are very few in that vital company—have just celebrated notable milestones. Josiah W. Gitt, editor and publisher of the Gazette and Daily at York, Pa., has observed the 40th anniversary of his direction of that 160-year-old newspaper. In Madison, Wis., William T. Evjue, editor and publisher of the Capital Times, has completed his 50th year in the journalism of his State.

Each is a brave, free man. Each has been unshakeable in standing for honesty, integrity, intelligence, and information. Each has see from experience that where these prevail there will be progress and growth and high standards in political and social affairs.

Mr. Evjue, who grew up in the great tradition of the elder LaFollette, has exposed and battled against McCarthyism from the beginning. It is his satisfaction to have been right all along and now to see others belatedly trying to catch up with him. His newspaper is a daily application of his motto, "Let the people have the truth and freedom to discuss it and all will go well." Thanks in large part to Editor Evjue and his fearless staff, Madison stands high among the best-informed, most forward-looking communities in the country.

Similarly the people of York, Pa., can be grateful for the unswerving attachment of J. W. Gitt to constitutional principles and particularly to the civil liberties guaranteed in the Bill of Rights. No influence peddler, high or low, in politics or out, has ever pushed around York's stanch editor. His slogan is "Print the truth and let it speak." And that is just what he has been doing—enabling truth to speak—for 4 decades. No editor need do more than that.

If there were even a dozen William T. Evjues and Josiah W. Gitts in American journalism, the American people would be infinitely better informed. Our people would be less inclined to listen to demagogues, quacks, and self-servers. They would be far quicker to recognize and support leaders in the tradition of freedom and freemen. May the Gitt and Evjue examples wax and multiply.

New Plants for New Jobs in Labor-Surplus Areas

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following address I delivered over WMEX, Boston, Mass., on Saturday, November 19, 1955:

Let's look at the national picture first; the economic condition of the United States as a whole.

It's good—very good.

Until the complete returns for the year are tabulated, we cannot speak with certainty. With little more than a month to go, and with a big volume of Christmas trade expected, however, we can venture the prediction that this will probably be the most prosperous year in our history.

More people are working than ever before.

The largest corporation in the world, which is located in this country, will report profits of more than a billion dollars for the year 1955, which is another first in economic history.

To repeat, the overall picture is very good.

In this broadcast, however, I want to point out local trouble spots, where unemployment is heavy, and has been for several years.

In a problem as complex as this, it is impossible to weigh all the factors, within 15 minutes.

Therefore, I intend to concentrate on a major factor, and a major solution.

Even though the Nation as a whole is booming, we have scattered areas that are plagued by economic blight.

These cannot be ignored.

For, if we fail to find a cure, other areas, in turn may become affected, and the problem becomes more difficult to solve.

The United States Department of Labor makes a job survey every 2 months, on both large and small areas, to determine local economic conditions.

Suppose we confine ourselves to the 149 major labor-market areas. These are the most important production and employment centers.

In July of 1955, unemployment of 6 percent or more was reported from 31 of these 149 areas. At a time of great national prosperity, we have these pockets of unemployment in 32 of the 48 States. That is why the problem calls for some measure of attention and assistance by the Federal Government.

Moreover, 19 of these areas are listed as "chronic."

Ten of these have had substantial unemployment for more than 4 years.

What are the causes of this economic disease that has hit textile communities in New England, and coal-mining communities in Pennsylvania, among others?

Many of these depended upon one industry, and when this declined they found themselves in serious trouble.

Heroic efforts are being made on the local level to attract new replacement industries, but the going is hard.

Several years ago, when a textile mill closed down, hundreds, and sometimes thousands, of workers were dismissed from employment in the only occupation which they knew. Machinery was moved away. The empty factories were sold to dealers in second-hand industrial properties.

The outlook was bleak, for the displaced workers and the communities.

Groups of local citizens were organized to purchase the vacant mills. Chambers of commerce, or industrial development committees, worked hard to attract new industries. But recovery has been painfully slow and difficult.

Local resources, however, are limited. At times they have not been fully mobilized. The rental or reconversion of old mill plants is an emergency measure. It offers only a partial solution. The type of industries that are attracted to a community under these conditions, are usually small ones, that operate on a shoe-string basis, and barely pay the legal minimum wage.

This is a desperate compromise that does put some of the unemployed to work, but at lower pay than they once earned, and at a sacrifice in the average standard of living.

The brave fight being put up by some communities, is worthy of our admiration, but it is not enough. They need help.

The hundreds of thousands of dollars that have been raised in the larger areas to buy up old plants and lease them to other industrial tenants, is a form of treadmill progress. They seem to be making a recovery, while they are losing ground to other communities whose standards are improving, in line with the Nation's progress.

In one small Pennsylvania town, a nickel-a-week plan, with the 6,000 inhabitants contributing 5 cents each week for 5 years, to

raise funds for new industries, is stark evidence of the valiant effort that some communities are making to save themselves.

But when we add up the results of all these local bootstrap operations, we find that few of them have come anywhere near the realization of their employment goals.

As I said before in this brief broadcast, there is not time to consider all factors. Businessmen, when they consider plant-location alternatives, must be satisfied as to the proximity of raw materials, markets, transportation facilities, cheap and abundant power resources, sufficient water and sewerage facilities, and whether a community is an attractive place in which to live. Plus other factors.

However, to quote one official in a labor-surplus community that was once a leading producer of textiles: "We must build new factories or die."

To my way of thinking, this comes very close to the heart of the problem.

On May 13, 1954, I introduced a bill in the United States House of Representatives known as the Industrial Development Act of 1954, to authorize Federal loans to assist local communities in building modern industrial plants in labor-surplus areas.

This would not be a handout, but an assist to local initiative, providing the final lift that would enable labor-surplus areas to get over the hump.

The legislation I seek would apply only to those communities that have had a substantial labor surplus for at least 1 year prior to the application for a Federal loan. The United States Department of Labor, from unemployment totals obtained from the United States Employment Service, and from State affiliates, would determine eligibility.

A $50 million revolving fund would be made available for capitalization. Publicly authorized, nonprofit industrial development committees, composed of representative citizens in the eligible areas, would submit plans and costs for the building of medium-sized modern plants to attract new industries. Upon approval, and on condition that local banks and citizens would provide half the cost, the Federal Government would advance a loan covering the remaining half.

Lack of sufficient capital is the one factor that presently deters local industrial development committees from proceeding with the construction of new plants that are needed to effect an economic transition.

In the preamble of the Employment Act of 1946, the Congress declared that, "It is the continuing policy and responsibility of the Federal Government * * * to coordinate and utilize all of its plans, functions, and resources for the purpose of creating and maintaining * * * maximum employment."

In March of this year the joint congressional Committee of the Economic Report unanimously declared: "We are very concerned with distressed conditions which persist in certain industries and regions even in an expanding economy * * * the Federal Government should recognize its responsibility."

In a vital economy like ours, no enterprise or community can stand still.

We are on the threshold of a second industrial revolution. Automation and atomic power are not just theories. We can see them coming around the corner. Existing machines and factories will be outmoded rapidly.

What then of plans that are ancient, even by present standards?

The textile cities of New England have 6 story factories that are 40, 50, and in some cases, many years older. Not a single new industrial plant has been built to replace the ones that are becoming more obsolete with each passing day.

These cities are in danger of becoming industrial slums unless there is a program of modernization. Because no dynamic growth industry, capable of providing steady work at good wages, is going to move into an old-fashioned high-cost plant.

In fact, one of the reasons why labor-surplus areas have lost the industries that once supported them, was because other areas offered inducements to build new plants in response to the new technology.

My bill, I believe, would encourage and assist labor-surplus communities to modernize, and become inviting to growth industries. In this connection, it is pleasing to note that the White House has taken up the suggestion.

President Eisenhower, during his convalescence, has approved a new approach to an old contradiction—the challenge of chronically depressed industrial areas in the midst of national prosperity.

In his state of the Union message to Congress, in January, he will propose a technical-assistance program to show labor-surplus communities how to help themselves, coordinating all forms of Federal assistance under a new agency to be created for that prime purpose.

Furthermore, he will recommend self-liquidating loans to help local communities in the effort to build modern industrial parks following the legislation that I introduced last year.

To become effective, this will require your support and that of the Congress.

By working together as a team we can insure the success of the Industrial Development Act in the American way through the voluntary cooperation of city, State, and Nation, with capital and labor putting their shoulders to the wheel and with every citizen taking part in the modernization of our labor-surplus areas in order to restore them to full and progressive economic activity.

"We must build new plants or die."

The Industrial Development Act shows us how we can take up the slack, and go forward again.

Granting of Amnesty to Communists

EXTENSION OF REMARKS
OF
HON. E. L. FORRESTER
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. FORRESTER. Mr. Speaker, during the Christmas holidays, the following article appeared in the Evening Independent, a daily newspaper published in St. Petersburg, Fla.:

ELEANOR JOINS PLEA FOR COMMIE AMNESTY

NEW YORK.—Forty-two persons, including Mrs. Franklin D. Roosevelt, have petitioned President Eisenhower to grant a "Christmas amnesty" to Communist Party leaders jailed under the Smith Act.

The petition stressed that the signers were "in fundamental disagreement with the philosophy of the Communist Party and with essential elements of its program." It added that the motive for their appeal was "their attachment to the democratic way of life."

The petition, made public yesterday, asked that sentences of 16 jailed Communists be commuted to time already served. They were sent to prison after being convicted of teaching or advocating forcible overthrow of the Government.

The petition said the trials "were carried through in a period of the cold war and in an atmosphere often marked by hysteria." It also sought postponement of more than 100 similar cases now pending or under appeal.

Mr. Speaker, it is shocking that the crime of advocating the forcible overthrow of our Government is regarded so lightly by those petitioners, and that the petitioners would have the President annul the Smith Act by commuting the sentences of all that have been convicted thereunder, and postponing the trials of all cases pending or under appeal. Such advocacy simply means that those petitioners do not want anyone prosecuted for the violation of that law in the future.

It is further strange that these petitioners only recommended that persons violating the Smith Act be granted amnesty. We have many 18- and 19-year-old boys that unknowingly, or certainly without design, violated some military rule while serving our country in actual combat, and have been imprisoned for some years and have many years yet to serve. It would seem that the Christmas spirit would have been directed to this class, instead of persons advocating a theory that caused our Government to take those boys from their homes and send them into combat in defense of our form of government. Our penitentiaries are filled with American citizens who fudged a little on their income tax, or committed some other Federal offenses which were not to their credit, but none of whom would overthrow our Government by violence, but, despite their dereliction, would fight for our country and our way of life. Nevertheless, all of those persons were forgotten through the Christmas season by those petitioners, and only those who advocated the overthrowing of our Government excited their sympathies.

The assertion that the trials of those parties were in an "atmosphere marked by hysteria" is astounding. All of those defendants were accorded fair trials and given all constitutional rights, and doubtless had fairer and fuller trials than the 18- and 19-year-old boys that I have previously referred to.

Of course our President ignored the petition. The article does not say who the other petitioners were. I believe that the public would like to know.

Conference of the U. N. Food and Agriculture Organization in Rome

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. ANFUSO. Mr. Speaker, the annual conference of the United Nations Food and Agriculture Organization—FAO—took place November 4–25, 1955, in Rome, where the Organization's headquarters are located. Although this was the 8th session of the Conference, FAO celebrated the 10th anniversary of its existence. FAO was officially launched in October 1945 at a conference in Quebec.

The United States was ably represented at the Rome Conference by a delegation comprised of specialists and experts from the Department of Agricul-

ture and the Department of State. Our distinguished colleague from Kansas, the Honorable CLIFFORD R. HOPE, and I had the great honor of being appointed by the distinguished Speaker of this House as congressional advisers to the United States delegation.

The chairman of our delegation was the Honorable Earl L. Butz, Assistant Secretary of Agriculture. I wish to take this opportunity of informing all my colleagues on both sides of the aisle that Mr. Butz was an extraordinarily able chairman. He was fair and just in all deliberations in and out of committee and made it possible for the United States delegation to present a united front before the Conference.

The purpose of FAO is "to promote the common welfare" of the nations associated with the Organization by "furthering separate and collective action" which is aimed to accomplish the following major goals: First, raise the levels of nutrition and the standards of living of the peoples under the jurisdiction of these nations; second, secure improvements in the efficiency of the production and distribution of all food and agricultural products; third, better the condition of rural populations; and fourth, contribute toward an expanding world economy.

Originally, 32 nations had joined in the formation of FAO. Now, after 10 years of successful existence, 71 nations throughout the world are participants in the work of FAO. Of noteworthy interest is the fact that none of the countries behind the Iron Curtain, neither Russia, Red China, nor any of their satellites in Europe or Asia, are members of FAO. This accounts not only for a minimum of bickering in the Organization, but also for a very high degree of harmonious cooperation between the member nations and a fine record of achievements over the past decade.

The Italian Government has erected, at its own expense, three magnificent buildings in Rome where the agency and its staff are housed. The organization's annual budget comes to about $6 million, of which the United States contributes 31.50 percent, or less than one-third of the total. Other nations, in the order of their contributions, are: United Kingdom, 11.30 percent; France, 7.53 percent; Germany, 5.55 percent; Canada, 4.64 percent; India, 4.21 percent; Italy, 2.83 percent; Japan, 2.55 percent; Australia, 2.30 percent; Sweden, 2.03 percent. Other nations contribute sums in lesser percentages.

Our delegation was highly honored when our distinguished colleague, the gentleman from Kansas [Mr. HOPE], was asked to deliver one of the major addresses at the opening session of the conference. Following a welcoming address by the Italian Minister of Agriculture, Emilio Colombo, the conference heard three major addresses on the general theme "FAO in a Changing World." The Secretary for Foreign Affairs of the Philippines, Joaquin M. Elizalde, discussed the international political aspects of the theme. He was followed by the gentleman from Kansas [Mr. HOPE], who discussed the economic aspects. The third and last address was by M. Andre Mayer, one of France's leading scientists and a founder of FAO, who talked about the social and human aspects.

I trust that our colleague the gentleman from Kansas will place into the RECORD his most interesting and illuminating address so that all of us may have the opportunity to acquaint ourselves with its contents. With his kind permission, I should like to quote only one brief paragraph from his address:

> In my lifetime I have been associated with many organizations but none in which I have felt a more sincere interest or a greater appreciation of its activities than FAO. For in FAO we have an organization which deals with the very fundamentals of life and which concerns the interest and well-being of every human being. The very fact that 71 sovereign nations are now members and active participants in FAO bears this out.

The agenda of the conference was quite long and extensive. Let me at this time merely point out that the major problems discussed were the following: a comprehensive review was made of the world food and agricultural situation since the last conference; problems of food distribution and consumption were considered; studies were made of production trends and the adjustments to food consumption; a survey is being planned to determine the world's agricultural, fishery, and forestry resources in relation to the needs of the world's population; there was considerable discussion of the question of agricultural surpluses; and the conference also took up the peaceful uses of atomic energy in agriculture and food production. Needless to add, that there were also extensive reports on FAO's growing activities in recent years and a program of work was planned for the future, as well as various legal, procedural, and financial aspects of the organization.

Instead of burdening my colleagues with a detailed review of the proceedings of the FAO Conference, I should like at this time to share with you some of my thoughts and findings based on what I heard at the conference and discussions I had with members of other delegations, most of whom I found to be extremely friendly towards the United States and the American people.

We learned at the conference that the population of the world is growing at the rate of 100,000 souls daily. In 1953 there were estimated to be more than 2½ billion people in the world. Each year we add about 30 million to the world's population. If it continues at this rate, the world will have about four and a half billion people by the end of the 20th century, and probably twice as many a hundred years from now.

The question is, now and in the future, how to produce enough food for a world population of such enormous proportions. Our colleague the gentleman from Kansas [Mr. HOPE] was absolutely correct when he stressed in his address that this is not time to talk about slowing down world agricultural production. It is perhaps not too widely known that even now, with huge agricultural surpluses in some countries, nearly two-thirds of the world's population is inadequately fed or undernourished. If this situation is not improved by wiser planning, we may all be confronted with tragic economic, political, and social consequences in the years ahead.

To be sure, some progress has been made in recent years since the end of World War II, particularly at the instigation of FAO. Progress has been recorded in research, in spreading technical knowledge and education concerning agricultural production, standards of nutrition, and the like. The great problems which still remain unsolved and with which FAO is struggling to find a satisfactory solution are better distribution of agricultural products and raising the level of consumption. We have the paradoxical situation in the world today of huge agricultural surpluses in some countries and people who are undernourished and poorly clothed in other countries. In the United States and other countries the people produce an over-abundance of food. Other parts of the world, like Asia and Africa, cannot produce sufficient food and the peoples of these areas have to live on a subnormal or starvation diet.

Despite this tragic situation, we in the United States are not in a position to give away much of our food surpluses even if we wanted to do so. We are not the only food-producing nation in the world; consequently, we must exercise great care so as not to disturb the world markets. Nor do the peoples who are in need of these food surpluses want them for nothing. Some of them are too proud to take it for nothing. Others are jealous of their sovereignty and independence and fear that in taking this food they will become indebted to other nations.

Shortly before Christmas, you will recall, our Government announced that it will make available considerable quantities of wheat, corn, and other products to needy persons in foreign countries. These are to be distributed through church and private welfare agencies "until such time as any or all of the commodities can be disposed of in normal domestic channels or until they can be sold abroad." I consider this action by our Goverment as one of the most potent ways to fight communism in the world.

During the FAO conference in Rome, I discussed this very suggestion with my colleague and fellow delegate [Mr. HOPE] and also with the Honorable Earl Butz. We visited private church agencies where we saw at firsthand how some of our surpluses were being distributed to the poor and needy, irrespective of their politics. Both of these gentlemen assured me that upon their return to the United States they would urge our Government to release more of our food surpluses to such private agencies. After my return from abroad, I again conferred with Mr. Butz and others in Washington concerning this matter. I was therefore very elated when I learned of the action taken by our Government, although I am not seeking any personal credit for such action.

I merely wish to state that we are not losing anything because some of these commodities have been in danger of rotting in the warehouses and ships where

they are stored. By donating this food to the needy abroad we stand to gain immeasurably. We stand to win the support of much-needed friends all over the world.

Unfortunately, our position has not always been clear to the peoples of Asia. At times it was felt by some of them that we had abandoned our concepts of freedom and independence in order to support our Western allies in fostering colonialism. For example, the cry to save Indochina was: "Aid France." The Asian peoples thought it should have been: "Save the People of Indochina for Freedom." Communism, on the other hand, won victory after victory by the cry: "The land belongs to the people who work it."

Because of colonialism we have lost out in China, Indochina, and to some extent in North Korea. We have succeeded in saving South Korea, the Philippines, Japan, Burma, Thailand and others because the peoples of those countries were granted their freedom and independence. There is no escaping the fact that America is on the defensive in Asia. Unless we are willing to help the peoples of Asia and other areas of the world in safeguarding their inalienable rights to freedom and independence, we can expect that the misunderstanding about our aims will deepen and we will be in danger of completely losing their friendship and support.

How important is this? Let us face the fact that, as things stand now, the democratic forces are snowed under by Communist numbers. The Chinese and North Koreans are fighting Russia's wars in Asia, while Russia's own tremendous manpower reserve remains untouched. At the present time, all we can count on definitely in Asia are the 21 million people of the Philippines, 18 million in Thailand, and 80 million in Pakistan—119 million in all, as against about a billion people for Russia, Red China, North Korea, North Vietman, and so forth. The rest, including the vast numbers in India, are pursuing a neutral course which is bound to be detrimental to them and the whole free world.

This is far from being a very encouraging picture of the situation. But we need not become despondent. We are far from lost in Asia. If we pursued the same policy in Asia as we recently did in defeating communism in the Philippines, and if we strongly encourage an organization such as FAO, we can still hope to regain our moral and political leadership among the nations and preserve freedom and democracy in the world. If we can help to fill empty stomachs, substitute contentment for hunger and disease, and free the minds of people everywhere, then there will be no place for communism in the world.

The United Nations Food and Agriculture Organization offers a wonderful opportunity to help bring this about. While Soviet Russia seeks to promote communism and confusion by arming nations in the Far East and Middle East and is encouraging them to wage war, the FAO promotes democracy and freedom by encouraging the production of agricultural commodities and improving the distribution of food in the underdeveloped areas.

Perhaps even more important is the fact that FAO is trying to develop the purchasing power of the peoples in these underdeveloped countries. This can be accomplished in some degree through the use of our food surpluses and by helping them to exploit their natural resources and build up local industries. This will provide more employment for the people and enable them to become buyers on the world market.

By distributing some of our food surpluses we help to prevent famine and disorder, we improve our relations with countries which are given such assistance, and we help to promote peace. The facilities of FAO are at our disposal in the effort to achieve these goals.

Mr. Speaker, FAO is bent on the very laudable task of raising the status and the dignity of all human beings. It is dedicated to the cause of removing slavery and bondage in the world. It is pursuing a course which seeks to help make all peoples free and independent in the eyes of God and man. For these reasons, I shall strongly support this organization and its program. I urge you and all my colleagues to give it their support. FAO holds out a great promise to us, but also a great challenge.

In conclusion, I take this opportunity to express my sincere thanks to you for affording me the honor to represent this House on the United States delegation to the FAO conference.

They Envy and Admire Us

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. MADDEN. Mr. Speaker, H. B. Snyder, editor of the Gary Post Tribune, sets out in the following editorial in simple facts why the free nations of the world must continue to fight to curb communism.

The two Soviet leaders revealed to the world during their trip to India and Burma that they need more support from nations outside the Iron Curtain or their economy will continue on the road to failure.

Well-financed lobbies are at work within our own borders to force our Government to relent in its drive against further Communist aggresion and infiltration.

THEY ENVY AND ADMIRE US

The failure of many Americans to understand the true meaning of the Communist attack on civilization is shown in the opposition stirred up by President Eisenhower's recommendation for the appropriation of increased funds for use abroad. We call this fight the cold war and yet it is not thought necessary to spend enough money to win it.

There is never opposition to spending enough money to win a hot war. We know we simply must win regardless of the cost, even though a good part of that cost may eventually be recognized as waste. But it was part of the process of winning and we overlook the mistakes of people who ought to have known better or the plans which were suddenly thrown together without enough consideration to make them get the results we expected.

Not so with the cold war. We call it war but we act as if it were merely a phase of peaceful and friendly competition. But it is not competition at all. And it is not friendly. The bluster and enmity and lies shown and told by Khrushchev in India, Burma, and Kashmir were not aspects of friendly competition. They were moves in war.

We think it is a step toward peace to try to build up better understandings between the peoples of the West and the East but there seems to be little hope of much progress as long as the Khrushchevs rule Russia and India and Burma are led by such neutralists as Nehru and Nu. But we must make the effort.

However, it is even more important to build up our military power and to offer economic help to those countries whose living standards are so low as to make them envious of us and easily led into the opposition because of that envy.

We must understand that every country in the world wants an improved standard of living and looks to us not only in envy but in admiration. We have what they all want and we must find some way to prove that we want them to have it and will cooperate in helping them to get it. If we can do that there will be no doubt about the outcome of the cold war if in the meantime we make it impossible by our own military strength for the Communists to make further inroads in the free or neutralist world.

Mellon and the Republican Trickle-Down Tax Philosophy

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I include parts 1 and 2 of a series of articles from the newspaper Labor's Daily. The series was written by Mr. George B. Holcomb and is of special significance because of forthcoming action on tax legislation this session. The articles trace the historic development of the trickle-down tax philosophy advanced by former Treasury Secretary Andrew Mellon and his associates during the 1920's and more recently championed by the present Republican administration.

ANDY MELLON AND GHOST SAVED RICH MAN THE MOST

(By G. B. Holcomb)

Part I

WASHINGTON.—On Tuesday, December 20, the Eisenhower administration will cannonize one of its political saints—the billionaire Secretary of the Treasury who helped skid the Nation into its worst depression—Andrew W. Mellon.

If the administration wished to identify itself with gigantic, legalized tax evasions, conflict of interest between business and Government, and the trickle-down theory

of taxation, it could find no more appropriate symbol than "Uncle Andy," as he was referred to by President Harding.

Andrew Mellon was the richest man ever to hold a Government office. And when others were jailed or rejected from office for mixing business with Government—as in the Teapot Dome scandal—Mellon continued in his shy, modest and scrupulous way.

WROTE TAX LAWS

There was nothing flagrantly illegal in the way he avoided taxes—his boys wrote the tax laws.

Yet Uncle Andy was only the leading figurehead on the advocates of the trickle-down tax theory. If authorship of the book were the sole reason for the Tuesday ceremonies, then the Republican Party really should be honoring Mellon's ghost—a ghost who walks.

The ghost, incidentally, is still on the Federal payroll, and in a different cause—art.

The story of the associations between Mellon and his ghost is one of the bits of history which has escaped most people. It is related here because it reveals much about the man whom the Nation will honor Tuesday.

STARTED ART GALLERY

It would be comforting to remember only that Andrew Mellon helped start the National Gallery of Art and supplied some $50 million worth of paintings to furnish it.

But in the process there also has been a close connection with his managing to free himself from a charge by the F. D. Roosevelt administration that he owed $2.5 million in back taxes to the United States Treasury.

It was Mellon's ghost, the ghost who walks, who also helped get that little item cleared up, through a settlement for $668,000 after Mellon's death in 1937.

It was Mellon's ghost who assisted the old man in his duties as supervisor over the collection of the Nation's taxes and over its banking system.

It was Mellon's ghost who has helped divert some $150 million worth of paintings into the National Gallery of Art, thus making it world-renowned.

HERE'S THE GHOST

The ghost is David E. Finley, director of the gallery and chairman of the Federal Commission of Fine Arts. He was born in 1890 at York, S. C. He plans to retire next year, culminating a career as the millionaires' friend.

The Saturday Evening Post once described him as a "small, slender, almost birdlike man with a continual smile and chirp."

But his brain is not that of a bird, for Finley wrote Andrew Mellon's book on taxation in 10 days.

And Finley had enough knowhow to get millionaires to build up their tax deductions, through gifts of paintings by artists who must be at least 20 years deceased. (This requirement is supposed to make sure that only famous artists' works are shown.)

SOMETHING FISHY

But, as the Post recorded:

"Of course, there are a few detractors of Finley, disapointed rivals in other museums, mostly, who sourly insist that Federal inheritance and gift taxes have been a big help to him.

"They point out that a millionaire with a really valuable collection of paintings must choose eventually between giving it away or saddling his heirs with a staggering tax burden.

"Since Federal taxes are larger than most State taxes in this respect, it is often cheaper to make such a gift to the national gallery than to a local institution."

As it was put by the late Chester Dale (utilities and investment banker and magnate):

"There are just about three things you can do with your money when you have as much as I have. You can give a building to a university or church. Or you can go in for jewelry, damned expensive, and I don't care for it, anyway."

ART'S MORE FUN

"Or you can spend it on art, which costs even more than the others, but is a lot more fun. That's why I chose art."

There are other charities, but apparently Dale couldn't think of them at the moment.

The tax burden on his heirs, if Andrew Mellon hadn't given away his $50 million worth of paintings, would have been onerous indeed.

Raphael's Alba Madonna cost the old man $1,166,000. Many of the paintings cost several hundreds of thousands apiece.

He paid $8 million to the Soviet Government for 23 paintings in 1930. (One of them was Titian's Toilet of Venus, "a very nude painting which Mellon never would have hung in his home," the Post said, and which cost $544,320.)

These paintings from Russia were hidden for a number of years, and Mellon and his ghost flatly denied that they existed. The oils were kept in a vault of the Corcoran Gallery in Washington during this period.

One reason for this secrecy, speculated the Statevepost, "may have been the depression which settled over the country after the stock market collapse of 1929.

"It probably would not have been good politics for the Secretary of the Treasury publicly to spend millions for rare paintings, at a time when the Government was swamped with unemployment, bank failures, and general distress."

In 1932, Andrew Mellon, in his seventies, was removed by President Hoover from his post as head of the Treasury Department, and was made Ambassador to Great Britain.

His ghost went with him, of course.

GHOST LOSES JOB

In 1933, that man, Roosevelt, entered the White House, and Mellon stopped being Ambassador to Great Britain. Although Finely originally entered Government service under a Democratic administration (Woodrow Wilson's), he too, lost his job when the Democratic broom began sweeping.

He was rehired—to his present position—in 1937.

But meanwhile, he and Donald D. Shepard set up a law office in Washington early in 1933. By sheer coincidence, their chief client was Andrew Mellon, and their first big case was on his behalf against the Treasury Department.

One reason the New Deal was hated and feared among certain financial circles was because it sometimes cracked down on tax evaders. It went so far as to accuse Mellon of cheating the Treasury out of $3,089,000 in taxes while Mellon was guardian of taxation—in the one year 1931.

MAGNANIMOUS OFFER

Finley and associates fought the case until 1937, with the settlement mentioned above.

In between the time the New Deal began that case and its conclusion, Mellon drafted a letter to President Roosevelt offering his entire art collection and money to build and equip a gallery for the "peepul" of the Nation.

There are some who say this was a kind of deal.

At any rate, President Roosevelt obviously saw this as an excellent method to add to the prestige of the Capital and to enhance the cultural heritage of the Nation. He readily agreed to the Mellon offer.

FINLEY THERE, OF COURSE

Finley was on hand to give any assistance he could.

On March 24, 1937, Congress set up the National Gallery, and ground was broken for the 182,000-ton pink marble mausoleum shortly afterward, about the time Andrew Mellon died.

It is modeled after the Emperor Hadrian's Pantheon in Rome, but is much larger.

David Finley's biggest triumph over the years probably was getting the huge collection of Pennsylvania Dutchman, Samuel H. Kress, the five-and-dime store king who bought paintings by the hundreds.

Until his death, S. H. Kress was the president of the board of trustees of the National Gallery.

TRICKLE-DOWN THEORY TRICKLED US SMACK INTO HISTORIC DEPRESSION

(By G. B. Holcomb)

Part II

WASHINGTON.—Unlike the man who put it down on paper under the pseudonym of Andrew M. Mellon, former Secretary of the Treasury, the trickle-down theory of taxation has not operated in seclusion.

David (the millionaires' friend) Finley may not be well known, but his theory is just as popular now as it was when he authored Taxation: The People's Business, in 1924, and said Mellon wrote it.

This theory, as most active labor members know, promotes the idea that income taxes should be greatly reduced on corporations and large incomes.

This is to provide incentive for more investments, so that prosperity can roll on boomingly forever—with only a few inevitable setbacks.

As Saturday Evening Post pointed out in an article a few years ago:

"USHERED IN DEPRESSION

"This scheme of taxation was followed, in fact, right up to the great collapse of 1929.

"Finley, despite his Democratic upbringing, put it into such eloquent and persuasive words that Mellon was delighted.

"He lifted Finley out of his routine job and made him special assistant. Today, there are hundreds and probably thousands of 'special assistants' in Washington, but Finley might well claim to be the granddaddy of them all."

The tax book was widely used as a Republican campaign document in 1924.

It came about as a result of Finley's main duty under Mellon, which was to answer letters from citizens wanting explanations on tax matters.

He suggested that a book on the subject might be helpful in heading off so many inquiries, and Mellon agreed. The book was published by Macmillan of New York. It contains 227 pages of relatively large type.

Some of the evidence that the trickle-down theory is just as much alive today as it was in the twenties is quoted on this page.

There are many who believe the theory, which has been occasionally called "Mellonism," may have been a major factor in causing the disastrous depression of the thirties.

President Truman maintained this in 1953 before a Labor Day rally of Michigan unions affiliated with the AFL and CIO. Said the doughty Missourian:

"The main answer to the question of what caused the depression is, I think, that in 1929 we had a very unhealthy distribution of the national income.

TOO MUCH AT TOP

"The people at the top had more than they could use, and the rest of the people did not have enough purchasing power to buy the output of our factories and farms.

"The big boom of the twenties increased the income of the top 5 percent of the people, but it actually decreased the income of the remaining 95 percent. Stock issues were boomed to fantastic heights by speculation," Truman said.

"But even when the speculators were rolling in profits, agriculture was in a depression.

"Workers, teachers, professional people were at the mercy of a speculative bubble, blown by the few in the interest of the few.

"The Government, controlled by the very groups who were doing the speculating, was

entirely helpless. All that Mr. Wilson could suggest as the disaster approached was that it looked like a good time to buy bonds," Truman told the rally.

"But no one had any money to buy bonds, and Mellon didn't know how to give the poor people any money, either. Naturally, the national economy couldn't go ahead in this lopsided fashion and it collapsed."

The New Deal, according to Truman, "stopped wild speculation. We taxed in accordance with ability to pay. We enacted minimum-wage laws and social-security laws.

"We helped agriculture and small business. We moved to develop the great natural resources of the country in the interest not of a few exploiters but of all the people.

"And, not least, we saw to it that the American labor movement got an even break with its employers in bargaining for decent wages and better working conditions, in order to raise the general standard of living in America," Truman said.

He said, "We did this in spite of the most bitter opposition. And, according to the leading Republicans, this was 'socialism.'

"It used to be called 'galloping socialism,' but now I understand it is more fashionable to call New Deal measures, like the Tennessee Valley Authority, 'creeping socialism.' My friends, they're both pure nonsense."

Truman said the New Deal proved that depressions and recessions are not necessary.

"And what is the reason, A major factor, this article (in Life magazine) says: 'is that we are constantly redistributing the national income into the pockets of the less prosperous'."

WHO WOULD HAVE THOUGHT

"Well, my friends," said Truman, "I never thought I'd see the day when Life magazine would praise us for that, but there it is, in black and white. And you can see the same kind of article in everything from the Sunday supplements to the Wall Street Journal," he said.

"And all this was possible because the Democratic Party did not believe in a sharply divided class society in America. We believed in a government that belongs to all the people, and an economic system that benefits all the people."

Truman claimed, "That is what saved us and saved our system of free enterprise and capitalism at a time when other countries have fallen into socialism or communism or fascism."

A HANDFUL

Today, in 1955, there are only a few men in the Eisenhower administration who continue to say that prosperity can be maintained only by continuing social security, jobless compensation programs, Federal projects, and taxation according to ability to pay.

But the spirit of Mellonism, as put down in a small book by his ghost, David Finley, lives on. The Saturday Evening Post described Finley as "the millionaire's best friend," and "little David, the rich man's pal."

There is little doubt but that the Post knew whereof it spoke, for the trickle-down theory is surely no friend of the poor.

Mellon and the Republican Trickle-Down Tax Philosophy

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks I include part 3 and the concluding article of the series written by Mr. George B. Holcomb and appearing in the newspaper Labor's Daily:

MILLIONAIRE'S SON, MELLON GREW RICHER IN DEPRESSION

Part III

(By G. B. Holcomb)

WASHINGTON.—Taxes on the rich encourage tax avoidance, according to spokesmen for the upper income brackets.

Back in 1924, David E. Finley, the man behind Andrew W. Mellon, quoted approvingly in the book, Taxation: The People's Business, the following statement by a Yale University economics professor:

"Who will be responsible for the further degradation of the income tax? We shall not be able to blame the rich. They escape, for the most part, by legal avoidance, not by illegal evasion."

These were among reasons advanced by Mellon then and by his disciples today for drastic surtax reductions.

Mellon was very successful, but then he had longer to work at it than Secretary of the Treasury George Humphrey has had; Mellon was in that office for 11 years.

Mellon might have looked better in public if he had stayed out of the Cabinet. But the memory of him seems to be suffering little, what with the 3-cent stamp issued to honor him on December 20.

WHY DID HE CONSENT?

Just why did Mellon consent to go down to Washington, as he put it?

Maybe he got bored in Pittsburgh with his millions and minions.

Andy, 1 or 8 children, was the chief heir-by-nature of his father, a successful judge. The judge hired his son at $75 a month when he was 18. This was the last time he received a salary until he became Secretary of the Treasury.

By the time he was 30, Andrew was in charge of most of the Mellon family's interests in coal, land, steel, and banking.

By 1920, he was a lonely man. His children were away at school, and his wife had left him to get away from money grubbing, it was said.

So he welcomed the chance to join the administration of Warren Gamaliel Harding. President Harding decided that anyone with as much money as Mellon would make a good treasurer.

OOH, THOSE CONNECTIONS

When he got to Washington, Mellon was surprised to learn that he couldn't serve in various Treasury capacities, such as Chairman of the Federal Reserve Board, without first divesting himself of his business connections.

This was easily done—and still is.

Mellon resigned from 51 boards of directors and scores of corporation offices.

He "sold" his bank stocks to his brother, Richard B. Mellon, for $10,520,495.

In return for this sale, he took a "note" bearing a return of 5½ percent interest. By coincidence this was just the same as the amount of dividends being paid on the stock.

This was one of the oddest notes in existence. The interest rate fluctuated up and down—just as did the dividend rate. Mostly it went up.

Within a few years, according to David Loth in this book, Public Plunder, Richard Mellon netted $300,000 from the stocks—in addition to the interest which he had paid to Andrew. So Richard gave the $300,000 to Andrew, too.

FORTUNE GROWS

In those days the slogan may well have been, "What's good for Mellon is good for America."

The business community needed a man it could trust in the Treasury. It got him.

And while he was in the Cabinet, Andrew Mellon's fortune grew from a mere $600 or $700 million to some $2 billion, during the depth of the depression.

Andrew Mellon led the great crusade to take the burden of repressive taxes off of the shoulders of the downtrodden rich. The crusaders pointed out that victims of high taxes had to pay as much as 65 percent in surtaxes on the biggest fortunes.

The fact that few of them paid it—Mellon paid in taxes only about 3 percent of his total income in 1931—was ignored.

During Harding's tenure, Mellon succeeded in getting a law through Congress to reduce the income taxes. According to Loth, Mellon's tax savings as a result of that law amounted to $500,000 a year.

Under the old rates, during the slump of 1921, he paid $1,492,883 in taxes. The next year he paid $950,958, under the new law.

JUST A BEGINNING

But this was only the beginning. Mellon requested and got a letter from one of his subordinates, a Bureau of Internal Revenue Commissioner, David H. Blair, "setting forth some of the various ways by which an individual may legally avoid tax * * * prepared by a member of the income tax unit of this Bureau."

This was written in the covering letter to Mellon. The various ways numbered a dozen.

Here are the results of one of these loopholes:

In earlier years, Mellon paid $6 million for some Pittsburgh Coal Co. stocks. In 1931, he noticed that the stock market value of these stocks, because of the depression, had dropped to $500,000.

This then, could become a loss of $5½ million on his 1931 income tax return, provided he sold the stocks at the low figure.

So Mellon sold the stocks to the Union Trust Co., headed by one of Mellon's men. Then 118 days later, one of the Mellon holding companies repurchased the stocks at the same price plus 118 days' worth of interest at 6 percent. But the loss stayed on the tax return.

BUSINESS FRIENDS

That some of Mellon's friends in the business world also shared in this legal avoidance of taxes can be assumed on the basis of the billions in refunds paid out during those years.

And, wrote Loth, "Uncle Andy and his companies shared to the extent of at least $7 billion. Papers relating to the Standard Steel Car Co.'s request for an amortization allowance of more than $3 million bore a notation: 'This is a Mellon company.' It got what it asked * * *."

Mellon's boys were active on other fronts. Aluminum Company of America, enjoying a near-perfect monopoly, narrowly escaped a congressional investigation—by only two votes—thanks to its heroic defender, Senator Reed of Pennsylvania, recognized Mellon spokesman in Congress.

The South American nation, Colombia, sought to cancel a concession it had granted to Gulf Oil, a Mellon company.

Suddenly Colombia became a bad risk, and could get no more loans out of National City Bank in New York.

Andrew Mellon, as Secretary of Treasury, later assured the president of Colombia that Colombia's credit might be better if it settled its difficulties with Gulf Oil.

This is history, mostly forgotten.

And on Tuesday, the Nation will honor this mostly forgotten man, Andrew Mellon, with a 3-cent stamp. It is altogether fitting and proper that he should be well remembered.

LABOR ECONOMISTS GIVE LIE TO TRICKLE-DOWN TAX PLAN

Part IV

(By G. B. Holcomb)

WASHINGTON.—The trickle-down theory of economics will be just as much an issue next

year as it has been during every recent political season.

Its strongest proponents are the National Association of Manufacturers and the United States Chamber of Commerce.

Chamber spokesman Emerson P. Schmidt put it this way in a report issued last month:

"That we can maintain prosperity and progress without new investment is doubtful.

"If its benefits trickle, flow, and spread all around * * * there should be no complaint. * * *

"High and uncertain taxes on investment and achievement can be among the chief factors which will hold us to lower scales of living than those we could achieve."

MAKES MORE SENSE

Yet Prof. William L. Cary of Columbia University recently told a congressional committee that the large investor probably constitutes the most important beneficiary of preferential treatment in tax laws.

This was substantiated by Prof. J. Keith Butters of Harvard, who said, "The evidence indicates that, as a group, individuals in the upper income percentiles are still accumulating large amounts of new investable funds despite existing tax rates."

Peter Henle, AFL economist, writing in the current issue of the Federationist, said that the Federal tax laws, far from treating the upper-income groups and corporations unfairly, actually contain special privileges for such taxpayers.

"There is every evidence that low-income families bear a disproportionately high share of the tax burden," he reported.

Henle urged a return to the principle that the burden of taxes should fall according to ability to pay.

CLOSE LOOPHOLES

While Congress possibly should consider cutting taxes for the lower-income groups, it should at the same time try to put an end to some of the loopholes favoring upper income groups, he wrote.

CIO Research and Education Director Stanley Ruttenberg pointed out recently that during the past 2 decades, growing corporation tax rates, for example, seem to have had little effect on investment.

What's more, even though the tax rate dropped in 1954, so did business expenditures for new plant and equipment.

Past experience indicates, said Ruttenberg, that it is the money spent by consumers which is the biggest factor in fostering and holding prosperity.

In other words, the tax rate on business and high incomes has less effect on the economy than the corporation spokesmen like to admit.

Thus the emphasis in government policies should be to see that those consumer expenditures are not interrupted or abruptly reduced, but constantly and steadily expanded, liberals say.

TRICKLES: 1924 AND 1954

1924: TREASURY SECRETARY MELLON

"A sound tax policy must take into consideration three factors. It must produce sufficient revenue for the Government; it must lessen, so far as possible, the burden of taxation on those least able to bear it; and it must also remove those influences which might retard the continued steady development of business and industry on which, in the last analysis, so much of our prosperity depends."

1954: TREASURY SECRETARY HUMPHREY

"In addition to the $5 billion tax cuts of January 1, we are recommending a general revision of the tax system. It will do two principal things:

"(1) It will make the tax burden fairer for millions of individuals by removing the more serious tax inequities and complications.

"(2) It will stimulate production and create bigger payrolls and more and better jobs by reducing restraints and by encouraging initiative and investment."

The Hebrew Home for the Aged, Riverdale, N. Y.

EXTENSION OF REMARKS
OF
HON. CHARLES A. BUCKLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. BUCKLEY. Mr. Speaker, under unanimous approval of the House, I am including an effective and inspiring address delivered by Supreme Court Justice Sidney A. Fine, our former colleague, under date of September 11, 1955, on the occasion of the dedication of a cottage at the Hebrew Home for the Aged at Riverdale, N. Y., as follows:

I am privileged to say a word of greeting and to congratulate the officers and active leaders and workers of the Hebrew Home for the Aged at Riverdale at these ceremonies.

I count it a high honor to be associated in this very notable undertaking to provide a modern, up-to-date home for the Jewish aged.

From the beginning, the plans for this magnificent haven were drawn with imagination and faith. The organizers relied upon the generosity and charity of our friends and neighbors, and their faith was justified. Already, more than a million and a half dollars has been contributed to acquire and to build this home. The organizers also gave to the planning of the home, the imagination and heart required to establish it in a setting unique among institutions for the aged.

This afternoon we dedicate another cottage to expand the bed capacity of the home to accommodate 260 elderly persons. This is a good time to point out that the facilities we are providing here for sheltering and caring for old people are unmatched anywhere in our city and in many other places in the world.

This park setting overlooking the beautiful Hudson River and the Palisades is ideally suited to quiet retirement at the end of a busy and often hard life. Yet, the home is situated within the limits of the greatest city in the world and within convenient distance of the relatives and friends of those who live here.

The rooms in the main building and in the cottages are airy, light, and tastefully and comfortably decorated and furnished. The pastel shades of the walls combine with the streaming sunlight to make this a happy place full of cheer and hope. The decor compares favorably with that in a comfortable, modern hotel accommodating well-paying guests.

The beautiful dining and social hall makes mealtime a festive occasion, and every motion-picture show a visit to a motion-picture palace.

The solaria, the lounges, the terraces, the occupational therapy and leisure rooms are comfortable places for socializing.

The fine synagogue is ideally suited for prayer, study and meditation, and inspiration for many of the old folks.

I am impressed with the facilities provided for the care of the sick. With the advancing years, those residents who become ill and who are infirm are looked after in an infirmary that compares favorably with many hospitals. Those who have temporary illnesses of weaknesses are tended in the treatment rooms and clinics. The X-ray rooms, the laboratories, the dental, eye, and foot rooms and the physiotherapy departments are the last word in medical facilities for serving the aged.

This is a home in the modern sense of the word. The residents have all the freedom of movement on and off the grounds that they desire. The aged here are not subjected to stringent rules and disciplines. The large staff—almost 1 employee for every 2 old people—has been charged with the responsibility and is instructed in the spirit of service and respect for the personality and the dignity of each individual resident.

I am proud of my community for making possible such an enlightened, progressive agency for the care of the homeless aged.

With the increasing numbers of aged in our population, every branch of our Government must be vitally interested in the welfare of our senior citizens. The Federal, State, and municipal authorities are moving to help meet the problems—special problems which confront all of us with the advancing years. The Council of State Governments has recently outlined a plan of action in aging. Our own Governor Averell Harriman has appointed a special commission to accelerate plans for helping the large older segment of our population. Our city fathers, much to their credit, have been attempting to set up special facilities for aged persons.

However, it remains for the individual citizen to establish and to sponsor an institution such as the Hebrew Home for the Aged at Riverdale. To help our fellowman who at the end of his years is no longer able to help himself—to provide him with loving care in an atmosphere of sympathy and understanding—we must maintain and support this home.

We must expand it and build it and sustain it and continue to dedicate more buildings and more facilities for those whose strength fails them in their old age.

On the eve of the Jewish New Year, let us wish each other a happy, healthy, and prosperous New Year. Let us join in making the New Year a better year for elderly men and women.

Disaster Insurance

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the statement I made before the United States Senate Committee on Banking and Currency at its Boston hearing on disaster insurance on November 9, 1955.

The material follows:

DISASTER INSURANCE

Mr. Chairman and members of the committee: First, Mr. Chairman, let me extend to you and your colleagues a hearty welcome to Massachusetts and express the gratitude of our delegation and people for the painstaking attention your committee is giving to the very serious problems which recent disastrous floods have created for us.

I am very thankful also for this opportunity to appear before you and present my views. My distinguished and beloved colleague, Mrs. ROGERS, a member of our dele-

gation, and of our Flood Control Committee, is also here and I know you will be pleased to hear from her.

While some of the problems connected with the flood are not precisely under the jurisdiction of your fine committee, many of them are pertinent to your current studies and inquiries and undoubtedly present avenues for effective remedial action by the Congress.

Let me state also that I have been very much gratified by the work to date of your distinguished committee and the very able leadership of our good friend, Senator LEHMAN, one of the outstanding members of the United States Senate, marked and distinguished for his long, valuable service as Governor of the great State of New York as well as his conspicuous service in the Senate. There are many bonds of friendship and admiration which tie him to Massachusetts people, and to our particular cause, and we appreciate more than I can say the thoughtful, forward-looking approach which he and the committee are pursuing.

The great havoc wrought by the floods in our State and area, indeed throughout much of the Northeast, hardly requires detailed description by me. It suffices for me to emphasize the fact that the ensuing destruction, havoc, and distress were widespread and that the resulting problems of relief, rehabilitation, and flood control and protection will have to be tackled vigorously on a very broad front.

Let me state further that all our people are deeply grateful for the efforts which the Federal Government has made to date. At the President's direction many Federal agencies too numerous to mention here have rendered us valuable and effective assistance and plans are in being which, if carried out by the Congress, should be of immeasurable benefit.

First, I should like to suggest the urgency of immediate appropriations by Congress of adequate funds to proceed as fast as possible with studies and construction of flood-control projects already authorized, and wherever necessary, in the various river basins of our State and region.

Delay would be fraught with grave possibilities of fresh disaster. Our flood committee, of which I am chairman, is intensively studying many necessary, specific projects and the Army engineers are conducting exhaustive surveys. Earliest possible action is of paramount importance.

A second proposal is one which your honorable committee is intensively studying and that is the urgent need for flood insurance and disaster insurance. I am very glad that Senator LEHMAN and your committee have broadened your studies to cover complete disaster insurance, because following the terrible Worcester tornado of 1953 I introduced H. R. 6129 which would create a Government-owned corporation to insure against all natural disasters such as floods, tornadoes, droughts, forest fires, earthquakes, hurricanes, and all disturbances and conditions of such impact and severity that it becomes necessary for the President to declare disaster areas in any part of the Nation. I have previously submitted to the committee for insertion in the RECORD the text of H. R. 6129.

You all realize that it is impossible to secure flood insurance, or disaster insurance, from private insurance companies because its cost would be prohibitive. Under the proposed bill the Government would reinsure disaster policies designed to cover every part of the United States against the ravages of all natural disasters.

I am desirous, insofar as it is practicable and feasible, of having private companies cooperate with the Federal Government in this coverage because it would not interfere in any way with current private insurance coverages wherever they exist, of storm and wind damage and the like, because the proposed insurance would not go into effect in any area until the President has declared an emergency.

I note from the press, Mr. Chairman, that you are considering a measure to include damage from atomic attack and possibly other war damage, and, so far as I am concerned, I believe that this proposal is not only sound and feasible, but vitally necessary, if we are to be prepared for any great national emergency that might strike us like a bolt from the blue with devastating effects.

In this connection, it might be relevant to refer to the War Damage Corporation organized during World War II on the theory that war risk is catastrophic in nature, arising out of a single peril, and war risk losses are unpredictable, as well as impossible for private companies to undertake by themselves.

You will recall that the Act of March 22, 1942 provided specifically for property loss or damage which might have occurred after Pearl Harbor to the end of the war period, and the War Damage Corporation entered into agreements with some 546 established insurance carriers to transact general war-risk insurance protection available to the public.

Under the program the companies were permitted to make a reasonable profit for their work in writing the insurance and handling claims and the like. It was not necessary for the Corporation to request or receive any direct appropriation from the Congress and it was capitalized for something like a hundred million dollars and its stock was held by the RFC.

You will recall that from December, 1941 to June, 1945 premium revenues aggregating something like $250 million were more than adequate to enable the Corporation to meet its operating expenses and pay approved claims for property loss and damage.

Actually the only funds made available to the Corporation by RFC were $1 million for the acquisition of the initial issue of 1,000 shares of capital stock.

About $372,000 was expended in approved claims for losses which occurred before inauguration of the premium insurance program.

This insurance was set up so that it could cover all the property in the United States—homes and residential, business, churches, public institutions, and the like with the assistance and participation of the private companies.

Let me repeat that I regard such a program not only to be sound and feasible, but decidedly necessary at this time, and I hope and urge that the committee will consider H. R. 6129 in connection with its study of other pending proposals you are studying.

In the third place, I have made certain efforts looking toward expansion of the Weather Bureau to speed intensive study of weather problems and to inaugurate as early as possible more effective hurricane and storm-warning systems. I think there is a real need for increased and improved research on weather and weather service and am introducing appropriate legislation when Congress reconvenes. I respectfully ask the subcommittee's permission to include in the record the text of the preliminary draft of my weather bill.

Fourthly, I also think that Congress will have to strengthen and expand our machinery for disaster relief and rehabilitation. It should be permanent, it should be more closely coordinated with the States and local communities. It should be broader and more generous in its coverage.

I seriously question that relief of disasters of such great magnitude as we are dealing with now, and will have to deal with from time to time, and which may hit anywhere in the country, can be satisfactorily handled by Government loans. The Small Business Administration, acting under its present mandate, has done splendid work and I would be the first wholeheartedly to commend this Government agency for the help it rendered to us, and is still rendering to us.

However, I believe that these relief and rehabilitation problems will have to be approached on a much broader front and that consideration must be promptly given to the equitable and humane aims of putting flood and disatser sufferers, as nearly as we can, into the status quo ante—the position they were in before disaster struck them.

It can be definitely said, I think, that many of these losses, individual and collective, human and material, are far beyond the resources of individuals, or the State and local governments, to cope with adequately. A broader measure of assistance by the Federal Government is required.

Such a program will be costly and expensive. But so is foreign relief; so are agricultural subsidies; so are great public projects in other sections of the Nation. The stricken people of the eastern seaboard who pay such heavy taxes to the Federal Treasury are also entitled to the generous help and assistance of the Federal Government in their time of terrible affliction.

In conclusion, I earnestly plead for your cooperation and assistance. We have been sorely stricken. Our own people have shown tremendous courage and resourcefulness in trying to reestablish their homes, their industries and their communities. But our need is still very great. To ward off the effects of the disastrous floods and to set up adequate safeguards against possible future visitation of great natural disasters, so unpredictable in their approach and point of attack, and so paralyzing in their consequences, we now need the sympathetic help and assistance of the Government.

If your illustrious committee comprised of great leaders of the United States Senate and great leaders of the Nation, able, esteemed and patriotic, working so diligently under the leadership of the very distinguished Senator from New York, can help us measurably in any way to realize the objectives in this field of relief, rehabilitation and protection which we in Massachusetts feel must be so urgently and vigorously pursued, then we will indeed be very grateful to you.

Please let me thank you, Mr. Chairman and members of the committee, for hearing me this morning and giving your valuable time, and most of all your sincere and sympathetic consideration of our serious flood problems. I am sure that you will do everything you can to assist us.

Thank you very much, Mr. Chairman and gentlemen.

Brooklyn Campaign of the Boy Scouts of America

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Mr. Andrew S. Roscoe, president of the Equitable Savings & Loan Association of Brooklyn, N. Y., and adjunct professor of economics at the Polytechnic Institute of Brooklyn, at the annual Brooklyn luncheon of the Boy Scouts of

America held at the Granada Hotel on Tuesday, November 29, 1955:

I feel complimented by your invitation to visit with you at this luncheon dedicated to the launching of the Brooklyn campaign of the Boy Scouts of America.

I could devote my allotted time to a discussion of the great work of the leadership and staff of the great Boy Scout organization in Brooklyn. I feel that the many years of scrvice contributed by Brooklyn's great supreme court judge, the Honorable J. Vincent Keogh, the Honorable Richard Hannah, our beloved general chairman, a great engineering educator, Dean Henry Q. Middendorf of the Polytechnic Institute of Brooklyn, Mr. Justice George Arkwright, our beloved friend, Comdr. Barney Nova, Commander Lieblich, and others have served as a source of inspiration to the youth of America and to all of us adults who join the Scout movement in an effort to implement and supplement the labors of these pioneers.

At greater length, I might discuss the devotion of the Scout organization. When Jim Boyer visited with me, accompanied by your general chairman, Richard Wesley Hannah, supplementing the invitation of Judge Keogh, I asked quite a few questions. It was simply wonderful to learn that in the Scout organization the professional staff wishes to remain in the background. It is a pattern that we seldom meet with, but when we do meet this pattern we cherish it, and we single it out as a beacon of hope, attesting that we do have men with the highest degree of integrity and morality dedicated to a profession, laboring for modest compensation and seeking neither power nor acclaim.

Your Scout executive, Jim Boyer, a highly educated Texan, has contributed 30 years of professional work to Scouting, having served as a Scout executive in small farming areas as well as in large industrial cities and with a record equaled by few other social workers in our great country. With almost a decade of service to his credit in Brooklyn, he is commanding a volunteer group of 8,500 adults, the good men and good women in a community, who in turn provide help, advice, and guidance to 700 Scouting packs, troops, and posts commanding our armada of 25,000 boys. The Brooklyn Boy Scouts, the future of America.

Nothing indicates the kind of a leadership that Jim Boyer has provided more than the fact that he is able to attract and retain the cooperation of outstanding Brooklyn men.

I choose, however, to call to your kind attention the purpose of our luncheon meeting today. We have a splendid Scout organization. The leadership is here. We have a wonderful volunteer group to assist this leadership, and we have 25,000 boys, eager to mold their thinking according to our finest American traditions. I mean 25,000 boys on the inside, and I am told there are at least as many on the outside who should have an opportunity to participate in the great program of Scouting, but who cannot do so simply because we do not have the money to provide them with such an opportunity.

Brooklyn is blessed with 2 percent of the population of the whole country and an equaly impressive percentage of the total national income. We have 20 percent of the population of the State and almost 40 percent of the population of the city. As a matter of fact, we spend one-third of all scout dollars collected in the greater city of Brooklyn, yet we have been only able to raise 10 percent of the total quota of the greater city. For 10 percent cash, Manhattan gives us 33 percent of the total collected. It is always nice to have a piggy-back ride but I am just wondering what the answer is to the financial aspects of the problems of such youth organizations as the Boy Scouts. Certainly, we have great leadership.

Your general chairman, Richard Hannah, one of our great barristers, a gentleman with a background of accomplishments not limited to the field of practice of law. As you know he is general counsel to the General Accident, Fire, and Life Assurance Corp., Ltd., and, as well, a leader in many fields of religious, educational, and social welfare. It is simply wonderful to be associated with this type of leader, and this leadership should assure our volunteers in this effort to obtain our quota for the Brooklyn Boy Scouts. Such effort will enable us to say to Brooklyn boys: "We want you to have the benefit of scouting and we love you even to the extent of willing to pay for this affection. We want you to have the same opportunity to become scouts in Brooklyn as you would have if you were living in other communities." For if a boy lives in Queens, he has 2 chances to Brooklyn's 1 of becoming a scout; if he lives in Nassau he has even a greater hope of becoming a scout. But in Brooklyn his chances are very slim because of the lack of funds. We hear a lot about Federal aid, State aid, and municipal aid for our youth. Scouting does not get funds from government. Scouts are good kids. They present no threatening mental, emotional, or moral problems.

Certainly these youngsters, the children of our neighborrs, merit our moral and substantial support. This is a great cause! Providing for the good kids is a great purpose, and all of you are as dedicated to the great ideals of scouting. To carry this campaign to full fruition wil merit community reward not measured in gold but infinitely worthy of community pride.

The poet Wadsworth once spoke of his youth thus:

"In that great dawn, 'twas bliss to be alive,
But to be young 'twas very heaven."

Our youth should know, the early impact of heaven. They should not be dispossessed!

Israel Must Have Arms

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. CELLER. Mr. Speaker, under leave to extend my remarks, I insert herewith an address I made on January 4, 1956, in Chicago, Ill., before the Congregation Rodfei Zedek:

ISRAEL MUST HAVE ARMS

Israel must have arms. Let us remember this: Wherever you stand in Israel, you can see a border line with scarcely the twist of a neck. Thus, if there is an attack upon Israel and Israel is unprepared to meet it, Israel will be forced into the sea before any aid whatsoever can be rushed to her.

The only defense Israel can have against an attack is to be able to meet it head on. A Pearl Harbor would mean the end of Israel. There is no space for retreat.

Israel asks for arms for another reason which, above all else, most certainly should be understood by the United States. The United States has consistently pursued the policy that the most effective deterrent against war is to maintain adequate arms for herself and her allies. To that end, we have devoted the major portion of our budget, keeping strong our armed forces and trying to keep ahead in military developments and supplying our allies with military aid.

Is it, therefore, unreasonable—can we possibly view it as unreasonable—that Israel, small and friendless, should likewise view an adequate defense as the best deterrent against war, and as the best assurance for peace? We in the United States have sought, through a system of defense pacts—NATO, SEATO, and the encouragement of pacts like the Baghdad pact and the Northern Tier arrangements—to promote the cause of peace in the world. Is it, therefore, unreasonable that Israel, in her isolation—the only democratic country in the world so isolated—should seek a pact with the United States, the country which once befriended her, the country which once, through legislative action and through presidential proclamation, gave so much sympathy and understanding to the ideals of the Jewish homeland?

The situation in the Middle East has deteriorated where it now constitutes one of our own weakest points, securitywise. Through a lack of firmness with the Western Powers, our obvious indecisiveness, so open to the Arab States that they played the East against the West, we now face Soviet penetration of the Middle East. Right now we seem to be running around in circles, crying loudly at the Communist apparition in the area, obviously distraught, now patting the Arab nations on the head, now murmuring sympathetically to Israel, promising and withdrawing, promising and withdrawing again.

Let us make no mistake about it. We have been less than forthright. The Western World has reason for its alarm.

To me it is amazing that the Western World, dedicated to the preservation and even to the expansion of democracy, should have turned its back on the one practicing democratic nation in that area of the world. The British Government is openly pro-Arab, so openly pro-Arab, so vigorously pro-Arab, that the voices of protest are heard around the land. As a result of this mounting protest, Prime Minister Anthony Eden has reluctantly consented to a decree that no license be granted for the export of materiels that could be reconditioned and re-exported for use as weapons of war "unless the government of destination is prepared to give a guaranty against that happening."

Such a decree is meaningless. It is impossible of enforcement. Inspections certainly cannot be maintained in any country where this materiel eventually lands. It is especially meaningless in view of the fact that Great Britain has been feeding the Egyptian maw great supplies of arms, including 64 Centurion tanks, scores of jets, and some 180 to 190 reconditioned British Valentine tanks.

A shipment of these arms in part and parcel of Eden's policy of Arab appeasement. Eden is like a man who keeps feeding steaks to a tiger in the hope of making him a vegetarian.

Is it that the Government of Great Britain considers Israel expendable? Can Eden on one hand deprecate an arms race in the Middle East and on the other condone the supply of arms all out of proportion to that of Israel to the country of declared and open hostility?

The situation is so fraught with danger that top priority was given a few days ago by the newly appointed British Foreign Secretary, Selwyn Lloyd, to that very situation by summoning to London eight British envoys in Middle East countries for a 2-day conference. Among those summoned were the British ambassadors from Israel, Egypt, Syria, Lebanon, Jordan, and Saudi Arabia.

It is also said that Great Britain may find it necessary, in view of the storm of protest, to isue a white paper explaining its policy in the Middle East.

In all this, where is United States policy? Will our leadership go by default?

We cannot, of course, conclude—since we do not know—that our Government will steer the wrong course. We do know that there has been too much reliance on wishful thinking. We do know that there has been—and still exists—a split among the State Department advisers. We do know that our diplomacy has failed in Egypt. But the course must be set and set soon—with realism, with staring of the facts straight in the face. We cannot afford any conflagration in that area in the name of our own security.

As Prime Minister David Ben-Gurion said, eloquently and with wisdom, in a recent address to the Knesset, the Israeli Parliament:

"We know that any war—one even in which we gain the upper hand—involves ruin and destruction for both parties and intensifies hatred between nations. We know that, after our victory in one war, a second round is possible, and after our victory in a second war, a third round may come, and there is no end of this business."

First Order of Business

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following instructive and enlightening editorial from the Boston Post, Boston, Mass., September 14, 1955:

GAP IN THE DIKE

The gap between planning and construction of flood control projects in New England was graphically illustrated at the meeting of the Bay State congressional delegation with Army engineers.

Flood control projects amounting to $196 million have been authorized for New England since the disastrous floods of 1936—in all 27 projects—but less than $2 million has been spent to carry out the plans.

There are several reasons why this gap exists. One of the big reasons is the failure of local and State authorities to concur in the projects. In many cases the objections are reasonable, and in many others purely capricious. Usually the objections center around the destruction of taxable property necessary to create storage basins.

Another reason, however, is the cloud of indifference which descends upon the flood-afflicted areas after the emergency has passed. After the cleanup, and after the rubble is replaced by new construction, people delude themselves with the assurance that it can't happen twice in the same place.

If local and State authorities become indifferent to flood control because the people are no longer pressing for relief and reparation, it follows that the pressure will be off the delegation in Congress. If local and State authorities will not concur in flood-control plans there is not a great deal that the Corps of Engineers can or will do to push through a flood-control project.

Flood-control projects on the Merrimack, Hoosac, Housatonic, Connecticut, Winooski, and Thames Rivers, which are a serious annual threat, should be given priority, should be pressed through to conclusion, and should be backed by generous congressional appropriations.

It must be remembered that the New England delegation in Congress must first secure appropriations to reimburse the Corps of Engineers for about $28 million which will have been spent by the end of this year on the basis of an agreement between President Eisenhower and the party leaders.

Money must be appropriated over and above these flood-reparation funds for the flood-control projects. Authorization of a flood-control project doesn't contain floodwaters. Only storage basins built to contain the floodwaters can do that.

The United States Corps of Engineers has prepared a New England flood-control plan. All that is needed is State and local concurrence and the money. The fact that this flood control scheme lies within an area of chronic labor surplus should stimulate swift action in the Congress.

The presence of the majority of the Bay State delegation in Congress at the conference with the Corps of Engineers is heartening. We would like to see the New England delegation in Congress brought together at frequent intervals for conferences of this kind which would produce a cohesive plan for New England betterments.

Governor Leader's Israel Bond Drive Address

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Honorable George M. Leader, Governor of Pennsylvania, at the State of Israel bond dinner held in Wilkes-Barre on October 23, 1955:

Americans of my generation can claim a viewpoint on Israel. It really couldn't be otherwise. This country's actual existence coincides with our own.

We were a generation that grew up in a world in which the cause of Israel took shape, out of the dreams of idealists, out of the Balfour Declaration into an independent nation, transforming the desert sands.

I remember reading, while attending school, the grim tales told in banner headlines of another tragic chapter of the Jewish people. The appeals of Israel reverberated in the conscience of the world.

Many of us shall never forget the fight we individually and as a Nation made against the ruthless forces of modern tyranny during World War II. All of us were appalled when we witnessed how brutality and mass destruction were systematically employed in an attempt to erase the name of Jew from the face of the globe. By my age, I am a part of that group of Americans who opposed the cancerous spread of fascism.

By my ancestry, I am happy to boast, of being Pennsylvania Dutch. They are a species unto themselves. By family religious tradition, I have a legacy of simple creed and good deeds derived from my ancestral plain people. Their unique sense of how to live a faith and express a family folklore in all one's dealings with one's fellow human beings still colors the moral sense of my own social and spiritual obligations.

I am sure you won't think it exactly strange when I say I am for Israel because I am Pennsylvania Dutch and still function in the motives of the Christian beliefs of my family predecessors.

I am sure it must come immediately to mind how my ancestors and my immediate family life has at least some identity with how you and your immediate relatives frequently live. When one grows up in a family atmosphere where faith presides over patterns of conduct in almost every precise aspect of daily living, you at least sense an affinity, even if not an identity, of attitude. When one accepts the basic tenet that daily living is an external expression of accustomed regulations—formed by an inner, simple, spiritual compulsion, then there are bonds of attachment with another people—whose way of life pursues rules of conduct stemming from the law of the prophets and the kings.

But there is really much more to the explanation of why I am committed to the cause of Israel than that. As Pennsylvanians, I think you will see my point. All of us boast of being lineal descendants in a spiritual sense of the viewpoint of William Penn. Do you recall what really was the proprietor's vision when he described his attempt at establishing a Commonwealth as the holy experiment?

Penn felt he must establish a colony in the clean, fresh air of a bright, new world as a haven for religious and personal liberty.

We sometimes don't appreciate what this event really meant. Penn's plan was a really new notion put into practice in the experience of men. Religious toleration is not too old an idea. Penn wanted people to find in his woodlands space for liberty of person in all its forms: for a man to think as he liked, worship as he was convinced, work as he saw fit, live as he felt obliged to as a responsible member of a common community.

Once the word finally got out about the holy experiment, immigrants were certainly not lacking. Among those who came for a new start in life were many from Germany. In these were some of my ancestors who nearly nine generations ago took William Penn at his word. They came from the gingerbread duchies and principalities that divided up the real estate of south Germany because these pocket-sized potentates made their conception of religion a civic handicap.

They wanted out; they wanted a land where they could be made as free as they believed God intended them to be.

So it was—300 years ago—that my forebears settled in the counties of what today are York, Lancaster, and Berks to find out what life and liberty meant, to see if what they heard about Penn's experiment was a fact. They had uprooted themselves from where their people had lived for generations. They tossed aside many relations and customs that they had shared with their fellow subjects. Now, they took their roots anew in our rich, red loam. They began to grow in freedom as their crops grew by the sweat of their brow. They recognized a man's quenchless desire for respect and dignity and they accepted freedom as a sign and a mark of the presence of God.

That was my family tradition. It was a part of me. It still is.

We were in our American origin refugees of tyranny because of our faith in God and man. We were immigrants for freedom. We were tough enough, cantankerous enough of body, mind, and spirit not to knuckle down and surrender to circumstances but get up and go on to a better deal. We abandoned a wormy past for a bright future. We had faith, given the opportunity, we would succeed afresh in a new land. Any people that relive a similar chronicle could not help but enlist my deep, abiding support.

Looking back on my sharp reactions of horror and abhorrence to the tragedy of modern Jewry which I expressed in college days, I cannot help but recall how my family history awoke in me a sense of kinship in suffering for those who were the victims of the ruthless Hitler regime of prewar days.

Recently I had an occasion to remember the reactions that were average among my classmates in the last half of the 1930's. They just couldn't understand any more

than could I the motives and psychology of a ruling political party that could coldbloodedly make their nation a tool of a people's torture and a world's fear. We felt outraged that any human beings, because they adhered to a religious way of life, automatically were candidates for a gas chamber, or for an impersonal listing for a taste of living death in a concentration camp. More than one of us who had been so comfortable in the security of our rolling family farmlands in central Pennsylvania woke uneasily to a sense of identity with those who then were actually experiencing on a more collossal scale the same repression and persecution as once did those from whom we sprung.

The Pennsylvania Dutch know the worth of liberty and they teach it to their children because they will not forget that one time they did not have it. They know the need for limitations on public power, because one time they suffered from its excess. They, too, recognize the terror of fear. They, too, had known legal discrimination. They, too, had felt the heavy, harsh hand of an indifferent authority brush aside their rights to pursue the ways of God in the light of their conscience. You can't escape this kind of background. It supplies strong roots of sympathy and understanding that make up my bonds for Israel formed quite awhile ago.

When I was asked to talk with you this evening, these memories came flooding back. I cannot conclude that the survival and the accomplishment of the renaissance of Israel could have happened aside from the spiritual vigor of the insight and moral character of your co-religionists that brought about the birth of the new republic and has sustained it in its epic efforts to put aright its diplomacy and its economy.

I make no pretense to a comprehensive understanding of all the complex issues engaging Israel. Yet, I cannot otherwise explain the treasury of courage and stamina, the pioneering spirit that raised the Israeli Republic from nothing and won the respect and admiration of fair-thinking people throughout the world.

Israel came to birth, a new land in an ancient, outworn corner of the globe, more rich in history than in natural resources.

Israel came into being as though a response to the ancient prophecy in the Holy Land surrounded by a hostile, bitter Arab world. Israel came into existence over the lethargy and indifference of European powers.

Israel came to life anew, a nascent state of an ancient people, a fledgling government for an ageless faith.

I can claim only a layman's knowledge gathered from newspapers and magazines to confirm the similarity of spirit and inner strength I perceive between the early Pennsylvanians and the modern citizens of Israel.

Pennsylvanians had all the advantages on their side. They came to a virgin territory of vast space and immeasurable deposits of natural resources. They have built steadily over the generations. Time has been on their side.

On the other hand, Israel is new and has just begun in limited terrain and worn soil. Nevertheless, a sense of contagious confidence belongs to both, a spirit of pioneering in a new land in response to a new challenge is abroad.

The Israelis see their country as our forebears saw America, as a land where the intangibles count as much as physical wealth. They see a lond where dignity can be breathed with the air. They want there what our ancestors achieved here:

Freedom to one's opinion that the truth might prevail;

Freedom in occupation and economic enterprise that careers may be carved by talent and service;

Freedom from arbitrary government and the violent prejudices of fellow man, so no man might be compelled against his will.

The Israelis work for the happiness that comes from freedom and which drew like a magnet the homeless and the ill, the aged and the suffering, the young and the equipped among your co-religionists from every trouble spot of the five continents. They brought their persons and their courage, their experiences and their inexhaustible hope that no might and majesty of naked power would ultimately stay their course of achieving a free society compatible with their ideas.

Today Israel stands for the kind of freedom every American understands, almost alone in the Middle East. I think it is honest to say that the new republic is an outpost of 20th century progress in a blighted 14th century dominated area. This is so because of the spirit of Israel's people, the spirit of venture that marks out the pioneer, the spirit of vision that comes from faith, the spirit of confidence that depends on man's capacity to remold the earth. Such cards of credentials will always be honored by the American people.

Here is a country whose very population has doubled in 7 years and yet practices no barriers in immigration policy. Here is a new republic that in this time has increased its national income in a single year over 30 percent, even if its new citizens are more endowed with assets of the spirit than this world's goods. This is the strength of Israel which cannot be lightly dismissed.

The Israelis are devoted to their religious faith as a pattern of conduct in the course of national affairs. Their new immigrants blend their sense of exaltation with the old as a powerful, almost atomic, force of the human spirit.

I do not think that I can forget to pay my tribute on this occasion to the extraordinary record of generosity that is the sacrifices of my fellow Americans of the Jewish faith in their unparalleled contributions to the maintenance of this gripping cause. American Jewry have displayed a measure of sharing with their distressed coreligionists abroad that may well remain a model of charity for a century. Now, charity is being supplanted to some degree at least by investment. I know you will not slacken now.

Some of my friends believe I have been engaged quite steadily during the last 8 months in my own problems of fund raising. I hope you will permit me one special appeal for your cause tonight.

I am frequently told that it's hard to sell intangibles or get people to believe that intangibles make a good invstment. Yet I cannot help persisting in my belief that I know of no better investment than in maintaining and sustaining freedom. I cannot recall any greater opportunity for doing what one ought than in supporting the efforts of free men devoted to the proper use of the opportunities provided by liberty.

At least Emerson was partially correct when he once remarked that the essence of a nation's history is a composite of the biographies of its individual men. I think you have got the right type of man in Israel. They are tough, they are hard, they are energetic, they are workers, they know the price that must be paid for freedom. They have been molded in the cauldron of one of the most trying crises of our modern history. They have experienced suffering. They have felt terror. They suffered exile and imprisonment. They bore persecution. They were snuffed out by war. They hurt with the memories of death that struck their children and their relatives. They experienced dispossession of property and goods. They walked, forlorn, as the homeless of the world.

And yet, they lived. They survived. They endured. They did not succumb. They lived on the faith within them, faith in their God and His way, faith in the conquest of good within the human spirit, faith in themselves in good, hard work, in stark, commonsense, in self-sacrifice, faith in the chance to prove themselves by building a homeland.

As friends of freedom, believers in the inevitable triumph of the democratic process throughout the world, as guardians of Israel, let us join together in working together to sustain this outpost of freedom where human dignity walks without fear among men.

How To Get Rid of Our Agricultural Surpluses

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article:

HOW TO GET RID OF OUR AGRICULTURAL SURPLUSES

(By Dave Livingston, Washington, Iowa)

SELL THE GRAIN BACK TO THE FARMERS WHO RAISED IT, AT A CUT PRICE IN RETURN FOR ACREAGE REDUCTIONS

If corn and wheat farmers will seed down, or fallow, part of their acreage allotments next year then let them buy, from the Government surplus stocks of corn and wheat, 50 bushels for each acre of corn or 20 bushels for each acre of wheat seeded down or fallowed at their own expense. This surplus to be bought for 75 cents a bushel.

This would be starting a soil-bank plan immediately and paying for it with surplus grain instead of new tax money. Farms with less than 50 acres of allotment could elect to seed down their whole allotment and for larger farms an additional 20 percent over the first 50 acres.

For example, I have a farm with an acreage allotment of 50 acres of corn out of a total of 235 acres. Thus, under this plan, I could buy a total of 2,500 bushels during 1956, at 75 cents a bushel. In return I would seed down the whole 50 acres at my own expense. I would then buy this feed through my local ASC office, where they already have my whole allotment record. In order to spread this surplus selling so that livestock numbers would not be increased, nor the grain trade upset they could restrict my purchases to 25 percent of my allowance in any 60-day period and also begin delivery at the beginning of the crop year (July 1 on wheat and September 1 on corn).

This farm is the kind that is commonly referred to as the family-size farm. It is rough and hilly in spots. The 50-acre allotment is already so low that it is next to impossible for a man to make a living farming it because it takes as much machinery and more labor to grow this 50 acres of corn than it does to grow 100 acres or more on a better farm. On the other hand this farm lends itself to a grass-farming program and should be planted to grass. It is one of the hundreds of thousands of farms where the hilltops and pastures were plowed up, during World War II and the Korean police action, to produce the much needed extra corn and soybeans at that time. Because of the lowering of farm prices and income as well as the rise in expenses since that time it has been

necessary to continue to farm these hills intensively to make a living.

The return of this farm, and others like it, to grass farming presents a much greater problem to the individual farmer than has been generally recognized.

First. A farmer of this type must have some grain to balance his grass in order to get maximum returns on his livestock program. A livestock program is inevitable on this type of land because that is the only way you can convert grass into income. This need for grain has been the main reason for the continuation of corn farming on these hill farms.

Second. When a farmer converts his land from grain to grass there will be a time lag of 1 year in his income until this new grass becomes available as livestock feed. If a soil-bank plan were developed, where the Government rented this land to get it out of grain production, it would break these farmers financially.

Let us suppose the Government paid as much as $20 per acre rental. That would be $1,000 rental on the 50 acres. Then the farmer must buy his grain. Even at $1 per bushel he can get only 1,000 bushels which is not enough. Actually he will be able to buy much less than 1,000 bushels at the current market price. Under my plan he can get 2,500 bushels, or about normal production, while he makes this conversion.

Third. Not only will the individual farmers income be cut, during this lag time, but eventually this farmer will need a little more capital to stock this new grass properly. Through my plan he could bridge the immediate gap, without being hurt financially, and still reduce grain acreage.

I'm not enough of an expert to figure out what will be needed more than a year in advance in agriculture (and the experts are not doing so good either) but I know that if you want corn ground seeded down to grass on my farm you can get it done in 1956 by my "Grain Purchase Plan." I'll be very happy to seed down my ground at my own expense and thus take my chances on this year of lag time.

Some people will try to find fault with this idea because it will increase livestock numbers. It will be 2 years before that could start. After that cattle and sheep will gradually increase. They will have to increase for two reasons. In the first place we will need more livestock to furnish food for our increasing population. Second, from the farmers standpoint, he will have to buy livestock to eat up this new grass. If these farmers cannot increase their livestock numbers to consume this grass then they will go broke. The reason livestock will not increase immediately, and will not increase too rapidly in the future, is that livestock numbers are geared to the amount of the supply and price of grain. Under this plan the farmers would have no more grain on their farms than if they continued production. They simply buy a year's supply out of surplus instead of raising it. Who says that is not what we need in this country?

From my standpoint this plan would temporarily reduce my production costs.

From the standpoint of the Government it would get rid of the grain surpluses in return for acreage reductions. Production of wheat and corn would be reduced in direct proportion to the amount of the surpluses sold. Thus storage problem of the normal carryover would be minimized to say nothing of the future savings in storage costs and the waste through spoilage. When this surplus is once used up then the problems of agriculture are minimized no matter what kind of a farm plan we have. It would take the farm problem out of politics.

From the standpoint of the general taxpaying public it would reduce the cost of any soil-bank plan by paying for it, at least in the beginning, with money already invested in surpluses and it will get immediate action.

It can be done in 1956 with very little new legislation.

This whole plan is purely and simply an additional option under the proposed soil-bank plan. It can be offered along with the land-rental option already proposed, and endorsed, by many of the leading farm organizations.

One trouble with most farm plans up to date has been that they start with a great big overall situation and work down to the individual farm. This plan works in reverse. It begins at the proper starting point, the individual farm, and works up. As soon as the surplus is gone it is finished and it takes no new organization to make it work. It is simply an additional feature of the ASC.

It is the sum total of the production of a lot of little farmers over a period of the last 10 years, which created most of the surplus in the first place. So why not take the perfectly logical step and let these same little farmers use it up while they get their farms back into grass?

Keep one thing clearly in mind. The collective excess we have today, of both wheat and corn, has been accumulated over a period of 10 years. In fact the gross total has increased very little during the past 5 years. It makes no difference whether this accumulation took place under the Democrats or the Republicans. It makes no difference whether rigid 90-percent supports or flexible supports are to blame. It makes little difference whether the Farm Bureau, Farmers Union or the National Grange are in favor of rigid or flexible supports nor what plan they advocate in the future. The fact remains that we have about 1 billion bushels of wheat and corn as a combined accumulated surplus, over and above a normal carryover, and the big job is to get it consumed.

Why run around all over the world trying to sell wheat for export? In the first place we have very little really good wheat available for export. In the second place the State Department would probably tear their hair out if we got the job done. In the third place we already have a pretty lousy reputation for poor-grade wheat because of carelessness in shipments already made. I was in Europe, the Middle East, and Egypt last spring and almost everywhere I heard the complaint that American wheat was inferior and a poor buy.

Because of low-protein content, poor grade, contamination, and other causes most of the wheat we now have in storage is only good for livestock feed so let's quit kidding ourselves and use it up for that purpose.

Now to answer several questions involved in this plan.

Why do I propose 50 bushels or corn to the acre?

Because that is a high average yield. Remember we are trying to get rid of surpluses so that is a pretty fair deal for both the farmer and the Government. If 1 billion bushels of surplus grain were sold at that rate it would put 20 million acres out of production. This is assuming it would all be used to put corn land out of production.

Why sell 20 bushels to the acre of wheat land?

Because here also it is a fair high average yield figure. If the wheat surplus were all bought back by wheat farmers, at the rate of 20 bushels to the acre, it would put 50 million acres out of production.

As a matter of fact this plan would get rid of surpluses so fast that the amount to be liquidated in any one year would probably have to be limited to 300 million bushels or we could suddenly create famine conditions. Remerber. When you sell 300 million bushels by this method you also take out of production another 300 million bushels for the next year making a net change in position of 600 million bushels.

How can a small farmer pay for this grain?

He can buy it one truck load at a time. He will need less money at one time to do this than he would need to buy seed, fertilizer, and gasoline to plant his whole crop in the spring. If he can't do this he is "busted."

If either a wheat or corn farmer has no livestock what can he do?

He can sell it into the cash grain market. But he cannot dump a lot at one time because of the provision that he can only buy 25 percent of his allowance in any 60-day period. He simply buys it from the Government, in lieu of raising it, and then sells it in the open market. As an additional feature this would prevent the market gluts at harvest time.

Will this plan increase livestock numbers?

I partially answered this earlier. It would not do it immediately but it would as time went on. This plan, in itself, would not do it, because of the "cheap" grain, because no single farmer would get enough grain, and second, he would have his purchases spread out. Any additional grain he needed for increased livestock he would have to buy on the open market. It is reasonable to assume that the cash grain market would stabilize around the loan figure so that any livestock producer would think twice before he increased production.

Would it interfere with soil conservation?

The answer is "No." Most soil conservation practices such as contour ridges, waterways, ponds, et cetera, are carried out when the fields are in grass. It is the farms in the hill country that need these practices and these are the ones which would benefit most from this plan, therefore it would have the effect of speeding up conservation measures.

The Stranger in Their Midst

EXTENSION OF REMARKS

OF

HON. THOMAS G. ABERNETHY

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. ABERNETHY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial which recently appeared in the Milwaukee Journal. The editorial follows:

THE STRANGER IN THEIR MIDST

Adolphe H. Wenzell, who played a dual role in the defunct Dixon-Yates contract, was long the mystery man of the deal in which congressional Democrats scented scandal. How mysterious he was is only now being pointed up. The Government—if you can buy the idea—didn't even know who he was.

Wenzell, it will be remembered, had been an executive of the first Boston Corp., first adviser and then financial agent of the Dixon-Yates combine. He was also a top aide in the Budget Bureau. Wenzell, in effect, sat on both sides of the table in the negotiations between the Government and Dixon-Yates. For this we have no less than the word of William Mitchell, general counsel of the Atomic Energy Commission, who says: "The matters on which Wenzell was advising the contractor (Mr. Dixon) were the same on which he had been employed to advise the Government."

But Mitchell also says this: The "conflicting private interest of Mr. Wenzell was not known to his superiors in the Government, and only came to light recently."

Where did Wenzell's superiors think he came from? How did they happen to hire him? If they didn't know who he was and where he had obtained his experience, how did the Budget Bureau happen to engage him as an expert on utility financing and use him as adviser on a $107 million deal?

Assuming that they were so naive and uninformed about the man they named as adviser, how could they escape learning about his connections when the charge of conflict of interest was made months ago? How is it possible that they learned of the conflict of interests only recently? The Milwaukee Journal and other newspapers printed the information.

And when Budget Director Hughes telephoned Wenzell to come to Washington to advise him on the Dixon-Yates contract, how did he reach him? Did he think that Wenzell's address—the First Boston Corp.—was a dummy number or that Wenzell just had a phone there for convenience?

The American people are tolerant and patient and will accept a lot of pretty silly stuff. But if they accept the idea that the Government used a mysterious stranger as a top adviser with no idea of his past connections, they'll believe anything.

And we don't think they will.

Civil Rights

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. ADDONIZIO. Mr. Speaker, the following letter from the New Jersey members, Leadership Conference on Civil Rights, 30 Clinton Street, Newark, N. J., dated December 14, 1955, warrants careful consideration. Like the organizations signing the letter, I feel strongly that this Nation owes to all citizens of the United States wherever they reside, the rights to which they are entitled under the Bill of Rights and Constitution and that we cannot tolerate narrowing or restricting the blessings of liberty and democracy to a selected few in certain areas of the Nation. I urge the Congress to take action promptly on civil rights legislation that the recent tragedies in Mississippi show is so urgently needed.

The letter follows:

NEW JERSEY MEMBERS,
LEADERSHIP CONFERENCE
ON CIVIL RIGHTS,
Newark, N. J., December 14, 1955.

Hon. HUGH J. ADDONIZIO,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN ADDONIZIO: Bill of Rights Day, the 15th of December, will mark the 164th anniversay of the adoption of the Bill of Rights. This day offers us an opportunity to reevaluate the importance of the Bill of Rights as a cornerstone of the American system of government and to reiterate our adherence to the principles contained therein. We believe that fundamentally, the Bill of Rights, as part of our Constitution, recognizes the rights and the dignity of the individual and constitutes a prohibition against any infringement on those rights or that dignity.

Down through the years of its existence, the courts have given depth and meaning to the provisions of the Bill of Rights. The most recent Supreme Court decision against segregation in public schools is a dramatic illustration of this legal interpretation.

However, our own United States Congress has not kept pace with the growth or with the need for growth and understanding of the provisions of the Bill of Rights and has failed to provide us with legislative safeguards in implementation of these constitutional provisions. Not for 80 years has the Congress of the United States passed any civil rights legislation. Fortunately, our Federal system of Government has not allowed this failure on the part of the national legislature to deprive all citizens of the benefits of wise and humanitarian legislative practices. Many States of the Union have found it necessary to pass civil rights legislation.

We, in New Jersey, can be rightfully proud of the leadership which our State government has provided in this essential field. Many States have followed the step that New Jersey took 10 years ago in passing civil-rights legislation which forbids discrimination on the grounds of race, creed, or national origin in employment, education, public accommodation, public housing, and in the National Guard.

It is unfortunate, however, that citizens of New Jersey, traveling in other parts of the country, do not have the benefit of similar legislation. We, the undersigned organizations, therefore take this opportunity on this, the 164th anniversary of the adoption of the Bill of Rights, to urge our New Jersey Representatives to exert every effort to see to it that Congress passes such laws which will guarantee to the citizens of New Jersey the same kind of protection in all parts of the Nation as we have in our own State.

Americans for Democratic Action; American Jewish Committee; American Jewish Congress; American Veterans Committee; B'nai B'rith; Ethical Society of Essex County; International Ladies Garment Workers Union; Jewish Labor Committee; Jewish War Veterans, Department of New Jersey; National Council of Jewish Women, New Jersey Region; National Council of Negro Women; National Frontiers Club; New Jersey C. I. O. Council; National Association for the Advancement of Colored People.

Counterattack

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. MORANO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a news release concerning a statement which I made on December 29 for broadcast to some 70 million people in Soviet satellite nations through the facilities of Radio Free Europe, a most effective organization which is continuously performing an excellent service in combating Communist propaganda in the enslaved nations of Europe.

Also included is a letter to me concerning the statement from Mr. Leslie Whitten of Radio Free Europe:

Representative ALBERT P. MORANO has told Radio Free Europe that the attack by Nikita Khrushchev on President Eisenhower for his Christmas message over RFE to the captive East European peoples "shows the basic insecurity of the Soviet Empire."

The House Foreign Affairs member said that "In effect the captive East European peoples are experiencing an enslavement that is worse than colonialism."

"To react in this fashion to a Christmas message from the President of the United States demonstrates the fear inherent in the Kremlin regime," the Connecticut legislator said. "It shows that only through methods of fear and force can Russia attempt the continued enslavement of its satellites."

"This statement by Khrushchev is itself interference in the affairs of the captive East European nations which the Kremlin pretends are independent and free."

Representative MORANO said he congratulated and complimented Radio Free Europe for its continuing work in broadcasting the truth to the people behind the Iron Curtain.

"Without truth no nation is free" he said.

RADIO FREE EUROPE,
New York, N. Y., December 29, 1955.

Hon. ALBERT P. MORANO,
House of Representatives,
Washington, D. C.

DEAR MR. MORANO: Thank you for your kindness in giving us a statement on the Khrushchev attack upon President Eisenhower. As you can see from the attached it was wired to Munich for immediate broadcast to our audiences in Bulgaria, Czechoslovakia, Hungary, Poland, and Romania.

We estimate our listener potential at some 70 million and reach them through our 29 transmitters in Europe.

To them, as you no doubt know, strong, incisive statements on current affairs by free world leaders mean a great deal in terms of hope and encouragement in their struggle against communism.

We appreciate your cooperation on the story, the more so since we asked it of you on the spur of the moment, and know that your statement will be gratefully received by the captive peoples of Eastern Europe.

Sincerely yours,

LESLIE WHITTEN,
Assistant Chief, News and Special Events.

Governor McKeldin's Address to Joint Meeting of Rotary and Kiwanis Clubs on Steamship "America"

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. McDONOUGH. Mr. Speaker, on my voyage home from Europe last September on board the steamship *America*, a joint meeting of the Rotary and Kiwanis Clubs was held which was presided over by Gov. Theodore R. McKeldin, of Maryland. Among the passengers aboard the *America* were Rotarians and Kiwanians from many parts of the United States, Europe, and Asia.

It was a very interesting meeting, and Governor McKeldin made a speech concerning the relationship and cooperation between the United States and Great Britain and the responsibility of these two great nations in world affairs which I am including herewith in my remarks.

As an honorary member of the Southwest Los Angeles Kiwanis Club, I had the privilege of attending this meeting together with the following members of the Rotary and Kiwanis Clubs from the United States and other countries: Rotarians: Jacob Alkow, Tel Aviv, Israel; Herbert Bartlett, New York, N. Y.; William N. Eklund, Carmel, Calif.; Emerson Hinchliff, Ithaca, N. Y.; Paul Ihle, Fort Lauderdale, Fla.; Grover Ivey, Orlando, Fla.; Dr. Jules Lechaux, Le Havre, France; Gov. Theodore R. McKeldin, Annapolis, Md. (also Kiwanis); Adalbert Wettstein, Hoboken, N. J. Kiwanis: Charles Lightman, Abington, Pa.; Congressman Gordon L. McDonough, Los Angeles, Calif.; Lew Prosser, Plant City, Fla.; Frank Schreyer, Salt Lake City, Utah.

The following is the speech that was made on this occasion by Governor McKeldin, of Maryland:

An American returning to his native land after a sojourn abroad in 1955 has either kept his eyes shut or he has his mind filled with a multitude of new impressions, some of them contradictory, many of them puzzling and confusing. But I do not believe that any man of sense can fail to receive one vivid, sharp, and clear-cut impression. We may be perplexed about many things, but there is no shadow of doubt about the importance of the issues that hang upon the smooth adjustment of relations between the United States and Great Britain.

Adjustment is the right word because the course of events has, without the consent of either nation, brought about shifts of weight and power that compel new adjustments of relations; and it is a delicate operation easily ruined, not by evil intent, but by mere lack of forethought.

One of the most conspicuous political developments of the 20th century has been the accession of power to the United States. Our manpower, industrial power, financial power, and military power have all increased prodigiously; but Americans, as they contemplate this, should never forget that it has been attended by a corresponding increase in an unpleasant kind of power, namely, the power to be offensive. Bad manners in a small and relatively impotent nation may be regarded by the world with tolerant amusement, but similar conduct in a first-class power may arouse hatred that eventually will explode in disaster.

I am persuaded that there is not even remote danger of an actual clash between Great Britain and the United States; but it is obvious that tensions between the two countries are inevitable, and those tensions should not be needlessly increased by thoughtless action on either side. Tensions are inevitable whenever enormous weights shift. At the very moment when American power was expanding tremendously, Great Britain was suffering prodigious losses. The weights shifted, and some crackling and sparking of static electricity was bound to result.

I am not concerned with the British side of this development, and I have no comment to make upon it, except to say that history does not offer an instance of a great power's acceptance of the fortune of war with more dignity and grace. I am concerned only with the American side; for tremendous issues hang upon our ability to accept the increase of responsibility that accompanies every increase in power.

It is as yet far too soon to claim that this ability has been demonstrated. It will take at least another 50 years to demonstrate it conclusively, and an American has no higher duty than to support every effort to make our country's response equal to the calls upon it. Those calls are already very exacting and they are bound to increase in urgency with the passage of time.

As wielders of possibly the greatest concentration of power on earth, and certainly the second greatest, we have incurred the responsibility that rested upon the British for the 100 years preceding the First World War. We should, therefore, be more than anxious to learn all that they can tell us about the just exercise of power, for it is an art that, like any other, must be learned.

This is not a suggestion that we should be content to remain in tutelage. The responsibility is ours. The British cannot assume it if they would. It is our inescapable obligation to use our own judgment; we must proceed, as Lincoln put it, "with firmness in the right as God gives us to see the right." But firmness in the right is entirely consistent with willingness to listen courteously to what others have to say, and, when the others are old and experienced friends, not merely to listen but to weigh their arguments carefully before coming to a decision. This is all that the British have a right to expect of us, and, I am certain, all that they desire of us; but so much they have a right to demand, and every fair-minded American admits it.

The historical processes that brought about the transfer of power across the Atlantic were not within the control of any one nation, and perhaps not within human control. Nevertheless, I repudiate with all possible vigor the Marxian doctrine of man's irresponsibility. Granting that we cannot control history does not entail admitting that we cannot control our responses to the challenges of history. The shift of power may have been inevitable, but it is not inevitable that it shall be accompanied by the follies and misunderstandings and wrongs that have attended such shifts in years gone by. That part of history is well within the control of the two nations concerned.

I think the United States and Great Britain may congratulate themselves that they have, so far, set an example to the world in the civilized conduct of such a shift. The harder part of the task fell upon the British, and they were equal to it only because of their belief that the shift did not involve a threat to the political system of self-government by free men that they had been steadily perfecting for a thousand years.

This imposes upon us the responsibility of seeing that the event shall justify that faith. This means that the liberty of an American citizen is henceforth more than a domestic matter; for when an American's freedom is infringed the shock will run through all free nations just as, for a hundred years, the denial of an Englishman's rights alarmed free men everywhere. For England was the great citadel of freedom. Americans understood perfectly John Randolph's assertion that if he might have a Westminster jury to try him he "would rather walk through the fires of ministerial persecution with Horne Tooke" than risk any sort of judicial procedure under a dictator.

It is now our formidable task to establish the same confidence in American justice, not in Manchester and Glasgow, where liberty is understood, but in Delhi and Tehran, where the doctrines of western democracy are new. It will not be easy. Nobody knows better how hard it is than our British predecessors, and we shall be well advised to emulate the care that they have taken to safeguard an Englishman's freedom of speech and freedom of opinion. For they furnished encouragement and inspiration not to Englishmen alone, but to all lovers of liberty everywhere.

In the nature of things the new relation of the two countries cannot be altogether pleasing either to citizens of the Republic or to subjects of the Queen; but it seems to me that it offers an opportunity for a joint enterprise of immeasurable significance to the world. If we can continue to make the readjustment smoothly, justly and amiably, it will be a demonstration to all the world of the safety with which power can be transferred among nations when all are firmly committed to protection of the freedom of the individual.

For a firm conviction that the best government is self-government by freemen excludes the possibility of belief in aggression as a justifiable national policy; and if the threat of aggression is eliminated, power may be left anywhere. For more than a century the increasing power of Washington has been a matter of indifference to Canadians because they were convinced that it would not be used against them. In recent years, I am happy to believe, Mexicans for the same reason have observed with complete tranquility the increase of the Armed Forces of the United States from thousands to millions of men.

But these examples of international amity are less impressive because an enormous disparity of relative strength was involved. It is an entirely different matter when the balance sways between two countries that are, or recently have been and may again be of approximately equal strength. It is the clash of great powers that is the ruin of the world; and by the same token it is amicable adjustment of their relations by great powers that gives mankind reassurance and hope.

For the past 10 years our ill-wishers have waited confidently for the split between the United States and Great Britain. They were confident because they were sure that the course of events was making a split inevitable. They took note of the material losses that Great Britain had suffered, and of the material gains that the United States had made. They were aware that these gains and losses signalized a considerable shift of the balance of power; and they were perfectly sure that the inevitable result of the shift would be rancorous envy on the part of Great Britain, or intolerable arrogance on the part of the United States, or probably both. They felt that they had only to wait to see us at each other's throats.

But 10 years have passed, and it has not happened. It is possible that there have been some twinges of envy in Great Britain, and I must regretfully admit that a few Americans have worked their mouths a great deal more than their brains. But these have been pin-pricks. The great mass of the British people do not believe that their safety dimnishes in proportion as America grows strong, and the great mass of the American people are learning that the responsibilities outweigh the privileges that go along with power.

Thus our ill-wishers, forseeing accurately the trend of events, have been utterly wrong in their calculation of the results. It is evident that they must have failed to take into an account some important factor in the equation. It would be gratifying if one could say that this missing factor is a combination of wisdom and virtue that raises the British and the Americans above the moral level of the rest of humanity; but unfortunately the facts do not support any such claim. The thing that our enemies failed to take into account is a good deal less resplendent; it is merely the fact that both nations are committed to the doctrine that every man by reason of his humanity is endowed with certain inalienable rights and that among these are life and liberty, to which Americans add the pursuit of happiness. This doctrine implies that no nation can rightfully deprive any man of these rights merely to increase its own wealth and power; and it follows that no nation so committed can commit unprovoked aggression without denying its faith and becoming worse than the infidel.

Liberty is the factor that has upset the calculations of those who were certain that a shift in power would inevitably be followed by the clash of arms, or certainly by mutual distrust, suspicion and hatred. These people, knowing nothing of the nature of liberty, could not forsee its effects; but they are beginning to see, although they are still far from understanding.

Nevertheless, every day is making the thing plainer. Every success that the English speaking nations achieve in the admittedly difficult work of readjusting their relations brings nearer the day when all men will begin to understand that when peace and freedom go hand in hand the twists and turns of the current of history that shift physical power from side to side will offer no threat to any man and cause no nation to be afraid.

Recreation Facilities in National Forests

EXTENSION OF REMARKS
OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. METCALF. Mr. Speaker, recreation facilities in our national forests have been going to pieces for many years. A continual lack of sufficient appropriations, plus a soaring increase in popular use, has led to this situation.

Time after time sincere efforts have been made to get appropriations sufficient to meet the needs. The needs never have been met. The 1956 appropriation for national forest recreation facilities was $1,670,000, a mere drop in the bucket when you realize that some 44 million persons used the national forests for recreation in 1955, an increase of 26 million persons over the number of annual visits just 9 years before.

To end this meager hand-to-mouth existence of our forest recreation facilities, I have introduced H. R. 1823. In the main it is the same solution as was proposed in the Tackett bills of the 81st and 82d Congresses and the Baker bill of the 83d Congress.

It establishes public recreation use of the national forests as a policy of Congress; no such basic policy exists.

It provides for the setting aside of 10 percent of the national forest receipts each year for development, maintenance, and operation of facilities and areas for recreation use; improvement and maintenance of wildlife habitat; and safety, sanitation, and health in connection with uses of the national forests. The amount so set aside shall not exceed $5,500,000 in any 1 year. None of the money shall be used for land acquisition.

It provides that in those few cases in which fees are charged for the recreational use of national forests—a charge which the Secretary of Agriculture already is authorized to make, and is making—the money collected shall be spent wholly for the above-noted recreation facilities.

There can be no argument with the first portion of the bill establishing a basic recreation policy. Among those of us who know the great need for funds there can be no argument on the second portion, providing for reinvestment of 10 percent of forest revenues for recreation facilities.

But on the last portion of the bill there has been considerable argument, based on misunderstanding. Contrary to some opposition statements based on this misunderstanding, this portion does not give any new power to the Forest Service, in fact it limits this power. It limits the Forest Service's authority to charge fees for recreation use to only those few specialized areas in which there are specially equipped campgrounds and picnic areas; at present the Forest Service could impose such a charge at any recreation area on the forests.

An example of such a change was that made at Pattee Canyon in Lolo National Forest some 15 miles from Missoula. This popular camping and picnicking area has a heavy use from Missoula residents, university students, and various groups. The facilities are described by the Forest Service as "one of our better areas." For a time a charge of 25 cents per car party was being made for use of the picnic or camping facilities. But, contrary to the belief of users who paid this charge, the money thus received by the Forest Service could not be used to keep up the facilities there. The money has been going directly into the United States Treasury. Charges for use of Pattee Canyon were discontinued in 1955.

If my bill did not include this final portion setting aside 100 percent of these recreation receipts for maintaining the recreation facilities, only 10 percent of the receipts could go for such purposes. I feel it is fair to allocate 10 percent of the forest revenue from such sources as grazing fees and timber sales to recreation—but it is foolish to allocate less than 100 percent of the recreation fees for this purpose.

Charges are being made to users of recreation facilities only in some 49 of the larger and especially equipped campgrounds and picnic areas. The average charge is 15 cents per person per day, with children under 12 being free. The highest charge is 25 cents per person per day. Nearly all of these facilities are being operated by concessioners as the Forest Service seeks some means of solving its problem of inadequate funds. At most, the Service estimates only 200 of the 4,700 improved campground and picnic areas are large enough to be successfully operated as charge areas.

The alternatives to this bill may be a spread of the concessioner-operated facilities and perhaps even a system of personal licenses in which a charge would be made for every recreation use of the national forests. We do not want either of these alternatives.

Montana contains 9.4 percent of the acreage of the national forests, a total of 16,986,393 acres, of which more than three-quarters are in the First District. The number of visitors that used the national forests in Montana during 1954 totaled 1,311,000. Yet for all this vast acreage, and the relatively heavy usage in consideration of the population of this area, the Forest Service was able to spend only about $60,000 on Montana forest recreational facilities during the year.

Many of the recreation facilities, nationally, are worn out. Most of them date from the 1930's. Niggardly appropriations have made it impossible to maintain them properly, much less expand them to meet the soaring need. As a result, some have been closed because of their deterioration and unsanitary condition. On those public recreation facilities that remain in use the Forest Service has been able to spend only 8 cents per visit for maintenance and cleanup. And that figure does not take into account the millions of visits made to wilderness areas and other places where facilities are nil, or the millions of visits made to resorts, summer homes, and the like in the forests on which no Federal money is spent. To do what the foresters feel would be a fully adequate job they believe close to 20 cents per visit would be needed. To keep the facilities just going along in a satisfactory manner they place the estimated cost at 14 cents per visit.

The situation has deteriorated to the point now that the Forest Service declares it needs $3,300,000 for current cleanup and maintenance alone. For capital investment to rehabilitate these facilities and to construct desperately needed new ones, the foresters advise that some $24 million is needed.

Contrast those figures with the amount budgeted for the current fiscal year and the contrast between what has been sought and what has been granted is painfully clear.

The hearings during the 83d Congress on the Baker bill brought forth from many sources the tale of deterioration of facilities.

Representative CARL ELLIOTT, of Alabama, testified:

> Annual expenditures by the Forest Service for the operation and maintenance of these recreational facilities * * * in no way meets the need for adequately providing for the large number of our citizens who take advantage of these facilities each year. During the days of the Works Progress Administration and the Civilian Conservation Corps, many of these recreational facilities were originally constructed. Today many of them are in a state of deterioration; forest roads and campsites are badly in need of repair; the dangers of forest fires are not always properly guarded against; public safety, sanitation and health often is not given proper attention because of the limited amount of appropriations.

Chester Wilson, conservation director of the State of Minnesota, declared:

> The deteriorated conditions of the recreational facilities and wildlife habitat in the national forests was observed many years ago, and that was due to the lack of sufficient funds for taking care of those interests. * * * It is literally a case of starvation in the midst of plenty. * * * We have a great contrast right in our State of Minnesota where we have ample funds for all of our game and fish activities with an annual surplus which is available for the maintenance of recreational facilities and the development of game and fish opportunities and resources throughout the State, but by contrast in the national forests the resources are just going to seed.

In the view of Thomas Kimball, director of the Colorado Game and Fish Commission—

The recreational needs in particular have not been met; in fact, what facilities are available for the great mass of people using the national forests are in a very bad state of repair * * * the lack of adequate sanitary facilities is important. You can imagine what that does when an increase runs from 300,000 to almost 1,300,000 visitors, with no increase in facilities to take care of that load, or the increase from 60,000 fishermen to 366,000 fishermen, with no increase in sanitary facilities and no increase in the picnicking grounds or campgrounds.

Kelly E. Bennett, chairman of the North Carolina National Park, Parkway, and Forests Development Commission, testified:

Because of inadequate recreation facilities, many people tramp and picnic on unimproved areas where there is danger of polluting water used for domestic purposes and creating fire hazards when the camper builds his fire in locations which have not been provided with fireplaces and other facilities.

William Voigt, Jr., executive director of the Izaak Walton League, pointed out:

It is about all the Forest Service people can do, under existing appropriations, to play garbageman and clean up after the public has passed through * * * the eighty-odd percent of our national population that lives in cities and towns is fast running out of private land and water where it can freely find the outdoor recreation so many millions of us crave and seek. We already have learned that, generally speaking, the national forests are among the choicest recreation areas anywhere in the interior of the country. As a nation we are going to have to depend ever more upon our national forests to handle the increasing recreational load.

The tale of pennypinching went on and on.

Seth Gordon, director of the California Fish and Game Department:

The recreational developments in connection with the national forests have been so badly neglected that in our States the merchants in the nearby areas are begging their customers for money to help maintain the toilet facilities and to clean up the trash.

I. T. Quinn, director, Virginia Commission of Game and Inland Fisheries:

The failure due to lack of funds to provide recreational facilities has become little less than tragic.

Harold I. Bowman, president, National Forest Recreation Association:

Large numbers of campers are forced to camp in undeveloped areas, thereby increasing the fire hazard and the threat to safe water supplies and public health. This is no criticism of the Forest Service. The forest officers are doing everything possible. They are working overtime, trying desperately to take care of the public. They simply do not have the funds to do the job.

As the Baker bill, this legislation received support in the hearings from the National Wildlife Federation, National Association of Travel Organizations, Wildlife Management Institute, Outdoor Writers Association of America, Montana State Federation of Labor, Utah Wildlife Federation, Izaak Walton League, Western Montana Fish and Game Association, Ohio League of Sportsmen, Oklahoma Outdoor Council, United States Industrial Union Council of the CIO, Virginia Wildlife Federation, Appalachian Mountain Club, National Farmers Union, Billings (Mont.) Rod and Gun Club, California Alpine Club, Southeast Texas section of the American Camping Association, National Forest Recreation Association, Darrington (Wash.) Chamber of Commerce, Dude Ranchers Association, Washoe County (Nev.), Council of Social Agencies, Florida Wildlife Federation, Silver City (N. Mex.) Lions Club, the American Legion Post of Everett, Wash., Taos (N. Mex.) Chamber of Commerce, Marin Conservation League of California, West Montana Fish and Game Association, American Camping Association, Cascade County (Mont.) Wildlife Association, National Ski Association of America, Arizona Game Protective Association, Mountainburg (Ark.) Lions Club, the American Museum of Natural History, Pensacola Anglers and Hunters Club, Montana State Federation of Labor, Intermountain Ski Association, and many more.

Also lending their voices in support of the legislation were representatives of State and local government agencies, among them representatives of the North Carolina Wildlife Resources Commission; Iowa State Conservation Commission; North Carolina National Park, Parkway, and Forest Development Commission; Missouri Conservation Commission; California Fish and Game Department; Colorado Fish and Game Commission; Virginia Commission of Game and Inland Fisheries; Wisconsin Conservation Department; Minnesota Conservation Department; Snohomish County, Wash., school system; Box Elder (Utah) County Commission; Cache (Utah) County Commission; and the New Mexico Department of Fish and Game.

National forest recreation is important from the business standpoint. Many business enterprises are supported by tourist and vacation activities. National forest recreation is the economic backbone of many communities.

Frank Menke, the sports historian, in his New Encyclopedia of Sports, shows the financial impact of hunting and fishing alone:

The two armies—the anglers and the gunners—who rarely are mentioned on the sport pages—spend more money each year than would be needed to buy all the racetracks in America, all the racehorses, all the football stadia, all the baseball parks, all the professional ballplayers, all the ice rinks and hockey players, all the dog racing tracks and dogs, all the polo fields and horses, all the rodeos with their complete equipment, all the automobile speedways—and there still would be enough left to buy handsome post offices in wholesale quantities.

Menke estimates there are 25 major horse parks plus 75 minor tracks, and that approximately 17,500 thoroughbreds and trotters are campaigned annually. These properties, plus all sires and brood mares, are worth, he says, less than one-tenth of what anglers and hunters spend in every 12 months.

The startling lack of appropriations for forest recreation for the American people cannot be blamed on a lack of effort. All the dynamite that forest users could carry has been used in attempt after attempt to shatter the appropriations roadblock.

Our national forests are making money for us. Receipts in fiscal 1955 totaled $80,563,879.28. Timber sales accounted for $75,421,418.96 of this. Another $3,354,225.51 came from grazing permits. The remaining $1,788,234.81 came from land uses, recreation, leases, power, and so forth. That same year, Congress appropriated about $30 million for the national forests. So $50 million went into the Treasury from operation of our national forests. We should reinvest some of this profit in the business.

Two precedents for such an allocating of revenues have been in use for more than 40 years in the national forests.

One, enacted in 1908, sets aside 25 percent of all money received from the forests to be used by the States in which the forests are located for the public roads and schools in counties in which there are national forests.

The other precedent, enacted in 1913, provides for reinvestment of 10 percent of all national forest receipts for use of the Forest Service in construction and maintenance of roads and trails within the forests.

I might note that the reinvestment for recreation of 10 percent or not more than $5,500,000 annually, as proposed in H. R. 1823, will not reduce the funds set aside in the above two acts.

Several national and regional organizations have again expressed themselves on this legislation within the past few months by specifically endorsing H. R. 1823. Their recommendations are as follows:

International Association of Game, Fish, and Conservation Commissioners, September 12 to 14, 1955, Augusta, Ga.:

A resolution was adopted which calls upon Congress to hasten action on H. R. 1823 and other incidental bills that set aside 10 percent, but not more than $5½ million annually, of the forest receipts from the sale of timber, grazing privileges, and other uses for recreational and sanitary purposes and the improvement of wildlife habitat within national forests.

Outdoor Writers Association of America, June 22, 1955:

Whereas some 180,000,000 acres of national forest lands unposted hunting, fishing, and recreational areas for all Americans; and

Whereas H. R. 1823, by Representative LEE METCALF, would provide for multiple uses of these areas, and provide funds for a stepped-up program for wildlife habitat and recreation: Now, therefore, be it

Resolved, That the OWAA urges the Congress to enact legislation embodying the objectives of H. R. 1823 thus implementing public use of these lands; and be it

Resolved further, That a copy of this resolution be sent to all such Members of the United States Congress and to all such other groups and individuals as may be interested.

Western Division Outdoor Writers Association, June 16, 1955:

Whereas the recreation visits on the national forests were reported at over 40 million for 1954, an alltime high; and

Whereas this has created serious problems of fire protection, sanitations, and crowding on the limited developed national forest recreation areas; and

Whereas a program of expanded development of recreation facilities as well as an accompanying program of improvement for

national forest fish and wildlife habitats is urgent: Now, therefore, be it

Resolved, That the Outdoor Writers Association of American urge Members of Congress in the respective States to support H. R. 1823 and companion bills which would set aside 10 percent of the national forest receipts each fiscal year, not to exceed $5,500,000 in any year, for recreation development and wildlife habitant improvement of the national forests.

Montana District Council, Lumber and Sawmill Workers, Local 2405, July 16–17, 1955:

Whereas Congressman LEE METCALF has introduced H. R. 1823 providing funds for maintenance of recreational facilities in the national forests by setting aside 10 percent of Forest Service revenues from timber sales, etc., for that purpose; and

Whereas the national forests should be utilized where possible for the enjoyment and recreation of all citizens of the United States that find an opportunity to visit them: Therefore be it

Resolved, That this convention of the Montana district council and all affiliated local unions go on record as endorsing and supporting passage of H. R. 1823 and commending Representative LEE METCALF for his good efforts to utilize the national forests for the benefit of all; and be it further

Resolved, That copies of this resolution be sent to the next convention of the Montana State Federation of Labor for concurrence.

The district 2 Wildlife Federation, with offices in Lewiston, Idaho, passed a resolution favoring enactment of H. R. 1823 at its last district meeting.

All these people realize that the money spent under this bill would be an investment in the future of our Nation. They realize that the annual appropriation procedure is not providing the money that is so urgently needed for this work. They have learned through bitter experience that such funds cannot be obtained by appropriation. They believe, as I believe, that the time is long past due for legislation permitting a reinvestment of national forest receipts for this major recreational purpose of our national forests. This year is the time to act.

My bill meets the need. With 10 percent of the National Forest revenues, but not more than $5,500,000 annually, the Forest Service can do a good job of bringing the forest recreation facilities up to date to handle the steadily increasing demand. And the provision that the Forest Service be limited in what it can charge for, in the way of recreation facilities, but that all such fee revenues be plowed back into the recreation facilities, just makes plain good sense. This bill, H. R. 1823, deserves the support of all persons who want our forests to remain "the people's playgrounds."

The 42d National Convention, Knights of Lithuania, Newark, N. J., August 1955

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I include a greeting which I addressed to the 42d national convention, Knights of Lithuania, assembled at the Hotel Robert Treat, Newark, N. J., during August 1955:

THE ANNUAL CONVENTION OF THE KNIGHTS OF LITHUANIA

MY ESTEEMED FRIENDS: I am greatly honored to address this annual convention of the Knights of Lithuania. I know that this meeting presents you with the opportunity to express your anxiety for the land of your forebears which is presently under the totalitarian oppression of the godless Soviet Union. It also offers a chance for all freedom-loving Americans to join with you assembled here in emphatically protesting against the inhuman tactics of Soviet aggression as well as transmitting a message of hope for eventual freedom of all Lithuanians from their present bondage. It is essential that we incessantly remind your Lithuanian kinsmen we have not deserted them, and try to strengthen them spiritually so that they will continue their gallant struggle against Communist tyranny despite great odds.

The premeditated plan by which the Soviets enslaved the brave Lithuanian Nation and the methods used to subjugate them profoundly shacked the American people. The unscrupulous and inhuman practice of deportation and mass exterminations, which the ruthless Communists have had to employ in their efforts to mold the social, economic, and cultural standards of Soviet Russia, is ample evidence of the indomitable determination of the Lithuanian people to resist the tyrant and to remain free. The Communists' total disregard for human rights and fundamental freedoms is a violation of the law of nations and the law of nature.

However, incredible as it may seem, despite the threat of brutal persecutions the resistance movement among Lithuanians still continues in the homeland as well as abroad. It has been estimated that over 15 underground newspapers are published in Lithuania. Moreover, in the face of constant pressure to enforce communism, it has been estimated that Lithuania has the smallest Communist Party membership of any of the satellite countries—only 0.8 percent of the entire population.

The American people have not forgotten the valiant efforts of the Lithuanian people to hold tenaciously to the last vestiges of freedom. Evidence of our concern for their plight was the formation of the House Baltic Committee to investigate the incorporation of the Baltic States into the U. S. S. R. Extensive hearings were held and the testimony given by eyewitnesses demonstrated for all the world to see the pattern of Communist aggression in the Baltic States. This thorough and well documented investigation should be a source of encouragement to these captive peoples in assuring them that we have not fotgotten them and that we do not condone their captivity. These documents are available in colleges and libraries throughout the United States and are a means of informing the American people regarding the ruthless tactics employed by the Soviets in conquering free countries.

The American people have never recognized the absorption of Lithuania into the Soviet system. The Lithuanian people, conscious of their right of freedom, will never surrender and renounce their independence of soul and they will oppose the foreign aggressor. Their fight for freedom is a symbol and inspiration for oppressed nations everywhere; we are sure that such a determination for liberty will not be in vain. Secretary of State John Foster Dulles has stated that a despotism of the Soviet type cannot indefinitely perpetuate its rule over hundreds of millions of people who love God, who love country, and who have a sense of personal dignity.

It is fitting that on this occasion of the annual convention of the Knights of Lithuania that I express my sincerest hope for the liberation of the Lithuanian homeland and its restoration once more as an independent republic.

Sincerely yours,

PETER W. RODINO, JR.,
Member of Congress.

Your Food Dollar—Middleman Gets More, the Farmer Less, United States Reports

EXTENSION OF REMARKS

OF

HON. WILLIAM E. MINSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. MINSHALL. Mr. Speaker, I wish to call my colleagues' attention to a most enlightening and well-written series of articles which recently appeared in the Cleveland Press under the byline of the distinguished and highly respected journalist, Mr. Dick Preston. The series follows:

YOUR FOOD DOLLAR—MIDDLEMAN GETS MORE, THE FARMER LESS, UNITED STATES REPORTS

(By Dick Preston)

WASHINGTON, December 19.—The average Ohio housewife had the biggest grocery bills of her life this year. Yet farm income, as everyone knows, is on the skids.

This is the sort of puzzle which sets mom to talking to herself and pop to wondering if she's secretly playing the numbers with the household funds.

It also has set the United States Agriculture Department to looking for some new answers to an old problem: What happens to the housewife's food dollar?

The farmer gets 7 cents less out of each food dollar than he got 4 years ago. And overall spending on food keeps climbing even though retail prices for basic commodities remain about the same.

Where does the money go? Here, according to Agriculture Department experts, are some answers:

You're paying considerably more to the middlemen—the processors, wholesalers and retailers—than you did in 1951. This isn't all profit. Their costs have gone up, too.

FOOD IS BETTER

You're buying better food than you used to—more meat, eggs, fresh vegetables, less bread, beans, and potatoes. You're eating well, but it costs you more.

You're paying the grocer for services you used to perform at home—prepared frozen foods, ready-to-bake pies, cake mixes, and the like. These items are not reflected in the cost-of-living index, which deals in basic foods. But they are reflected in what you spend.

The food handlers' bite out of your grocery dollar has been going up steadily for several years. It accounted for only 48 percent of retail costs in 1946. Today it is up to 59 percent.

WHERE DOLLAR GOES

Here is a brief breakdown of where each dollar goes:

To the grocer—18 cents.

(Out of this his net profit, on the average, is about 1 cent, his United States taxes about a penny more. He pays 9 cents for labor, and 7 cents for the costs of doing business, including electricity, fuel, rent, advertising, State and local taxes, depreciation, paper bags, and so on.)

To the wholesaler and processor—34 cents.

(The average wholesaler's net profit is one cent, the processor's about 1½ cents. United

States taxes are approximately the same. Labor costs account for 17 cents. Canning, packaging, commissions and other costs make up the 12 remaining cents).

To the transporter—seven cents.

(This includes railway freight transportation of raw materials, trucking of garden products and milk, shipments from the farm to the processor as well as from the processor to the retail store.)

To the farmer—41 cents.

CANNERIES HUM

Most of the middlemen are making a little more profit today than they did 4 years ago. Canneries and dairies are doing especially well. And chain groceries are expected to show higher profits than in 1951.

However, labor costs account for the biggest share of the increase. The average food-processing worker was paid $1.47 an hour in 1951. Today he gets $1.76. Labor is about half of the total cost of food processing.

Railway freight rates, another big item, are up more than 10 percent, with new increases on the way. Advertising budgets, especially for the national brands, have jumped with the advent of TV. (Advertising still accounts for less than 2 percent of the food processor's costs, however.)

Other things which have gone up include State and local taxes, paper products for packaging, cans, plant and equipment costs and many smaller items.

YOUR FOOD DOLLAR—NUMEROUS MIDDLEMEN TAKE LARGE BITE

(By Dick Preston)

WASHINGTON, December 20.—You're going to be hearing a lot about the middleman's profit in the food industry during the 1956 political campaign.

There'll be a great political hue and cry over the fact that the farmer today gets only 41 cents or less out of every dollar you spend for food, compared with 52 cents 10 years ago.

The remainder goes for marketing charges, which have risen steadily since the end of World War II.

Already Democratic National Chairman Paul Butler has called for a congressional investigation of this continuing trend. And Agriculture Secretary Ezra Taft Benson, trying to beat Congress to the punch, has started a study of it in his own department.

Who is this food middleman? What does he do besides buy and sell commodities, making a commission on each step from the farm to your table?

HE DELIVERS GOODS

Well, for one, he is the fellow who hauls the wheat, or hog, or vegetables from where they're grown to where they're sold. He is also the fellow who converts grain into flour, milk into cheese, steers into steaks.

He's the man who freezes the peas, cans the tomatoes, cooks the soup, bakes the bread, candles the eggs, bottles the milk, and sorts the oranges.

He's the grocer who buys 5,000 different food products from all over the world and sets them out on convenient shelves so that you, the American housewife, can feed your family better than anyone ever was fed before.

CHARGES GO UP

His charges for doing all this have risen so rapidly that they have absorbed nearly all of what you might have saved in food bills from the current farm price drop.

This winter it costs 26 percent more to market a typical basket of farm food products than it did in 1947. Farmers, meanwhile, are getting 14 percent less.

Of course, you are getting more service for your money than you did a few years ago. Things are put up in fancier packages. Potatoes are washed, vegetables cleaned, meat divided into handly purchasing units.

This accounts for some of the increased cost. But the Agriculture Department's market basket does not include many of the ready-to-cook, labor-saving items found in modern stores. Except for frozen vegetables and a few mixes, it sticks pretty close to basic food products.

WIDER SELECTION

You are also getting more products from which to choose. A typical grocery today carries 5,000 items. Twenty years ago it carried about 1,000. The 4,000 new ones are largely specialty goods of one sort or another or out-of-season items which once you didn't buy at all.

You are paying for higher wages in the marketing industry, higher taxes all around, and higher costs of doing business.

Are the marketers making too much profit? That depends on what you think too much profit is.

Food processors today are earning considerably more after taxes on their investment than they did before World War II. The average net then was about 7 percent; today it is 9 percent or more. And with much higher investments, the dollar profits are even greater.

BAKERIES DO WELL

Best off are baking companies (which average about 12 percent), grain millers (nearly 13 percent) and dairy products firms. Grocery chains are netting 11 percent or more.

Meat packers, on the other hand, aren't doing so well. The net profit for 11 of them after taxes in 1954 was only 2,7 percent, compared with 5.6 percent before the war. This year they'll do a little better.

However, the profit these processors make on each item they sell is smaller than it used to be. As a percentage of sales, profits this year average only about 2 percent compared with 3 percent in 1935–39.

The difference comes from greatly increased volume and from higher prices per unit sold.

YOUR FOOD DOLLAR—MAID SERVICE RUNS UP GROCERY BILL

(By Dick Preston)

WASHINGTON, December 21.—You housewives are spending a lot of your grocery money for maid service these days.

Its' pretty expensive maid service, too, if your'e in the market for that sort of thing. The Agriculture Department estimates it costs you only 45 cents an hour.

But it accounts for much of the increase in your food bill during the last 4 years.

"Maid service" is what the food-processing companies like to call all the many things they now do for you that you used to do for yourselves.

It includes scraping the carrots, washing the spinach, topping the celery, mixing the cake, cutting up the chicken, shaping the hamburger patties, raising the rolls, slicing the french fries, boning the fish, portioning the cereal, and even crimping the crust on your pie.

SELL LIKE HOT CAKES

Such "convenience" items are the biggest new thing in the postwar grocery business. They sell like hot cakes (in fact, one of the biggest sellers is ready-to-cook hot cakes) and housewives of this prosperous era don't seem to boggle at the extra cost.

A few food economists are worried that the packaging, preparing, and precooking spree may be getting out of hand. But the majority point to booming sales as proof they're filling a consumer demand, and the outlook is for more food processing rather than less.

Since 1948, so many new convenience foods have gone on the shelves that entire grocery stores have had to be redesigned. One food chain reports 570 such items on sale which it didn't handle 7 years ago.

The frozen-food industry alone topped $1.5 billion this year—5 percent of all grocery sales. Mixes now account for one-third of the flour business. Completely prepared frozen dinners are expected to sell at the rate of 45 million pounds in 1956.

"Practically nobody makes pies any more," said John A. Logan, of the National Association of Food Chains, proudly. "If they don't buy ready-to-bake frozen pies, they buy the mixes."

Almost none of this costly service is reflected in the food price index by which the Bureau of Labor Statistics measures your theoretical cost of living.

BLS bases its estimates on 60 basic food items, such as bread, potatoes, meat, and coffee, in nonprocessed form. Its theory is that "maid service" is a luxury, not a necessity.

That explains why your grocery bills have gone up even though the Government says food costs in Ohio have remained the same or even dropped in the last 4 years.

All this modern merchandising is so attractive that you may not realize how much you're paying for it. But consider these examples:

Ten pounds of unprocessed potatoes cost about 55 cents in Ohio stores. Ten pounds of frozen French fries, one of the booming convenience foods, cost $3.

An 8-ounce box of corn flakes can still be bought for a dime. The same 8 ounces, neatly packaged in convenient dish-sized boxes, cost 25 cents.

Arthur Godfrey's favorite tea (and other brands, too) comes to about 65 cents for 3¾ ounces done up in teabags. If you want to use your own teaspoon, you can buy 4 ounces of the same tea for 45 cents.

Agriculture Department experts estimate the time you save—and the extra money you pay—like this:

A day's meals for a family of 4, with mom doing all the old-fashioned work, cost an average of $4.90. She must spend 5½ hours in preparing them.

The same meals, made from ready-to-cook items, cost $6.70 and take only about 1½ hours of preparation.

Thus the housewife saves 4 hours' work at a cost of $1.80, or 45 cents an hour.

That sounds like a bargain today. But if hard times ever return, you'll know where to save plenty of pennies.

YOUR FOOD DOLLAR—UNITED STATES FARE IS BETTER TODAY, SO COST IS HIGH

(By Dick Preston)

WASHINGTON, December 22.—One reason your grocery bill is higher than ever, in spite of falling farm prices, is that you're literally eating "higher on the hog" today.

For many American families in 1955 it's pork chops and apple pie instead of bacon and beans.

"You've little use for the cheaper foods which used to be staples, and you're demanding more and more steaks and roasts, fresh vegetables and fruits, tangy salads, and fancy desserts.

The change is healthy, of course. It means a better fed, better looking America, with bigger, stronger, healthier children. But it is costing you money.

GOOD SPENDING HIGHER

If you're an average family, you spent a higher proportion of your income on food this year than you did in 1939, even though you are earning far more.

As a result, some products once in great demand have little or no market today. Lard is difficult to sell at any price. Salt pork no longer is a staple. Cheaper meat cuts of all kinds move slowly. Bread sales are dropping every year.

On the other hand, fancier meat cuts have zoomed in price. Pressure from buyers has virtually tripled the price of steak since

World War II, while chuck and hamburger have lagged behind.

Still you want steak so insistently that grocers have to put on elaborate campaigns to remind you other kinds of meat are really better buys.

PIGS IN THE STREETS

In Kewanee, Ill., for instance, 4 carloads of pigs were turned loose in the streets recently to call attention to pork's cheapness and plentiful supply. Then the town's grocers rounded them all up and threw a barbecue.

Here are some of the ways your buying habits have changed since pre-depression days:

Today you're buying 30 percent more meat, fish and poultry for each household member than you did in 1929. Most of the increase has been in beef and chicken.

You're eating nearly 100 more eggs a year, twice as much ice cream, 25 percent more milk and butter. Your consumption of such vitamin-packed products as oranges and tomatoes has almost doubled.

But you don't eat as many potatoes (one-third less a person) and not nearly as much bread.

GET MORE VITAMINS

Over-all, you're eating about 3 percent less food but getting 15 to 25 percent more of the essential vitamins and minerals, 5 percent more protein, 30 percent less starch.

These changes in what you eat are all to the good, as long as you can afford them. But they do complicate things for the farmer.

He can't raise a pork chop without raising an equivalent amount of sausage meat and shoulder. He can't produce 30 pounds of fancy steaks without producing another 970 pounds of steer. And since World War II he's been geared to grow far more wheat than you'll consume.

In the long run, his only answer is to sell the things you don't want to other nations. There are still plenty of people in the world who aren't too rich for hamburger, too well nourished for bread.

I Am the United States

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. McDONOUGH. Mr. Speaker, because of the great interest that was shown by various audiences which I had the opportunity to speak to, during the recent congressional recess, in the following brief narrative history of the United States entitled "I Am the United States," it occurred to me that the people of the Nation as a whole would be equally interested. Any American can take pride in his native land when he reads this inspiring brief history of the United States.

I am, therefore, including herewith this statement which attracted so much attention and aroused so much interest that additional copies were requested whenever it was read:

I AM THE UNITED STATES

I was born on July 4, 1776, and the Declaration of Independence is my birth certificate. The bloodlines of the world run in my veins, because I offered freedom to the oppressed. I am many things, and many people. I am the United States.

I am 165 million living souls—and the ghost of millions who have lived and died for me.

I am Nathan Hale and Paul Revere. I stood at Lexington and fired the shot heard around the world. I am Washington, Jefferson, and Patrick Henry. I am John Paul Jones, the Green Mountain Boys, and Davy Crockett. I am Lee and Grant, and Abe Lincoln.

I remember the Alamo, the Maine and Pearl Harbor. When freedom called, I answered and stayed until it was over, over there. I left my heroic dead in Flanders Field, on the rock of Corregidor, and on the bleak slopes of Korea.

I am the Brooklyn Bridge, the wheatlands of Kansas, and the granite hills of Vermont. I am the coalfields of the Virginias and Pennsylvania, the fertile lands of the West, the Golden Gate, and Grand Canyon. I am Independence Hall, the *Monitor*, and the *Merrimac*.

I am big. I sprawl from the Atlantic to the Pacific, 3 million square miles throbbing with industry. I am more than 5 million farms. I am forest, field, mountain, and desert. I am quiet villages—and cities that never sleep.

You can look at me and see Ben Franklin walking down the streets of Philadelphia with his breadloaf under his arm. You can see Betsy Ross with her needle. You can see the lights of Christmas, and hear the strains of Auld Lang Syne as the calendar turns.

I am Babe Ruth and the world series. I am 169,000 schools and colleges, and 250,000 churches where my people worship God as they think best. I am a ballot dropped in a box, the roar of a crowd in a stadium, and the voice of a choir in a cathedral. I am an editorial in a newspaper, and a letter to a Congressman.

I am Eli Whitney and Stephen Foster. I am Tom Edison, Albert Einstein, and Billy Graham. I am Horace Greeley, Will Rogers, and the Wright brothers. I am George Washington Carver, Daniel Webster, and Jonas Salk.

I am Longfellow, Harriet Beecher Stowe, Walt Whitman, and Thomas Paine.

Yes, I am the United States of America, and these are the things that I am. I was conceived in freedom and, God willing, in freedom I will spend the rest of my days.

May I possess always the integrity, the courage, and the strength to keep myself unshackled, to remain a citadel of freedom and a beacon of hope to the world.

Our National Parks

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. HILL. Mr. Speaker, the recognition by the President, in his message to Congress, of the needs of our national parks, and indications that something will be done to overcome present inadequate conditions is most gratifying to me. A nation cannot afford to neglect a great asset of such scenic and historic areas. As population and industrial expansion continue to increase, such areas will be even more cherished. The proper provision for use of leisure time becomes even more important to our citizens. The 50 million who visited areas of the National Park System last year were disappointed in some of the things they encountered. Facilities were inadequate, and many of them over-age. Many areas were crowded. Those who had visited the same places in previous years made comparisons not flattering.

The National Park Service has been studying this matter from every angle. They anticipate visitation increasing to 80 million in the next 10 years. They expect to submit a long-range program called Mission 66 containing the answers to today's deficiencies, together with meeting the increasing demands of the future, both in the fields of development and in preserving the areas so that future Americans can also enjoy them. Such a program should meet with ready approval by the Congress. I shall lend my full support to it.

The Cabaret Tax

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. PELLY. Mr. Speaker, I have just introduced a bill to abolish the 20 percent so-called cabaret tax. That segment of the amusement industry presently laboring under this very discriminatory and wholly uneconomical tax has long been in need of this essential relief. Competent economists say that this wartime emergency tax which has never been discontinued since the war, instead of producing income to the Government, is actually resulting in less revenue to the Treasury. Hearings on this legislation will show that if this unfair tax is repealed the Treasury will gain by at least $11 million in excess of the nearly $39 million which this tax brought in during the last fiscal year. I am satisfied such a gain in revenue would result from persons operating places of entertainment now subject to the tax, plus personal tax accruals resulting from more musicians working longer hours at these places. Furthermore, additional accruals are certain to result from the reopening of places that have been forced to close because of the tax. I should like to point out that the American Hotel Association reports that approximately two-thirds of its dining-with-entertainment rooms have been discontinued or forced to close since 1946 as a direct result of this tax. I also wish to point out the large additional revenue that would result from the employment of entertainers other than musicians, as well as supplementary service personnel, in dining-with-entertainment rooms that would be reopened as a result of the discontinuance of this tax. Statistics show that musicians alone have lost approximately 50 percent of their employment in these taxed places of entertainment since 1943. Also, for every musician so displaced there has been an equal number of jobs lost by other entertainers and substantial numbers among waiters, waitresses,

culinary, and other service help. All this adds up to a loss of thousands of jobs at a time of generally high employment.

The decadence of our national cultural standards, with particular reference to musicians, is becoming daily more apparent. While mechanized music plays some small part in this recession of our cultural standards, the major basic underlying cause is, I believe, unsound economic policy as represented by this discriminatory tax. Surveys show that only 32.8 percent of the approximately 252,500 instrumentalists belonging to the musicians union can at the present time earn all or a large part of their livelihood at their profession. Conservatively, 35 percent of the membership of this union can no longer follow their profession to any marked degree. A good one-half of the musicians union's total job potential is being destroyed by this unsound tax policy. In order to sustain our musical cultural heritage, great musicians must be developed. Generally speaking, these come only from the masses of working instrumentalists. If large reservoirs of employment are continually siphoned off as is now happening, it is indeed possible that our cultural life, from a musical standpoint, will disappear from the national scene.

For these reasons, I urge the membership of the Ways and Means Committee to give favorable consideration to repealing the 20 percent cabaret tax and hope the measure will come to the floor during this session and receive favorable action.

The Red Mass

EXTENSION OF REMARKS
OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to insert the sermon of the Reverend Thomas J. O'Day, S. J., delivered at the annual red Mass held at St. Charles Borromeo Church in Brooklyn, N. Y., on September 15, 1955, which marks the opening of the courts:

With almost a lifelong interest in persuasive speech, I have often visited courtrooms to hear some well-known trial lawyer make his final appeal to the jury. In some cases this appeal was very rhetorical and majestic, and the jury was deeply and visibly moved. In other cases the speech was plain, factual, direct, almost informal, and while not as memorable or stirring as the other type, it, too, successfully accomplished its purpose. In similar settings the speeches differed, chiefly because of the difference in the talents and personality of those making the appeal.

A like difference is to be found in sermons. On very special occasions, such as this, the sermon is often an elegant and eloquent discourse on the philosophy of law or some difficult points of jurisprudence. It will not be that today, for my eloquence is limited and I am not capable of discoursing on fine legal points to men who have spent years in the intense study and the exacting practice of the law.

Rather, I would talk over with you this morning something more simple and fundamental but which has a definite bearing not only on your professional work but on your entire life. I would speak with you about the relationship which exists between you and Almighty God, the relationship of a creature to his Creator, of a servant to his Lord and Master.

What does it mean to be a creature? It means that God made you out of nothing. You did not choose the time or place, you did not choose your parents—because you were nothing. Forty, sixty, eighty years ago nobody was talking about you, nobody was even thinking about you—because you did not exist. Then God gave to your parents a share in His own creative power, and into that body they formed, God Himself breathed a soul. Only He could create that, because it is spiritual and immortal. Through His infinite power and loving providence you came out of nothingness into existence as a human being, a creature composed of body and soul and made to the image and likeness of God.

That is an old truth, isn't it, familiar to you since you studied the first page of the catechism at your mother's knee or in Sunday school. Yet it is a truth that is basic for all right living, and to the thinking man, its consequences must affect his whole life. Ponder this fundamental relationship to Almighty God as creature to Creator and you cannot escape its conclusion of an absolute, essential, creaturely dependence upon God, in all things, everywhere, always. All that you are and all that you have, you owe to God. St. Paul used to ask the men of his time: "What have you which you have not received?" Then with that logic of his, he followed it up with: "And if you have received it, why do you act as if you had not, why do you act as if it were all your own?" All the gifts and talents and powers you have—God gave them to you. And if you have trained and developed them and used them to full capacity, you are doing only what God intended and expected when He bestowed them.

Now from this conclusion of complete and essential dependence comes another. Since all you have and even your very existence you owe to God, it follows that He has something to say about your life and how you should live it. In fact, He has everything to say. He has the absolute right to command and forbid, and because we are His creatures, with that essential and complete dependence, we have an absolute obligation to submit and obey. And we know what His will is for us—He has made it known in the divine and natural law, in His Commandments, in the Commandments and teaching of his church, in the obligations that are an intrinsic part of your family life and of your legal profession.

It is vitally important for every man to frequently consider this relationship of absolute dependence on and submission to Almighty God. If he forgets it or ignores it, his whole way of life will be affected seriously and disastrously, as we can see perhaps more clearly in others than in ourselves. So much of the restlessness and unhappiness and disorder in the world and in individual lives can be traced to those lives being completely self-centered instead of God-centered. It is beginning to dawn now, on many people that they have not been looking for the right things in life, nor have they been looking to the right person. With all their preoccupation with the right and the left, they are realizing they have forgotten that there is an above and beyond.

It is especially important for you to remember. The honor and respect rightfully shown to jurists and counselors and public officials can make a man forgetful of that fundamental truth of absolute dependence on and submission to God. In a position of authority, he may quite easily lose all sense of submission to a higher, and divine authority. He can, without realizing it, become very independent and proud, high-handed, and selfish, almost a little God unto himself, conducting his private and professional life according to his own ambitions and whims and passions, without regard for what God commands or forbids.

From a man's attitude toward the will and law of God, we may measure his character and this will also be the norm by which we may judge him a success or failure in life.

First, it will be a measure of his character. A man of character is one whose decisions and actions are based habitually not on feelings, passions, human respect, but on principle, on what God wants him to do. Now what is your habitual attitude toward the law of God? In your daily life, when you have to make decisions, what is the chief consideration which determines the choice? Take a legislator, whose primary consideration should be the common good of the Nation or city or State. Will he frequently subordinate the common welfare to personal or political motives? Will a judge, in consideration of a gift, render verdicts he knows to be unjust? And if elected to office, will he sacrifice principles and justice in order to show special favor to those responsible for his nomination or election? Will the public official sometimes try to justify bribery and dishonesty and graft by falsely asserting that everyone in public life does the same thing? And what of the lawyer who is concerned only with staying within the limits of legal immunity and has little or no regard for any other obligation?

For all these the chief consideration is: What do I feel like doing? What are others doing? What will others think? What is there in it for me? How much can I get away with and not get caught? These are not strong characters but weak ones—their decisions and actions are based habitually on feelings, passions, human respect. Like a house built on shifting sand, there is no foundation on which to build character there. For a man of principle, for a strong character, the big consideration is: What is the right thing to do? What does God expect of me? Not what I like, but what is right, cost what it will, no matter what others may be doing, or what they'll say or think about me.

This habitual attitude toward the will of God is not only the measure of a man's character, but it is also the norm of real success in life. In judging anything a success, don't we ask: "Is it doing that for which it was made?" For example, this watch was made to tell time accurately. It may appear rich and beautiful, may have a very expensive band and all sorts of gadgets on it—but even with all these things, if it does not tell time accurately—as a watch, it is a failure. To judge therefore whether a man is making a real success of his life, I have to ask—Is he doing that for which God created him? It certainly is a very futile thing for a man to discuss real success or to discuss anything that is really important to him as a man until he has first determined the reason for his existence, the direction in which he is travelling and the goal he is destined to reach. God created each and everyone of us to know Him, to love Him and to serve Him, and by this means to save our souls and to be eternally happy with Him in heaven. Are we moving in the right direction toward that goal?

Remember Roy Reigel in that famous Rose Bowl game of 1929? The sensational run down the field toward the wrong goal line? Many a man is doing a Roy Reigel in the game of life. He may hold high political offices; he may be advancing rapidly from the position of a magistrate in the lower court to that of an eminent jurist in the highest; he may be a famous criminal lawyer or head the legal staff of a great corporation;

he may have a fabulous income and enjoy all sorts of prestige and popularity; he may be considered in his community to be eminently successful—and yet in God's book he may be doing a Roy Reigel—running sensationally toward the wrong goal and to eternal failure.

In the tenth chapter of the Gospel according to St. Luke, we read that a certain lawyer came to Our Lord, "trying to put Him to the test and saying: Master, what must I do to possess eternal life?" Jesus answered him: "What is written in the law? What is thy reading of it?" The lawyer pondered for a moment, and searching his memory, answered from the Old Testament: "Thou shalt love the Lord thy God with thy whole heart and with thy whole soul and with all thy strength and with thy whole mind, and they neighbor as thyself." Jesus said to him: "Thou hast answered right; do this, and thou shalt live."

It is evident that the supreme law of life is the law which bids us to love God above all things and our neighbor as ourselves. To love God above all things, means to be willing to sacrifice anything, however attractive, which would prevent me from doing what He wants. And love of neighbor is universal—no one is to be excluded from that love, whatever his nationality or race or creed, and no matter how he may have treated us. And this law of love is for every phase of our daily lives, not just for a particular part of it. It has been one of the heresies of our time to assert that while love of God and of our neighbor may be desirable in our lives as private individuals, it need have no place of importance in education, in business, in government, in the professions. But such a separation is unjustifed and disastrous. If we try to be Christians in our private lives but abstract from the fundamental law of Christianity in our professional lives, we shall end as pagan in both. In clear and uncertain terms the Church teaches us that there is no human activity whatever from which Almighty God and the greatest of laws promulgated by His divine Son, can ever safely be excluded. Therefore, we cannot be Christians at home and Christians before the altar on a Sunday morning, and then feel free to shed our Christianity as we enter our office or the courtroom.

Our divine Lord himself, of course, is the perfect ideal on which we should strive to model our lives. He came upon earth not only to redeem us, but also to show us how to live. The keynote of His life on earth was perfect submission to the will of His Father. In the awful agony in the garden on the night before His crucifixion, He could say to his Heavenly Father as He did throughout every day of His life; "Not My will but Thine be done." And with this uncompromising strength of character there was also and always the gentleness, the graciousness, the understanding, the compassion toward all men—toward the poor, the unfortunate, the sick, the sinner.

We may have fallen far short of this ideal in the past, but the important thing this morning is not what we have been but what we will try to be. We have taken a little time to recall some basic truths. Now if we apply them and live them, God, in His infinite generosity, will reward our efforts with His richest blessings on our work.

For every member of the judiciary we pray in the words our Holy Father used in his urgent pleas to a group of judges: "May you labor in every way to make for yourselves the perfect ideal of a jurist who, through his competence, his wisdom, his conscientiousness, his rectitude, merits and gains the esteem and confidence of all."

Members of the Catholic Lawyers Guild of the diocese of Brooklyn, and your colleagues and friends who have graciously accepted your invitation to assist with you at this mass of the Holy Ghost, in the pursuit of the highest ideals of your profession, your course is clearly charted. It remains for you to walk that way in the knowledge and love of God and men. Bowed down this morning before this altar, with the deep humility befitting men in high places, yet your prayer rise to the throne of God, that in your private lives and in your work of defending and administering the law, you be just and honorable and courageous, men of principle, men whose daily lives are an outstanding expression of the supreme law of life—love of God above all things and love of neighbor as thyself.

Foreign Imports

EXTENSION OF REMARKS
OF
HON. DEAN P. TAYLOR
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. TAYLOR. Mr. Speaker, some time ago the Tariff Commission voted almost unanimously against granting relief to the manufacturers of wool gloves.

As a result of this failure several manufacturers of knit goods have been unable to compete with foreign markets and the glove industry has begun to dry up.

I quote herewith an article recently published in the Leader-Herald which indicates the truth of my statement:

GLOVERSVILLE COMPANY WILL CEASE ALL OPERATIONS AT ROYALKNIT; TO TRANSFER SOME OF 20 WORKERS—SAY CONSOLIDATION MADE NECESSARY BY CHEAP IMPORTS

The Gloversville Knitting Co. will cease all operations on January 1 in the Royalknit plant at 19 West Main Street, Johnstown. All of the operations, according to officials of the concern, are being consolidated in the main glove plant located in Schenectady and the Gloversville plant on Beaver Street.

Only a few minor operations, according to the company, have been carried on in the Johnstown plant during the past year.

About 20 employees will be affected. Some of them will transfer their activities to the other plants.

IMPORTS HURT

According to Ralph O. Collins, Sr., president of the Gloversville Knitting Co., the consolidation was made necessary by the terrific impact of cheap knit glove imports on the American knit glove industry.

The Royalknit glove line of the Gloversville Knitting Co. will henceforth be merchandised from the main offices at 51 Beaver Street in Gloversville.

The passing of the Royalknit plant in Johnstown marks the exit of one of the oldest of this type in the city. It was established many years ago by the firm of Obenhoff & Potter. Later it was taken over by the firm of Blewer & Hager. When Blewer entered the service, the assets of the firm were sold to the Gloversville Knitting Co. early in 1943.

The press releases from Tokyo indicate that imports from Japan will be much greater than this year's imports. The Tokyo press has likewise indicated greater imports to this country of bamboo products, furniture, and pottery.

To protect our American industries becomes the obligation of the Congress since the constitutional function of Congress is to regulate imports.

I suggest, therefore, that Members of the House whose districts are adversely affected by the importation of foreign merchandise consider the resolution of the American Knit Handwear Association, Inc., set forth below:

Be it resolved—

1. That import quotas be recognized as a superior method of regulation of import competition, under many present-day circumstances, to tariff rates that have been bound against increase or cut to inadequate levels under conditions that are despairing to all who seek relief;

2. That such import quotas should be authorized by Congress under specified conditions permitting to imports a fair share of the domestic market of particular products and providing for flexibility both to overcome domestic shortages and to adjust to surplus conditions;

3. That such quotas be designed to lend encouragement to exports to this country according to the higher wage standards prevailing in the countries of origin of such exports by granting special quota bonuses to any higher wage-level countries currently shipping to us and offering the same inducement to any other countries that may attain such levels in the future;

4. That the appropriate governmental agency to establish such import quotas be the United States Tariff Commission, an agency created by Congress and responsive only to Congress, guided by specific terms setting forth the conditions under which quotas may be established, the conditions that will determine the share of the domestic market to which imports will be entitled, the basis of quota allotment in accordance both with average wage levels abroad and historic exports to this country, and the conditions that will determine modification of the quotas to assure appropriate flexibility and adjustment to changing economic and technological trends; and

5. That legislation incorporating these principles be sought in the 2d session of the 84th Congress.

National Reserve Plan

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend and revise my remarks, I wish to present herewith an address made by the Honorable Carter L. Burgess, Assistant Secretary of Defense for Manpower, Personnel, and Reserve, before the National Conference, of State Directors of Selective Service, held in Washington, D. C., on December 6, 1955. This national conference was called by Maj. Gen. Lewis B. Hershey, Director, Selective Service System. I feel my colleagues will be interested in reading this address:

General Hershey and gentlemen, I appreciate the opportunity of being here, and I want to thank you for having me over. In behalf of the Department of Defense, and Secretary Wilson, I want to particularly salute you for a job consistently well done.

I consider General Hershey and each of you as full partners in the Nation's defense program, completely knowledgeable of the problems we face internationally and trigger ready to respond to all needs.

No one has been more helpful to me and my labors than the good general and the members of his able staff. I hope they have found me equally helpful, for that is my sincere desire.

We bear an indispensable relationship, one to another, and we should face our tasks realistically and with all face cards up.

The general and I are merchants of what we have and not mourners of what we don't have.

Some mourners have recently taken the position that what we gained this year in Reserve affairs is not worthwhile, and I simply will not agree with them. Nor will I accept the defeatism that such an attitude develops.

Those nations not allied with us in our quest for a strong free world would like for the general and you and me to waste our time and energies over what we don't have, and in worrying about the imperfections of what we do have.

I say to you:

Let's get busy wtih what we've got.

The great adjutant general of the State of Louisiana, Ray Flemming, helped to further sell me on this philosophry over a couple of Sazeracs in New Orleans last week. His emphasis is on the forward outlook for the future. And so is mine.

Lest we forget, let's take a brief inventory of the blessings gained this year as a result of congressional action. They include:

1. Extension of the Selective Service Act to 1959.

2. Expansion of the Ready Reserve ceiling from 1,500,000 to 2,900,000.

3. Authority for the President to call up to 1 million Ready reservists in a proclaimed emergency without the approval of Congress.

4. Screening processes that are designed to improve the status of the Ready and Standby Reserves, which will help industry and individuals through the orderly processes of selective service.

5. Additional volunteer choices for our young people to fulfill their military obligations through shorter periods of basic active service and longer periods of Ready Reserve service.

This provision opens up opportunity for enlisted reservists and ROTC graduates alike. By this action Congress increased by defense action the choices for service to well over 30 plans for our youth.

6. Enforcement measures applying to Reserve service that became effective for all men entering the Armed Forces after August 9, 1955, and which will not become fully meaningful toward meeting the defense Reserve requirement until after 1957.

Refinements and clarifications covering many features of Active and Reserve serivce are contained in the 1955 legislation.

With positive accomplishment of this kind on the record, it is not clear to me how anyone could characterize this action by Congress as not being worthwhile.

It's true it won't be worthwhile if each of us fails to put his shoulder to the wheel and get the program moving. And that, as a matter of fact, is the real crux of the problem we are facing.

As of today, about 4,000 young men have volunteered for the Army's 6-month training program, and of these 2,300 have actually begun training, with remainder deferred. Of the 2,300 in training, 1,224 represent new recruits, and 1,081 are members of the National Guard. The Marines have thus far begun training for about 75 men, with around 400 recruited as of November 1.

Figures such as these indicate the extent of the problem which we face—in terms of effectiveness, fairness, and contribution to the national security.

NATIONAL RESERVE PLAN

General Hershey knows as do I that the President believes in the equitable sharing of the military obligation by all of our young people of induction age. In July of 1953, he said: "I am confident that it is the will of this Nation that the responsibilities for its defense should be shared as equally as possible by all of its citizens." I believe also that this is the congressional belief in large measure.

To the greatest extent possible, and dependent upon congressional action in 1959, this policy of American fairness could have best been achieved under the provisions of the original national Reserve plan.

When this plan did not fully succeed, we lost the automatic features of distributing equally the sharing of the military obligation among our young people. We lost the right to induct persons into the Reserve 6-month program after volunteer methods failed. This authority would have been for persons from 18½ to 26 which would have helped you and Defense in our manpower pool problems. Further, we lost all features which would have assigned to the guard its share of prior service veterans and basically trained reservists. Our efforts and record in behalf of these provisions before the House and Senate speak for themselves. We went down swinging hard.

All of this placed a more difficult burden on the President, the Pentagon, and upon Selective Service, and I trust we all will be willing to share a part of the additional tasks this has imposed.

For Defense this means—

1. Requesting the draft each time our recruitment efforts start to fall behind active force program requirements just as we did in the case of the Navy.

2. Improving Reserve staff organization within the services and doing a productive job of enlisted, Reserve, and ROTC sales work. Intensifying the effort in getting Reserve and National Guard units behind the job of recruiting their requirements.

3. Doing a successful job of giving first-class basic and elementary specialist training for 6-month reservists, and encouraging the guard and their garrisons to use this opportunity to build up further their training and overseas qualification for all National Guard units. This is precisely what President Eisenhower urged the Army and Joint Chiefs of Staff to accomplish in his August 9 statement.

4. Completing at the earliest possible date the remaining Executive orders called for under the Reserve Forces Act—with respect to screening the Ready Reserve, and implementing the 6 months' critical-skill provision.

5. Considering placing into program action wherever possible some of the interim features included in the Reserve Forces Act for expediting a partial buildup of the Reserve until the enforceable measures become fully effective during 1957.

For Selective Service:

1. Continuing to faithfully meet the Defense calls for draftees.

2. To have on hand sufficient registrants to fill a 3-month training cycle if a mobilization call should come.

3. Sell the Reserve program.

4. Get ready for administering the 6 months' critical skill Executive order.

5. Advance planning for selective recall of Standby Reserve in a general mobilization.

The big 6-months' plan must show promise soon. We will give it a fair trial, based on all our efforts.

If our total push fails, then the program will have to be withdrawn from the books.

Our Services can't operate empty training establishments designed to provide training for over 100,000 reservists and guardsmen annually only to wind up with a smidgen group.

The Selective Service System, as I have stated, can help us with this serious problem. Through your local boards you exert a broad and continuing influence on the community level. You can do much to show young men the wisdom, and the necessity, of going forward to honor their military obligation and to do their part.

Urge our youth to volunteer for the National Guard and the Reserve. Point out the futility to them—to their employer and to their community—of adopting the wait-and-see attitude. Show them the advantages of the Reserve program. In this way they will go to camp for 6 months and return to their homes to take up their employment, permitting him to be absent for a minimum period of time.

There is something in all our programs for everybody—for the man who wants an education, for the man who wants a family, for the scientist, and the highly skilled worker.

I've mentioned the choices the Reserve program affords. We need to get across to the young man and his parents that the best way to plan his life in these uncertain times is to face the problem squarely and take on his military obligation. Each qualified young man should make his decision at around age 17 on what branch of the service he wants to enter, and then get on with the business of exercising his obligation to help protect this country. In this way he does his full part and makes his most productive contribution. Everybody benefits—business and industry; the military; the community and the individual himself.

SUMMARY

Now I understand you are going to have intensive panels and seminars on the 6-month critical skill program, on screening the Ready Reserve, and on Selective recall of the Standby Reserve, so I will not discuss them. General Hershey knows my position on each of these proposals.

I will just say, however, that the prospect of several of these provisions have already won widespread approval from business and industry spokesmen—and will unquestionably permit a more equitable distribution of critical defense-supporting skills, as well as minimizing the disruptive effects of a possible mobilization.

The Department of Defense knows that the Selective Service System will work at its customary efficiency in conjunction with the new Reserve program. You will have new and added responsibilities in selection for the 6-month critical skills program, and administration of the Selective recall process of Standby Reservists in event of a mobilization.

We know that orderly processes will prevail. We have the fullest confidence in your handling of these matters.

In connection with mobilization readiness, I was gratified to learn that another of your seminars will concern the functioning of your national organization under conditions of catastrophe. That is the kind of constructive forward planning we have long since learned to expect of the Selective Service System.

CONCLUSION

And now I want to thank you again for having me over here today. In conclusion, I'll make just this brief point:

Let's all remember that we have the same Commander in Chief and the same objectives. I look forward to working more closely with you in getting the President's program over the top for stronger and larger and better trained Federal Reseves and National Guardsmen. Your comments and criticisms are always welcome, and my doorway is open 24 hours a day in order to have a good visit with you. Even better, I will come and see you. I trust that it will result in our meeting all the requirements, by doing together a better job with what we have.

Hawaii

EXTENSION OF REMARKS
OF

HON. JOHN V. BEAMER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. BEAMER. Mr. Speaker, under unanimous consent, I wish to insert the letter received from Miss Martha Herzog, of Marion, Ind., in the Appendix of the RECORD.

She expresses interest in Hawaiian statehood. I have had the privilege of visiting the Hawaiian Islands on several occasions and can appreciate Miss Herzog's enthusiasm for this paradise of the Pacific:

Hon. JOHN BEAMER,
Congressman, Fifth District, Indiana:

HAWAII

"In the beginning God created the Heavens and the Earth" (Gen. 1:1).

"Our God of the universe saw it was good,
Yet never did He cease,
For while He planned the beginning
He also made plans for increase.

"As ages pass He sometimes wills
New land by its eruption.
Then molten rock comes gushing forth,
Sometimes midst great destruction.

"Yet land and life come forth from this
In God's good time and season;
They come from rock formed long ago,
According to His reason.

"Thus He made some tropical isles
Which still erupt, expand.
He smiles on them from sunny skies;
He waters the fruitful land.

"He planned for them the tradewind
Refreshing as it blows,
And these isles of rain and sunshine
Are the isles of rare rainbows.

"Many are the people.
Who have found these beauteous isles.
They found life good, so stayed there
In a land of love and smiles.

"They are a happy people.
They sing, and dance, and smile—
Yet 'neath it all there's longing,
A yearning all the while.

"Our beautiful Isles of Hawaii,
Which we call 'Our Territory,'
Belong to us, yet are not of us—
The pathos of this story!

"They help defend Our Country!
They harbor Our Country's fleet!
They take the blows intended for us!
Love and loyalty keep them sweet.

"They never mention secession.
Nor clamor to be free!
They simply wish to be one of us,
Secure in equality.

"They pay their taxes loyally.
With faith and hope they pray
Their efforts will be judged of worth;
That love will find a way.

"They've given final resting place
Upon their beauteous Isle
To thousands of Our Country's sons,
Including Ernie Pyle.

"These islands have many rainbows!
The rainbow have many ends!
And there we've found 'the pot of gold'
In the hearts of our island friends!

"They give of themselves untiringly!
They give, and they give anew!
This the people ask in return:
'Let us be one of you'!

"Most of our States now in being
Were once of a territory.
Did any, when seeking statehood,
Experience the same hard story?

"Weren't they all duly accepted,
All in good time and season.
Regardless of their politics?
Must politics be a reason?

"Our statesmen are good politicians!
We chose them for that part!
But politics needs an open mind,
And also an open heart!

"Let's use consideration!
Let's end the lengthy debate!
Extend heart and hand to Hawaii,
And make her our forty-ninth State!"

Sincerely yours,

MARTHA HERZOG.

P. S.: During the past summer I realized a long-time dream. I visited Hawaii.

Several years ago, in a course in political geography, I chose Hawaii as a special study. I became very much interested, and also very much concerned because of the unsettled question of statehood. My concern has continued even as the question has continued to be unsettled, and I've wished very much to visit the islands.

Last summer, as a member of an NEA tour group, I spent 17 days on the islands. It was a delightful, as well as instructive experience. The islands are truly lovely and most interesting—and so are the people who live there.

Interest, concern, and appreciation all deepened, blended, and finally erupted in the foregoing expression—a very small voice crying in the wilderness perhaps. But sometimes even a wee small voice can be heard.

Won't you, personally, please do whatever you can to terminate favorably this question of statehood? I know the people of Hawaii would be most grateful.

Thank you.

Sincerely yours,

MARTHA HERZOG.

MARION, IND.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

PRINTING DOCUMENTS AND REPORTS

Documents and reports of committees with the evidence and papers submitted therewith, or any part thereof ordered printed by Congress, may be reprinted by the Public Printer on order of any Member of Congress or Delegate, on prepayment of the cost thereof (U. S. Code, title 44, sec. 162, p. 1940).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily RECORD, of which 1 shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

Appendix

Assistance to Agriculture

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. JENSEN. Mr. Speaker, every American who reads the newspapers knows of course without me talking about it that the Midwest stockraisers, and that takes in at least 95 percent of the farmers in that great area of our Nation, are in a terrific price squeeze, which as the records will show started way back in 1951.

The evil day was the day in February 1951 when Mike DiSalle, Administrator of the Office of Price Stabilization, announced he would roll back cattle prices 10 percent, just so he could approve the 9 percent wage boost which the packinghouse workers were then demanding. The "little dictator" did both with President Truman's approval. Look at the record.

Their reasoning was that to approve the 9 percent wage boost, without reducing meat prices, would raise the cost of living to the American consumer, who at that very time was spending just 24 percent of his income for food, while the rest of the peoples of the world were spending on an average of over 70 percent of their income for food. The cattle rollback took most every farm commodity down the toboggan with it. Then for several months, after the Republican Congress in the early spring of 1953 abolished the Office of Price Stabilization, all farm commodity prices leveled off until Secretary of Agriculture Benson and the farm leaders of both the Senate and the House of Representatives of both parties got into a squabble over 90 percent and flexible price supports for our 6 basic farm crops: corn, wheat, cotton, tobacco, rice, and peanuts. And from the very day that squabble started most all farm commodity prices again began to slip downward until at this time fat hogs and cattle are bringing the farmers an average of about 60 percent of parity and according to the last Department of Agriculture report, the American farmers' dollar is only buying 80 cents worth of manufactured and processed goods at the counter. To make matters worse, droughts, grasshoppers, and corn borers have to no small degree added greatly to the farmers' problem in many sections of the Midwest; that is especially true of most of southern Iowa, parts of Missouri, Kansas, and Nebraska, as well as other parts of the Middle West to a more or less degree. That, my colleagues, is not a condition that the American economy, let alone the American farmer, can long endure.

Now, Mr. Speaker, neither your party nor my party should take all the blame for the plight of our farmers, nor does the average farmer place all the blame on us; for they know they have produced more than has been consumed for many past years, but let us not forget that they were urged to produce, produce produce all during World War II and the Korean war in order to feed and clothe, not only our military forces and civilians, but to a very great degree our Allies too, both military and civilian. Farmers of all ages, old men and old women, and young teenage boys and girls rolled up their sleeves and really produced; sometimes running their tractors, plows, planters, and harvesters around the clock, while millions of the farmers grown sons and daughters were serving their country in the Armed Forces, and in war plants, all over this wide, troubled world.

Let us never forget, but be forever grateful to the American farmer for the great and important part he has played in all our military victories. And let us also never forget the fact that the victors in every major war in recorded history, was the nation which God had blessed with the greatest supply of food, feed, and fiber. For the reasons I have just stated, I for one am willing and anxious, yes, Mr. Speaker, more than that, I plead and pray that this session of Congress disregard party lines and adopt the necessary legislation to help our farmers help themselves over the present emergency, and then adopt a farm bill providing the least possible controls and Federal domination, but plainly sufficient in its benefits to our farmers, to do a good job over the long pull. Permit me to say that I sincerely hope a repetition of the last session will not again occur during this session, wherein this House of Representatives passed a fairly good farm bill, and which I supported, but which never saw the light of day from the committee room of the other body. Hence, it would seem there might be a plague on both our Houses, Democrat and Republican.

But that is water over the dam. What should we do now? There are many ways this Congress can extend a helping hand to our farmers without too great an outlay of money, and without telling the farmers when to plant and when to reap. I believe it was Thomas Jefferson who once said:

> If the time ever comes when the Federal Government tells the farmer when he shall plant and when he shall reap, we shall soon want bread.

I have seen that very thing happen to many nations around this world in my lifetime. I will have no part of it here. This is the 18th session I have had the honor of serving the people of the Seventh Iowa District in the United States Congress. My district is an agriculture district. I was born and raised on a farm, and during all my adult life I have lived and dealt with farmers. I know their problems and their heartbeats, and I know when they are in trouble, and believe me, they are really in trouble now.. Especially the younger farmers, a great majority of them veterans, who have not had time to get their finances in order before this farm panic occurred.

I visited with hundreds of them last fall, and have had hundreds of letters from farmers, large and small, young and old, and businessmen since then telling me of their plight and giving me their ideas of the kind of laws Congress should pass for their immediate relief and for the long pull. I have read every word of every letter in the hope that they would be helpful to me in writing and recommending a farm bill, and they have.

Here are my recommendations to the Agricultural Committees of both Houses of Congress. Hold hearings every day for one week starting immediately, and bring a bill to the floor of both Houses the following Monday, that bill to provide emergency assistance to agriculture as follows:

If corn and wheat farmers will seed down, or fallow, part of their acreage allotments next year, then let them buy from the Government surplus stocks of corn and wheat, 50 bushels for each acre of corn, or 20 bushels for each acre of wheat seeded down or fallowed, at their own expense. This surplus to be bought for 75 cents a bushel. This would be starting a soil-bank plan immediately, and paying for it with surplus grain, instead of new tax money. Farms with less than 50 acres of allotment could select to seed down their whole allotment, and for larger farms an additional 20 percent over the first 50 acres.

This plan has been recommended to me by farmers and others. This plan would require no cash outlay, would give almost immediate aid to thousands upon thousands of distressed farmers. It would dispose of a great quantity of our surpluses, a lot of which is spoiling as time goes on. It would empty thousands upon thousands of Government-owned bins, making purchases of more new bins for next year's crop unnecessary.

For further details of this plan and in order to save time and space, I direct your attention to the extension of my remarks in this CONGRESSIONAL RECORD on another page, wherein, after receiving unanimous consent, I am having printed the recommendations of Mr.

Dave Livingston, a farmer living at Washington, Iowa. Mr. Livingston, a respected farm leader, has traveled far and wide over America and the world, seeking for knowledge and speaking to farm and business meetings everywhere.

Yes, and I would go further. If I had my way I would in the same bill specifically direct the Secretary of Agriculture to support the price of cattle and hogs at a price of at least $4 per hundredweight more than the present market price on cattle and hogs, until the prices on cattle and hogs reached 90 percent of parity. I would expect the Agriculture Committee to set weights and grades. Sure, this will cost some money, but nothing compared to the loss of tax revenue to the United States Treasury by the lost revenue which will be brought about by the thousands of bankrupt farmers if immediate relief such as this is not provided. Some may accuse me of being too liberal. Yes, I will admit I have been quite liberal when any segment of people, the American people, need emergency relief, as desperately as the Midwest farmer needs it right now. But look at my record; I will put my record of the past 17 sessions in Congress up against the best of them for not squandering the taxpayers' money.

I just said I would direct the Secretary of Agriculture to support the price of hogs and cattle. Now the reason I would do that is simply because, if I were Secretary of Agriculture I would welcome such a directive from the representatives of the taxpayers of America, even though I had the authority under existing law to do it, as the Secretary of Agriculture has right now. But is is plain to see he will not exercise that authority for fear it would encourage greater production of hogs and cattle. My studied opinion is, that is a risk he is justified in taking under the circumstances, and which all fairminded, informed people know, or should know at this late date.

And in addition, I cannot recommend too strongly that we place a complete embargo on the importation of meat and live cattle from foreign countries until such time that hogs and cattle prices bring 100 percent of parity to our own producers. Here are the figures on imports and exports of beef, pork and cattle for the first 9 months of 1955, furnished me by the Department of Agriculture:

Beef and veal imports, 90,700,000 pounds.

Beef and veal exports, 34,751,000 pounds.

Pork product imports, 124,148,000 pounds.

Pork product exports, exclusive of lard, 54,144,000 pounds.

Live cattle, mostly from Mexico, 240,135 head.

Exports, 19,823 head.

My friends, that borders on criminal in the face of constantly falling prices on meats here in the U. S. A. Oh, some may say that is only a drop in the bucket compared to our total production. Well, it is a mighty big drop and simply adds that extra straw which is breaking the camel's back. And let me tell you here and now, my dear friends, there is no other Nation in this whole, wide world that hesitates one minute to impose a complete embargo on imports from us when they have a plentiful supply of their own, even though we have shoveled our taxpayers' dollars into their coffers by the millions and billions of dollars. How stupid can we be? And that silly business has been going on for the past 10 years. For all our sakes let us stop.

That, Mr. Speaker, is my recommendation for quick and I believe effective aid to help our distressed farmers over the present emergency farm price squeeze or farm panic, whatever you wish to call it.

I also know the cotton farmer is having a bad time. I will leave that problem to my colleagues from the cotton producing States, with the assurance that I shall be just as fair to the cotton producer as I am to the farmers on whom America depends for a plentiful supply of food for our daily bread.

I am gathering facts and figures, in preparation for introduction of two bills which, after a lot of study, I have concluded should be made law to help bring about a stable prosperous farm economy over the long pull. But first and foremost in my mind now is to assist my colleagues on the Agriculture Committee in bringing out a bill at the earliest possible time which can pass both Houses of Congress quickly and be signed by the President for immediate, effective aid to a great multitude of our distressed farmers.

How To Get Rid of Our Agricultural Surpluses

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article:

HOW TO GET RID OF OUR AGRICULTURAL SURPLUSES

(By Dave Livingston, Washington, Iowa)

SELL THE GRAIN BACK TO THE FARMERS WHO RAISED IT, AT A CUT PRICE IN RETURN FOR ACREAGE REDUCTIONS

If corn and wheat farmers will seed down, or fallow, part of their acreage allotments next year then let them buy, from the Government surplus stocks of corn and wheat, 50 bushels for each acre of corn or 20 bushels for each acre of wheat seeded down or fallowed at their own expense. This surplus to be bought for 75 cents a bushel.

This would be starting a soil-bank plan immediately and paying for it with surplus grain instead of new tax money. Farms with less than 50 acres of allotment could elect to seed down their whole allotment and for larger farms an additional 20 percent over the first 50 acres.

For example, I have a farm with an acreage allotment of 50 acres of corn out of a total of 235 acres. Thus, under this plan, I could buy a total of 2,500 bushels during 1956, at 75 cents a bushel. In return I would seed down the whole 50 acres at my own expense. I would then buy this feed through my local ASC office, where they already have my whole allotment record. In order to spread this surplus selling so that livestock numbers would not be increased, nor the grain trade upset they could restrict my purchases to 25 percent of my allowance in any 60-day period and also begin delivery at the beginning of the crop year (July 1 on wheat and September 1 on corn).

This farm is the kind that is commonly referred to as the family-size farm. It is rough and hilly in spots. The 50-acre allotment is already so low that it is next to impossible for a man to make a living farming it because it takes as much machinery and more labor to grow this 50 acres of corn than it does to grow 100 acres or more on a better farm. On the other hand this farm lends itself to a grass-farming program and should be planted to grass. It is one of the hundreds of thousands of farms where the hilltops and pastures were plowed up, during World War II and the Korean police action, to produce the much needed extra corn and soybeans at that time. Because of the lowering of farm prices and income as well as the rise in expenses since that time it has been necessary to continue to farm these hills intensively to make a living.

The return of this farm, and others like it, to grass farming presents a much greater problem to the individual farmer than has been generally recognized.

First. A farmer of this type must have some grain to balance his grass in order to get maximum returns on his livestock program. A livestock program is inevitable on this type of land because that is the only way you can convert grass into income. This need for grain has been the main reason for the continuation of corn farming on these hill farms.

Second. When a farmer converts his land from grain to grass there will be a time lag of 1 year in his income until this new grass becomes available as livestock feed. If a soil-bank plan were developed, where the Government rented this land to get it out of grain production, it would break these farmers financially.

Let us suppose the Government paid as much as $20 per acre rental. That would be $1,000 rental on the 50 acres. Then the farmer must buy his grain. Even at $1 per bushel he can get only 1,000 bushels which is not enough. Actually he will be able to buy much less than 1,000 bushels at the current market price. Under my plan he can get 2,500 bushels, or about normal production, while he makes this conversion.

Third. Not only will the individual farmers income be cut, during this lag time, but eventually this farmer will need a little more capital to stock this new grass properly. Through my plan he could bridge the immediate gap, without being hurt financially, and still reduce grain acreage.

I'm not enough of an expert to figure out what will be needed more than a year in advance in agriculture (and the experts are not doing so good either) but I know that if you want corn ground seeded down to grass on my farm you can get it done in 1956 by my "Grain Purchase Plan." I'll be very happy to seed down my ground at my own expense and thus take my chances on this year of lag time.

Some people will try to find fault with this idea because it will increase livestock numbers. It will be 2 years before that could start. After that cattle and sheep will gradually increase. They will have to increase for two reasons. In the first place we will need more livestock to furnish food for our increasing population. Second, from the farmers standpoint, he will have to buy livestock to eat up this new grass. If these farmers cannot increase their livestock numbers to consume this grass then they will go broke. The reason livestock will not increase immediately, and will not increase too rapidly in the future, is that livestock numbers are geared to the amount of the supply and price of grain. Under this plan

the farmers would have no more grain on their farms than if they continued production. They simply buy a year's supply out of surplus instead of raising it. Who says that is not what we need in this country?

From my standpoint this plan would temporarily reduce my production costs.

From the standpoint of the Government it would get rid of the grain surpluses in return for acreage reductions. Production of wheat and corn would be reduced in direct proportion to the amount of the surpluses sold. Thus storage problem of the normal carryover would be minimized to say nothing of the future savings in storage costs and the waste through spoilage. When this surplus is once used up then the problems of agriculture are minimized no matter what kind of a farm plan we have. It would take the farm problem out of politics.

From the standpoint of the general taxpaying public it would reduce the cost of any soil-bank plan by paying for it, at least in the beginning, with money already invested in surpluses and it will get immediate action.

It can be done in 1956 with very little new legislation.

This whole plan is purely and simply an additional option under the proposed soil-bank plan. It can be offered along with the land-rental option already proposed, and endorsed, by many of the leading farm organizations.

One trouble with most farm plans up to date has been that they start with a great big overall situation and work down to the individual farm. This plan works in reverse. It begins at the proper starting point, the individual farm, and works up. As soon as the surplus is gone it is finished and it takes no new organization to make it work. It is simply an additional feature of the ASC.

It is the sum total of the production of a lot of little farmers over a period of the last 10 years, which created most of the surplus in the first place. So why not take the perfectly logical step and let these same little farmers use it up while they get their farms back into grass?

Keep one thing clearly in mind. The collective excess we have today, of both wheat and corn, has been accumulated over a period of 10 years. In fact the gross total has increased very little during the past 5 years. It makes no difference whether this accumulation took place under the Democrats or the Republicans. It makes no difference whether rigid 90-percent supports or flexible supports are to blame. It makes little difference whether the Farm Bureau, Farmers Union or the National Grange are in favor of rigid or flexible supports nor what plan they advocate in the future. The fact remains that we have about 1 billion bushels of wheat and corn as a combined accumulated surplus, over and above a normal carryover, and the big job is to get it consumed.

Why run around all over the world trying to sell wheat for export? In the first place we have very little really good wheat available for export. In the second place the State Department would probably tear their hair out if we got the job done. In the third place we already have a pretty lousy reputation for poor-grade wheat because of carelessness in shipments already made. I was in Europe, the Middle East, and Egypt last spring and almost everywhere I heard the complaint that American wheat was inferior and a poor buy.

Because of low-protein content, poor grade, contamination, and other causes most of the wheat we now have in storage is only good for livestock feed so let's quit kidding ourselves and use it up for that purpose.

Now to answer several questions involved in this plan.

Why do I propose 50 bushels or corn to the acre?

Because that is a high average yield. Remember we are trying to get rid of surpluses so that is a pretty fair deal for both the farmer and the Government. If 1 billion bushels of surplus grain were sold at that rate it would put 20 million acres out of production. This is assuming it would all be used to put corn land out of production.

Why sell 20 bushels to the acre of wheat land?

Because here also it is a fair high average yield figure. If the wheat surplus were all bought back by wheat farmers, at the rate of 20 bushels to the acre, it would put 50 million acres out of production.

As a matter of fact this plan would get rid of surpluses so fast that the amount to be liquidated in any one year would probably have to be limited to 300 million bushels or we could suddenly create famine conditions. Remember. When you sell 300 million bushels by this method you also take out of production another 300 million bushels for the next year making a net change in position of 600 million bushels.

How can a small farmer pay for this grain?

He can buy it one truck load at a time. He will need less money at one time to do this than he would need to buy seed, fertilizer, and gasoline to plant his whole crop in the spring. If he can't do this he is "busted."

If either a wheat or corn farmer has no livestock what can he do?

He can sell it into the cash grain market. But he cannot dump a lot at one time because of the provision that he can only buy 25 percent of his allowance in any 60-day period. He simply buys it from the Government, in lieu of raising it, and then sells it in the open market. As an additional feature this would prevent the market gluts at harvest time.

Will this plan increase livestock numbers?

I partially answered this earlier. It would not do it immediately but it would as time went on. This plan, in itself, would not do it, because of the "cheap" grain, because no single farmer would get enough grain, and second, he would have his purchases spread out. Any additional grain he needed for increased livestock he would have to buy on the open market. It is reasonable to assume that the cash grain market would stabilize around the loan figure so that any livestock producer would think twice before he increased production.

Would it interfere with soil conservation?

The answer is "No." Most soil conservation practices such as contour ridges, waterways, ponds, et cetera, are carried out when the fields are in grass. It is the farms in the hill country that need these practices and these are the ones which would benefit most from this plan, therefore it would have the effect of speeding up conservation measures.

Ruth Estrin Goldberg Memorial for Cancer Research

EXTENSION OF REMARKS

OF

HON. HUGH J. ADDONIZIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. ADDONIZIO. Mr. Speaker, it is a great pleasure to call the Members' attention to the remarkable humanitarian accomplishments of the Ruth Estrin Goldberg Memorial for Cancer Research which has been in existence for only a few years.

Mrs. Mervin Eisenberg, of Newark, N. J., publicity chairman of this splendid organization, has kindly furnished the following account of the memorial's history and growth:

RUTH ESTRIN GOLDBERG
MEMORIAL FOR CANCER RESEARCH,
Newark, N. J., October 27, 1955.

Representative HUGH ADDONIZIO,
Congressional Office Building,
Washington, D. C.

DEAR REPRESENTATIVE ADDONIZIO: It has recently come to my attention that Members of Congress may read into the CONGRESSIONAL RECORD outstanding work that an organization in their community has done.

I am a member of the Ruth Estrin Goldberg Memorial for Cancer Research and feel that this organization has done a remarkable job in a few short years. I am, therefore, enclosing herein a record of our organization's founding and growth as well as a complete list of it's financial grants to date. I have heard a great deal about the sincere interest you have in the people and the groups that you represent, and I hope that you will find our record sufficiently interesting and our accomplishments great enough to read to Congress as an example of the excellent work one organization in the State of New Jersey is doing.

Although we are very proud of our accomplishments, we realize the enormity of the task we have undertaken, and we will continue to work diligently to improve our record until the wonderful day when cancer, the reason for our existence, will be wiped out forever.

Thank you for any consideration you may give us in this matter.

Very truly yours,

Mrs. MERVIN EISENBERG,
Publicity Chairman.

HISTORY AND GROWTH OF RUTH ESTRIN GOLDBERG MEMORIAL FOR CANCER RESEARCH

The Ruth Estrin Goldberg Memorial for Cancer Research was founded in 1949 in the State of New Jersey by nine young women who had lost their good friend, the late Mrs. Goldberg, through cancer at the age of 28. They were so deeply affected by her death that they decided to establish an organization which would serve as a living memorial to their friend wherein they could work to eradicate the menace that had taken her life.

REGM, as it is frequently called, is a nonsectarian organization with a membership of over 500 women now, who, during their spare time work solely to raise money to find a cure for cancer through research. All of the funds raised by this group go directly to cancer research.

Financial grants are issued to any hospital or institution in this country that does outstanding work in the field of cancer, and is in need of financial assistance to continue its field of study. Final selection of the institution to receive a grant is made by the membership at large under the advice and counsel of its advisory board, which consists of 11 honorary members who are mainly physicians and scientists, and its officers. Dr. James B. Allison, Director of the Rutgers University Bureau of Biological Research, is a member of this advisory board.

In 6 short years the Ruth Estrin Goldberg Memorial has donated $47,292.80 to cancer research. Their proudest achievement is the establishment of the Ruth Estrin Goldberg Memorial for Cancer Research Isotope Laboratories at the Bureau of Biological Research of Rutgers University, New Brunswick, N. J. This laboratory is specifically designed for the use of radioactive isotopes in cancer research, and the group has donated $11,510 to the laboratory to date. It is their sincerest hope that continued success in their fund-raising activities will enable them to go on equipping and enlarging the laboratory they have established.

During the past year they have donated $1,450 to the Children's Cancer Research

Foundation, Boston, Mass., a sonic oscillator; $5,000 to the New York Medical College for the Ruth Estrin Goldberg Memorial Fellowship in Pediatric Cancer; $3,500 to the Roscoe B. Jackson Memorial, Bar Harbor, Maine, for cancer tissue culture study; and $1,500 to the Newark Beth Israel Hospital Research Foundation Laboratory in completion of a pledge to their laboratory.

They now have $6,361.19 in the treasury and, therefore, expect to issue additional grants very soon. Although they are very pleased with their accomplishments, they realize that they must continue to work to raise money for this all-important purpose so that some day the disease that killed their young friend will be wiped out forever.

The list of Ruth Estrin Goldberg Memorial donations to date is most impressive and is indicative of the zeal and enthusiasm of the membership:

List of Ruth Estrin Goldberg Memorial donations to date

1949	
September: Newark Beth Israel Hospital	$500.00
1950	
September: Rutgers University	1,500.00
1951	
September: Newark Beth Israel Hospital	3,000.00
1952	
February: Newark Beth Israel Hospital (apparatus in animal testing room)	2,000.00
September: Rutgers University	4,000.00
1953	
March, September: Newark Beth Israel Hospital (both grants for clinical evaluation of leukemia)	6,000.00
1954	
January: Rutgers University (hood for Radio Isotope Laboratory)	1,485.00
April: Children's Cancer Research Foundation, Boston, Mass., for refrigerated centrifuge for leukemia	2,222.80
March: Francis Delafield Hospital, New York	3,200.00
September: Newark Beth Israel Hospital (to their research foundation laboratory)	2,000.00
September: Roscoe B. Jackson Memorial, Bar Harbor, Maine (cancer tissue culture study)	3,500.00
September: Institute for Cancer Research, Lankenau Hospital, Philadelphia, Pa. (automatic sample changer)	1,910.00
1955	
March: Children's Cancer Research Foundation, Boston, Mass. (sonic oscillator)	1,450.00
March: Rutgers University (scaler-counter-timer)	1,525.00
March: New York Medical College (REGM fellowship in pediatric cancer)	5,000.00
September: Rutgers University (animal room and equipment for REGM Radio Isotope Laboratory)	3,000.00
September: Roscoe B. Jackson Memorial, Bar Harbor, Maine (cancer tissue culture study)	3,500.00
September: Newark Beth Israel Hospital (research foundation laboratory, 2d payment of pledge)	1,500.00
Total	47,292.80

The February 1954 issue of the monthly, Report From Rutgers, the State University of New Jersey, contained the following tribute to the memorial:

IN MEMORY OF COURAGE

The Ruth Estrin Goldberg Memorial for Cancer Research is a foundation which provides funds for research on cancer. Other foundations do too, but that is where any resemblance of the Ruth Estrin Goldberg Memorial to any other ends abruptly.

Unlike most foundations, the Memorial didn't simply come into full-blown being through a bequest or gift. It is a living and growing thing, supported by the individual hard work and enthusiasm of a group of North Jersey housewives who have vowed a personal vengeance against the disease which claimed the life of Mrs. Ruth Estrin Goldberg, young, charming, and, like themselves, a housewife, at 28.

Nine close friends of Mrs. Goldberg, fellow members of an informal social club, felt so strongly about her death that they decided to turn the club into a memorial which has now been expanded to a membership of more than 400.

Over the course of but a few years, their support of Rutgers cancer research has totaled $10,000, no vast sum as the assets of conventional foundations go, but highly useful in providing tools for the expansion of the fundamental studies undertaken in the State university's bureau of biological research.

This year for instance, a compact but efficient laboratory specifically designed for the use of radio-active isotopes in cancer research has been opened at the Bureau. A bronze plaque notes its dedication to the memory of Ruth Goldberg.

The new laboratory was built with an original $4,000 grant from the REGM. Subsequently the Bureau of Biological Research found that it needed a $1,500 exhaust hood for the safe handling of radio-active materials and the ladies promptly responded with a gift in that amount.

These radio-active isotopes are byproducts of atomic radiation. They are chemicals deliberately made to absorb measurable amounts of radiation, amounts that can be accurately metered after they have been taken into the body's tissues.

For example, if the scientist needs to measure the amount of a drug or compound he believes potentially effective against a cancer, it can be combined with a radio-active substance. Then after the substance under test is within the body, the amount which goes to and is absorbed by the tumor can be traced and measured.

Funds which bought the laboratory equipment came from many sources. "Coin catcher" is the phrase used by the women to describe everything from cake sales to fashion shows, diaper service rebates to collecting used nylons.

The bureau research program, supported by organizations such as the Damon Runyon Fund and the American Cancer Society, as well as foundations, industry and the university's own research funds, is playing an important role in the concerted national and international research program aimed at cancer.

And in the work of the bureau, this memorial to a young, lovely and selfless lady is playing an esential part.

Norman Chandler's Visit Behind the Iron Curtain

EXTENSION OF REMARKS

OF

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. HILLINGS. Mr. Speaker, Mr. Norman Chandler, distinguished publisher of the Los Angeles Times, visited Russia, Latvia, and Czechoslovakia last fall. He was accompanied by Mrs. Chandler and Mr. Robert Hartmann, chief of the Los Angeles Times Washington Bureau.

Mr. Chandler discussed conditions in the Communist world in a series of articles which appeared in the Los Angeles Times. I suggest that all Members of Congress read Mr. Chandler's illuminating account of conditions behind the Iron Curtain.

The following are the first 3 articles which appeared in the Los Angeles Times on November 6, 7, and 8, 1955:

[From the Los Angeles Times of November 6, 1955]

ENTRY INTO RUSSIA FOUND STILL DIFFICULT—PUBLISHER OF TIMES TELLS OF LONG WAIT FOR SOVIET TRAVEL PERMIT

(This is the first of a series of articles in which Mr. Chandler, publisher of the Times, will report his observations in the Soviet Union and some of its neighbors. It was airmailed uncensored from Vienna.)

(By Norman Chandler)

LENINGRAD.—It's still far from easy to get into the Soviet Union. But, thanks to the "spirit of Geneva," it is a little easier than it used to be and, once inside the country, an American tourist can do things which 6 months ago would have been impossible.

We arrived here after 3 months of trying. This, I am told by other Americans here—we have seen only about a dozen outside of the permanent United States Embassy and news agency staffs—is something of a speed record for the course. Many have waited 6 or 9 months and many more never get permission.

PUT TO THE TEST

When I read the final communique from the Big Four Conference at Geneva last summer, it seemed to me the agreement to facilitate a freer exchange of visitors and cultural groups was the one solid result of the meeting. I decided to put it to the test, and asked the Times Washington Bureau to apply at the Soviet Embassy for visas for Mrs. Chandler and myself.

Mrs. Chandler was most interested because of her activities in the cultural and educational fields. She wanted to see the best Soviet artists performing in their own country and to discuss with top Russian officials the prospects of bringing them to the United States in a talent exchange.

BACKGROUND VALUABLE

If we were admitted, I also planned to take Bob Hartmann, chief of our Washington bureau, along. So much of the news from our Nation's Capital concerns the relations between the United States and the U. S. S. R. that I felt a background of firsthand knowledge of the Soviet Union would be most valuable to him and give our Washington bureau a real advantage in the months ahead.

Nevertheless, when we left the United States in mid-September for Europe and a vacation made memorable by the magnificent service provided us by TWA and Howard Hughes, no reply had been received from Moscow.

The combined efforts of our Washington bureau, the Associated Press in New York and Moscow, the good offices of Vice President NIXON and Under Secretary of State Herbert Hoover, Jr., seemed to no avail. The Soviet authorities, we were to learn later, do things in their own good time, if at all.

THE RIGHT COMBINATION

We had virtually decided to abandon the visit to Russia, with winter fast coming on, when as a last-chance effort I sat down in Frankfurt, Germany, and wrote a telegram directly to Nikita Khrushchev, first secretary of the Communist Party. I reiterated our

reasons for wanting to visit the Soviet Union and added I had to be back at my office in Los Angeles by November 12.

The workings of the inner Kremlin are like a combination lock. No outsider knows the exact combination that makes the tumblers fall into place and produce a decision to open the door. But something certainly happened, and when it did things moved fast.

I was informed our visas had been granted and could be picked up at the Soviet Embassy in Vienna. We had already left Vienna, so we asked to have them transferred to Paris. Within 24 hours, in what dumfounded American experts on Russia call the swiftest bureaucratic switch on record, the all-important stamp was on our green United States passports.

Joined by Bob Hartmann, who did a modern Nellie Bly by getting to Paris some 17 hours after picking up his visa in Washington, we took off immediately for Helsinki via Copenhagen and Stockholm—some of the neatest cities of Europe.

INTO THE UNKNOWN

At the Helsinki Airport we were met by our good friends Holger and Ulla Semelius. He is president of the Finnish Newsprint Association which supplies paper for 1 out of every 7 pages in the Times and Mirror-News. After a delightful visit and typical Finnish lunch, our flight was called and we boarded the Soviet plane with the inner feeling of jumping off into the unknown.

Right then we had to discard our first bit of misinformation about Russia. We had heard that Soviet planes have no seat belts. This one did, although it was the only one we found in Russia so equipped.

AIRBORNE HOT RODDERS

All civil aviation in the U. S. S. R. is run by Aeroflot which simply means "air fleet." The usual commercial transport is a Soviet version of our old work horse of the skies, the Douglas DC-3, seating 21 passengers. We saw no four-motored civilian planes.

The pilots tend to wheel their planes around the airfield like hot rodders, and they take off and land without very much ado, but appear to be skillful aviators. Travel by Aeroflot, as we found it, is safe enough and reasonably comfortable, though the planes vibrate more than ours and there are no such frills as meals or vodka aloft.

Our Soviet hostess was a smiling girl with the sturdy peasant figure so typical of Russian women. She wore an untidy black uniform and cap from which escaped considerable unruly red hair. She wore a little lipstick, which is not very common in the Soviet Union.

The flight began with a matter-of-fact distribution of paper sacks for air sickness. Later she distributed some lemon drops, mineral water, and Russian magazines—which I could read only enough to tell that the main article was about peaceful atomic powerplants.

BLUE VELVET ELEGANCE

The seats were upholstered in a coarse frieze and the interior was of blue plastic. Lap robes were passed out for high-altitude flying, though the cabin was heated. At the rear was a heavy blue velvet curtain—the first we were to see of this material, which evidently is thought the height of elegance throughout the country, as it is used everywhere. There was a single rest room for all passengers, fairly clean.

At each window were translucent plastic shutters, which, I surmised, could be closed if we were not supposed to look out. But they were not closed. We peered down eagerly for our first view of the biggest nation on earth, so long a dread mystery to Americans, the Union of Soviet Socialist Republics.

[From the Los Angeles Times of November 7, 1955]

IRON CURTAIN NOT VISIBLE FROM AIR—RUSSIA FOUND TO BE COSTLY LAND BY VISITING PUBLISHER OF TIMES

(This is the second of a series of articles in which Mr. Chandler, publisher of the Times, will report his observations in the Soviet Union and some of its neighbors. It was airmailed uncensored from Vienna.)

(By Norman Chandler)

LENINGRAD.—The Iron Curtain is invisible from the air.

Flying from Helsinki in our two-engined Soviet transport there was nothing to see below but a sea of white clouds when our Russian stewardess announced, in hesitant English:

"We are now in the Soviet Union."

I felt no particular sensation, neither thrill nor chill, after months of waiting for this moment.

It was in this objective frame of mind, actually, that I went to Russia. I was resolved to forget, if I could, that this was the capital of the Communist world. For the duration of my visit I would try to see it as just another foreign country, with different way from our own.

THE GOOD AND BAD

As a tourist and private American citizen, traveling with Mrs. Chandler and Bob Hartmann, chief of our Washington bureau, I hoped to record for our readers the impressions and experiences of a visit to the Soviet Union, the good and the bad, just as I might do in Pakistan or Uruguay or any other place I had never seen before.

I am not an expert on the Soviet Union, nor could I become one in a fortnight. Able professionals like Dick O'Malley and Stan Johnson of the Associated Press bureau in Moscow or our hard-working and rigidly restricted Embassy staff are reporting the twists and turns of Kremlin politics to the American people and the United States Government.

But we were among the few individual Americans permitted to tour the U. S. S. R. since Geneva. The Soviets prefer large delegations, or foreign officials, to the hard-to-watch, hard-to-please private tourists who annually swarm over Western Europe.

OFFICIAL AGENCY

The all-embracing official Soviet travel agency, Intourist, takes care of all foreigners inside Russia. To somewhat soften the outrageous official exchange rate of 4 rubles to $1 (the ruble will buy about a nickel's worth of goods) Intourist sells coupon books ranging from $30 a day for "luxe" service through 5 less expensive classes. The "luxe" coupon book covers transport to and from railway stations and airports to an Intourist hotel, lodging and 4 meals (including tea but not wines, liquors, or bottled water), plus sightseeing with an English-speaking interpreter, guide, and chaperon.

It sounds like a lot for $30 until you see it. Actually, without buying anything in the way of souvenirs—there is nothing worth buying except postcards and postage stamps—we found ourselves getting rid of rubles at the rate of about $100 per person a day in addition to the Intourist coupons.

LIVING EXPENSIVE

So I won't predict any great volume of American tourists to the Soviet Union next summer, even if, improbably, all visa requirements are suddenly abolished. Food and hotel rooms are as good as the U. S. S. R. has to offer, and one is whisked about in a shiny black Zim, which resembles a 147 Buick or Oldsmobile such as only the wealthier Soviet officials and artists can afford.

But by American or Western European standards, the food is bad and the accommodations primitive. Living is terribly expensive and all you get for your money is an inside look at a fascinating and heretofore almost forbidden land.

To a newsman this makes it worth while—for a while.

I'm well aware that first impressions often are deceiving. But here are those I jotted down driving from the airport into Leningrad, Peter the Great's planned city on the Baltic.

Our first sight of the Soviet Union's second metropolis was obscured by a familiar phenomenon, smog. A heavy blanket of smog hung over the city and for a moment made us feel at home. But our wheels had scarcely touched the hexagonal concrete paving blocks of the airstrip before we knew Leningrad was definitely not Los Angeles. It was like landing on another planet.

CAMERAS O. K.'D

Customs and passport formalities were amazingly easy at the airport. We were asked to declare how much money and jewels we carried, and whether we had any reindeer horns or hashish with us. Nobody raised an eyebrow at our cameras and plentiful supply of film.

The Intourist man—we were seldom to be without one from then on—met our plane and put us in a Zim limousine for the Hotel Astoria. The paved highway was good but something was lacking—suddenly I realized it was the absence of advertising billboards. Where the state owns everything, why advertise?

It was just dusk, and factory workers were queued up for buses and trolleys along Stalin Avenue, the extremely wide boulevard leading to town. Their faces were expressionless. Their clothing, while warm, was drab and dirty. Almost everybody wore black. They stared at us, but we could not be sure whether it was because they recognized us as Americans or because of the limousine. There were some trucks but only a handful of private cars on the streets. We saw few smiles.

CITY COLD AND GRIM

While in the country the birches were just turning gold, the city of Leningrad had few trees or touches of green. It looked cold and grim, like a vast forced-labor camp. Massive multiple apartment houses, built of brick with little or no structural steel, were rising behind old Russian-log houses of incredible disrepair but somehow in better taste. Soviet architecture is a nightmare, somewhat like piling the Lincoln Memorial on top of the Los Angeles city hall, with colossal statues of workers and peasants at every corner.

At the Astoria Hotel, a prerevolutionary relic of masonry furnished with massive period furniture in garish colors, we walked into a lobby teeming with French movie people here for a cinema festival. An antique elevator took us to our suite, but we soon learned that you must walk down five flights to descend. Scrubwomen constantly scour the stairs, but seldom the bathroom. There is very little unemployment in the Soviet Union and very little good plumbing.

[From the Los Angeles Times of November 8, 1955]

SOVIET LAND FAILS AS UTOPIA MODEL—IT'S ABOUT 50 YEARS BEHIND UNITED STATES, VISITING TIMES PUBLISHER REPORTS

(This is the third of a series of articles in which Mr. Chandler, publisher of the Times, will report his observations in the Soviet Union and some of its neighbors. It was airmailed uncensored from Leningrad.)

(By Norman Chandler)

LENINGRAD.—I had not been in the Soviet Union for 24 hours before I was convinced that every American should see this country. Especially those who consider it the model of the future Socialist world utopia.

Actually it is about 50 years behind the United States in most visible facilities and at least 20 years behind any Asiatic or European country I have ever seen.

This is not to make the rash statement that Russia is not moving ahead technologically, perhaps equaling or surpassing us in some things—things which the planners of the Kremlin give top priority such as the odd combination of bombs and ballets. Compared with what the Soviets had achieved a decade ago, life is undoubtedly better for the Soviet citizen, who appears remarkably resigned to a way of life which, to the average American, would be unbearable.

LETDOWN FOR VISITOR

No matter how much you have heard, read, seen in pictures, or imagined about the U. S. S. R., I'm sure you would find it very different from your preconceptions. I know I did.

Looking back, I have to admit that suspicious as we Americans have been of Soviet propaganda about their material progress, we have all subconsciously swallowed some of it. For while I never thought things would be as good as the Russians boast, neither did I ever dream they could be as bad as they are—with some notable exceptions I shall mention later.

On the other hand, where I expected some hostility toward Americans and the kind of contentious belligerance you get from our rabid leftwingers at home, I found considerable courtesy and no hostility. I found my freedom of movement around the city much greater than I anticipated and if we were "tailed" or followed it was done so skillfully we were unaware of it. I do not think we were, although the authorities certainly had a general idea of where we were all the time, as we made no secret of it.

NO BAN ON CAMERA

I openly carried my camera and took pictures wherever I pleased, with or without a Soviet guide. Only once was I told "Nyet" about photographing. That was when a small formation of soldiers marched past our hotel.

Leningrad, at least in late fall, is a poor introduction to the Soviet Union, however. The food at the hotel, invariably the same menu of tired canned vegetables and potatoes fried in strong grease, with tough or tasteless meat and apples the only fruit to be had, was a shock after Paris and Scandinavia.

A few things are good. Caviar, of course, which Intourist guests can have with every meal if they like it that well, strong tea served in a glass in a silver holder; ice cream—which I pray was pasteurized. The black bread is good but the white is only fair. Sturegon is a tasty fish if you can get some without the cooking oil aroma. Borsch is better at any Kosher restaurant in the United States.

VODKA EXPENSIVE

There are virtually no imported goods in the country—except a few things from Czechoslovakia such as cut crystal which adorns every table. You cannot buy Scotch whisky for comradeship or money and about an ounce of vodka costs $1. While there are no bars, I saw considerable drunkenness on the streets and even in hotel dinning rooms. In all fairness, it probably was not more than you would see in America, but it seemed worse because these inebriates were never gay, just drunk.

My overall impression of Leningrad is grim. Perhaps this is because the contrast with the West was so startling; perhaps because cold weather was coming on; perhaps because it is too close to the frontier for Soviet planners to assign it a very high priority.

Yet there were many things of interest to see.

Most impressive was the rehearsal, by what must have been 10,000 crack troops of the Red army and navy, for the national Red October holiday on November 7 (Russia clung to the Julian calendar until after the revolution; thus the October uprising was November 7 under the Gregorian system used universally today.)

PRECISION MARCHERS

With marvelous precision, these massed formations marched through the plaza of the Czar's winter palace where the revolution actually began. Not far away, anchored in the Neva River, was the cruiser *Aurora*—of the same vintage as the U. S. S. *Maine*—whose crew mutinied and turned the ship's guns on the palace.

We watched this parade rehearsal from a window of the palace, now one of the world's richest art museums. The collection itself is remarkable and the palace of the last Romanoffs, well-kept and better preserved than most of the slapdash construction of the past few years, is a treasure house deserving more time than we could give it.

Leningrad, formerly Petrograd, formerly St. Petersburg, was laid out by Peter the Great on the plan of Paris in his effort to Europeanize his country. It has broad boulevards and circles, but little traffic; it has Stony Park where czarist nobility once had their summer dachas and now Soviet kindergarten children play while their mothers work.

BUILT ON 101 ISLANDS

It also resembles Venice in that it is built on 101 islands, with many canals and bridges. We saw husky Soviet oarsmen shelling, and our intourist guide frankly voiced the hope the U. S. S. R. would beat the U. S. in the next Olympics. He showed us the Kirov Stadium, seating 100,000, and pointed out with local pride it was the largest in the Soviet Union. I noted an elegant central box obviously reserved for VIP's in this land of equality.

But the resemblance to Paris or Venice ends very quickly. There seems little gaiety; a sad orchestra ground out tunes in the Astoria's dining room and a dumpy girl vocalist sang Besame Mucho, which appeared most unlikely. There was no dancing.

There are only 15 churches operating in Leningrad, 1 each for Protestants, Roman Catholics, and Jews, the rest Russian orthodox. The best of the onion-spired orthodox churches have been turned into museums or movie theaters, the rest are crumbling ruins.

CATHEDRAL MUSEUMS

In the once-splendid Kazan Cathedral we visited the antireligious museum, which the Soviets prefer to call the Museum of Science and Religion. From what I had heard, the more offensive and blasphemous exhibits apparently have been discarded, though I could not read the slogans.

The museum was thronged with groups of Russian schoolchildren, attentive and well behaved, getting their first lessons in the new religion of Marxist materialism. They were as cute and happy as children anywhere, and this frightened me more than the marching columns in Revolution Square.

Norman Chandler's Visit Behind the Iron Curtain

EXTENSION OF REMARKS

OF

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. HILLINGS. Mr. Speaker, the following are the fourth, fifth, and sixth in the series of articles by Mr. Norman Chandler, publisher of the Los Angeles Times, in which he describes his experiences behind the Iron Curtain. These articles appeared in the Los Angeles Times on November 9, 10, and 11, 1955:

[From the Los Angeles Times of November 9, 1955]

MOSCOW REMAINS SOVIET SHOWPLACE—ENDLESS PROCESSION STILL FILES BY LENIN TOMB, TIMES PUBLISHER FINDS

(This is the fourth of a series of articles in which Norman Chandler, publisher of the Times, is reporting his observations in the Soviet Union and some of its neighbors. It was airmailed uncensored from Moscow.)

(By Norman Chandler)

Moscow.—The desk in my room at the National Hotel, where this is written, looks out directly on Red Square, the brick walls and gilded spires of the Kremlin, and the severe marble pyramid beneath which lie the first Pharaohs of a new empire, Lenin and Stalin.

It all seems like a dream, from which one will momentarily waken, to watch the shuffling line of Soviet citizens moving two-by-two in a seemingly endless procession that winds around the Kremlin's ancient battlements, rain or shine.

Yet we are in the Soviet capital, one of the largest cities on earth (estimates vary from 5 to 7 million) and the very heart of the world revolution which has changed the lives and postwar hopes of all of us. And we got here, as ordinary tourists, much the same way you would hop a plane from Los Angeles to San Francisco.

START DELAYED

Aeroflot, the only Soviet airline, is not the only one in the world that gets you up at 6 a. m. to go to the airport and then tells you the flight will be delayed until noon. On the Leningrad-Moscow run there are two flights daily, but on most others planes fly only once or twice a week. So you don't just grab a standby card for the next plane.

The Russian version of a DC–3 which we finally boarded for Moscow was almost identical with the one in which we entered the Soviet Union, but it had no seat belts and the stewardess wore no uniform. We paid about $15 for overweight baggage as the limit of 20 kilograms each is less than that allowed on international flights.

Whether Moscow has smog like Leningrad, I may never know, for we saw nothing until we plunged down through the fog and leveled out just over the brown fields near Moscow Airport. I wondered how President Eisenhower's aerial inspection plan would work if Soviet skies are always overcast as they were every day but one during our stay there.

MET AT AIRPORT

Both the omnipresent Intourist guide and Dick O'Malley, chief of the Associated Press bureau, were there to meet us. We went with O'Malley in the only Chevrolet we saw in Moscow (plus 7 or 8 other American cars, owned by diplomats) for the 40-minute ride to town.

At first glance, Moscow is far more impressive than Leningrad. It is twice as big; automotive traffic is so heavy that traffic jams—the Russian word is actually "traffikdjam"—are quite common. People are better dressed—though there is no such thing as style in Soviet apparel—and appear more natural and content than in the northern city.

There is much evidence of new construction—mostly huge housing developments—with the peculiar portable cranes used by Russian masons silhouetted everywhere against the sky like huge storks.

FEW WORKMEN ON BUILDINGS

But oddly enough, with all the scaffolding, safety fences and piles of bricks, I seldom saw anyone actually working on these buildings. Maybe they do it at night.

The National Hotel, built in 1903 as a showplace of Czarist Moscow, is even more ornately decorated and furnished than the

Astoria in Leningrad. All "luxe" suites have pianos—ours was a Steinway—but our bathroom was a fright. The cusine, thank goodness, was better than in Leningrad—although the only really palatable meal is breakfast, since you can't do much to ruin a soft-boiled egg, and Russian ham is good.

REALLY TRY TO PLEASE

While it's impossible to avoid comparing Soviet food and service with American and European ways, I must add that the hotel staff and Intourist people were unfailingly attentive and accommodating, once we could make our wants known through the language barrier. Intourist obviously was ill-prepared for the "spirit of Geneva" and any great number of English-speaking tourists—though delegations of French, Germans (both East and West) and Asian nationalities are fairly frequent.

But the Intourist manager in Moscow, Mr. Rogov, and the woman guide assigned to us, Mrs. Zoya Novikova, really knocked themselves out to try to please. To an American, it takes a maddeningly long time to get anything done in Russia. But this is true almost everywhere in Asia and there is much truth in the old saying: "Scratch a Russian, find a Tartar." From a Russian viewpoint our Intourist staff worked miracle after miracle of red-tape cutting and arrangement-making. Nor would they accept any tips for their services, although, despite the official "no tipping" policy, hotel and restaurant workers seldom turn down an outstretched ruble.

Of course, the Intourist people tried to show us what they wanted us to see—as we would very likely do, come to think of it, in showing foreign (especially Russian) visitors around our own country. But they did make an effort to show us everything we wanted to see until we ran out of time, and bore our frequent changes in plans with Slavic patience.

ONLY OUTRIGHT REFUSAL

The only outright refusal we met was on a comparatively simple request to visit inside a typical Soviet home or flat of a city worker. This is the first thing anyone who is really trying to understand a foreign country better wants to do. But it is not done in the Soviet Union—the excuse is that it would be rude to invade a stranger's privacy—but the guide never asks you to his or her home instead. Social contact between Americans and Russians is almost nonexistent, despite the spirit of Geneva.

Moreover, aside from officials with whom I arranged interviews and the English-speaking intourist employees, I did not have a single informal conversation with a Soviet citizen during my entire stay. It was not for want of trying, nor entirely due to my ignorance of the Russian language. It just isn't done.

The result is that the diplomatic corps and the few foreigners living in Moscow for other reasons, such as press and radio correspondents, find themselves pretty much talking to each other. The passing tourist has no chance at all, and the next time I read a report by a fortnight visitor giving Americans the lowdown on what the Russian people are thinking, I'm not going to believe it any more than I'd believe Pravda on that subject.

One can, however, offer a few fast impressions—hardly more than hunches. I don't think there's going to be any revolution in the U. S. S. R. soon. The feel of discontent and desperation is not in the air; quite the contrary—that patient line of black-clad figures waiting to see Lenin's and Stalin's remains are not driven there with whips—they wait years for an admission card. Nor do I think anybody in the Soviet Union—rulers or ruled—wants war now. They want Mir—peace—because they have so much to do.

[From the Los Angeles Times of November 10, 1955]

KREMLIN TYPIFIES COMMUNIST POWER, BUT IN ITS SHADOW NOBODY ARGUES POLITICS, TIMES PUBLISHER REPORTS

(This is the fifth of a series of articles in which Norman Chandler, publisher of the Times, is reporting his observations in the Soviet Union and some of its neighbors. It was airmailed uncensored from Moscow.)

(By Norman Chandler)

Moscow.—At night seven red stars, illuminated from within and constructed of ruby crystal, brood over Moscow from the seven towers of the Kremlin.

They are the symbols of Communist power at the center of an empire already larger than that of the Roman Caesars, whose imperial eagles they replaced, or that of the Mongol hordes against whose forays the first log walls of the Kremlin were built.

The present medieval walls were under construction when Columbus was discovering America, obviously with better brick and mortar than Soviet builders use now to erect buildings that begin to crumble after 2 or 3 years.

IMPORTED ARCHITECTS

Then, too, the imported Italian and Byzantine architects who built the Kremlin worked without the pitiless production norms which the Soviet system substitutes for competition in almost every phase of its economic life.

As a short sojourner, I cannot say that the Soviet system does not work. But I have seen enough to convince me that it doesn't work very well.

Laying aside for the moment considerations of individual freedoms which in our society are more highly valued than elsewhere, the Soviet economy seems to have done best in those endeavors which most resemble the discarded capitalist system. One of the first pure Marxist principles to go out the window was "to each according to his needs." Now there are all gradations of income—including some ruble millionaires—as a result of wage and salary incentives which recognize that all men are not equal in ability.

TALENT REWARDED

As in America, managerial and artistic talent command high incomes. Managers strive to show a profit, in which they share. The rest goes not to stockholders but to capital expansion, which is the primary goal.

But a curious thing about visiting the capital of the Communist world is that in the very shadow of the Kremlin nobody will argue politics with you or try to convert you to communism. You could do a lot better in Pershing Square.

I had only one real discussion in this vein, and that with Kromeinov, chief of the American section of Pravda. It was a most illuminating demonstration of the workings of an intelligent Soviet mind.

Kromeinov sat in at an interview I had with the acting editor of Pravda, a big, dark-haired gentleman named Zhukov, like the famous marshal. Zhukov did not speak English, nor I Russian, but we exchanged questions and answers of a technical nature while tea and cakes were served.

REACHES 4,900,000

Pravda has only 4 pages—newsprint is as scarce here as anywhere—but circulates to 4,900,000 readers throughout the Soviet Union. Matrices of its daily Moscow edition are rushed by jet aircraft to 14 distant cities, so that the word of the Kremlin, which Pravda speaks, goes out in identical form to every corner of the largest nation on earth.

I asked Zhukov if he felt the American press had been more friendly to the Soviet Union since Geneva. He said some. I asked if Pravda had taken a more peaceful tone toward the United States.

"The Soviet people have always had friendly feelings for the American people," Zhukov replied. "So we have not had to change. We have known President Eisenhower a long time—he has been here—and we have always been careful to respect him, although we have sometimes been rough with MCCARTHY and KNOWLAND. But your papers are always rough with our leaders."

SPECIFIC EXAMPLE

This scolding led me to ask for a specific example, whereupon Zhukov said, through the interpreter, he was most disappointed that Secretary Dulles had said the Soviet farm delegation should never have been allowed to tour the United States.

I said frankly I'd never heard of that, so he went for the TASS report from Washington. (TASS, the official Soviet news agency, serves 4,500 papers in the U. S. S. R. and exchanges news with agencies abroad, where it is served by 40 bureaus and some 200 correspondents. The deputy director of TASS, Mr. Vishnevski, in an earlier interview, gave me almost identical answers about the spirit of Geneva, as practiced by the United States.)

Kromeinov, whose English (and tailoring) reflected 5 years in the United States as a Pravda correspondent, produced the Dulles quotation and read it to us. Even after two translations, it was apparent that Dulles was saying he regretted the few protest demonstrations that occurred during the Soviet farm delegation's tour, and was afraid they would be magnified in Moscow. Or so I interpreted it, and said so.

ARGUE OVER MEANING

"Nyet," the Soviet editors chorused. Kromeinov quite seriously explained that Mr. Dulles regretted that American crowds had warmly welcomed the Soviet delegation, and wished they hadn't come.

We argued inconclusively about it for 15 minutes, and parted equally unconverted. Yet I am convinced my hosts absolutely believed everything they said. It gave me an eerie feeling, for newspapermen everywhere else can argue with certain facts mutually agreed upon. But here, with the one Russian I found willing and able to discuss the news in my language, I realized that the impenetrable Iron Curtain is not around the Soviet frontiers but around their minds.

I also interviewed the deputy head of the press section in the Soviet Foreign Ministry, which is housed in one of Moscow's seven skycrapers which average about 30 stories in height and dominate the flat terrain in every direction. This official (one always talks to deputies or assistants and wonders whether the head man is really on vacation in the Crimea), Khokov by name, was polite but uninformative.

"What is in our power we shall do," he replied to our specific requests, none of which was heard of further. For all questions concerning Soviet policy he had some variation of this answer: "It is very difficult to speak for the government now."

None of the Soviet officials I interviewed offered much more than courtesy, and I doubt if any of them could, except at the very top—nor would anyone say who is at the top just now. There are very few pictures on the walls of anyone except Lenin and Stalin, although I saw one each of Malenkov and Molotov and a couple of Bulganin. I saw

none of Khrushchev, who probably comes closer than anyone else to being the boss.

But if the Soviet authorities continue to complain that the American press is inaccurate in its information about their country, they have only themselves to blame. When you cannot communicate either with the government or the people of the Soviet Union, you can only look and surmise—and wonder.

[From the Los Angeles Times of November 11, 1955]

LENIN AND STALIN VISITED IN DEATH—TIMES PUBLISHER VIEWS BODIES AND TAKES PICTURE IN KREMLIN ITSELF

(This is the sixth of a series of articles in which Norman Chandler, publisher of the Times, is reporting his observations in the Soviet Union and some of its neighbors. It was air mailed uncensored from Moscow.)

(By Norman Chandler)

Moscow.—If anyone had told me a year ago that today I would stand looking into the faces of Lenin and Stalin, inscrutable even in death, I would have questioned his sanity.

And if he had added that I would stroll within the walls of the Kremlin, nonchalantly snapping pictures of the very palace where Stalin lived and so many of his enemies died—while Red army sentries watched with equal nonchalance—I would have sent for the padded wagon.

Yet it was actually as easy to arrange as a tour of the White House.

CITY IN ITSELF

The Kremlin is not a single building, but a collection of palaces, churches, government buildings, and barracks surrounded by a brick wall. On a hillock at the junction of the Moscow and Neglinnaia Rivers, it was the fortified center of the ancient city. Behind its pentagonal wooden walls the first Muscovites defied the Tartar Khans and later czars stored up treasures while the Communist regime, for all its theoretical disdain of wealth, has carefully preserved.

An American tourist is by no means free to roam the Kremlin at will. But since last July—coincident with the Geneva Conference—parts of this once mysterious citadel of the Communist world have been open to visitors, Soviet citizens and foreigns alike.

It may be symbolic of the authority which resides in the Kremlin that inside it is the only place I saw in the Soviet Union where pedestrians—and most Russians are—pay the slightest attention to crosswalks or traffic cops. Elsewhere it's a hair-raising contest between man and machine in which miraculously nobody seems to get hurt or even angry.

FABULOUS COLLECTION

The area of the Kremlin open to sightseers contains one of the world's most fabulous collections of medieval armor, weapons, court and clerical clothing, and the rich gifts of princes and potentates to the imperial Czars. You can also see the cluster of Russian Orthodox churches, now museums, in which the czars worshipped, were crowned and finally entombed, even during the two centuries when the capital was moved to St. Petersburg (Leningrad).

Unlike Stalin, today's top Soviet leaders no longer live in the Kremlin. They have luxurious (by Soviet standards) apartments or houses in town and summer dachas in the country.

Except for the Foreign Ministry, which is located in 1 of Moscow's 7 skyscrapers which average about 30 stories high, most of the principal Soviet Government offices are housed in the Kremlin; in an area where tourists do not wander.

MONOPOLY ON BEST CARS

These high-ranking Communist officials are instantly recognizable because they have a virtual monopoly of the best Soviet-made car, the Zis, a big, black limousine which somewhat resembles a 1947 Packard. They whiz out of the Spasskaia (Saviour's Tower) into Red Square, the rear seat always curtained, and always at a high rate of speed. One afternoon, taking a snapshot of colorful St. Basil's Church, I was almost run down by Georgi Malenkov, who observers say is still very much around despite his apparent demotion.

It is here in Red Square, just under the Kremlin walls, that the two saints of the new religion are enshrined in a handsome mausoleum of red Ukrainian granite and black labradorite. Severely modern, in contrast to its medieval surroundings, the pyramidal tomb was erected originally for the embalmed body of Lenin alone. But room was made for Stalin when he died, permitting irreverant foreigners in Moscow to coin the title "The Gruesome Twosome."

WAITING LINE IMPRESSIVE

Not knowing quite what to expect, I ate lightly before paying my respects, but the experience was neither gruesome nor particularly moving. The really impressive thing, to an American, is the half mile-long line of Soviet citizens waiting, inching forward, their clothing a dreary black, their faces expressionless masks.

Our intourist guide flashed a pass at the cordon of police and we walked briskly—it is too cool for a California topcoat in Moscow—past the long waiting line. I asked if foreigners cutting in at the head of the line didn't make these patient Soviet people a little annoyed.

"Oh, no," she said. "They consider that you are the guests of the Soviet Union."

ALL REMOVE HATS

I removed my hat at the entrance as automatically as I had seen crowds of supposedly atheistic Soviet citizens do upon entering a former church. If I had not, I might not have got past the two ramrod stiff Red Army sentries with fixed bayonets.

Inside, two-by-two, the procession filed down the marble stairs and around the glass caskets. Four more soldiers stand at each corner, almost as still as their former masters. Only the faces and hands of the bodies are visible, and whether they are real or exceedingly good wax casts you cannot tell in the dim, funereal lighting. Stalin looks more lifelike than Lenin, who has been there a lot longer.

Not a sound is heard save the shuffling of feet, as the Soviet people pass by the remains of this once-powerful pair who discarded the immortal soul as a superstitious opiate. No sobs are heard, and when one reaches daylight again, no tears can be seen.

FACES BLANK MASKS

The faces of the Soviet citizens emerging from the tomb—which many of them have waited 4 or 5 years to enter—are the same blank masks I saw when they filed in.

What does this mean? You never find out.

Even more incredible than shooting snapshots inside the Kremlin, or passing Lenin's and Stalin's biers, is this: Throughout my stay in the Soviet Union I did not talk informally with one single ordinary Russian.

I had scheduled interviews with Soviet officials. I asked questions and got civil answers from Intourist guides and hotel employees. But not once was I alone with a Russian for just a friendly chat. I thought prhaps this was because I spoke no Russian, or because we were there only a short time.

But I was told by our Embassy officials that foreigners who have lived in the Soviet Union for years, and speak Russian fluently, have never had a real heart-to-heart talk with a Russian either. It still isn't done, despite the "spirit of Geneva."

That "spirit" gets you inside the country, but not inside its people.

Norman Chandler's Visit Behind the Iron Curtain

EXTENSION OF REMARKS

OF

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. HILLINGS. Mr. Speaker, the following are the seventh, eighth, and ninth in the series of articles by Mr. Norman Chandler, publisher of the Los Angeles Times, in which he describes his experiences behind the Iron Curtain. These articles appeared in the Los Angeles Times on November 13, 14, and 15, 1955:

[From the Los Angeles Times of November 13, 1955]

CULTURE IN RUSSIA IMPRESS VISITORS—COMMAND THEATER PERFORMANCE IS HIGHLIGHT FOR TIMES PUBLISHER

(This is the seventh of a series of articles in which Norman Chandler, publisher of the Times, is reporting his observations in the Soviet Union and some of its neighbors. It was air-mailed uncensored from Moscow.)

(By Norman Chandler)

Moscow.—The play's the thing, as Shakespeare said, in the Soviet Union.

When it comes to showmanship, the Russians really excel. But like everything else they do, there is a coldly calculated purpose behind the Communists' preoccupation with culture and the arts. They are not, it seemed to me, an end to be enjoyed in themselves, but a means to further the goals of the all-powerful Soviet state.

Mrs. Chandler is the expert in our family on music and the theater. Doors opened readily for her in the Soviet Ministry of Culture and VOKS, the Society for Cultural Exchanges. We found ourselves on the invitation lists for special closed performances at the century-old Bolshoi Theater and saw the best in Soviet talent.

COMMAND PERFORMANCE

While I was unimpressed and have been frankly critical of many phases of Soviet life, the standard of their cultural presentations is very impressive, indeed. To me, the most memorable experience was a command performance given in honor of visiting Premier U Nu of Burma by the Turkmen Soviet Republic chorus.

Soviet Prime Minister Bulganin, whose genial grandfatherly appearance is perfectly suited to the new spirit of Geneva line, sat beside his Burmese guest in the royal box. Behind were other Soviet leaders, including Foreign Minister Molotov, ex-Premier Malenkov, Kaganovich—almost all of the Presidium members except Khrushchev, who was reportedly out of town. Our seats were in the orchestra not 50 yards from this galaxy of ordinary-looking men whose word is law over half the world.

The Turkmen Republic is one of the 15 units of the Soviet Union, in the south adjoining Turkey and Iran. Its people speak a Turkish dialect and are, or were, Moslems. The spectacle emphasized the oriental character of the U. S. S. R., which too many westerners overlook.

BIGWIGS AT LAST PERFORMANCE

These national troupes are invited regularly to perform in Moscow—for the Soviets make a great pretense that they are semi-autonomous, though they have less independence than Los Angeles County has from Washington. The final performance is usually attended by the Kremlin bigwigs and invited guests.

I must say the costuming, staging, and lighting of the spectacle were magnificent. The massed chorus and wild Turkmen dances also were superb and unique. Individual artists were not outstanding, but they gave their best for Bulganinn & Co., who applauded for repeated encores.

Technically, Le Ballet Sovietique, a Soviet folk ballet now touring Europe, which we saw in Paris before coming here, and the dancing of the Soviet's Prima Ballerina Ulanova, whom we saw in the colorful Tartar legend, "The Fountains of Bacheserai," were far more polished and professional.

INGENIOUS STAGE EFFECTS

There were ingenious stage effects, too, such as realistic churning waves of the sea in Rimsky-Korsakov's opera Sadko. But the Turkmen command performance was unforgetable, for it demonstrated perfectly the uses of culture in the U. S. S. R.

Circuses in lieu of bread are an old gimmick of dictators from Caesar to Hitler. But the Soviet idea is more subtle. All the richness and splendor seen on the stage is a promise of a brighter tomorrow to dispel the drab realities of today.

The emphasis on culture in every school and peoples' club permits the only kind of self-expression the Soviet people are allowed, and enables them to feel as civilized as any other nation—or more so—despite the contrary evidence all about them. "Uncultured" is a common term of insult in modern Russian, often applied to Americans in the pre-Geneva era.

IMPRESSIVE FAIR

The same substitution of an impressive display for reality was shown us in the Moscow agricultural fair. This was a truly beautiful exhibition of the products of Soviet agriculture and industry, not for foreigners but for visitors from all parts of the U. S. S. R.

Each of the 15 Soviet Republics has a pavilion in its own architectural style, showing the various products—cereals, fruits, textiles, furs, farm machinery, etc.—in tasteful displays. Excellent photographs and murals decorate the walls along with graphs showing production today as compared with the past—and shooting upward toward a future goal.

This is not the way life is in the Soviet Union today. It is the promise of the way it will be tomorrow if everyone works a little harder. And dubious as an American visitor is inclined to be, he cannot help being impressed—unless he goes out into the country and sees what Soviet agriculture is really like.

I confess I almost canceled our planned tour of a collective farm. I assumed it would be a model farm especially set aside for foreign tourists and far superior to the real thing. Our intourist guide admitted that it was hardly typical because it was so close—about 30 miles—to a large city. But I'm glad I changed my mind and went.

The guide and the woman director of the collective farm—which is named Molotov Kolhoz, after the Foreign Minister—were obviously proud as punch of its accomplishments. This farm supports 285 families, they explained, from 4 villages round about. They have 160 milk cows and 326 head of livestock in all. They raise their own feed, poultry, and hothouse tomatoes; sell some of their surplus to the state at low fixed prices and the balance in the free market for whatever the traffic will bear.

DAIRY UNSANITARY

If this was a better-than-average farm, I can understand why the Soviet farm delegation was so impressed on its tour of America. The dairy was indescribably unsanitary, though it had milking machines and an electric refrigerating unit to cool the milk. The rest of the layout, I'm sorry to say, was even more primitive. I have seen nothing as bad in America or Western Europe—yet this was a kolhoz they proudly show to tourists.

Along the road we passed the first individual homes we saw in the Soviet Union, old Russian log houses being thatched with straw for the winter. The paved road itself was easily up to the European standard, at least as far as we went, but the fields appeared poorly developed and animals were few. There are more churches open in the country, and more smiles for strangers, than in the cities.

In one day the model collective farm and the brilliant Bolshoi ballet taught me more about the Soviet Union than 100 books.

[From the Los Angeles Times of November 14, 1955]

WARMER RECEPTION FOUND IN LATVIA—RIGA CITIZENS MORE LIKE WESTERN EUROPEANS, TIMES PUBLISHER WRITES

(This is the eighth of a series of articles in which Norman Chandler, publisher of the Times, is reporting his observations in the Soviet Union and some of its neighbors. It was airmailed uncensored from Riga.)

(By Norman Chandler)

RIGA.—Few if any Americans have been allowed to see this former capital of Latvia, 1 of the 3 Baltic nations swallowed up by the Soviet Union just before the last war. United States Congressmen touring the U. S. S. R. this summer were turned down when they asked to come here.

But here we are, Mrs. Chandler; Bob Hartmann, our Washington bureau chief, and I, and we got here without even trying. Intourist, the official Soviet travel agency, matter-of-factly routed us through here when we said we wanted to fly to Prague, Czechoslovakia.

True, all we saw of Riga was a fleeting glimpse of much shipbuilding activity as our plane circled for a landing, plus the new airport terminal which is better than either Moscow's or Leningrad's. We saw enough, however, to convince us that Latvia, now consolidated with Lithuania and Esthonia as one republic in the Soviet Union, is a far more European and civilized land than anything we saw in Russia proper.

WESTERNERS ENFOLDED

The Soviet people, imprisoned within their own frontiers and knowing nothing of the outside world except what they are told, don't know how bad off they are. The new generation has absolutely no basis for comparison. But the tragedy of the Iron Curtain is that it has enfolded people like these who for centuries have been part of the Western World.

Even under Communist rule, you detect instantly from the warmth and genuine cordiality of these captive peoples that they are a different breed from the carefully correct but cold Russians. If the spirit of Geneva permits more movement of Americans and other free peoples through these borderlands, it will help to maintain at least a slight contact between them and the world to which they really belong.

THROUGH CUSTOMS

Here in Riga, our checkout point for leaving the Soviet Union(we were again whisked through customs and passport control without a bag being opened. However, it is forbidden to take Soviet money out of the country—not that it is worth anything abroad, but it is a regulation.

Between us we had about 100 rubles ($25 in United States money) which we had been unable to spend, since there is little in the Soviet Union one wants or can afford to buy. To see whether the money regulation was a shakedown and if our rubles would wind up in the pocket of the customs officer, we declared them.

"You will have to surrender them and we will give you a receipt," the interpreter said. "If you return to the Soviet Union within 3 years, you can get them back."

I had a hunch I wouldn't be returning that soon, if ever; so I asked if I could spend them at the airport. The plane was due to take off in a few minutes. Then, wonder of wonders, the customs officer himself accompanied us to the airport restaurant and into the kitchen, which was the cleanest I saw in Russia. He made sure I spent every last ruble for small jars of caviar, and refused a tip for his courtesy.

LAST HUMAN CONTACT

As we dashed for the waiting plane, he smiled and shook bands heartily. It was the most human contact I had with a Soviet citizen—and the last. But I must add that the same kind of meticulous honesty prevailed everywhere. Nobody shortchanged us Americans, bewildered by strange sums in rubles and kopeks.

Though we left valuable and hard-to-get items in our hotel rooms—the ancient locks of which I'm sure everyone in the hotel could open—not a thing was stolen, not even money left purposely for the chambermaid.

In the Czech plane, Soviet-built, but run with considerably more service to passengers than Aeroflot provides, I looked out the window at the neatly cultivated farms and picture-postcard villages of Czechoslovakia and tried to set down in retrospect a few impressions of a tourist's trip through the Soviet Union.

RANDOM OBSERVATIONS

Here they are at random:

In the very best hotels and restaurants of Moscow—which are none too good and charge $20 for dinner—alongside well-to-do Soviet officials and visiting dignitaries you often see slovenly, dirty people, with no neckties or coats, living it up noisily. They are workers or minor party stalwarts, presumably, who have been given a Moscow holiday as a reward for surpassing their production quotas.

During my entire stay in the U. S. S. R. I did not see a single well-dressed or attractive woman. Whenever we walked about the streets, Mrs. Chandler was stared at—not rudely but with evident curiosity and envy—although male Americans don't seem to attract much attention. Even in the best state stores, such as GUM on Red Square, women's fashions are devoid of any style. Maybe this is because the models are selected by men.

CHILDREN SEEM HAPPIEST

Children seem to be the happiest and healthiest of Soviet citizens. Parents appear to make a lot of their youngsters but, contrary to my experience in most countries, you cannot penetrate the language barrier by admiring the young ones.

Translating Soviet prices into United States dollars is somewhat misleading due to the artificial exchange rate. But figuring the average city worker's wage is something like $200 a month, it's hard to understand store-window prices equal to $60 to $120 for a pair of women's shoes; $600 and up for a 10-inch television set; $37 for an ordinary alarm clock; and $2,000 for an Austin-sized Moskvitch car.

CLEANER THAN LOS ANGELES

Mrs. Chandler went shopping in the free market where farmers can sell any surpluses over what they must deliver to the state stores at low fixed prices. She paid $5.50 for two pears and a small bunch of grapes.

Moscow streets are remarkably clean for a big city—cleaner than Los Angeles, I'm ashamed to admit. Public transport services also seem better, especially the subway system, which is the most modern I've ever seen, with each station an immaculate marble palace equipped with escalators.

But behind the facade of imposing buildings lining Gorky Street in downtown Moscow I found some of the darkest, most odoriferous alleys and wretched slums imaginable. Yet I have to say nobody stopped me from exploring them

There is a terrible sameness about all the people in Moscow. While the Communists make much of racial minority problems in other lands, I saw no Negroes and only a few orientals—Red Chinese army officers or tourists like myself. And the Russians not only look a lot alike, but have very little variety in dress, except for uniforms, which are not as prevalent as I had expected.

VISITORS NOT WANTED

The Soviet Union certainly is not ready to receive any numbers of American or western tourists who demand minimum service and fair food. But the Kremlin doesn't want visitors for their dollars or to show them a good time.

Like everything else in the planned Soviet society, there is a deadly serious purpose behind the slight parting of the Iron Curtain of which we were early beneficiaries.

The reason is to convince the world, and America in particular, that the spirit of Geneva is genuine. But the real test is not whether the Soviet authorities will let more foreigners in, but whether they will let any considerable number of their own people out.

Frankly, I don't think they dare to.

[From the Los Angeles Times of November 15, 1955]

CZECHS FRIENDLIER TO UNITED STATES THAN RUSS—PUBLISHER HAS CHILLING NIGHTMARE WHEN HE LEAVES PRAGUE, HOWEVER

(This is the concluding article in a series of reports by Norman Chandler, publisher of the Times, on his recent tour of the Soviet Union and some of its near neighbors.)

(By Norman Chandler)

VIENNA.—The last Soviet soldier left here 3 weeks ago. And you don't know how glad I am.

I never return from a foreign trip to the United States without a renewed feeling of thanksgiving that I had the good fortune to be born an American citizen. But today, as I stepped off a Czechoslovak Airlines plane from Prague, I almost kissed the soil of Austria in my relief to be back in the free world.

This was a curious reaction, because not once within the Soviet Union had I experienced the slightest sensation of danger or dread. In fact, Mrs. Chandler, Bob Hartmann, chief of the Times Washington Bureau, and I found it so much simpler to move around in the U. S. S. R. than we had imagined that, for a moment, we let our guard down and almost didn't get out.

NIGHTMARE

What happened to us in Prague on the last leg of our journey was a spine-chilling nightmare right out of an Alfred Hitchcock thriller.

We found Czechoslovakia, a picture-postcard country, much like Austria or Switzerland in outward appearance, a sharp contrast to the Soviet Union.

Even under a Communist satellite government, the Czechs like America and the Western World so much they can't conceal it. They are a friendly people, who historically belong to the free world. Although the Iron Curtain has fallen around them and the red flag of the U. S. S. R. flies alongside theirs, they still remember freedom and strive desperately to show their yearning in many subtle ways.

GENUINE SMILES

In contrast to the mechanical and dutiful politeness we found in Moscow, every Czech we saw had a genuine smile and made an extra effort to accommodate Americans. There was a certain spontaneous gaiety and humanity in the coffee houses and on the streets which we never saw in the Soviet Union.

While the Czechs apparently import very little from the West, there is more variety and a better quality of goods in their stores. Their industry, now thoroughly socialized but still benefiting from past managerial know-how and skilled labor, is flooding markets in Eastern Europe and the Middle East.

The Alcron Hotel in Prague was so superior to any we saw in the Soviet Union, the food and service so much better, and the couples dancing to a pleasant little orchestra's American and Latin tunes so normal that for a while I almost imagined I was outside the Iron Curtain.

SORRY TO LEAVE

We were genuinely sorry to leave Prague, after seeing a few of its historic monuments that speak eloquently of Czechoslovakia's contributions to Christian civilization. But our plane connection at Vienna was extremely close, so we started for the airport in plenty of time. Outside, I noticed a Chevrolet with a small Ameircan flag on its fender.

As in arriving, we breezed through customs and headed for the field when the Czech airline ground hostess came running after us.

"You have no exit visa," she said apologetically. "Without it you cannot leave the country."

"What do we have to do?" I asked. "Why didn't anyone tell us?"

"You must go to the Foreign Ministry, back in town. Or perhaps to your Embassy," she said.

IN KREMLIN'S POWER

In that second I suddenly was aware how utterly helpless any American actually is once he crosses the invisible line that marks off the Communist world. For all our illusion of security, we had been completely in the Kremlin's power all the time. And this is how every resident of the peoples' democracies must feel every day of his life.

Then I remembered that tiny American flag on the Chevrolet parked outside. I told the Czech hostess about it and for an instant she hesitated. Then she said: "I will see if I can find someone from the American Embassy. It will be all right."

She returned with Col. Thomas Ryan, United States Air Attaché in Prague. He was there to see some friends off on another flight but readily rushed to our rescue. I can't remember when a friendly American face ever looked so good.

AGONIZING MINUTES

To make a long story short, Colonel Ryan called the Embassy, the Embassy called the Czech Foreign Office, Czech Airlines held the plane, and we waited to see if the Czech authorities would telephone permission for us to depart. They did, after 20 agonizing minutes, and we took off for Vienna.

When we crossed the Soviet frontier from Finland a fortnight ago I felt no qualms at all. But when we left Czechoslovakia behind us and the copilot said we were over Austria, I found myself suddenly relaxed and indescribably weary.

We chatted gaily about our future plans, and waited for the plane to let down at Vienna. But as we approached the runway Mrs. Chandler whispered:

"This isn't Vienna at all—they've taken us somewhere else."

We looked at the terminal. The sign read "Prague."

FOG CLOSES IN

They explained that fog had closed in over Vienna, but by now we were not sure. We had been through the Iron Curtain and now we were back. Two plump women who were the only other passengers in the plane now looked suspiciously like secret police agents. I fumbled guiltily in my pocket with the few Soviet kopeks I'd taken out of the country for my grandchildren.

Actually nothing was wrong but the weather. After 2 hours we took off again, and this time we made it. The Viennese officials at the airport all seemed like long-lost brothers. The Viennese hostesses were all beautiful. Best of all there was Charles B. Edmonds, our unfailingly helpful friend from TWA who had waited outside the Iron Curtain for us, with everything efficiently prearranged for the rest of our journey.

TELLS OF HOPES

I hope the day will come when Americans and Russians can visit each other's countries, learn to understand each other better, and make real and lasting friendships as we do in other distant lands.

I hope someday it will be possible for a traveler to leave Russia with happy memories, hoping to return again.

But from what I've seen I'm afraid that day is not very near. No one can know the difference between the two worlds, free and slave, until he has been in both.

What Labor Wants in a Health Insurance Plan

EXTENSION OF REMARKS

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. ROOSEVELT. Mr. Speaker, in the Machinists Monthly Journal of September-October 1955 there appeared such an interesting article regarding health insurance that I feel that my honorable colleagues who may have missed it will be most interested in reading it, and, with the express permission of its author, Mr. A. J. Hayes, international president, International Association of Machinists, I wish to insert it in the RECORD.

The article follows:

WHAT LABOR WANTS IN A HEALTH INSURANCE PLAN

(Address by A. J. Hayes, international president, International Association of Machinists, before the 1955 convention of the American Hospital Association, Atlantic City, N. J., September 20, 1955)

I am extremely grateful for this opportunity of discussing with you the topic of the health opportunities of the American people, for that is precisely what is embodied in the subject assigned to me—What Labor Wants in a Health Insurance Plan—no more, and not a whit less.

Many folks who are strangers to the American labor movement, its history and its philosophy, are inclined to look upon us as a self-seeking group, whose recent growth and forthcoming unity are causes for anxiety. But objective persons, who are acquainted with our aspirations and our programs know that our interest spreads far beyond the immediate ranks of organized labor, to encompass the good and welfare of all our fellow countrymen. Nowhere is this more evident than in our position regarding health insurance.

To me, as a representative of organized labor, as a consumer of medical services, and above all as an American, nothing is more important than the health and the health opportunities of our people.

As a worker in American industry I learned early the tragedy of inadequate and improper health care. As a consumer of medical service I came to know the severe drain on the family budget of proper care.

As an American, in this midtwentieth century, I rate the health and the education

of the American people as one of our greatest national assets, and its improvement as one of our most important and immediate goals. This is not a question of welfare work, or of namby-pamby do-goodism. It is a matter of stark survival in an era of tensions and tempests.

We cannot tell at this point what fruit the recent summit conference at Geneva will bear. We can only hope. But this I do know from my trade-union experience—and don't forget that American unions have long been the target of Communist infiltration and strategems—this I do know—that until the Communist tiger changes his stripes, the tension between the free world and the Soviet-dominated nations will alternately diminish and grow with the ever-present danger of a shooting war.

This being the case, it is up to us to preserve and to improve our relative advantages on the world stage.

It would be conservative to say that insofar as natural resources are concerned, the free world and the Communist world are on even terms. And that may be underestimating the potential resources of Russia and her satellites.

So far as manpower goes, the Communists have by far the advantage in sheer numbers.

The strength of the free world—and it is still largely centered in Canada and the United States despite the rapid economic recovery and development of our allies in freedom—lies in industrial know-how and the quality of our manpower.

Technical development is not the primary concern of a union official. We entrust that important phase of our national potential to management and its competent corps of engineers. But by the very nature of my union position I am vitally concerned with the men and women who carry out the techniques and operate the machines of industry. And one of the most certain ways to insure their presence on the job and to improve their productive capacities is to cut down on the absences and the inefficiencies which stem from ill health.

NOTHING PERSONAL

You will forgive me, then, if I am blunt. Try to think of me in the light of the Irish patriot during the Black and Tan wars of 30 years ago. According to an account I heard, that fighter for freedom was concealed in some bushes along a highway when a member of the British Tans appeared. The Irishman set the bolt of his rifle, and the Englishman turned at the click. Looking his intended victim squarely in the face, the Irishman said, "I hope you realize there's nothing personal in this"—and squeezed the trigger.

You and I, of course, are allies, not adversaries, but the point still holds: I hope you realize there is nothing personal in what I may have to say. Indeed, I hope that what I have to say will contribute to our mutual understanding of the job to be done, so that we may work together to help develop some plan of insurance which will meet the health needs of the American people.

As representatives of America's hospitals, which constitute one of our more important health facilities, you are to be commended on the 25th anniversary of Blue Cross. The inception of that nonprofit community plan of insurance a quarter century ago marked the beginning of an era which has seen more and more people, and more and more families, enrolled under some type of health insurance, until today well over half of our countrymen have some sort of medical care insurance.

As trailblazer and pace setter, Blue Cross has a proud history. Beyond the mediate service embodied in its benefits, Blue Cross has contributed much to the health education and the health facilities of Americans. It has increased the understanding of the assets and facilities of good health, and the value of prepayment in meeting their costs. It has helped in expanding and improving hospital facilities. And through such devices as Health Services, Inc., and the Inter-Plan Service Benefit Bank, Blue Cross has helped toward meeting the needs for a national plan of hospital insurance without sacrificing the benefits of community interest and community control.

As a representative of the consumers of medical care services, I am happy to be here to congratulate Blue Cross on its silver anniversary.

In its inception, Blue Cross was a consumer-sponsored plan, although not a cooperative in the true sense of the word. It is natural that a group of consumers would start off with some plan of insuring against the costs of hospitalization, because hospitalization is one of our more expensive medical care services. And it is just as natural for hospitals to aid in the establishment and development of such a plan.

Now there is no doubt about the value or the necessity for some means of insuring against the cost of hospitalization. But, from the broader health viewpoint, didn't we actually put the cart before the horse by starting out with hospitalization insurance? Properly considered, hospitalization is not really health insurance at all, but rather insurance against one of the high costs of neglected health.

This same approach to the problem marks most of the so-called health insurance plans currently available. Very few of them provide in any way for the medical services essential to good health; all of them stress protection against the costs of ill health. In addition, many of them depart from the service principle embodied in the Blue Cross plan and operate purely on an indemnity basis.

But, to return briefly to what might be termed our negative approach to health insurance, let me cite an example offered by the Blue Cross plan in Washington, D. C.—Group Hospitalization, Inc.

LET'S NOT FORGET PREVENTIVE MEDICINE

In recent months Group Hospitalization has stepped up its promotion and advertising program, evidently to meet the competition of inferior plans which have been using glib talk on the air and in direct mail to seduce unwary searchers after health insurance. I am completely in accord with the stepped up Blue Cross campaign. But consider its approach. We are told as we listen to the radio that in the next 12 months 1 out of every 3 families in Washington will need hospitalization for 1 of its members. Therefore, enroll now in Group Hospitalization. Granted the truth of the figures—which are appalling—shouldn't we ask ourselves this question, How many of those people who will need hospitalization could have been kept out of hospitals by preventive medicine or early diagnosis and treatment?

A NEW APPROACH NEEDED

And that is exactly the kind of question we have been avoiding all along the line in our fragmentized, cart-before-the-horse approach to health insurance. It is high time, I believe, that we stopped emphasizing insurance against the high cost of neglected health, and devoted more of our efforts to developing a system of insurance or prepayment which will give the American people greater access to the kind of health care which prevents illness or nips it in the bud. This approach to the problem is logical; it is economical, and it is practical.

What labor wants first in a health insurance plan is that it be comprehensive, running the gamut from periodic physical checkups to care for long-term or catastrophic illness. A plan which creates the incentive to keep well and which encourages health education, periodical checkups, early diagnosis, and treatment.

The results of our fragmentized, cart-before-the-horse system are costly, and sometimes ludicrous. Now mind you I have the greatest admiration for Blue Cross, and the Blue Shield plan which so often is integrated with it these days. But limiting Blue Shield benefits to medical and surgical services performed in hospitals can have ridiculous and wasteful results. Several years ago in one of our Washington, D. C., newspapers there was a letter to the editor from a perplexed subscriber to Blue Cross-Blue Shield. His son had his arm broken in an accident. The mother rushed the boy to the office of the family doctor, about 3 miles away, and the physician set the arm. Application for Blue Shield benefits was denied because the arm had not been set in a hospital. And the bewildered father, in his letter to the editor, wondered why it should be required that the service be performed in a hospital, with the nearest hospital 15 miles away, when the job could be, and was, done satisfactorily in the doctor's office. I can find no logical answer to that question. And I certainly can see no sense to requiring hospitals, which are generally overtaxed with work, making space and facilities available for medical services which can be performed just as well in the patient's home or the physician's office.

Labor's second desire in a health-insurance plan is corollary to the first and equal to it in importance—and that is that the plan should be based on the service, rather than the indemnity, principle.

The application of indemnity features in accident and health insurance has always baffled me. I know of no other field of insurance in which so many price tags appear. For example, I have collision insurance on my car. Of course, it has a $50 deductible clause, a principle, by the way, which I consider wholly inapplicable to health insurance. But nowhere in the policy do I find anything which says the company will pay so much for a crumpled fender, so much for a sprung door, or so much for a broken windshield. If the car is in a collision I take it to a repair shop, after proper arrangements have been made, and have the damage repaired at the expense of the insurance company.

But when it comes to the human body the insurance companies go around hanging price tags on the allowable price for services to remove ailing tonsils or appendixes or to set broken limbs.

Beyond this there are grounds for believing that the application of the indemnity to surgical and medical insurance has played a part in increasing the cost of medical care. Many unions' negotiated health plans are underwritten on the indemnity basis. That may sound at odds with what I am saying about labor's wants in health insurance, but when unions started negotiating health and welfare plans they had to take what was available. In case after case where the union negotiates higher schedule benefits in an attempt to relieve the covered employees of additional medical costs, the level of medical charges rises soon after, leaving the covered employees no better off than they were before. Now, this phenomenon may be logical in the light of the sliding-fee system medical charge based on ability to pay, since, in a way, the insurance benefits constitute an additional resource to the patient. But the ultimate result will be to convert health insurance to a benefit plan for the physicians.

The important question is not how many dollars the company paid out to Mary Smith when she came down with pneumonia (although that might make good advertising copy), but whether or not Mary Smith received the care necessary to restore her quickly and certainly to good health. And that latter question can be answered only in terms of service, not cash benefits. Beyond that, in judging the adequacy of a health insurance plan we must always pose the question, Could the illness have been prevented,

or at least cured before it became serious enough to require major medical services?

PLAN WANTED FOR ALL

In addition to desiring a health insurance plan which provides comprehensive medical services, labor wants a plan that is available on a universal basis.

In discussing coverage of health insurance, let us rule out immediately any consideration of the type of so-called health insurance which is sold on an individual basis. That type of plan may be defended on the basis that something—anything—is better than nothing. It has no other recommendations. Its costs are high. Its benefits are few and limited. And its cancellable features—however necessary they may be from an actuarial point of view—make it subject to grave and often-practiced abuses. It has no place in any serious discussion of desirable health insurances.

Our fragmentized approach to health insurance has resulted in a variety of group plans, most of them tied to employment for a specified employer or residence in a specific community, or both. This is a grave weakness in the light of the tremendous geographical shifts in population and industrial shifts in labor force which have marked the past 16 years. It will become even more grave in the future with such factors as decentralization of industry, automation, and atomic energy promising continuing shifts in the population and the labor force.

While practical considerations may dictate that a health-insurance plan be applied basically to employed persons and their dependents, parallel provisions must be made for the unemployed, the retired, the chronically ill, and other groups of people who need the protection of health insurance but who are not in the employed labor force.

Blue Cross has already demonstrated the possibility of developing coverage on a national basis and of extending protection to such groups as farmers and retired workers, and even, in cooperation with the Veterans' Administration, to groups of people needing hospital and medical care who are generally considered noninsurable. These pioneering ventures of Blue Cross are worthwhile guides in the development of universal comprehensive-service health insurance.

EMPLOYERS' ROLE IN FINANCING

As to the financing of health insurance for the employed population, labor believes that the cost should be borne, in part at least, by employers. Under many negotiated health and welfare plans, employers bear the entire cost and find it a sound investment. In order to make it possible for every employed person to enjoy the full benefits of a health and welfare plan, the charges must be computed in terms of percentage of wages and salary rather than on a flat-fee basis.

So far as the administration of health insurance is concerned, labor believes strongly that the consuming public should have a voice in decisions relating to the economic, as distinguished from the purely medical or professional, aspects of any plan.

Finally, labor believes strongly that any universal plan of health insurance must be carefully coordinated with an overall plan for the development of our health facilities and medical personnel.

William S. McNary, executive vice president and general manager of the Michigan Hospital Service, summed this need up neatly when he testified several years ago before the President's Commission on the Health Needs of the Nation on an evaluation of Blue Cross plans. This is what he said:

"Just putting money in the hands of the people will not solve the problem. For instance, if we in Blue Cross were to double our enrollment in the next 30 days, the result would probably be the nationwide collapse of our hospital and medical services."

We are woefully short in medical and parimedical personnel, and in many medical facilities. And we of labor believe that the need for additional personnel and facilities is too acute to be left to the slow process of gradual evolution. The Hill-Burton hospital construction program is an example of how the Federal Government can assist its citizens in meeting their health needs by helping to overcome existing shortages. Similar programs should be developed to aid medical and nursing schools and institutions for training parimedical personnel. And financial assistance should be provided ot competent candidates for the medical profession.

In addition to an overall shortage in medical personnel and facilities, our existing resources are badly distributed among our people. Labor believes that the hospitals, which are developing into medical centers, can help solve this problem of maldistribution through a system of branch hospitals, which will aid both patients and physicians in rural and remote areas by bringing to them the facilities and know-how of modern medicine.

This—in summary—is what labor wants in a health-insurance plan: A system of universal, comprehensive service health insurance, with consumer or public representation at the economic policymaking level, carefully tied in with a comprehensive Federal program for developing the personnel and facilities to make it work.

That is a large order. We of labor know it. And we realize, too, that it will not come over night. But nothing short of that program will enable us of the United States to accomplish what we must accomplish to conserve and develop the healthy, skilled manpower needed to meet the growing peacetime needs of our dynamic economy and to keep up strong and alert on the international scene.

We know that such a program is practical. We have seen such plans developed and work in the crucible of experience. As one outstanding example, consider the Labor Health Institute of St. Louis, Mo. Here is a description of that plan which appeared recently in a thought-provoking discussion of the subject Are Medical Centers the Answer, by the publishers of Employee Benefit Plan Review and Research Reports:

"It provides complete, comprehensive medical services through a group practice medical center, but with the addition of home and hospital care. * * *

"The services include general medical, specialist, and surgical care, with the usual ancillary services; hospitalization up to 90 days each year, complete dental services except for dentures, visiting nurse service, drugs at special rates, and eyeglasses at a discount. The average out-of-pocket expenses of an average institute member's family in 1951–52 were only $37."

As the report noted earlier, "this is presumably the most expensive" form of health insurance. Yet in the fiscal year 1951–52, contributions to the plan, which are based upon a percentage of wages, averaged $130.05 for a worker and his family, and $58.63 for an individual.

So far as results are concerned, the employers, who bear the entire cost of the plan, find their contributions to be a worthwhile investment in good health. Days lost by illness among institute members averages 3 days in 1952, as against a generally accepted national average of 7 to 8.

There is positive proof that comprehensive health services can be furnished economically and efficiently. The only question from the national viewpoint is how?

We of labor believe that the answer to that question rests with the medical and related professions and the insurance people. If they succeed in developing voluntary, nonprofit plans like Blue Cross, and in obtaining Government assistance in meeting the health needs of the aged, the unemployed, the indigent, and the chronically ill, perhaps the results will be achieved through privately operated systems. If, on the other hand, segments of the medical profession and the insurance world persist in profiting on the ill health of America, then we must and we will turn to some system of national insurance.

However it may come about, labors' wants in this field will be met, the dream of access to proper health care for all Americans will be fulfilled. As individuals the American people will not much longer tolerate a system of medical economics which denies proper medical care to themselves and their children.

As a nation we cannot continue to run the risk entailed in lost time and production deficiencies stemming from ill health. There is no pursuit of happiness for persons whose capacities for advancement and enjoyment are sapped by disease. There may be, in this troubled world, no continuing liberty for a nation which permits its manpower resources to waste away for lack of proper health care.

We of labor rate health as a prized personal possession, and a vital national asset. We earnestly solicit your cooperation, and the cooperation of others in the health and health insurance fields, in developing a system of health insurance which will give to every American access to the miracles of modern medicine.

In our progress toward this goal, we must not be impeded by timorous tradition or empty epithets. Where Government assistance is necessary let us accept it—yes, let us demand it, as an essential service of a modern state. Wherever the answers may lie, and the answers are many in this complex field, let us search them out logically, conscious only of the health needs of the American people, and the demands which history has imposed upon our country.

Robert E. Sherwood and Bernard DeVoto

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. METCALF. Mr. Speaker, 2 months ago America lost one of her leading authors when Bernard DeVoto died of a heart attack.

His history of the fur trade in the West, Across the Wide Missouri, won the Pulitzer prize for historical literature in 1948. In 1952 he won the national book award with Course of Empire, a history of the search for the Northwest Passage from Columbus to Lewis and Clark.

In addition to being a great historian, Mr. DeVoto was an authority on western life. He traveled widely in the West and knew our resources, our people, and our problems.

This Nation's loss goes far beyond the mere absence of an author-historian. For Bernard DeVoto was a conservationist in the tradition of Theodore Roosevelt and George Norris.

In tribute to a friend, I call attention to the following newspaper editorials on

DeVoto and another great man of letters, Robert E. Sherwood:

[From the St. Louis Post-Dispatch of November 15, 1955]

TWO ARMED WITH WORDS

The writing trade was deprived of two of its most proficient American practitioners when heart attacks struck down almost simultaneously Robert E. Sherwood and Bernard DeVoto. And fair play lost two of its most vigilant and vigorous advocates; this second loss being the greater.

But for the string of crises which began with the depression, ran through the war and the end of which is not yet, the paths of these two might have come together only briefly as students at Harvard College. Sherwood might have gone his way as a playwright and movie writer, turning out hit after hit and winning a Pulitzer prize every now and then.

DeVoto might have been well content to be Harvard's best writing teacher since Bliss Perry, turning out magazine fiction or history, just to show he could practice what he preached and also getting his recognitions.

Both did get their Pulitzer prizes, Sherwood three of them for Idiot's Delight, Abe Lincoln in Illinois, and There Shall Be No Night. DeVoto's came for Beyond the Wide Missouri, a book prepared largely in St. Louis in the archives of the Missouri Historical Society.

These two Americans, however, were not cut out to be nonpolitical, after the fashion of so many of their European counterparts. There would be no American Hitler except "over their dead bodies." And the threat did not have to be so great to arouse them. Sherwood came to Franklin D. Roosevelt's aid in the writing of speeches, worked hard in the wartime information services, wrote articles for liberal causes and crowned them with Roosevelt and Hopkins, winner of a Pulitzer biography award.

DeVoto's birth in Utah made him conscious not only of the history of the West but of the necesity for defending its natural resources against ever-present plunderers. He was just as zealous for personal rights as for public property. He fought battle after battle against erosion of the Bill of Rights, whether by book banning or by the prying of public authorities.

Occasionally he might devote one of his Easy Chairs in Harper's magazine to kidding the female beautification industry or to ruminations on Mark Twain, whose unpublished papers were in his custody. But mostly he was fighting. He loved good fights and he was always determined to win them.

Sherwood and DeVoto showed that they could write for money the easy way, but they were not minded to take that way. To them writing was not just a way of making money; it was the great instrument of enlightenment and progress, the great weapon against the enemies of enlightenment and progress. So they will be missed—and remembered.

[From the Dayton Daily News of November 15, 1955]

SHERWOOD AND DEVOTO

American politics, philosophy, and letters suffered a grievous double blow over the weekend in the untimely deaths of Robert Sherwood and Bernard DeVoto.

Sherwood at 59 and DeVoto at 58 should have had many useful years ahead of them. Yet heart attacks claimed the lives of both.

This was one of many similarities between two men whose personalities and careers were different in numerous other ways. Sherwood was primarily the playwright, DeVoto the essayist. Yet both brought their interests and talents into focus in the field of history and in the lists of down-to-date political combat.

DeVoto was by turns relaxed and stern as for a score of years he purveyed opinions on morals and manners from Harper's "Easy Chair." He was a sophisticated connoisseur of the nuances of the cocktail hour, yet he was a mordant, Jeremiac crier of the havoc that greedy men have tried to wreak on his native western lands.

More of the poet and humanist, Sherwood made his impact on contemporary politics through presidential speech writing, and his contribution to history through his chronicle of the crusades of Franklin D. Roosevelt and Harry Hopkins.

Two brave and sensitive men have been taken from the scene at a time when there is urgent need for persons of like ideals and comparable effectiveness in championing them.

[From the New Orleans Item of November 16, 1955]

DOUBLE LOSS

The deaths of Robert Sherwood and Bernard DeVoto almost at the same time and both from heart attacks must surely have had a doubly sad effect on many of their readers.

For these two writers were enough alike in their viewpoints and fields of interest that a great many people who admired one would also admire the other.

They were, to be sure, not at all alike in literary style. Sherwood was best known as a playright and DeVoto as an essayist and historian.

Yet both wrote from deep convictions and they had a common devotion to the American heritage and the fundamental truths of democracy.

They were of the same generation—in fact, their ages were 59 and 58—and each was representative of it. Their influence on the creative literature of their own time has been great, and in both cases this was at least partly due to their sincere concern for the world and the country in which they lived.

[From the Oregon Statesman of November 17, 1955]

AUTHORITY ON THE WEST

(By Charles A. Sprague)

Two distinguished American men of letters, both winners of the Pulitzer prize, died this week, prematurely one might say, for neither had reached the age of 60. Robert E. Sherwood, who won his laurels as a playright, was a New Yorker, aged 59. Bernard DeVoto, 58, native of Utah but long-time resident of Cambridge, Mass., was a man of varied interests and talents: teacher, novelist, historian, critic, conservationist.

Each took a keen interest in public affairs; both were liberal in political outlook, but their expressions of public interest differed. Sherwood was a frequent aid to the late President Roosevelt as speechwriter. He was a strong internationalist in the pre-World War II days. The only American author to win the Pulitzer award four times, Sherwood won it for his play Idiot's Delight, Abe Lincoln in Illinois, and There Shall Be No Night, and fourth for the biography Roosevelt and Hopkins. He was still busy at writing plays for stage and screen, and his death removes one of the ablest of American dramatists.

DeVoto was a much more versatile individual. His writings were addressed to a much wider audience, and his frequent plunges into controversy brought him into nationwide prominence. Not only were his interests diverse, his scholarly attainments were multiple. Teaching and lecturing at Harvard where he graduated did not occupy him long. He turned his hand to fiction writing, both as novelist and, under the pseudonym of John August, as writer of thrillers for popular magazines.

As literary critic he found himself in frequent feud with fellow litterati, for he was a man of independent mind, disinclined to hunt with the pack. Thus he turned from such modern stylists as Hemingway and Thomas Wolfe to favor writers of an elder day, particularly Mark Twain, who was a frequent subject for his literary efforts. (He regarded Huckleberry Finn as the greatest American novel, and Thoreau's Walden as the greatest piece of nonfiction written by an American.)

DeVoto's works of most solid worth, however, relate to the great West where he was born and reared. He became the greatest living authority on the exploration of Western America. Four great historical volumes are the fruit of his labors in this field: The Year of Decision, 1846; Across the Wide Missouri; the Course of Empire, and an edition of the Lewis and Clark Journals. As a historian, DeVoto was not merely one to grub in libraries and to decipher old manuscripts though he did much of that. He crossed and crisscrossed the great West whose geography was a vital part of history he was writing. He knew Montana and Idaho and Utah and Oregon intimately. It was his practice to revisit the West by automobile at frequent intervals so he kept fresh his acquaintances with the West.

This exploration made him a stout champion of conservation. He poured out his bitterest philippics against the despoilers of the range and the rivers and the beauties of the West. Recently he turned his guns on those who are desecrating the attractions of New England. DeVoto was a vigorous foe of the D'Ewart bill of 1953 to entrench graziers' rights in national forests. He became, too, a sharp critic of Secretary McKay—and worked among his conservationist friends for the election of RICHARD NEUBERGER as Senator in 1954.

These articles were done for the Easy Chair in Harper's magazine, "the oldest editorial feature in American journalism" as he noted in the current issue of the magazine. In this number DeVoto took a backward look over his 20 years of supplying this feature to Harper's. Referring to the 30 articles and the monthly column he figured he had written some 800,000 words for Harper's—"more than anyone else now living." He admitted this was personal journalism and classified it as cultural criticism. That may do as well as any other label. Fact is, that his range of subjects for the Easy Chair was extremely wide. The feature may have been easy for him, but it made many of its readers very unhappy. DeVoto admitted an indulgence in polemics, and when that is permitted for one with as sharp a wit and facile a style as DeVoto, polemics is a mild word for the product. Where it was to hound book censors or nail to the corral fence the western stockmen who had stripped the land of its cover of vegetation or to jibe at prohibitionists, DeVoto wrote with such vigor and pace that his victims were left dead Indians. Variety was characteristic of DeVoto's themes for the Easy Chair. This gave freshness to the subject matter and added to the zest which Harper's readers had for the feature.

Though his death comes as a shock to his constituency, it might be said that if it had to come, the time was well chosen. DeVoto had completed the trilogy on Western exploration; he regarded the Lewis and Clark Expedition as of the greatest historical significance in the settlement of the continent. He had rounded out 20 years of cultural criticism in Harper's. (A book is just coming off the press with a compilation of selected articles from the Easy Chair.) And he had won a substantial victory for protection of public lands.

A man with such varied interests and tastes and such physical and intellectual energy would never be content to retire. In his 58 years, however, DeVoto had packed important and durable work in history, in literary criticism, and carried responsibilities of citizenship.

[From the New Republic of November 28, 1955]

BERNARD DEVOTO: AMERICAN PATRIOT

(By Arthur M. Schlesinger, Jr.)

Bernard DeVoto was, above all, a man who loved his country—who loved it deeply, with knowledge and with compassion, sometimes with exasperation and an appearance of despair but always with a basic faith. He hated ever to leave it. He never set foot outside the North American Continent, and it was only with great reluctance that he would venture across the Canadian border. "Love," Whitehead somewhere says, "is very penetrating; but it penetrates, not to facts, but to possibilities." Bernard DeVoto's love for his native land included both facts and possibilities. He sought out facts, cherished them, armed himself with them, used them to club others over the head, felt uneasy away from them. But he penetrated always to what lay beyond—the hope, the dream, the fertile valley over the next hill.

His so-called irascibility was not old-curmudgeonism. It was rather the outrage of a man who could not bear to see his Nation falling below its own highest standards. One of the last incidents of his life made the point. When he condemned the transformation of the beautiful State of Maine into a jerry-built, neon-lighted vacationland, he did so, no because he hated Maine, but because he loved it. (One State official responded by canceling the State's advertising in Harper's, where DeVoto's article appeared; but Governor Muskie understood DeVoto's passion and reversed the action of his subordinate.)

This love for country meant an inexhaustible delight in its physical aspects, from the deserts and canyons of his native Utah to the green hills of his beloved Vermont. But DeVoto was no sentimental nature writer. He cared, not only about deserts, but what caused them; not only about forests, but what threatened them; not only about rivers, but what could be done to purify them, control them and enlist them in strengthening the land and the people. He was dedicated to the struggle for the preservation and development of the country's natural resources.

But Bernard DeVoto's passion above all was for the moral dimension of America. He was a fanatic for the tradition of individual freedom. "When an American says that he loves his country," wrote DeVoto's friend, Adlai Stevenson, "he means not only that he loves the New England hills, the prairies glistening in the sun, the wide and rising plains, the great mountains, and the sea. He means that he loves an inner air, an inner light in which freedom lives and in which a man can draw the breath of self-respect." Because Bernard DeVoto loved freedom, he hated the smellers and the snoopers, the witch-hunters and the book-burners, the censors and the investigators.

[From the Times of London of November 16, 1955]

MR. BERNARD DEVOTO: HISTORIAN OF THE FRONTIER

Mr. Bernard DeVoto, who collapsed and died on Sunday night at the age of 58, shortly after appearing in a television program in New York, was a scholar who did not believe in remaining in the study.

Bernard Augustine DeVoto was born at Ogden, Utah, on January 11, 1897, and was educated at the University of Utah and Harvard. His studies were interrupted by the entry of the United States into the 1914–18 war and he served in the Army as a musketry instructor. Having graduated from Harvard in 1920, he worked for a time as a schoolmaster and then as assistant professor of English at Northwestern University. In 1929 he joined the teaching staff of Harvard and remained there for some 5 years. For the next 20 years he was editor of the excellent feature in Harper's magazine, the Easy Chair.

As befitted his origin, he was intensely interested in the frontier, and his greatest work, a trilogy which appeared between 1943 and 1953, stands in the forefront of vivid historical writing. The pioneers, Verendrye, Michaux, Mackenzie, Bill Burrows, Lewis and Clark, move life-size across the broad canvas, vital and imposing. The Pulitzer and the Bancroft prizes awarded to him were the recognition of perhaps the greatest historian of America, who has done for the settlers of the West what Trevelyan has done for the men of the Risorgimento. The three volumes, The Year of Decision, 1846; Across the Wide Missouri; and Westward the Course of Empire, look a formidable task to read; they are, however, so gripping that once the reader has begun there is only pleasure. The material on which they are based is not only documentary, though all seems to have been consulted. What makes DeVoto's writing so vivid is the fact that not only was he born in the territory he describes but constantly visited the scenes he depicted.

His other works on the Middle West, though on a smaller scale, are of high merit, and his understanding of the quaint genius of Mark Twain is deep and communicable. In lighter vein he wrote a number of "thrillers" and popular magazine fiction under the nom de plume John August. Indeed, when the extent and gravity of his historical writing are considered, his output, serious and gay, was immense and of fine quality.

[From the Manchester Guardian Weekly of November 17, 1955]

KEEP OFF THE GRASS

(By Alistair Cooke)

It is impossible to imagine DeVoto dead and gone—this restless historian who made other restless men dead for centuries—La Verendrye, Michaux, Mackenzie, Bill Burrows, Lewis and Clark—more vital than the newspapers can make most of our living statesmen. He had achieved and delivered his great work—the three-volume masterpiece on the settling of the West: The Year of Decision, 1846; Across the Wide Missouri; and The Course of Empire. He chose his field as a young man and would let nothing—not comfort, nor friendship, nor the easy chance of riches—keep him from it. He even gave up teaching to pursue it, by the mountain pass and the mule as well as by the forgotten journal, buried text, and maps, and Government surveys, expiring on the shelves of the Library of Congress.

He took the prize all good scholars, writers, and artists of every kind hanker after: to have seen one's mark and made it. DeVoto had made it by 30 years of ceaseless probing and reading and journeying. Yet he was too good and necessary a man to die so soon. For he never used his scholarship as a sanctuary from the battle of his own time. When he was not up to his knees on an old voyageur's trail through the Rockies, he was up to his powerful larynx in all the controversies of the day. He defied the Federal Bureau of Investigation to come and force him to tell about any personal association, however trivial. He blasted continuously the power and conservation policy of the Republican administration. He saw the public domain being gradually preempted, not by evil men but by ignorance of the history and the disciplines necessary to preserve it.

Only last month he protested at the deterioration of the Maine coast into a "jerry-built, neon-lighted, overpopulated slum," and had the wounded Down-Easters foaming at him. One of his proudest moments was to be sitting on the Stevenson campaign train 3 years ago and just be able to hear MCCARTHY, over a radio, crackling with static, identify him as "Richard" DeVoto, one of Stevenson's malignant crew of associates.

The individual's right of privacy. The public's right to its own public lands. These were his gospel. There ought to be some simple, strong, Twainian epitaph for him, something as succinct as the inscriptions on the graves in Tombstone, Ariz. "Bernard DeVoto, 1897–1955. Keep Off the Grass" would do very well.

[From the Winnipeg Free Press of November 26, 1955]

THE CAUSERIE

(By M. F.)

Many Canadians are familiar with the articles which Mr. Bernard DeVoto has been contributing over many years to Harper's magazine. He has made the Easy Chair not only the oldest feature in American journalism but also one of the most intelligent and stimulating. His death robs American journalism of a stalwart warrior for freedom and enemy of conformity.

It is usually forgotten, and even the obituary notices in the American press forgot to point it out, that Mr. DeVoto wrote the single, most impressive political commentary on the 1952 Presidential campaign.

Very early in that campaign he wrote an article pointing out the serious risks of giving the Republicans control of Congress and thereby of the committee chairmanships. He published the list of the Republicans who would serve as chairmen and gave them the contemptuous nickname of "murderers' row."

It would be of little avail, he warned, for Mr. Eisenhower to be making noble gestures when his policies would be exposed to this ugly gauntlet in Congress. He predicted that national affairs in the event of a Republican victory would waiver ominously between a stalemate and a feud. One must recall the first 2 years of the Eisenhower administration to realize the cruel precision of this prophecy.

Mr. Walter Lippmann tried to counter Mr. DeVoto's argument by claiming that it was essential to convert the Republican leaders in Congress to a sense of responsibility by making them partners in a Republican administration. Mr. Stevenson sneered at this syllogism by observing that never before in American politics had a party gone to the country with the cry "throw the rascals in."

The last footnote to this episode was written when Mr. Lippmann, some months ago, formally abandoned his discredited theory. He announced his new revelation that the strength and progress of the American people demanded a Republican President and a Democratic Congress.

Enough writers have praised DeVoto's books on the West, his veritable passion for conversation, his love of Mark Twain. But his life was spent in controversy and it is as a controversial figure and not as a stuffed saint that he should be remembered.

[From the New York Times of November 15, 1955]

BERNARD DEVOTO

The sudden death of Bernard DeVoto is a major loss to the world of American letters. Historian and novelist, critic and editor, he was a writer both scholarly and colorful, pugnacious and humorous, skillfull and profound.

Bernard DeVoto was first of all a careful and distinguished chronicler of the majestic story of this country. His famous trilogy—The Year of Decision: 1846, Across the Wide Missouri, and the Course of Empire—comprise a classic of America's westward expansion, written by a man whose knowledge and love of the West has been surpassed by no other contemporary historian. But he was not content to be considered a writer of merely western history—he complained about

being known as some kind of tributary of the Missouri River—and there is little doubt that had he lived he would have made equally great contributions to the history of other areas. He was renowned for his work in literary history, too, and one of his books on Mark Twain has been described as the first thorough application of the methods of social history to the problems of literary criticism.

But he probably exerted his greatest influence on American life and thought through his 20 years of editing the famed department of Harper's magazine called the Easy Chair. Crusader, critic, and caustic commentator, his trenchant paragraphs were in the best tradition of literary journalism. Though the Easy Chair covered many fields, that one in which he was perhaps most effective of all was as a conservationist who knew what he was talking about and who pulled no punches. His contribution in awakening the national conscience on this subject has been of the most practical and enduring value.

It is sad but fitting that Bernard DeVoto's last memorial should have been a collection of essays, largely from the Easy Chair, published only a few days ago. In it he was justly proud to write: "No one has got me to say anything I did not want to say and no one has prevented me from saying anything I wanted to." That expressed the spirit of DeVoto, a great American, and the spirit of the America he loved.

Natural Gas Issue

EXTENSION OF REMARKS
OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, January 9, 1956

Mr. WILEY. Mr. President, earlier today it was my privilege to deliver an address before a variety of public-spirited individuals and organizations which have banded together to protect the interests of American consumers of natural gas by advocating defeat of the Fulbright bill.

It is my intention to do everything I can toward the objective of protecting the public interest by carrying on my share in this battle, as I have down through the years, when the predecessor legislation to this bill came up.

I send to the desk the text of the statement which I delivered, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SENATOR WILEY URGES AVALANCHE OF PUBLIC REACTION TO PROTEST AND KILL NATURAL GAS EXEMPTION BILL—SAYS BOTH PARTIES HAVE TO IMPROVE THEIR POSITION ON ISSUE

(Excerpts of address delivered by Hon. ALEXANDER WILEY, of Wisconsin, ranking Republican on Senate Judiciary and Foreign Relations Committees, before meeting of consumer-labor-women's-business groups opposed to national gas-exemption bill, Washington, D. C.)

It is a pleasure for me to greet this fine assembly of civic-minded citizens.

I am particularly pleased with the wide variety of groups which you represent, because the task which you have undertaken—the protection of the interests of upward of 29 million American consumers of natural gas—is one which definitely requires the strongest possible alliance of grassroots Americans in every walk of life.

I am going to talk to you today exclusively about the practical aspects in the battle now looming before us.

OUR PURPOSE TODAY IS TO PLAN FOR BATTLE

I am not going to attempt at this point to make a detailed evaluation of the Fulbright-Harris bill which would basically exempt producers of natural gas from Federal control. There is not time on this occasion for either a detailed legal evaluation or a detailed economic evaluation.

I believe, of course, that you are already familiar with the evil effects of the legislation in its arbitrary nullifying of effective regulation under the Natural Gas Act of 1938 and its deliberate overturning of the Supreme Court's decision in the Phillips case.

Let us therefore use this brief occasion as a public planning session. Planning for what? Planning for the battle to protect the public interest. This is deservedly a factual public session because, unlike our opposition, we are trying to thwart ignorance and misinformation and behind-the-scenes deception. We seek an informed, aroused public, eager to do battle against greedy, entrenched monopolistic forces.

Now, let me spell out a few of the points which I think should command our attention, as we prepare to do battle:

AN AVALANCHE REACTION OF PROTEST BY THE PUBLIC IS NECESSARY

1. First and foremost, I want to emphasize that nothing short of an avalanche reaction from the grassroots of America will suffice to defeat this legislation.

I mean an avalanche through the air and on the ground—an avalanche of responsible phone calls, personal visits, telegrams, letters, postal cards, petitions, and every other means available to the people at the grassroots of this Republic.

I am not asking for any blind or artificial propaganda effort, such as may sometimes occur on an issue which the people do not understand, but on which they are told to communicate to the Congress.

Instead, I am urging the only sort of voluntary, enlightened campaign in which I feel you of this audience and I are interested. It must be an intelligent reaction, based upon at least a general understanding of the issues. I refer to an understanding that this bill can have disastrous consequences on our economy by skyrocketing inflationary pressures, an understanding that this is perhaps one of the final, decisive rounds in a long effort by a relatively small group of individuals ruthlessly to exploit the American public by charging all that the traffic will bear.

Of course you in this audience today will be engaged in the very democratic process which I am urging—responsibly contacting Members of the Congress. But I want to say that infinitely more must be done by your associated groups and affiliated members throughout the Nation, and it must be done now.

MARGIN OF VICTORY IN DOUBT

Now, of course, both sides in the approaching Senate fight have been making nose counts, so to speak.

They have counted up the Senators who are committed for and against the bill.

They have counted up those who are still uncommitted, but who may lean in one direction or another.

As a result of the nose counts, opinion may vary as to the precise number of Senators in each category.

Fortunately for America, it is certain that our side, the public side, has been gaining strength in past months. It is certain that the superoptimistic outlook—"it's in the bag"—on the part of our opponents has been dampened a good deal by recent impressive additions, allies to our side, the public's side.

Nevertheless, as of the present date, January 9, 1956, I want to state very factually and frankly that, in my personal opinion, we definitely do not have a margin of superiority to defeat this bill.

That does not mean, however, that the opposition has a decisive margin.

On the contrary, the group of Senators who are today uncommitted, will swing this vote either way. And I want to stress that an objective view of the facts, an objective view of the enormous pressures being brought to bear from the other side, seems to signify this: Unless there is a blizzard of protest against this bill, then the chances are probably better than even, that the supporters of the Harris-Fulbright bill will win out.

In other words, the time for the American people to act in their own enlightened self-interest is now. They have the opportunity to protect themselves, and they must not lose this fleeting opportunity.

FUEL RATES WILL SHOOT UPWARD

If the bill is enacted, you can expect another type of blizzard to occur. It will be a blizzard of rate increase applications—which will cost consumers upwards of three-fourths billion dollars per year.

Not only will producers charge more and more for natural gas, but you can expect petroleum prices to edge upward as well.

The whole situation resembles a contrived Alphonse-Gaston act. The petroleum people will say to their friends and affiliates—the natural-gas people—"our rate increase after yours my dear Alphonse." And the gas people will say, "after yours, my dear Gaston."

First, the gas price will go up, then petroleum, then gas, then petroleum. And the net result will be that the consumers will more and more lose out while the gas industry, already representing $16 billion in assets will enrich its owners further..

IF PEOPLE ACT NOW, CONGRESS WILL PROTECT THEM

Some months from now, if this evil, greedy bill is approved, we can almost imagine the scene in the average American breakfast room. The husband will be reading his morning paper. His wife will be telling him, "John, I don't know where we're going to find the money to pay all these increasing bills. Our gas rate has gone up still again."

And one can almost imagine John replying, "Well, it's probably those fellows in Washington who are responsible."

Well, the so-called "fellows in Washington" would certainly be partly responsible. But it is really John, Mary, Susan, and Jack at the grassroots who would be responsible for the fate of this legislation—for the trend, vertically upward of their own gas rate.

Let no one pass the buck exclusively to the Congress. It is we in the Senate, of course, who are responsible for actually writing the bill at this stage.

But the Congress is only the voice and reflection of the American people.

If the American people choose to be silent (while eloquent proponents of the natural-gas interests are busily talking up their case), if the American people choose to sit on their hands, while the multi-million-dollar natral-gas lobby works tirelessly, night and day, 12 months a year, then the result is forecast.

But we need not get a negative result. We, the people, can achieve success, if we set our minds and our hearts and, yes, our shoe leather to it.

I am delighted at the support which has already been given to the battle against the bill. In my own State, with its outstanding tradition of safeguarding the public, an impressive number of public officials, organizations, and individual citizens have given me the fullest support in my personal efforts.

I am particular delighted that throughout our country, local gas distribution companies are acting with commonsense and devoted

public spirit in this fight to inform the American people of precisely the peril that is involved to the United States.

But infinitely more needs still be done.

BILL SHOULD HAVE BEEN RECOMMITTED TO COMMERCE COMMITTEE

2. The second major point that I should like to make is that, in the judgment of many people, including myself, the bill should really have been recommitted to the Senate Interstate Commerce Committee.

I do not believe that the record of that committee is complete in either the necessary legal or the economic data.

I point out, too, that a considerable amount of new evidence has come in since the committee, by a vote of 11 to 4, reported it out.

I do not question the fact that the bill has nominally been on the Senate Calendar for some months. But I think that the people would have been entitled to be heard further on this matter before the Commerce Committee.

Let me point out very clearly that, as a believer in the democratic, representative process, I definitely do not believe in arbitrarily pigeonholing or bottling up legislation. That is particularly my feeling when an expert committee of the Senate has already made its report and a recommittal proposal is considered.

Rather, I would have hoped that this committee could have studied the issue anew in all of its serious implications to our economy, in the light of the facts which are known as of January 1956. Then, the committee could have reported the bill out in its original or amended form, with comparatively little time elapsing.

Of course, the bill is now the pending business of the Senate.

If the Senate is disinclined to recommit the bill, if it wants a showdown now, then I say that, at the very minimum, there must and will be the fullest possible debate of every single angle of this issue. There are going to be a very considerable number of amendments which are going to have to be taken up one by one, slowly and surely.

Let me make it quite clear that I fully recognize that the general arguments over this issue are old one. Most of the principal points have been hashed and rehased many times. But that does not diminish our obligation to give to the American people, to give to the Federal Power Commission, to give to the courts—the fullest and most complete possible record, for their later study of this issue, as it may come up.

BOTH PARTIES SHOULD STRENGHTEN THEIR POSITION IN PROTECTING THE CONSUMER

3. Now, the third point that I should like to make relates to the political parties. I am not going to make a partisan statement at the present time, because this is of course, not a partisan occasion or issue.

We all know that party lines and so-called 'liberal'—conservative lines within the parties have tended to be somewhat scrambled on this issue.

We have seen men who are commonly called liberals reverse their pattern and support the Harris-Fulbright bill for exemption from Federal control.

We have seen men who are regarded as so-called rock-ribbed conservatives fight ably against the bill for exemption from Federal controls. (These latter colleagues of mine will be somewhat surprised, incidentally, to note the fantastic charges by the opposition that they—uniformly respected as conservative Senators—are supporting a measure which allegedly leads to socialism and public ownership. Such charges are obviously absurd; they are an insult to the intelligence of any thinking person who notes the thousand and one precedents, yes, during Republican, as well as Democratic Administrations, for Federal regulation in the public interest.

In any event, in this election year of 1956, I want to say very frankly that neither of the major political parties has covered itself with honor in this respect—neither my friends in the Democratic camp, nor my own Republican Party.

WHO IS SO-CALLED FRIEND OF BIG BUSINESS?

I would hope that my own party would strive to improve its position on this issue in both legislative and executive branches. And, if I may be permitted, I would certainly hope that those Democrats who so often have criticized my party as the so-called friend of big business would take the blinders off their own eyes and see exactly who is fighting for so-called Big Business on this issue.

The facts are that this Harris-Fulbright bill, will add perhaps 20 or more billion dollars in value to reserves in the ground, held by gas blue-chip companies. And this little unearned bonus to them—has been sponsored by Democrats, steamrolled through Democratic controled committees, and rushed to Senate and House floors, to be led rather ably—I may say, by Democratic leadership.

Concerning the question of so-called big business and free enterprise, I shall say—somewhat more later on.

FINE EFFORTS BY SOME SEGMENTS OF DEMOCRATIC PARTY

To keep the record straight, however, I want to say right now in all fairness, that there are segments of the Democratic Party which have nobly fulfilled the traditions of Woodrow Wilson and other great Democratic leaders of both North and South on this issue. Yes, from Virginia, mother of Presidents, from "little Rhodie," Rhode Island, and from other Democratic strongholds have come magnificent support.

In the Senate, in particular, this Nation is indebted to a great many individual Democrats, without whose help we who are fighting for the public could not possibly be as far advanced as we are in our uphill efforts toward victory. And if I were to single out any one champion, it would, of course, be the gentlemen from Illinois, Senator PAUL DOUGLAS, who, true to his valiant marine record of ably fighting against odds, come what may, has been masterfully leading the fight for what he holds dear to his conscience, as do you and I.

VOTERS SHOULD QUESTION SENATORS ON THEIR STAND

In any event, one-third of the United States Senate wil go to the people in November and even before that, will face the people in a good many primary fights, as well.

And I should think that not a single one of them should be excused from stating, at the outset, in his campaign precisely why he voted one way or the other on this evil bill.

Yes; the American people have a particular right to ask every supporter of the Harris-Fulbright bill in the House, the Senate, why he did not act to protect the rights of the public in this battle.

ALL-OUT, NOT TOKEN ACTION REQUESTED

I say "act," not just "vote." I am not seeking simply votes for our side; I am seeking all-out action.

Let none of us—inside or outside the Senate—who are opposing the Harris-Fulbright bill think that a half-hearted, token fight on any of our parts will suffice. All-out action—a fight to amend this bill in the public interest from stem to stern, to debate it in fullest detail rather than willy-nilly chitchat merely over the Fulbright or Harris versions—this is what is called for.

THE MASQUERADE OF THIS BILL

4. Now, fourth, I want to turn briefly to the bill itself and to the arguments which have been advanced by its supporters.

First, let me say, however, that as individuals, I have a tremendously high personal regard for many of the Members of the Senate who happen to be leading the effort for this bill. I am sorry to have to oppose them on it, first, because they are able battlers, and, second, because I wish they would put their abundant talents to better use right now in terms of fulfilling the needs of the American people.

ABLE OPPONENTS ARRAYED

I am thinking of that young, masterful Texan, the Senate's tireless majority leader, who the entire Nation rejoices, has recovered from his sudden physical misfortune. I am thinking of my good, scholarly friend from Arkansas, who has contributed so expertly on the Foreign Relations Committee, on which I am privileged to serve. And I am thinking of the two able scrappers from Oklahoma and the junior Senator from Texas, and others. Yes, I am thinking, too, of "Mr. SAM" over on the House side, whose long record of service to the Republic is hailed by friend and foe alike.

My remarks, of course, carry no imputation whatsoever on the individual Members of the Senate or House as legislators. I believe that they, in good faith, are fighting for what they believe will best serve the interests of the American people.

I believe, however, that my good friends of the opposition are wrong in their beliefs and evaluation. But I believe, too, that we can lock horns in this fight, as we have in the past, on the level of issues and never on personalities.

THIS BILL IS STRICTLY A PHONY

It just so happens, in my judgment, that this bill is now and has always been as phony as a 3-cent piece or a $4 bill. It was a phony as the Moore-Rizley bill. It was a phony as the Kerr bill. It is a phony as the Harris-Fulbright bill. (The last named, i. e., the present bill before us, is incidentally even worse than the Kerr bill in that it would go so far as to extend the "carte blanche" exemption from control not only to independent producers, but even to production activities of the pipeline companies and to producing affiliates of the pipelines).

Why is this bill a phony? Because the bill is not anything like what its supporters say it is.

YOU CAN'T CONTROL A PRICE IN MIDSTREAM

It is a phony because every thinking person knows that you cannot control a price in midstream; you've got to control, if the control is to be at all effective, at the source. But section 2 trickily redefines "sales" so that they are to be considered in interstate commerce only after transportation has commenced. Thus, the Federal Power Commission loses all effective control authority.

So, we are supposed to have controls without controls—now you see them, now you don't.

Continuing, the bill's so-called protections to consumers are a farce, so ambiguous and unenforceable are the so-called standards for fixing the price of natural gas at the source.

And there are other sham features as well.

It is alleged that this is a free-enterprise bill, but it is basically a bill to advance the cause of monopolistic forces which are the very contradiction of free enterprise.

THE GAS INDUSTRY HAS PIONEERED

It is alleged that if this bill is not enacted, the natural-gas industry will not have sufficient incentive to expand.

That phony argument is riddled by the whole record of the past, in which the natural-gas industry, despite admitted doubts over this legislation and the status of controls, has been skyrocketing in expansion.

Now, I want, at this point, to say a sincere word of tribute to the natural-gas industry.

Starting from scratch to the point where today it serves approximately 25 percent of the energy market of the Nation, it is a breathtaking example of the dyanmic force which the profit-and-loss system provides.

Here we have an amazing material which was formerly regarded as mere waste, emerging by the wizardry of production, transportation, and storage as a tremendous economic asset to the United States and to the free world.

I want to pay tribute to the men inside and outside the Lone Star State who had the vision, the financial acumen, the pioneering strength to take risks and build this industry up as one of the great pillars on the American scene. The fact that I oppose them in their effort to reach out greedily for too much profit does not mean that I have any less regard for their building of the industry so fast.

It is a big business, but I, for one, welcome large-scale enterprise in this complex, technological age, so long as it does not trample the little fellow or the public.

One would think from some of the artificial groans issued by the big companies' skilled public relations and advertising agencies, that this industry would hover at death's door if this bill is not enacted. But the contrary facts have shown, I believe, that in our entire country, no individual industry, but one, has a better record of avoiding business failures, that is, in the terms of the number of companies which have gone out of business. Yes, the only industry which has had relatively fewer business failures in our country is that old standby, the undertaking industry.

The natural-gas industry has prospered, and I hope it will continue to prosper. I want its stockholders and its bondholders to get a fair break. I believe 100 percent in Americans being entitled to the fruits of their labor, the fruits of their savings and investment—subject, of course, to any possible infringements of the public's rights.

But one may rightly ask just how much incentive does this industry reasonably expect it is entitled to? Does it think it must have say, an astronomic 25 or 30 percent return on its investment in order to expand?

Would it also prefer, say, a 50 percent depletion allowance, to begin with? Does it not believe that the public has any rights—or the United States Treasury? Or does it feel, the "public be damned" as some other mistaken sources seemed to feel at odd times in American history?

Remember, it is 29 million United States consumers whose interests are right now at stake—small consumers with an enormous investment in gas appliances which they are stuck with—if prices skyrocket. Last year, there were 200 household customers of natural gas for every 15 commercial customers and every single industrial customer.

CONCLUSION

Now, friends, I have spelled out a few of what I regard to be major elements in this fight. I could have referred in detail to a great many more issues involved in it.

I have spoken frankly, because I believe that this is a time for frankness.

I have spoken grimly, because I believe that it is no time for a Polyanna-like optimism, which assumes that there will be success for the public side automatically, when we know the reverse could be the case.

Victory will not come automatically, but it can come and it should come—with lots of sweat.

In any event, we are in the battle for the duration—in the Congress, in the Federal Power Commission, and yes, in the courts, beyond.

I am humbly proud of the role which my State, the Badger State, has played thus far—in the long Phillips battle from Bartlesville to Washington. You can be sure that this particular son of the Badger State is not going to give in nor will you, of Virginia, or New York, or Illinois, or Michigan, or Ohio, or the other States as well.

It has been a great pleasure to be with you today, and I wish you every success in your efforts to protect the public interest.

The Oregon Highway System

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, January 9, 1956

Mr. NEUBERGER. Mr. President, anyone who has driven along the beautiful roads of Oregon will have recognized that our State has a network of highways which constitutes one of the finest State systems in the Nation. The mastermind of this system has been R. H. Baldock, State highway engineer. His counsel is valued today whenever and wherever highway planners consult with men of experience and vision.

This is attested to by the inclusion of his statement in a two-page advertisement appearing in the Washington Post on Wednesday, January 4, 1956. This advertisement, Mr. President, presents, for the consideration of the 84th Congress, the ideas of 16 men, each an authority in his field, but all concerned with the development of more, better, and safer highways. Mr. President, I ask unanimous consent that Mr. Baldock's statement be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STATEMENT BY R. H. BALDOCK, STATE HIGHWAY ENGINEER OF OREGON

This fall the Western Association of State Highway Officials passed a resolution calling for a compromise road bill based on a 15-year plan in accord with the amounts shown in table A.

For the interstate system, Federal funds would be allotted to the States in proportion to the estimated costs of building the system in the several States, the State to match 10 percent of the cost. For the noninterstate system, the Federal funds, increased over the 1954 schedule by approximately 30 percent, would be allotted as at present and on the historical 50–50 matching basis.

It is further suggested that the 15-year plan be broken into three 5-year authorization periods in which the expenditures on the interstate system are gradually increased, the expenditures on the noninterstate system to be uniform. This permits a gradual increase in the engineering and contracting forces necessary to perform the work.

Table B below indicates the Federal funds required in each of the 5-year authorization periods.

Two plans of financing are proposed. Plan A proposes the authorization of one-half rather than one-third of present road-user taxes for roads, which is presently about $2,600 million; a moderate increase in road-user taxes—1 cent per gallon on gasoline and 2 cents per gallon on diesel fuel—all of which is to be used for roads; the borrowing of a reasonable amount of money—$5,225 million, on which the interest to be paid would be $1,166 million.

Plan B is based upon the same conditions as given in plan A except that the taxes (all to be used for road construction) are increased to eliminate the necessity of borrowing money. The increases in taxes over and above tax increases as proposed in plan A in order to accomplish this objective would be:

1. A 3-cent-per-pound increase in tire tax.
2. A 3-cent-per-pound increase in tube tax.
3. A 4-cent-per-gallon increase in lubricating-oil tax.
4. A 2-percent increase in present 8-percent tax on new trucks, buses, and trailers.

It is suggested that at least half of the present Federal road-user taxes be made available for roads each year, while all additional Federal road-user taxes be used solely for road purposes. Some people advocate the use of all presently levied Federal road-user taxes for road-construction purposes. This plan proposes to use half for road construction.

Some objection may be made to the modest amounts for the interstate system for the first 5-year authorizations. The amounts for the interstate system can be increased to a uniform $1,600 million per year for each of the 15 years by increasing the bonds from $5,225 million to $5,800 million and the amount of the interest from $1,116 million to $1,990 million to conform to plan A. However, it would be necessary to increase the Federal tax on gasoline from 2 cents to 4 cents per gallon for the first 5 years to do the same job on a pay-as-you-go basis as shown in plan B, a rather stiff tax increase. Moreover, the increase in expenditures for the first 5 years would make it quite difficult for many of the States to match Federal funds.

While either plan A or plan B will accomplish the objective of building the important interstate system in a reasonable period of time and of increasing the funds available for the building of the noninterstate Federal-aid system, it is recommended that plan A be selected. Plan A, as recommended by the Western Association of State Highway Officials, would require lower taxes and result in future users paying part of the bill. It is a more balanced plan.

TABLE A

[Amounts are in millions of dollars]

	Interstate system	Noninterstate system	Forest system	All systems
Federal funds	24,000	13,500	495	37,995
State funds	2,300	12,375	----	14,675
Total	26,300	25,875	495	52,670

TABLE B

[Amounts are in millions of dollars]

	1st 5 years	2d 5 years	3d 5 years	Total, 15 years
Interstate system	5,750	8,850	9,400	24,000
Noninterstate system	4,500	4,500	4,500	13,500
Forest highways	165	165	165	495
Total	10,415	13,515	14,065	37,995

Ireland's Economic and Social Progress

EXTENSION OF REMARKS
OF
HON. JOSEPH C. O'MAHONEY
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Monday, January 9, 1956

Mr. O'MAHONEY. Mr. President, this noon the National Press Club entertained

at luncheon the Deputy Prime Minister of the Republic of Ireland, the Honorable William Norton, who is also Minister for Industry and Commerce in the Government of Ireland. I count it as a signal honor that I had the opportunity to be invited to sit at the head table with the Deputy Prime Minister. His speech upon the industrial and economic progress of the land which he represents was one of notable attraction. From the beginning to the end, he held the attention of that very large audience, which filled the dining room of the Press Club. I only wish that I could relate to the Senate the answers he gave to some of the questions propounded to him at the close of his address. When the meeting was over, it was the universal judgment of all present that the Deputy Prime Minister of Ireland is a man of wit and eloquence. I was very much pleased to be present.

I now have the honor of requesting unanimous consent that the address delivered by him on that occasion, and dealing with the economic development of Ireland, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

IRELAND'S ECONOMIC AND SOCIAL PROGRESS

(Speech by Mr. William Norton, T. D., Deputy Prime Minister and Minister for Industry and Commerce in the Government of Ireland)

I propose in the course of this talk to review what Ireland has accomplished in the field of economic and social progress since regaining political independence 33 years ago. As Minister for Industry and Commerce, I am particularly concerned with developments in the industrial field and I will pay special attention to this aspect, while also endeavoring to sketch our progress in other fields.

The magnitude of the task which faced the new state in 1922 may readily be pictured. At that time there existed in the country relatively few large manufacturing industries; our people lacked industrial experience; the country lacked many of the natural resources such as coal and oil which were then regarded as essential for the development of industries; there was no money market to facilitate the investment of savings in Irish industries; imported goods were well established in the Irish market and in a home market based on a total population of approximately 3 million people it would have been impossible, unless special measures were taken, for the products of new Irish industries to gain a foothold in competition with imports from long-established factories in highly industrialized competing countries.

Vigorous action was necessary to overcome these obstacles to industrial progress. From the outset, Government policy was directed toward creating and maintaining conditions favorable to industrial development and expansion. Protection against imports was afforded to new industries to enable them to become established in the face of competition from abroad. New industries requiring capital and unable to raise it through the normal channels were assisted by means of state guaranties of borrowing, and a special Industrial Credit Company was established and financed out of state funds to underwrite capital issues and to provide other financial accommodations in suitable cases.

The efforts to develop the industrial economy of the country achieved remarkable success. Official statistics show that the volume of industrial production has trebled since 1926 and industrial employment has more than doubled.

NEW INDUSTRIES ESTABLISHED

Numerous industries have been set up and expanded and are operating at a high level of efficiency, producing a diversity of goods to supply the needs of the Irish market and, in many cases, competing successfully in export markets with the manufactured products of other nations. Workers have thus been trained in industrial processes and techniques, and directors and management executives have acquired experience in the hard school of practical business management. It would not be possible, in a short address of this kind, to detail the list of such industries, but the following may be mentioned by way of illustration: leather and leather goods, sugar and sugar products, cement, textiles and wearing apparel, ropes and twines, paper and paper products, flour and flour confectionery, furniture, motor vehicles assembly, rubber products, foundry products, cutlery and hardware goods, earthenware and tableware, glass and glass products, beer and spirits, biscuits, bacon, meat, etc.

Irish industry is based on private enterprise and credit for much of the development already achieved is due to the energy and courage shown by our business people and to the support given by the public by investing their savings in the new and expanded industries. However, due to the leeway which our economy had to make up, the government found it necessary not only to create an economic environment which would encourage the development of private enterprise but also to set up certain State-sponsored companies to undertake work which was not attractive to or which was beyond the ambit of private enterprise. Industries developed under State auspices include the production and distribution of electricity, peat, sugar, industrial alcohol, and steel. A State-sponsored body was also established for mineral exploration work.

PUBLIC POWER AT SHANNON

The Electricity Supply Board, the State agency which is responsible for the production of electricity, has developed hydroelectric power and has also built stations for generating electricity from native peat and from imported fuels. Production of electricity has increased from 120 million kilowatt-hours in the year ended March 31, 1931, to 1,458 million kilowatt-hours in the year ended March 31, 1955, and the board has in hand a development program extending to the year 1961 to provide additional generating capacity to meet the continuing growth in demand. The cost of the first hydroelectric scheme—the Shannon scheme—was about $17 million. So great has been the demand for current to keep up with industrial and social progress, that the total capital investment of the Electricity Supply Board is now over $200 million, and further expenditure of the same order is expected to be incurred between now and the year 1961.

Bórd na Móna, the body responsible for peat production, has applied modern machinery and research to the utilization for industrial and domestic purposes of peat—a product of tracts of our country once regarded by many as wastelands. Thirty years ago peat was entirely harvested by hand and used as a domestic fuel. Now it is harvested and processed by the most modern machinery—much of which was specially devised or adapted by Irish engineering skill. Some peat-fired stations for the generation of electricity on an economic basis are already in operation and others are being constructed; close coordination between the Electricity Supply Board and Bórd na Móna is established in this joint enterprise.

TRANSPORTATION PROGRESS

On the establishment of the state the railway companies were in serious financial difficulties due to heavy increases in operating costs during and after the First World War. In 1924, 26 railway companies were amalgamated into a new company. Nevertheless the difficulties of the railways continued and by the commencement of the Second World War it became clear that, on the basis of private enterprise, the railways could not find the additional capital necessary to renew and modernize their equipment as railways were no longer an attractive form of investment. Since then a new transport organization has been set up under state auspices and with state guaranties for borrowing. A program for the substitution of diesel traction for steam is now well advanced. Results are already beginning to show and it is hoped to have the railways placed on a sound economic basis before the lapse of many years. When this program has been completed, our rail services will compare very favorably with those in any other country.

HOW AVIATION HAS PROSPERED

Aviation was in its infancy when our state was established but at an early stage we recognized the advantages of our geographical position in relation to transatlantic services. In 1935 it was decided to establish an international airport for use by transatlantic services and in the following year construction of the land airdrome at Shannon was commenced. During the period when flying boats were used on transatlantic flights facilities were provided and when flying-boat operations ceased in 1945 the land plane base was ready for the change over. Since then we have kept abreast of the rapid developments in airport equipment and services. The growth in traffic (4,216 aircraft landed at the airport in 1946 and 8,208 in 1954) gives ground for our confidence that we continue to satisfy the operating companies and provide a service conforming to the most exacting standards of safety and efficiency. It is worthy of note that our customs-free airport, established at Shannon in 1947 was the first in the world.

We entered into the operation side of civil aviation with the establishment of a state-sponsored company called Aer Lingus in 1936. Development was slow during the war years, but since then progress has been rapid. In the year to March 31, 1955, Aer Lingus carried 340,000 fare-paying passengers compared with 4,300 in 1944. This company, operating from Dublin Airport, provides services to Britain and other European countries as well as internal services.

HEALTH SERVICES IMPROVED

The health services in the country have been steadily improved. There is not time now to describe improvements in detail, but it will give you some idea of what has been achieved when I tell you that in the past 25 years expenditure on hospital buildings works amounted to some $78 million and that in order to complete current hospitalization programs further expenditure of the order of $56 million will be required.

Remarkable progress has also been made in housing. Thirty years ago many of our rural dwellings were small and insanitary or in bad repair; there were extensive slums in Dublin and in some other cities. To meet this problem local authorities, utility societies, and private individuals were assisted by means of direct state grants and loan accommodation to provide dwelling houses for our people. In the period since 1922 the number of private dwelling houses built or reconstructed totals some 235,000. The result of these measures is now to be seen in the large number of bright new houses which girdle our cities and towns and in a greatly improved standard of rural housing.

WORKERS' WELFARE PROTECTED

In our industrial and economic development, the interests of the workers have not been overlooked. In general, wages are fixed by collective agreements between employers and employees, but legal provision has been made for fixing minimum wages for agricultural workers and for workers in certain other industries who were not sufficiently

organized to secure just wages. The Industrial Relations Act, 1946, is designed to promote harmonious relations between workers and employers generally. Under this act a Labor Court was established and this tribunal has achieved considerable success in settling differences between workers and employers on the basis of free and voluntary negotiation. Legislation has also been enacted to regulate the hours of work of all industrial workers and to prohibit night work by women and young persons. Legislation relating to safety and welfare of workers in factories and workshops has been codified and brought up to date in the Factory Act, 1955, which will come into force shortly.

Apart from the improvement in working conditions, measures have been taken to provide assistance for people at times when their own resources are not adequate to cope with eventualities such as illness or unemployment. Provision is made for unemployment and illness, and for widows and orphans by means of an insurance scheme to which workers, employers, and the State contribute. There is also provision for children's allowances, unemployment assistance, old-age pensions, and for accident benefits for people who are not covered by insurance. Widows and orphans not covered by insurance are eligible to obtain pensions and allowances in certain cases.

TOURIST ATTRACTIONS

Ireland, with her beautiful scenery and pleasant way of life, has many natural attractions for tourists. The potentialities of the Irish tourist industry have been recognized by successive Irish Governments since the founding of the state, and progressive legislation for the promotion and development of the industry is in force. Responsibility for the development and publicising of the industry is vested in a statutory body—Irish Tourist Board (Bórd Fáilte Eireann)—which receives a substantial annual grant from the state for the discharge of its functions. Some measure of the success of our endeavor in this field may be gaged from the fact that expenditure by visitors to Ireland in 1954 amounted to over $80 million.

The use which we have made of our opportunities can be seen in the increased prosperity of our country and in the well-being of our people. While we are proud of what we have achieved so far, we are determined that no complacency about our past achievements will blunt our determination to press ahead with further improvements until we have made our country worthy of the great sacrifices and courage of past generations who preserved for us through the ages the spirit of freedom and of nationhood.

My reason for this visit to the United States is directly connected with our desire and determination further to improve our country's economy. I am particularly concerned with the part which American businessmen may be able to play in contributing to our industrial advancement. Ireland has many advantages and attractions to offer to United States industrialists who may decide to extend their industrial activities to our country; in particular, we have many advantages as a base for production for export markets in Britain and other European countries. These attractions and favorable factors have been detailed in a brochure which has already been circulated among you, and the members of the official delegation, which I have arranged will visit you shortly and will be happy to supply full details and to inform and advise interested parties who may wish to know more about our industrial potentialities.

CONCLUSION

Where in other generations, speaking in this great land, millions of our people found a home and a refuge from alien prosecution and a vicious economic thralldom which accompanied it, may I, on behalf of the Irish people, express our profound thanks and gratitude to the American people and pray for their sympathy, their generosity, and understanding of Ireland in our darkest hours.

We shall seek ever to maintain and extend the bonds of friendship and understanding between our two peoples and to strive with the American people for the attainment of peace based on those concepts of liberty which are cherished by the American and Irish peoples.

Tribute to Dr. Lena Madesin Phillips

EXTENSION OF REMARKS
OF
HON. MARGARET CHASE SMITH
OF MAINE
IN THE SENATE OF THE UNITED STATES
Monday, January 9, 1956

Mrs. SMITH of Maine. Mr. President, during the past year Lena Madesin Phillips, one of America's outstanding women, passed away. She was not only a leader in the Federation of Business and Professional Womens Clubs, in which I have so much pride, but she was a leader of women generally.

A very fitting tribute has been written about her by Ruth Roach Robinson. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the tribute was ordered to be printed in the RECORD, as follows:

DR. LENA MADESIN PHILLIPS: WE PRAISE HER WITH AFFECTIONATE VOICE

One of our most revered leaders, Dr. Lena Madesin Phillips, world minded citizen, who had made the trip across the Atlantic so many times, died May 20, in France, en route to the Middle East to attend a conference of women leaders at Beirut, Lebanon. This conference was to conclude the international federation's 10-month research project to study the role of women, their activities and organizations in Egypt, Iraq, Jordan, Lebanon, and Syria. It was a great distinction that our international federation had been chosen to carry out this study under a Ford Foundation grant. We know the conference held early in June sorely missed the wisdom and guidance of our great leader who worked so effectively for all mankind.

Dr. Phillips had planned to spend some time in Greece and Italy before attending the silver-jubilee board meeting in Geneva, Switzerland, August 23 to 26, where in 1930, our international federation had its birth with Dr. Phillips founder president.

From our federation's historical records we find the following:

"Lena Madesin Phillips, among other YWCA leaders, was present and participating when, at the Ann Fulton Cafeteria in May 1918, the plan for the formation of a national business women's organization was written on a scrap of brown paper. As organizer, Dr. Phillips succeeded in interesting 400 business and professional women to attend that meeting in St. Louis in 1919. As the first executive secretary of the federation, she set up and carried on the work of the office in New York and attended to the publication of the magazine. Later she became the president of the national federation, serving from 1926 to 1929. She led the goodwill tours which resulted in the formation of national federations in other countries and the organization of the International Federation of Business and Professional Women in 1930. She became its founder president and served for 17 years in that capacity."

Let me be personal. I can write no other way of Lena Madesin Phillips. Through 35 years association with her I had been privileged to know her well. She will always be alive for me. But I am quite certain some of the color of our conventions will fade when she is no more around. She had a joyous breath of life. Yes, she was a personality, radiant and colorful, with a mind brilliant and scintillating. Her wit and humor vitalized her every undertaking. Her exuberance was what you took home from any meeting with her and hung onto forever—to put with the keepsakes of a lifetime.

I can see her now, and I'm sure you can, speaking from the floor as a delegate, performing from the banquet dias as a lecturer, sitting at the great pipe organ playing My Old Kentucky Home, and being treated as "royalty" by royalty at the great World Congress in London.

What pageantry the retelling of her life story will unfold. The telling of which will refresh and encourage us all.

Speaking for all of you, let me say, we were never in her presence, be it private conversation, committee conference, banquet hall or convention assembled but what we were burdened with some new challenge that humbled us—in the first place because we had been unable to see it ourselves, and second because we had not been strong enough to dare more. Whenever she heard a need knocking, she had a dream, a vision of a new and larger enterprise and a more costly consecration. She saw things hidden beyond the horizon, brought us in and told us of the visions, and not only the visions, but the meaning of them as well, and there was no escape from their implications for us.

She was known by every chancellery in Europe and by every American President and Secretary of State and other leaders. All felt more than admiration for her intellectual gifts and accomplishments, as recorded in a long list of honors.

She worked for all mankind through the office of the business and professional women of the world. She believed in univeral education, especially for the girls who will be the mothers and first educators of the next generation. She believed in world-wide language. She believed in the equality of men and women. She believed in an universal league of nations to be obtained without violence and to function through an international parliament. She loved America with burning patriotism, but she could, even in thought, disengage herself and look at policies and behaviours as they must appear from other vantage points. Hence she was an active and effective representative of our International Federation at the United Nations.

She was a Protestant, an Episcopalian, but believed "The Word of God is one Word, the spokesmen are many." She steered the course of our national and international federations, venturing fearlessly into untried seas. As a lawyer and a woman she went forth in life eager to put more into the world than she ever could hope to take out of it and possessed unshakable faith in the eternal laws of justice and righteousness. She found life joyous. She accepted difficulties as challenges to womankind. One never knew her to be tempted to give way to despair.

It is amazing that one woman carrying forward so many duties which exhaust most people, and fulfilling them, should have had time and strength and talent for so many things. She never gave just occasional interest or indirect support. Lena Madesin Phillips couldn't go into anything no matter how small or how great—she couldn't go into

anything for which she did not assume a responsibility and trusteeship.

Henceforth, everything we do in dedicating the resources of the womanhood of our federation to human progress will be a tribute to Dr. Lena Madesin Phillips.

RUTH ROBINSON ROACH.

If I should die and leave you here awhile,
Be not like others, sore, undone, who keep
Long vigils for the silent dust and weep.
For my sake turn again to life and smile,
Nerving thy heart and trembling hand to do
Something to comfort weaker hands than thine;
Complete these dear unfinished tasks of mine,
And I, perchance, may therein comfort you.

(Anonymous.)

Strikes and Civil Rights

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS

IN THE SENATE OF THE UNITED STATES

Monday, January 9, 1956

Mr. SCHOEPPEL. Mr. President, in view of the various crippling strikes which have recently taken place in some of our industrial plants in the United States, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Black Day for Civil Rights," written by David Lawrence, and published in the Washington Evening Star of January 4, 1956.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BLACK DAY FOR CIVIL RIGHTS—COLUMBUS STRIKE VIOLENCE FAILS TO STIR LIBERAL ORGANIZATIONS

(By David Lawrence)

Yesterday was a black day in American history. The Constitution was trampled upon. Civil rights were flagrantly abused. And yet not a single committee of Congress and not a single liberal organization showed any signs of raising a voice in protest.

No word of disapproval came from any of the groups which usually award prizes to defenders of civil liberties and no comment came from the organizations which are quick to denounce a jury's acquittal of persons charged with violence in the South.

Yet the dispatches from Columbus, Ohio, tell the story plainly of how nearly 1,700 American citizens tried to exercise their right to work at the Westinghouse plant and were set upon by a mob of other workers ordered to engage in mass picketing by a labor-union official. This was in defiance of a court order limiting the number of pickets. The United Press reports:

"The trouble broke out about 5:10 a. m. when some 2,000 members of the striking CIO-A. F. of L. International Union of Electrical Workers massed at the plant gates for a demonstration scheduled by the president of local 746.

"Sheriff's deputies said 2 or 3 cars were overturned early in the demonstration. The demonstration was called by President Charles Clark of the local union to protest the company's back to work movement.

"Eighty-six strikers were arrested. Sheriff's deputies reported 74 men and 12 women were jailed. Cars of workers attempting to enter the plant were smashed and at least seven persons suffered injuries during the uprising. * * *

"Troy Tadlock, 27, died during the demonstration. There were no marks on his body, officials said, indicating he died of natural causes.

"The 86 strikers who were arrested were held in the bullpen of the Franklin County jail on charges of inciting a riot. * * *

"The union called Sheriff Paul's handling of the situation 'one of the worst cases of police brutality ever seen in such a situation.' * * *

"Gov. Frank J. Lausche termed the conduct of the strike leaders 'indefensible.' He said the State would 'intervene to maintain law and order' if necessary."

But the damage cannot be measured in terms of persons arrested or injured or the amount of violence manifested at the gates of the plant. The real measure is in the extent of the intimidation exercised on the many thousands of workers who stayed at home and now do not dare to return to work, though they may desire to do so.

Thus is the right to work abolished by physical force in a big manufacturing plant in free America. Labor union leaders know full well that mass picketing has been prohibited by the laws of many States and that it invariably leads to violence. Yet they order mass demonstrations as a means of frightening those who may wish to return to work.

The laws of the land are designed to protect unions if employers refuse to bargain, and there is no justification, of course, for using violence as a means of enforcing union demands.

Only moral force can prevail in the court of public opinion. It is regrettable that no national leaders of trade unionism have come forth to denounce the use of physical force to win strikes or to intimidate workers. Some employers used to do such things, and the courts promptly punished "goon squads." But today various labor unions evidently feel that, with their present political power, they can threaten to defeat at the polls the mayors of cities or Governors of States who dare to use public authority to squelch violence.

Civil rights are important, because they protect citizens of every race or creed or color, but it is a mark of the hypocrisy of so-called liberalism today that it spends so much of its energies in defense of security risks accused of Communist affiliations or associations and doesn't seem to be bothered by the fact that thousands upon thousands of loyal Americans are losing their civil liberties at the gates of the plants there they try to exercise their right to work.

Winning the Peace

EXTENSION OF REMARKS
OF
HON. CHARLES E. POTTER
OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Monday, January 9, 1956

Mr. POTTER. Mr. President, at the 37th annual department convention of the American Legion, held in Detroit, Mich., last August, Dr. Richard C. Hertz, senior rabbi of Temple Beth El, Detroit, delivered a stirring address at the memorial service on the subject of winning the peace. The words which he spoke on that occasion carry inspiration and are well worth our consideration. In the interest of our struggle to strengthen and improve the peace we now have, I ask unanimous consent that the address of Dr. Hertz be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We are assembled together at this memorial hour, not as Catholics, Protestants, or Jews, not as white or Negro, not as Republicans or Democrats, but as Americans all, united in comradeship and dedicated to the advancement of freedom and democracy in our world. We have come together in convention as comrades who have served our country in war and in peace, and as we gather together in this memorial hour to think about those of our comrades who have fallen in the service of our country, we realize that this memorial hour by the very essence of its nature cannot be a happy sort of celebration. There is no place for any thought of festivity. It is rather an hour of hallowing the sacrifices of our sons and our friends' sons who have fallen on the field of battle and who lie buried on land or in the sea in honored graves.

This memorial hour, therefore, is a time for examination, a time to pause and think over in pride of the dedication that brought on their sacrifice, to review our own sense of values. Our beloved dead gave up their lives for causes, for ideals. They died in the grim doing of a hard duty that was not of their making. It is for us the living to amply demonstrate that their sacrifice was worthwhile. If this memorial hour would serve any purpose at all it must awaken within us the spirit that those that died shall not have died in vain. For, truly, Abraham Lincoln uttered the greatest memorial lines ever spoken: "It is for us to be here dedicated to the great task remaining before us * * * that from these honored dead we take increased devotion to that cause to which they gave the last full measure of devotion * * * that we here highly resolve that these dead shall not have died in vain * * * that this Nation under God shall have a new birth of freedom * * *."

There is only one way I know in which this Nation or any nation can have a new birth of freedom, and that is by dedicating themselves to peace. Wars can be won, why not peace? The real meaning of this memorial hour, therefore, is to touch our hearts and spirits in such a way that across time and space we link hands and spirits with those who have traveled onward, and from this communion draw renewed faith to press forward the work of building a better world.

Archibald MacLeish penned these lines in the darkest hours of World War II. He tells what a memorial hour should really be. This poem is called The Young Dead Soldiers.

"The young dead soldiers do not speak.
Nevertheless they are heard in the still houses.
(Who has not heard them?)
They say,
We were young. We have died. Remember us.
They say,
We have done what we could
But until it is finished it is not done.
They say,
We have given our lives
But until it is finished no one can know what our lives gave.
They say,
Our deaths are not ours,
They are yours,
They will mean what you make them.
They say,
Whether our lives and our deaths were for peace and a new hope
Or for nothing
We cannot say.
It is you who must say this.
They say,
We leave you our deaths,
Give them their meaning,

Give them an end to the war and a true peace.
Give them victory that ends the war and a peace afterwards,
Give them their meaning.
We were young, they say.
We have died.
Remember us."

We do remember the young dead soldiers at this hour. We can best commemorate their sacrifice by rekindling the torch of peace they died to keep aflame. Our honored dead lie buried on the far shores because they thought peace could be won by victory. Today we know that peace can be won only by and through peace itself. Peace is not just the absence of war. Peace is the presence of justice, security, and freedom operating in a world so released from anxieties, so freed from fear that "every man can sit under his own vine and fig tree with none to make him afraid." Peace can be won no less than war. But peace is harder to win than war. Wars are won in days, weeks, months, campaigns, deployment, reconnaissance, advance—these are the strategies of war. But peace can be won only in years, decades, generations.

We may not know as much about winning peace as we do about winning wars. The world is much better at wars. We train our admirals and generals much more thoroughly than our statesmen. Somebody usually wins a war with a victory, but nobody seems to win a peace. As little as we do know about the problem of peace, this much seems sure: Peace cannot grow and prosper on an empty stomach—on illiteracy, rickets, starvation, or disease. General Marshall, when he spoke at Harvard University on June 5, 1947, as then Secretary of State, may have uttered the wisest prescription in our time for peace. "Our policy," he said, "is not directed against any country or doctrine, but against hunger, poverty, and desperation, and nothing else." Thoughtful people have come to understand that hunger, poverty, disease and, ignorance are the basic causes of human unhappiness, the basic factors that move men to violence, revolution, and war. The underprivileged peoples of the world, particularly in Asia, have until recently accepted their lot like patient beasts of burden, but now they are rebelling because they clearly see that their suffering is due to oppression, to exploitation, materialism, colonialism, and not to any immutable fate assigned to them by a divine being. The point 4 policy of the United States, therefore, in sending technical aid and assistance to underprivileged peoples of the world should be applauded and commended as a step toward removing the causes of war, for wars are made in the minds of men.

So many people these days are willing to write off the United Nations as useless. Even its stanchest supporters at San Francisco, celebrating the 10th anniversary of the founding of the United Nations Organization, could not claim to be entirely pleased with its history, but its bitterest critics must admit that the effort to establish a meeting place with a resolving of differences, and for the nations of the world to nurture the growth of international law, to encourage the development of a world-minded attitude, a world-minded consciousness on the part of the great and the small, is all worth the struggle. No infant organization can be expected to lead to full maturity overnight. Bernard Baruch's wise warning comes back to us: "We must embrace international cooperation or international disintegration." Until a better instrument for world cooperation is forged, the United Nations is our best evidence of a will toward world community.

Grave weaknesses there may be in the U. N., and these must be removed as speedily as possible, but to secede from the U. N. because Russia has abused the veto, or because the Security Council may be helpless at times, is to throw away a potential for good, and to be left with empty hands. America has done much for the United Nations, but not enough. We may have contributed more in terms of dollars and cents than any other nation, but still our share is but a paltry bit in our multibillion dollar budget. What I am saying, therefore, is that ultimately the United Nations will have to play a larger role in winning the peace. There is no other avenue yet built. We of the American Legion ought to support the U. N. so that it can become a broad highway over which nations can travel to and fro, a viable artery of communications from which will flow greater understanding of friends and greater tolerance of foes.

We of the American Legion have long been concerned with the issue of communism. We have said over and over again in statements and resolutions that America must stop communism. But how are we going to stop communism? With guns? You cannot shoot communism with a gun. Communism is an idea, it is a program; it is a way of rescuing mankind from the ghastly misery in which most of it now lives. I say that the only way to stop communism is to offer the one world in which we all live a better solution to the real problem of human misery than communism can offer. I believe that democracy has a better answer than communism. Russia is not all that stands between mankind and a stable peace. Neither containment or appeasement will win the peace. Our only chance is to do something about the real issues of human misery. That is the proper place to begin and the problem to lick.

Some people naively think that Russia is all that stands between mankind and a stable peace. Why, if all the Russians in the world obligingly died today, if all the Communists, whether in Russia or China, or in our fifth column, were to commit suicide tomorrow, the world revolution for equality would not stop. Backward peoples in Asia and Africa and elsewhere are not only sick and hungry and desperate, but they now have discovered how modern science and modern communication, can break down the walls that have separated them from civilization. They now know that their hunger and their sickness and their misery are unnecessary. These backward peoples are in a state of ferment. They are in motion, fighting and insisting on the right to eat, the right to live. So to think that we can get a stable world by frightening or defeating Russia is naive. There is much more to building a secure foundation for a just and equitable society than merely scaring Russia or rattling new atomic sabers against them.

More than ever before, therefore, this memorial hour is a time for solemn thanksgiving. Guns have at least been silenced in Korea, the smoke of artillery has been lifted in Indochina, the rugged terrain of Asia has been left gutted but quiet. Our American soldiers, sailors, and airmen no longer move in deadly peril of Communist shells. For parents and loved ones at home the clock of human waiting no longer ticks, waiting for the ever-dreaded telegram of death. Yet there is no victory nor even peace—only gratitude that cease-fire orders have been signed and the chance for a just and enduring peace settlement has been won.

In Asia, in Europe, in the Middle East lies the grim task of converting the present armed truce—that is all it is, an armed truce—into a peace worthy of the name. Unless the diplomats and treatymakers succeed all else fails. Resumption of hostilities would solve nothing that negotiations cannot do better. Mankind knows, yet too often forgets, that wars inevitably create more problems than they resolve.

The Communists have at last learned in Korea and Indochina that the free world will not stand idly by in the presence of unbridled aggression. We Americans have also learned at terrific cost that Russia can alternate with lightning speed between cooing softly like a dove and striking hard like a poison rattlesnake. At last we know that Russia's tactics may change while her global strategy for world domination remains fixed. Even though there is now a New Look at the summit as a result of the conferences in Geneva, we should not be deceived by any soft talk from the Kremlin. Right now, Russia needs peace probably even more than does America. The death of Stalin and the consequent struggle for political power among the successors, including the liquidation of Beria, have laid bare the inner convulsion now going on behind the Iron Curtain. Russia needs time for her new dictators to fight it out among themselves and see who will emerge with the mantle of Lenin and Stalin. Then the winner and new champion must consolidate his position, banish his enemies, and solidify his tenuous reign of terror.

So America has a little time—a breather, but it is so little time. We can fritter away this time of decision or we can put it to good advantage. Which will it be? Stockpiling war material is not the only way to strengthen our security. We need to stockpile peace material. We need spiritual rearmament no less than military rearmament. We need defense and depth to toughen our moral fiber and remember the "courage and honor, the hope and pride, and compassion and pity and sacrifice which have been the glory of man's past."

At the very time of danger from without, our country also faces a danger from within. Reaction is on the march. Loud voices of political opportunists seek to silence the lips of clergymen, educators, writers, or anyone else who dares to stand up and be counted for freedom. Brainwashing is becoming stylish. We of the American Legion ought to stop and realize that the freedom we have defended with force can be subverted even in the name of freedom. Smear tactics, intimidations, guilt by association, half-truths and whole distortions have become a straitjacket of thought control. The whole world is watching America now to see whether we practice what we preach about freedom and democracy. The American Legion ought to make sure that in the name of Americanism no strong-arm gaulieters or vigilantes try to usurp the constitutional liberties vouchsafed to every citizen of America regardless of race, color, or creed.

A great debate on foreign policy is going on in this country; one that is not confined to the halls of Congress. It rests on responsible citizens everywhere. Unless we are willing to rise to our full stature and resume a personal responsibility for the decisions of peace, we are little better than sheep being led to the slaughter. Peace can be won! Not will be won, but can be won—if we lick the problem of human misery, if we summon the best brains, the finest idealism, the most inspired leadership, the most sacrificial living ever dreamed of, if we live up to the best that American freedom demands of us. Time runs on but we are still free to remember, as Herbert Agar suggested a few years ago, that now may be the last chance for the white race to join the human race as an equal. Stringfellow Barr said, "Let's join the human race."

The future alone will tell how late the hour is for civilization's last chance. It may be later than we think, if not nearly as late as we fear, for until the hour of doom strikes and all hope vanishes, every man and woman must work at the task of waging peace. More than this we cannot do. Less than this we do not dare. We of the American Legion must realize that negative anticommunism is not enough. We must settle down to the day-to-day, undramatic task of building a bulwark against war and communism by

sharing food, health, education, and freedom with all. We must become world-minded Americans, and see to it that our Nation lives up to the responsibilities which two World Wars have thrust upon our country. We must rouse ourselves from the winter of defeatism and pessimism, that perennial war is inevitable, and find a springtime of hope for man. The Voice of America must echo around the world rekindling the old hope of humanity for peace and freedom.

This memorial hour, therefore, reminds us that man's ability to build a democratic and peaceful world has not yet equalled his capacity for heroism and self-sacrifice, and that consecration and devotion to Christian and Jewish ideals have to be constantly renewed and reaffirmed. America must prove worthy of the sacrifices of its citizens who gave up their lives in time of war in order to build a better world. Americans in service, whether they be Negro or white, Catholic, Protestant or Jewish, now wear the uniform of our country proudly. They must not come back home to a country of discrimination and violation of civil rights. Every man, regardless of race, color, or creed is entitled to freedom of speech, freedom of religion, freedom of education, freedom of employment. We in the American Legion must see that all Americans, regardless of differences among us, must live, fight, and work together for a world democratic society. This memorial hour will have been in vain unless we build a kind of world in which men everywhere shall be free, in which "nation shall not lift up sword against nation, neither shall they learn war any more."

Tragically enough we have learned how to die together. Now the time has come when we must learn to live together—as Americans, as brothers, as Christians and Jews, whites and Negroes, united in the common cause of liberty and justice for all, God and country. Then we shall indeed understand the meaning of ancient scriptures, where it was written with profound wisdom, "Behold, how good and how pleasant it is for brethren to dwell together in unity."

Privilege and Responsibility

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Monday, January 9, 1956

Mr. SCHOEPPEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Privilege and Responsibility," published in the Wall Street Journal of December 9, 1955.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

Mr. Henry Ford, whose family's fortune is responsible for the Fund for the Republic, has now joined the ranks of those who think some of its actions have been "dubious in character and inevitably have led to charges of poor judgment."

It is not necessary to enter the argument on the merits of the Fund for the Republic to see that Mr. Ford's forthright explanation of his own position explains also one of the chief reasons why the whole question of these funds and foundations has become such a matter of public concern.

Mr. Ford says that although this fund was created from Ford funds he has no legal right whatsoever to intervene in its affairs. He writes:

"Because the Fund for the Republic was established as a completely independent organization, neither I nor any of the other trustees of the (Ford) Foundation has a voice in the fund's activities or projects. We have no control over the selection of personnel for the fund's staff. * * * These (original) directors were given the authority to select other directors and their successors without reference to us. They * * * have carried out their program on their own responsibility."

So here are a group of men who have been handed $15 million to spend in the Ford name for political and educational purposes without being accountable in any way to anyone. They are not subject to recall or referendum. They appoint their own successors. They could, if they chose, adopt projects to educate for communism, fascism or whatever fancy struck their heads. And no one could say them nay.

Of course no one could say nay either if Mr. Hutchins, the Fund's president, and the other individuals were spending money out of their own pockets to propagandize whatever views they wished. But as it is the money these men spend is not wholly private. This is a tax-free agency and to that extent receives both subsidy and privilege from the body politic.

And that is the crux of the matter. All these funds, foundations or what-you-call-them have a quasi-public character. And it is hardly surprising that the public is concerned if they seem to have privilege without commensurate responsibility.

Here perhaps someone will say, "Yes, but we have had tax-free foundations for years without public controversy. Why all the sudden outcry?"

The difference, we think, is that the traditional tax-free foundations did not invade the political arena. People might think the Carnegie or Rockefeller Foundations were wasting some of their money but they did not fear they were trying to use tax-free money to propagandize social or political viewpoints. Their political independence was never challenged because they did not deal primarily in political questions.

Today there are many organizations like the Fund for the Republic, though varying in size and political viewpoint, which seem to be using the privileges granted by society to influence the character of society. It is precisely because they have chosen to enter the political arena that their status has become a political question.

And the questioning is inevitably intensified when, as here, the men exercising the power of these privileged and subsidized funds are answerable to nobody at all.

Mr. Ford observes that "no public trust can expect to fulfill its responsibilities if it does not respond to intelligent and constructive public criticism."

And he might have added that in the long run if the public does not think these institutions live up to their responsibilities then the public will in time take away their privileges.

Senator Lyndon B. Johnson, of Texas

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, January 9, 1956

Mr. MANSFIELD. Mr. President, we are delighted that the majority leader has returned to his place in the Senate. During his absence from the Senate the Washington Evening Star of December 14, 1955, carried an editorial entitled "Moderate Man."

I ask unanimous consent that the editorial, which I believe sums up the feeling of both Republicans and Democrats, be printed in the Appendix of the RECORD. We are all happy that our distinguished leader is back with us, and we know that with him at the helm, we are in good hands.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

In its issue of June 27, 1955, Newsweek magazine said this of Majority Leader LYNDON JOHNSON:

"These days JOHNSON throws everything he has into the leadership job—the stamina of his 200-pound 6-foot, 3-inch physique, the political experience and his persuasive gifts. He ordinarily works through the evening with a staff which keeps him well briefed on legislative issues as they arise and on the quirks of Senators immediately concerned with them. He accepts no social engagements and spends what little time off he has with his wife and their two young daughters."

Five days later the dynamic Texan was cut down by a severe heart attack. It looked for a while as though his active career in politics was over.

But Senator JOHNSON has won his battle. This week saw his temporary return to Washington for a legislative conference with the President, and it was good to have him with us again. For the esteem in which Senator JOHNSON is so widely held goes beyond considerations of personal friendship and respect. In his own words, he is a moderate man, a man to whom moderation means "tolerance—a failure to embrace extremes, a willingness to listen to the viewpoint of others, and learn." Certainly there is no necessity to dwell upon the need for such a man, especially when he holds a place of such high importance on our political stage.

The news reports of the White House meeting do not tell us what Senator JOHNSON said to the President, or what the President said to Senator JOHNSON. Nor do we need to know in order to be certain of one thing. These men have shared an experience which tends to put things in proper perspective. The petty triumphs of partisan politics cannot seem of great importance to one who has returned from the dark valley which they have visited. We may be sure that the President and majority leader, though of opposing political faiths, will strive for the common good as they see it in the days ahead. And for that we may be truly thankful.

The Late Vera Buchanan

SPEECH
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 3, 1956

Mr. ROONEY. Mr. Speaker, I know all our hearts have been saddened by the untimely passing of our dear friend and distinguished colleague, the Honorable VERA BUCHANAN, of Pennsylvania. It is with deep emotion and a feeling of great sorrow that I pay brief, but nonetheless sincere tribute to the life and character and public service of such a noble lady.

We know the valiant fight she made during her illness and her courageous

efforts to carry on with the duties to which she had dedicated herself in this body. As a member of the House Banking and Currency Committee she was a considerable influence in securing the enactment of legislative proposals beneficial to the people of her district, State, and Nation.

VERA BUCHANAN was a most sincere and conscientious legislator who capably followed the footsteps of her late husband, my good friend, Frank Buchanan, whose memory I shall always cherish.

VERA was always gracious and charming and endeared herself to her host of friends and constituents. I shall always remember with fond recollection her appearance at the third assembly district Democratic organization reception and ball, held last May in my congressional district in Brooklyn. At that time she was in New York with a group of congressional friends on a tour of the city and it was a pleasant surprise when she took the time on such a short trip to come over to Brooklyn and honor us with her presence.

I am sure that I speak not only for myself but for all the Members of this House and her legion of friends when I say that her memory will linger in our hearts forever. My prayer is that her two lovely daughters will be consoled by the fact that her life was dedicated to fulfilling her role as a conscientious mother and carrying on with the fight for liberal and democratic principles to which her late husband had devoted his life. Her daughters and their families have my deepest sympathy in their great loss.

Pay for United States Executives

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, January 9, 1956

Mr. MANSFIELD. Mr. President, the question of pay or lack of pay for those working in the higher echelons of the Government is a question deserving immediate attention. Congress has granted pay raises to practically every other segment of our Federal personnel, but so far has held up increases in pay for top executives in the executive departments. It is good to know that the President in his state of the Union message approved a raise for such employees. They have not been given a raise since 1949.

It is my understanding that a bill providing for such pay raises has passed the House. It is my hope that before long the Senate will pass such a bill.

I ask unanimous consent that a news article on the subject, written by Jerry Kluttz, which appeared in a recent edition of the Washington Post and Times Herald, be printed in the RECORD. It is worth our serious consideration.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES PAY FOR EXECUTIVES UNEQUAL, DISCRIMINATORY

(By Jerry Kluttz)

Uncle Sam pays his top executives under a patchwork system that is shot full of inequalities and outright discriminations.

No major business would dream of using this system to fix the salaries of its leaders for the very simple reason that it would be poor business to do so. And the Government is big business—the biggest business—whether we like it or not.

Congress fixes the salaries of the executives in the three branches of our Government—executive, legislative, and judicial.

The House pays its parliamentarian $20,500 a year and his assistant gets $16,500. In contrast, the salary of the Senate parliamentarian, an equally important position, is a mere $14,800.

The legislative counsel of the House is paid $16,125. This compares to the $15,500 salary of his counterpart, the Senate legislative counsel.

Only one employee of each Senate committee may be paid a $14,800 annual salary. In the House, there is no limit on the number of committee staff members who can be paid $14,800 salaries, the maximum.

The congressional system for setting the salaries of its executives could be used to cover up the actual salaries paid to legislative employees.

For example, the maximum that can be paid a committee executive is $14,800 but no where in the congressional salary law does that figure appear. The amount used in the law is $8,820.

It takes an alert CPA and a lawyer to figure out how an $8,820 "basic" salary can be made into a $14,800 "gross" salary, but anyway, that's the system.

It should come as no surprise to find wide disparities and rank discriminations in the pay of executives in the executive branch.

It isn't generally realized, but an assistant district attorney can be paid more than most "little Cabinet" members of most Federal commissions and boards.

The top salary that can be paid to an assistant district attorney is $16,000 compared to $15,000 for most "little Cabinet" and commission members.

The $20,000 top salary that can be paid a district attorney places him close to the top of the Federal structure, salarywise, though his job, important as it is, doesn't compare with the heavy responsibilities of others in Government that pay substantially less.

The Commissioner of Internal Revenue, who is responsible for collecting the billions of Uncle Sam and supervises 54,000 employees, is paid $15,000, less than that of an assistant district attorney.

Small Business Administration rates as a minor agency. Yet its Administrator is paid $17,500. Also, SBA has three $15,000 deputies.

A full-time referee in bankruptcy can be paid $15,000, the same wage paid the heads of Civil Aeronautics Administration, Rural Electrification Administration, Government Printing Office, the Library of Congress, and numerous others.

The deputies and assistants in most of those and in other agencies are paid $14,800, the top classified salary. They have little financial incentive to be promoted to the boss' job for an insignificant increase of $200 a year.

John Foster Dulles is the Secretary of State, and as such, he's the No. 1 man in his department—but not according to the pay scale set by Congress. He's paid $22,500 a year; he appoints chiefs of foreign missions who report to him and who are paid $25,000 a year.

In numerous other instances in the executive branch the boss is paid either the same or less than an underling.

Assistant Postmaster General Norman Abrams is charged with supervising the Nation's 38,000 postmasters. However, several big city postmasters are paid more than his $15,000 salary.

It isn't unusual to find a general counsel or a budget officer in a Federal agency who is paid as much or more than the assistant secretaries.

Attorney General Herbert Brownell has been uniquely successful in persuading Congress to raise the salaries of his top officials. As a result, the top-bracket Justice salary scale is superior to that of any other Federal agency.

The Deputy Attorney General is paid $21,000, which is tops for any No. 2 Cabinet job; the Solicitor General is paid $20,500, and each Assistant Attorney General is paid $20,000 which is $5,000 more than most other "little Cabinet" members are paid.

Also, the Administrative Assistant Attorney General is paid $17,500 and it is $2,500 more than similar positions elsewhere in Government.

The House passed a bill last summer to raise the salaries of many Federal executives and to lift the $14,800 ceiling on classified salaries to $16,000. The bill is pending in the Senate.

In his State of the Union message, the President again urged the Congress to approve a bill to raise the salaries of Federal executives, the only group in Government which hasn't been given a general increase in salaries since 1949.

United States Position on Disarmament

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, January 9, 1956

Mr. LEHMAN. Mr. President, on October 23, 1955, the Sunday editorial section of the New York Times carried a most cogent and thought-provoking column by the eminent journalist, Mr. James Reston. That column dealt with the United States position on disarmament, and commented at some length on the priority given to propaganda over diplomacy in this vital area.

I ask unanimous consent that this revealing discussion of the situation by Mr. Reston, which is as true today as it was when he wrote it 2 months ago, be printed in the appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHY UNITED STATES DISARMAMENT PLAN ISN'T WORKING

(By James Reston)

WASHINGTON, October 22.—The United States is now engaged in the most ambitious search for a workable arms limitation program in the centuries-old history of this subject.

It has mobilized committees in the main Government departments, interdepartmental committees, interallied committees and committes of distinguished private citizens, and the hope now is that the work of all these organizations will be brought together into some kind of a Government plan late this year or early next.

Meanwhile Harold E. Stassen, the President's disarmament assistant, is running around the country complaining that the Russians are not accepting President Eisenhower's aerial inspection plan, and saying things about that plan that mislead nobody but the American people.

"President Eisenhower's proposal," he told the southern governors at Point Clear, Ala., this week, "would provide against great surprise attack, whether by nuclear or conventional means."

A MISLEADING STATEMENT

There is some truth in this, but not much. The President's plan provides for an exchange of military blueprints and for the right of the United States and the U. S. S. R. to fly over and inspect one another's territory, taking detailed aerial photographs if they choose.

The plan was limited to the territory of the United States and the Soviet Union. It did not cover our allies or the Soviet allies. It would not give the United States authority to fly over or inspect Soviet bases in the territory of the Eastern European satellites or permit the Soviet fliers to check what was going on in our bases in Germany, France, the United Kingdom, Spain, North Africa, Turkey, Pakistan, the Philippines, or Japan.

The Russians could accept the Eisenhower plan tomorrow and still be in a position—assuming they had the planes and the bombs—to launch a "great surprise attack" against the United States from Eastern Europe and against the United States bases in Japan from Communist China.

Similarly, their planes could be circling over the Air Force's strategic command in Nebraska and over every other bomber base in the United States this weekend, and this would not assure the Soviet Union against a massive surprise attack from United States bases in other countries or from United States atom-bomb carrying ships at sea.

Mr. Stassen knows this. He knows the Russians know it and have been asking him about it for weeks. He also knows that the Eisenhower plan will not be accepted or even carefully explored until the rest of our disarmament studies are complete. Yet he runs about the country like a middle western Dr. Coué, saying every day and every way we are getting nearer and nearer a disarmament agreement with the Russians.

As usual it is not what the United States does but what the United States says that is objectionable. Nobody blames the United States for taking its time to study the disarmament problem. A mistake in this field, a careless acceptance of phony Russian disarmament plans or a hastily drafted American plan produced in the glow of the Geneva spirit could place the whole Western World in jeopardy. What our own allies blame us for is for pressing everybody to accept the Eisenhower plan as a gateway to disarmament when we are not ready to say what is beyond the gateway.

Everybody, of course, wants to get started, but everybody has his own "first step" or "gateway." For example, the Russians want us to start by agreeing not to use atomic bombs and to limit armies to specific levels. The United States very properly rejects this pending a study of what is beyond the Russian "gateway."

A TIME FOR PATIENCE

Consequently, very little can be expected out of the discussions of disarmament at the United Nations or the negotiations on this subject by the Big Four foreign ministers at Geneva starting next week unless the United States completes its mammoth exploration of the problem and produces a plan.

The Russians are doing precisely what we are doing. They are waiting to see the whole of the American disarmament plan before accepting a part of it, just as we are waiting to study all aspects of their proposals before committing ourselves to any part of theirs.

Meanwhile, the sensible thing to do is to "pipe down" until the studies are complete on both sides and everybody is prepared to negotiate. Mr. Stassen and Ambassador Lodge at the U. N. could take this view without any damage to the United States position.

At no time since the start of the cold war has any country got so much propaganda mileage out of an idea as the United States has got out of the aerial inspection proposal, but the proposal is full of holes as it now stands, and the more Mr. Stassen and Ambassador Lodge agitate for its acceptance, the more they will expose its practical weaknesses, and jeopardize its ultimate acceptance.

Sovietizing Central Asia

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, January 9, 1956

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD a letter to the editor of the New York Times, dated December 26, 1955, by Hon. Robert F. Kennedy, chief counsel of the Senate Permanent Subcommittee on Investigations. The letter appeared in the January 2, 1956, issue of the New York Times. The letter is worth the attention of every Member of the Senate because it indicates quite plainly that the Soviet Union itself has been a colonizing power for many years, and in view of what the Soviet Union has been saying in south Asia and elsewhere it is an example of the pot calling the kettle black.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

SOVIETIZING CENTRAL ASIA—RELIGIOUS AND POLITICAL SUPPRESSION IN AREA CHARGED

(EDITOR'S NOTE.—The writer of the following letter is chief counsel of the Senate Permanent Subcommittee on Investigations. He recently accompanied Justice William Douglas on a trip through central Asia.)

To the EDITOR OF THE NEW YORK TIMES:

In your most commendable editorial of December 23 on Soviet colonialism you concentrated on Russian exploitation of the people of the Baltic States and Eastern Europe and passed over a most glaring example of Soviet colonialism—namely, in the 1,500,000 square miles which comprise the 5 republics of Soviet central Asia.

The Russians began their conquest of these ancient and independent States in the 1860's, but some sections remained free until they were finally subjugated by the Soviets during the 1920's. The people are of Turkish and Persian stock with a strong Mongolian strain. They have slanted eyes, high cheekbones, marked oriental dress, and are as different from the Russians as the Malayan is different from the Englishman, the Moroccan from the Frenchman.

The Communists, when they attack Western colonial policies, speak of broken promises, failure to grant local autonomy, segregation and the torture and murder of colonial peoples in order to subjugate them. By every one of these standards Soviet control of these areas qualifies as colonialism of a peculiarly harsh and intractable kind.

DISAPPEARANCE OF MOSQUES

The people of this region were promised by the Communists in 1917 that they could continue their religious practices. Yet in Bukhara, for example, where before the revolutian there were over 300 mosques and religious schools, now there exists, only 1 mosque, in a bad state of disrepair, and a single school that must serve the more than 10 million Moslems of the whole of central Asia. In Krasnovodsk, in Ashkhabad, with a population of 225,000, and in Stalinabad, with a population of 300,000, there are no mosques at all.

The people are denied local autonomy, for all sources of income, all means of livelihood, all social and political activity are controlled by Moscow.

The Communists practice rigorous segregation in this area, with separate school systems for the European Russian children and for the local children, and with the western Russian given more favored treatment in all areas of employment.

In order to promote their system against the wishes of the people during the 1920's and 1930's the Communists systematically eliminated one-third of the local Kazak population who desired to maintain their ancient ways. Based on statistics for the 1926 and 1939 census, published by the Soviets themselves, a million of these people disappeared from the Soviet Union.

ATTACK ON WEST'S POLICIES

The evils of the policies of certain western nations in colonial areas are now being widely publicized. The Soviets are directing all their agencies of propaganda toward the exploitation of these difficulties. And, yet, at the same time the Communists, with hardly any objection from us, have been permitted to wipe out the freedom of millions of people occupying an area larger than that of Western Europe.

It is, I believe, high time that we in the West understood and spotlighted in the United Nations and in our own propaganda throughout the world this aggression against freedom.

And, as the Soviets continue their "peaceful" encroachments in the Middle East, Afghanistan, and southeast Asia, using as their chief weapon eastern hostility to colonialism, it would be well if the peoples and leaders of these areas pondered what had been the fate of their brothers to the north, in Turkmenistan, Uzbekistan, Tadzhikistan, Kirghizia, and Kazakhstan.

ROBERT F. KENNEDY.

WASHINGTON, *December 26, 1955.*

Nation-States and the Nuclear Age

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, January 9, 1956

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article, published on yesterday, Sunday, January 8, in the Washington Post and Times Herald, and written by Mr. Herbert Elliston, formerly an editor of the Post, and now a special feature writer for that newspaper.

The article deals with a matter of tremendous importance, namely, a method for putting more life and vitality into our NATO organization, so as to hold together the NATO nations. In the article

Mr. Elliston discusses a resolution which I have submitted, asking that the President call a meeting of the NATO countries, in order to see whether they can agree upon further steps for unity and permanence.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NATION-STATES AND THE NUCLEAR AGE

(By Herbert Elliston)

It was one of the philosophers of ancient times, I believe, who said that the size of the state should be as broad as was necessary for defense. What is the Government limit required for our security in this thermonuclear age? It has obviously overleaped the national, most probably the continental, range—as obviously as in the case of the city-states of ancient Greece.

Science has shown that the security requirement for rulership is now as big as the planet. This is at the base of the advocacy of one or other form of world, or supranational, government; the safety of the "great globe itself" has become indistinguishable from the safety of the individuals upon it.

So, at the beginning of the New Year, as at the beginning of last year, I put in plug for the Senate resolution for an Atlantic exploratory convention standing in the name of ESTES KEFAUVER.

Pity for the resolution that this is election year, for it has influential backing both inside and outside the Senate. General Marshall is now for it, though he was cool toward the idea when he was Secretary of State. Out of office, Secretary Dulles spoke of the language of Atlantic unionism, though he now feels he has to be neutral. In any case, an election year is a drag upon any American initiative in world affairs on new lines corresponding with the swiftly moving times. Then there is the handicap that the man whose name heads the senatorial sponsorship is himself a presidential aspirant.

Nevertheless the necessity for an Atlantic convention (alongside, of course, the United Nations) continues to be sharpened with the clearer and clearer demonstration of the national insecurity prevailing amid the prospect of intercontinental missiles in the hands of national states responsible only to themselves.

You may say that, even if the convention were to lead to a supranational unity of the Atlantic nation-states, this would not necessarily preclude war. That is true enough. There will always be a danger of war—and big-scale war at that—so long as all nation-states have not bound themselves under a supranational authority. This is the logic of the spread of thermonuclear means and know-how—a spread that will eventually take in all the nation-states. As Ciano said in his memoirs, and Speer later at the Nuremberg trials: "Gone are the frontiers except in our minds."

However, there has to be a start somewhere in the quest for security in a new age which has left the nation-states as obsolete as the old city-state. Two world wars have already been the price we have paid for the nation-state system. Some historians would dispute this. Champions of the doctrine of free will, they insist that the people and their leaders were responsible for what happened. But it is legitimate, I think, to agree with this theory and at the same time to believe that the political framework in which at the time we were operating made the catastrophes almost impossible to avert. Interconnectedness of events is the law of history; otherwise there would be no such thing as an historical explanation of anything.

Note that the Kefauver resolution does not commit the sponsors to any particular sort of supranational government. Some of the supporters of the Kefauver resolution want a federation of Atlantic peoples, others a confederation, and still others would be content with a commonwealth which would strengthen and formalize the political ties of the constituent members. There is of course the North Atlantic Alliance. But NATO ties provide only a common strategy for military action against Russia—or do they? And otherwise merely for consultation. The organization looks more and more like an elaborate hoax giving the false impression that common policies on the part of the free world are in existence. It has lapsed into little more than the debating society that Senator JACKSON calls SEATO. Shadow boxing with the political challenge has indeed become the mode.

Personally, I would go much further than try to persuade the proposed convention to achieve a better coordination in diplomatic relations. The convention should focus the need for some pooling, some modification of national sovereignty so that our physical situation may have an adequate political counterpart. It should stir men's minds to get politically into the hydrogen world. Otherwise the bankruptcy of our foreign policy will be increasingly evident.

Veterans of Three Wars Guard Against Air Attack Near Custer National Monument

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, January 9, 1956

Mr. MANSFIELD. Mr. President, I ask unanimous consent that a news article appearing in the Billings (Mont.) Gazette of January 2, 1956, entitled "Vets of Three Wars Man Custer Lookout," be printed in the Appendix of the RECORD.

The people who are manning the ground observer post in the shadow of the Custer National Monument serve as an outstanding and patriotic reminder to our fellow citizens as to what the word "duty" implies. They are all a credit and an asset to our country and I commend them most highly for their continued active participation in insuring its security.

There being no objection, the news article was ordered to be printed in the RECORD, as follows:

VETS OF THREE WARS MAN CUSTER LOOKOUT

CROW AGENCY.—In the shadow of the Custer National Monument that stands as a reminder, a handful of men guard against enemy air attack.

On the small Montana hill, where Custer fought and died 80 years ago, the handful of men, who have fought for America in 3 wars, set up and operate a 24-hour a day ground observer post.

The organizer of the air defense organization is Maj. Edward S. Luce, retired superintendent of the Custer National Monument.

Luce served at one time with the 7th Cavalry Regiment, Custer's old outfit, and developed a keen interest in the general and his battle.

"The same thing could happen to this country that happened here on June 26–26, 1876," the major says. He added that adequate intelligence—or warning such as the GOC can provide—could perhaps have saved Custer and his men.

Full-time observers at the post, in addition to Major Luce, include Clarence T. Griep, a Marine from 1942–46, who lost a leg at Iwo Jima and still has 37 pieces of a land mine in him; Albert F. Jacobson, a World War II paratrooper who saw action on Luzon and Leyte; Don Rickey, Jr., a Navy machinists mate who participated in eight major naval engagements aboard the aircraft carrier *Enterprise;* Leland W. Georgen, who was with the Navy in Korea; Marion Terry, and Mrs. Evelyn Luce, chief observer at the post. All 7 live on the grounds and insure complete 24-hour coverage. Others who observe during working hours are Ray C. Davis, and Bruce Miller, both service veterans.

On a clear day it is possible to see at least 70 miles in some directions from the post.

"We can be sure they are always on the job," says Lt. Arnold Williams, filter center commander in Billings. "I am confident that enemy planes would not fly over the Custer Battlefield undetected as long as these people are on the job."

Elective Governor of Alaska

EXTENSION OF REMARKS
OF
HON. WILLIAM A. DAWSON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mr. DAWSON of Utah. Mr. Speaker, today I have introduced legislation to provide for an elective Governor and an elective Lieutenant Governor of Alaska. I have taken this action as a stanch supporter of full statehood for Alaska. My research has convinced me enactment of the legislation I introduced today would hasten, rather than delay, the day when Congress will finally recognize that the people of this vast and rich area are entitled to full citizenship rights—including the right to be represented in this Chamber.

This legislation is not being introduced as a substitute for statehood. There is no substitute for the full representative rights of the United States citizen. This measure is introduced as a step toward full statehood.

But this legislation is more than just a step toward full statehood. It fills an immediate administrative need of the Territory of Alaska. All issues of statehood aside, the present method of governing Alaska is outmoded and some rather serious administrative troubles are developing that this measure would correct.

An appointive governor was first provided for Alaska by an act of Congress in 1884. Since that time, there have been only two other measures enacted by Congress having any marked impact on Alaska's governmental setup. In 1906, Congress granted the Alaskan people the right to send an elected delegate to this House and in 1912 an act of Congress created the Territorial Legislature.

Congress has not enacted any legislation to add to Alaska's powers of self-government since 1912—44 years ago. This is a sorry record.

As a member of the House Interior Committee, I went to Alaska during adjournment and learned first hand of some of the problems Alaskans are having. Many of them could be solved by passage of this legislation.

The Governor of Alaska administers laws enacted by an elected legislature. But the Governor is responsible—not to the legislature, not to the electorate of Alaska—but to the President of the United States. Fortunately, because of the caliber of appointive governors, no serious conflicts have as yet occurred. But the potential is certainly there.

Knowing that they have no voice in the selection of their chief territorial executive, the people of Alaska, through their elected legislators, are reluctant to vest him with any authority over their affairs. This is understandable and is no reflection on the integrity of the present or past governors of Alaska.

As a consequence of this reluctance to give the governor authority to govern, there has now grown up in the Territory of Alaska a government by boards, and commissions, of which the governor is not even allowed to sit as a member. This system is creating all sorts of administrative difficulties, and I am confident it would cease to exist if the Alaskan people had a right to elect their own chief executive and it would never have come into being if this power had been given the Territory years ago when the complexities of government first showed it was needed.

The people of Alaska, I am sure, would not tolerate an unwieldly government by boards and commissions if they had the power to elect, and vote out, their own governor. This legislation is needed during the period when the fight for statehood is still going on. I hope you all can give it your support, regardless of your position on full statehood for Alaska.

Roy H. Glover Named Montana Man of the Year

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, January 9, 1956

Mr. MANSFIELD. Mr. President, Mr. Roy H. Glover, chairman of the board of directors for the Anaconda Co., was on January 2, 1956, designated as Montana's Man of the Year in a poll conducted by the United Press of Montana radio station owners and managers.

I think that honor is well merited, because Mr. Glover who was born in the State of Washington, received his education at the University of Oregon, and spent most of his life in Montana, is a distinguished citizen of our part of the country known as the Northwest. He has made many outstanding contributions to the betterment and welfare of Montana and its people and we are proud indeed that this additional honor has been conferred upon him.

I ask unanimous consent that the news story covering the announcement of the award which appeared in the Montana Standard, of Butte, Mont., on January 3, 1956, be printed in the Appendix of the RECORD.

There being no objection, the news article was ordered to be printed in the RECORD, as follows:

ROY H. GLOVER IS NAMED MONTANA MAN OF THE YEAR

HELENA.—Roy H. Glover, chairman, of the board of directors for the Anaconda Co., Monday was named Montana's Man of the Year in a United Press poll of Montana radio station owners and managers.

Glover was selected from more than a dozen top leaders in the fields of politics, industry, education, social, and other activities.

A native of Goldendale, Wash., Glover received his degree in law from the University of Oregon in 1916, practicing in Portland until he enlisted in the Army during World War I.

After his return from overseas duty, he located in Great Falls, starting as a law clerk in 1919. In the ensuing years, he became one of the State's leading attorneys. He was a member of the firm of Cooper, Stephenson, and Glover in Great Falls when he entered the Anaconda Co.'s legal department in Butte in 1943.

In 1945, he was appointed western general counsel for Anaconda and in the same year became general counsel for the Montana Power Co.

He was named vice president, general counsel and a director of the Anaconda Co. on October 12, 1951, moving his headquarters at that time from Butte to New York.

He has since spent considerable time in Chile in connection with Anaconda's large operations.

Chilean President Carlos Ibanez personally decorated Glover with the award of Knight Commander, Order of Merit of Bernardo O'Higgins, on April 6, 1955. The honor is one of the highest awards of Chile and was given for his valuable services to Chile.

Glover was elected chairman of the board of the Anaconda Co. on May 26, 1955, succeeding Cornelius F. Kelley. Mr. Kelley had announced his retirement earlier at the annual stockholders meeting in Anaconda.

While residing in Montana, Glover took an active part in civic affairs. His leadership was in constant demand for community projects.

Glover was interested in stockraising for many years and has maintained a summer home in the Sun River country in addition to his homes in Butte and New York.

Before becoming chairman of the board, he was vice president and general counsel of the parent Anaconda Co. and held the same titles with the subsidiary Chile Copper Co. and Chile Exploration Co.

He is a director of the First National City Bank of New York, the First Bank Stock Corp. of Minneapolis and other organizations. He is also a member of the American and Montana Bar Associations and of the Federal Power Bar Association.

For Aid With Strings

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mrs. ST. GEORGE. Mr. Speaker, the following article, For Aid With Strings, by Peter Meyer appeared in the last issue of the New Leader.

The article seems to me very worthy of consideration. Many of us are disturbed by the fact that in our policy we are soft to our enemies and ungenerous to our friends. We are an easy prey to blackmail in our foreign relations, and this may account for our unpopularity in many places today.

Let us help and reward our friends and keep our word to them, and let us stop worrying about what the Soviet Republics are doing for our enemies.

FOR AID WITH "STRINGS"—OUR ECONOMIC SUPPORT SHOULD BE GENEROUS AND UNSTINTING, BUT WE SHOULD REFUSE HELP TO NATIONS WHEN THEIR LEADERS GIVE COMFORT TO TOTALITARIANISM

(By Peter Meyer)

The diplomatic struggle between the free and Communist worlds has been marked in recent months by several highly paradoxical developments.

Take the repercussions which the recent Geneva Foreign Ministers' Conference has had in Germany: At Geneva the Western Powers acted as champions of Germany's basic national interests. They demanded German unity. The Soviet Union refused to allow it. They fought for the right of a united Germany to decide by free elections whether to ally itself with the West or the East, or remain neutral. The Soviet Union denied the German people this elementary freedom. The Western Powers came to Geneva supporting the basic goals of the German nation: unification and self-determination. The Communists came as blackmailers; they showed clearly that they would allow German unity only on terms which would condemn Germany to the fate of Czechoslovakia.

One would expect this to enhance the West's prestige and influence in Germany and destroy that of the Soviet Union. Yet, the opposite seems to be true. Never was there so much talk that Germany must negotiate independently with Moscow and make a deal behind her allies' backs. The Social Democrats are ready to give in to Soviet blackmail to the point of dropping the NATO alliance. Western chancelleries are trembling lest the Government parties follow this lead if something should happen to Chancellor Adenauer.

Take another example: The United States and all the democratic powers supported Japan's membership in the United Nations. The Soviet Union vetoed it. One would expect an outburst of indignation against the Kremlin in Japan. But, instead, the Japanese Socialists propose a resolution in Parliament blaming the United States. At the same time, correspondents report that the whole affair may strengthen Soviet influence in Japan and that the latter may have to yield to Soviet blackmail in the current peace-treaty negotiations.

Thus, the champions of German and Japanese interests are punished and their enemies rewarded. And nobody seems surprised.

Why is this so? Obviously, neither the Germans nor the Japanese have any great love for Russia or the Soviet system. They are merely being realistic. If they want something from the Soviet Union, even such an elementary right as national unity or representation in the United Nations, they have to pay for it, pay an immense price. On the other hand, if they want something from the United States, even something like economic and financial support which is not theirs by right, they can rely on a loud chorus demanding that such support be given with no strings attached.

This article seeks to make two points: First, in the worldwide struggle against totalitarian tyranny, America must be prepared to give liberal aid to her friends in this struggle, without pinching pennies or

extracting economic privileges for herself. Second, giving economic help to our enemies or their supporters is stupid, irresponsible, and immoral.

Every nation in the world has the right to self-determination and to freedom from foreign rule and oppression. We should support this right equally as regards Indochina, Tunisia and Morocco, or East Germany, Czechoslovakia, the Ukraine and Uzbekistan, or Goa and Kashmir. Every nation also has the right to decide freely how to organize its economic life and utilize its natural resources; so long as the decision is arrived at in a democratic way, we have to respect it.

But may we not modestly claim the same right for the people of the United States? This Nation does not live by exploiting colonies, and its income is essentially derived from its own resources and its own work. It has the right to decide how much of its wealth to give to whom and on what conditions. Unquestionably, we have a moral obligation to share some of our wealth with the unfortunate inhabitants of underdeveloped countries. But that obligation is matched by the no less forceful moral obligation of all who are free from totalitarian tyranny to defend freedom that it may not perish from the earth.

If India falls into Communist hands, the Indians will suffer and so will we. If America succumbs to Soviet power because of the betrayal of neutralists all over the world, the "neutral" countries will be quickly enslaved. Thus, the moral obligation is mutual. If a non-Communist government wants to barter the common interests of freedom for some economic favors from Khrushchev and Bulganin, or for their support in attacking another free country, America's answer should be: Not with our money, gentlemen. Such a government should not get a penny of United States aid.

One can, of course, argue that the right to self-determination includes the right to national suicide. But surely we are not obliged to cooperate in such a suicide. We must warn against it, offer our help if the suicidal policy is reversed, and withhold it, openly and clearly, if it is pursued. If the Afghan Government wants to put its neck in the Soviet noose in return for Soviet aid in its drive against Pakistan, let us tell them to beware. If the rulers of Egypt want to use Soviet arms to start an aggressive war in the Middle East, let us not force our economic and military aid on them. The high dam at Aswan is a meritorious enterprise and should be supported—on condition that Egypt stops flirting with the Soviets.

We must pay no heed to the threat that refusing to help will push the wavering governments deeper into the Soviet camp. What we are dealing with here is blackmail, and it never pays to give in to the blackmailer—it only increases his appetite. America does not have to fear competition between Soviet and American economic aid. If we really resolve to help our friends without penny-pinching we need not fear a comparison of the countries helped by us with those helped by the Kremlin.

George F. Kennan was right when he wrote, in Realities of American Foreign Policy, that favors habitually granted or unduly prolonged cease in time to be regarded by the recipients as favors and come to be regarded as rights. Then, of course, withdrawal of the favor becomes an injury to be resented even though the recipient may have had no actual right to the favor in the first place. Kennan went on to say that the policy of aid cannot be effective unless people feel that, while our favor is a possibility offering certain advantages to them, our disfavor is also a tangible possibility attended by certain disadvantages.

For decades the American Federation of Labor had the slogan, "Reward your friends and punish your enemies," and no liberal ever found anything wrong with this common-sense maxim. But apply it to international policies and the same people will tell you that the right policy is to offer the left cheek to every blackmailer who has just slapped your right one.

Proclaiming the principle of "no strings attached" only opens American policy to the reproach of hypocrisy. Since the need for help is immense and the means limited, America's enemies everywhere will claim that their country did not get enough, while another nation, more friendly to American policy, got more than it deserved. Even if the United States poured billions into India, the pro-Soviet intelligentsia would never stop complaining that the Pakistanis, who are ready to defend the subcontinent against Soviet invasion, received more help than the Indians, who do everything in their power to sabotage collective defense and to deliver Formosa and Vietnam to Communist slavery. So why not say clearly: Our help goes first to those governments which, in their own interests as well as those of other free nations, are ready to participate in common defense.

The only possible objection is that peoples should not be made to suffer for the policies of their governments. Philanthropic aid to the population of nonfriendly countries should not be excluded, provided it is distributed to the needy and under such controls that it cannot be misused by the governments (as UNRRA supplies often were in Communist-ruled countries). United States agricultural surpluses could certainly be used to great benefit in many places.

But many countries are in need of industrialization, electrification, mechanization of agriculture, greater efficiency in public administration, and consolidation of their armed forces. The resources are limited, and one must make a choice. South Korea, Vietnam, Pakistan, and Turkey have no less need of the benefits of civilization than countries whose leaders consider it the height of statesmanship to serve as impresarios for the Khrushchev-Bulganin circus.

If we cannot help everybody and must make a choice, let us establish an order of priorities. Those who are able and willing to participate in the common defense against totalitarian tyranny should certainly have first priority. Nations with democratic institutions which combine traditional neutrality with a firm resolution to defend themselves against attack—like Sweden or Switzerland—should be given help if they need it.

But governments which side with the totalitarians and help them, politically and diplomatically, to enslave other parts of the free world certainly cannot expect to receive American aid with no strings attached. The United States Government should greatly increase the scope of its foreign economic aid. But it should be used to drive home the point that it pays to defend freedom and does not pay to betray it.

How I Became America's 1955 Teacher of the Year

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, January 9, 1956

Mr. NEUBERGER. Mr. President, I ask unanmious consent to have printed in the Appendix of the RECORD a most illuminating article by Miss Margaret Perry of Monmouth, Oreg., from the December 1955, issue of Oregon Education, official monthly periodical of the Oregon Education Association. Miss Perry was honored in 1955 by being chosen as America's teacher of the year. Her article is entitled "This Is How I Became America's 1955 Teacher of Year." Her discussion should be of special interest to the Congress now, because we soon shall prepare and debate proposed legislation calling for some measure of Federal aid to education, and I trust it will be a generous and adequate measure. Some of that assistance, if it is provided, will help to hire and compensate teachers like Margaret Perry, who are charged with the great responsibility of preparing America's children for citizenship.

Miss Perry advocates higher standards of teacher training, and this goal can be attained only if teachers' colleges are ready for such a task, and if the profession of teaching itself offers sufficient material and cultural rewards to attract outstanding men and women to its banner.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THIS IS HOW I BECAME AMERICA'S 1955 TEACHER OF THE YEAR

(By Margaret Perry, supervising teacher, Oregon College of Education)

"Who dares to teach must never cease to learn."

This inscription, which is to be found above the entrance of the Monmouth Elementary School, has certainly been true for me. Its truth is guaranteed to any teacher who enjoys the daily association with boys and girls and fellow educators.

RURAL SCHOOL BEGINNINGS

Teaching is my career.

It was the achievement of a lifelong ambition when I began to teach in a rural school far out upon the Dakota prairies—40 miles from the nearest dry-goods store. For me this was no strange adventure because I had received my education in the similar rural schools of Tripp County and in the nearest high school in Winner, S. Dak.

Since these were the days of minimum requirements in teaching experience, a factor which is practically unknown today, I returned to my home town (Winner) to teach after I had secured this necessary experience. There were several interesting features about this return. I came back to my home town, back to become a faculty member with some of my former teachers and to work under a very understanding and professional superintendent who had been there when I was in high school.

I wish that I could pay proper tribute to that superintendent for the guidance and counsel which he has given to me during my life. I realize that I can never repay him but just hope that I can be an inspiration to some other teacher. Oregonians will be interested to know that this person is Superintendent J. W. Poynter, of the Hillsboro elementary schools.

For 10 years I taught in Winner in the intermediate and upper grades. I have pleasant memories of the many students who have been in my classes and I consider it a real privilege to meet them as I travel about the country. Students change so much. I have difficulty in recognizing some of them but teachers seem to go on forever. For this, I'm grateful, because there's no pleasure which quite compares to reminiscing with former students.

ON TO OREGON

These eventful and troublesome years passed. Grasshoppers, drought and crop

failure after crop failure didn't do much for teachers' salaries. I decided to apply in another school system which I considered to be an advancement. In getting together credentials, I contacted my former superintendent, Mr. Poynter, who unexpectedly offered me a position in the Hillsboro elementary schools. I was prompt to accept. This position brought me much happiness, many new friends, and a far better salary than I had ever known. I also had an opportunity to continue my education.

And so it was that I came to my present position in the laboratory school at the Oregon College of Education. I've long had convictions about programs of teacher education and have worked to the best of my ability towards their improvement. When the opportunity came to become a supervisor of teaching at the Oregon College of Education, I left Hillsboro with some hesitancy to enter upon this new venture.

STUDENT TEACHER WORK

Each new experience brings growth. My present position is most challenging because I work with children and with student teachers. The daily contact with the student teachers who are filled with ideas, energy and enthusiasm does something for me. I know that I am assisting in the preparation of several new teachers for the schools of this Nation each year and gain a feeling of added usefulness to our society. Many of these teachers remain in Oregon and I fairly burst with pride when I see them assuming responsible positions of educational leadership within our State.

My education was a long, slow and arduous process. I started to teach with a certificate based upon 2 years of preparation; 20 years later I received my master's degree from the University of Oregon. I have taught continuously, so the last 3 years of education were completed in 20 years of summers and evening sessions—a slow way to acquire a degree.

One of the important facets of my teaching has been my interest in higher standards of teacher preparation and the need for a competent teacher in every classroom.

ASSOCIATION ACTIVITY

I have always been an active and participating member of my State education association. In South Dakota, I can well remember the county institute when I was chosen to represent the county at the South Dakota Education Association. It was a momentous occasion. Throughout the years I have had many other memorable experiences, but one tends to remember first events longer than succeeding events. There is no thrill like a first thrill—my first trip across the United States, my first NEA, my first national appointment, my first visit to Edinburgh and Paris or my teacher of the year award.

In Oregon I had the good fortune to be elected vice president of the Department of Classroom Teachers and later served as president. I've worked on several State committees, am perhaps a veteran of the Teacher Education and Professional Standards Commission; served 2 years as coordinator of the Future Teachers of Oregon and am sponsor of the John Dewey chapter on the campus at the Oregon College of Education.

TEACHER OF THE YEAR

Why was I chosen McCall's fourth annual teacher of the year? In my opinion, there is no one specific reason but rather a constellation of favorable factors which contributed to my selection.

The teacher of the year is selected by McCall's in cooperation with the United States Office of Education. Nominations are submitted by the State superintendents at the invitation of Dr. Samuel M. Brownell, United States Commissioner of Education. The funds for the project come from McCall's which is doing this in an attempt to call attention to teaching as a career and in recognition of all the teachers of the Nation.

The United States Office of Education lists these criteria for the selection of teacher of the year: Sound professional education; successful teaching experience; personal qualities—skill in human relations, intellectual ability, emotional maturity, good health, community participation; being an active citizen and helping to make children better citizens; love of children, and wide cultural interests.

After I had been notified by the Oregon State Department of Education that I would represent the elementary teachers in Oregon, they told me that a staff member from the United States Office of Education would observe me in action.

Mrs. Adele Reed arrived one Monday morning in November 1954. There were three student teachers in the room, a few observers, parent conferences scheduled for late afternoon and evening, a visit to the blood bank. It was, in fact, one of those busy days when there wasn't an extra minute. But Mrs. Reed was a very warm and understanding individual who was able to make me feel very much at ease, so it was a pleasure to have her visit in my room and in our school.

It will always be a wonder to me to know how she could glean so much from casual observation and yet be able to relate in detail the method of room procedure, children's conversations and items on the bulletin board. (Her story appeared in the June 1955 issue of School Life.) When I took her to Salem, after the blood bank and before the evening parent conferences, I knew that I had had another first experience in learning to know Mrs. Reed, but I felt sure that this would be as far as I would proceed in the project.

Imagine my surprise when one morning in January Henry Ehrlich, the feature editor of McCall's, called Dr. William Wagner, my principal, and told him that he would be in Monmouth the next week to do the story. He arrived with a photographer, and they were in my room for 3 days—another first experience.

About the first week in April, McCall's called me from New York and told me that two of my students and I would be taken to Washington, D. C., and New York City as guests of McCall's. The students, Sue Mull and Dickie Peterson, were selected by their classmates.

TRIP TO WASHINGTON

On May 17 we left Salem by plane and were met at the Washington airport by Frank Hogan, manager of public relations for McCall's. From that time until he put us on the plane in New York to return to Monmouth, we were officially escorted by various McCall's representatives.

In Washington, D. C., we occupied a suite of rooms at the Hay-Adams Hotel, just across from the White House. For three days we enjoyed limousine service and other luxuries unknown to the three of us.

During the first two days a McCall's photographer recorded our activities (see the September issue of the magazine.) Our first official visit was made to Mt. Vernon. The chief guide was waiting to welcome our party and gave us a very special tour of the estate. It was a beautiful day; the sun's rays shone upon the Potomac; the rose gardens, which are replicas of those in Washington's time, were in full bloom.

In the mansion, ropes were cast aside as we walked into each of the rooms, special permission was given to us to climb into the cupola, and our guide allowed us to mount Washington's coach which stands in the old coach house.

VISITS WITH CONGRESSMEN

Mrs. Reed, the person who had written the original story on me—to whom I am very much indebted for the final selection, and Christine Sadler, Washington editor of McCall's, accompanied us to have lunch with Congressman EDITH GREEN in the House Restaurant. Edith arranged a special tour of the White House for us, gave us passes for the Bureau of Engraving, took us through the House of Representatives and gave us unlimited time from her busy schedule. We were impressed by the cordial welcome and genuine interest which was evidenced by our Senators and Congresswoman.

We visited with Congressman WALTER NORBLAD from our own district who had souvenirs for the children and a photographer to take our pictures for the local papers. Senator WAYNE MORSE displayed many of his trophies, pictures of his famous horses and discussed the rather uncomplimentary cartoons which adorn the walls of his office.

We were entertained at dinner on the Washington roof where the panorama of the city made us understand why Washington is our most beautiful city and made it rather easy for us to identify monuments and buildings when we viewed them later on.

PUPILS WERE PERFECT

Jane Wheeler, a young employee at McCall's, came to Washington to share in the events and to be a hostess for Sue and Dickie in the evenings. I was taken to an informal garden party where I met Otis Weise, editor and publisher of the magazine. This was the first time that he had come to Washington for the teacher of the year.

Our trip was another first, because this was the first time McCall's had taken children from a teacher's room. The various representatives who visited my room found my students stimulating and alert. I'm sure that McCall's had no regret about the decision because the children were adorable. I knew that they were outstanding in the classroom, but it was my first experience in living with them for 24-hour periods. At all times I was proud of them. My only regret is that all 35 pupils in my room could not have had the experience because I could never have been chosen without their assistance.

PRESIDENT EISENHOWER GREETS

Thursday, May 19, was the day. Not only was the June issue of McCall's released on the newstands, but we arrived at the White House at 9 o'clock in the morning to be received by President Eisenhower. Our identifications were checked at the gate, and all of us were approved except our photographer who had to enter via the regular press entrance. Commissioner Brownell presented us to the President. Our official McCall's representatives and Dr. Edgar Fuller, executive secretary of the Chief State School Officers, accompanied us in our White House visit. The President was very jovial, seemed pleased to visit with us, talked about the importance of education and teachers, told of his interest in Teachers College when he was president of Columbia University, gave Sue and Dickie a pen, gave us an autographed picture for our fourth-grade class, and dismissed us through his special rose garden—which is unusual for visitors.

Immediately afterwards we went to the Health, Education, and Welfare building for a meeting with officials in the United States Office of Education. Mrs. Reed produced a poem which she had taken from Sue's file when she visited our classroom. Sue read the poem at the staff meeting.

NEW NEA BUILDING

Our next stop was the new wing of the National Education Association Building. I was certainly among old friends because I serve as NEA director for Oregon. This, however, was the first time that I had seen the first wing of our great new educational center in Washington.

We hurried to the Senate dining room to have lunch with Senator RICHARD NEUBERGER

who had reserved special tables for our party. He also told us that he had made a speech about us on the floor of the Senate (CONGRESSIONAL RECORD, May 19, 1955, p. 5617). On the following day we returned to the Senate recording room and cut a tape with him. At this time he presented Sue and Dickie an autographed copy of his Landmark book, The Lewis and Clark Expedition, which was to be placed in the Monmouth School library.

For some reason Vice President NIXON, appointments had got behind schedule. We found a receptionist harassed by the appointments which must precede an official engagement. However, the Vice President took time to meet and visit with us in a leisurely fashion. He presented the scroll which named me as the 1955 teacher of the year. In addition, I was given a scroll for the Monmouth Elementary School "which made it possible for Margaret Perry to receive the teacher of the year award." Sue and Dickie received a pen and Dickie was given an autographed picture for the fourth grade class.

In the evening the adults heard T. S. Eliot who read from his poems with a few excerpts from his plays. He had real audience appeal and was extremely witty and clever.

A FREE DAY

One day in Washington was left free for us. We had some previous commitments but there was time to walk up the marble steps at Lincoln Memorial and read together the inspiring Gettysburg Address, to see our money in process at the Bureau of Engraving, to view the new Marine Iwo Jima Statue, to go on our special tour of the White House, to see the changing of the guard at Arlington, to marvel at the bravery of the Wright Brothers and Lindbergh when we saw their planes at the Smithsonian, and to drive briefly through the Washington zoo.

TO NEW YORK

On Armed Forces Day we left Washington during the parade and arrived in New York City in the midst of another parade. We came into LaGuardia Airport and then located our suite of rooms in the Waldorf Astoria—one of the most luxurious, famous, and biggest hotels in the world.

Sue and Dickie went to see the United Nations Building. They also visited the world's highest structure and New York's most famous and most visited—the Empire State Buildfng. At the 86th floor there was some controversy—Sue had gone high enough but Dickie wanted to go on to the top. They want to the top. It is said that 15 million people live within sight of this building—one-tenth of our entire population.

NEW YORK AT NIGHT

After dinner at the Hotel Astor, we joined the throng in the nightly promenade along the great white way, that area between 42d and 47th Streets which is divided by Broadway. The array of apparel stores, windows filled with tempting foods, street vendors and hawkers selling souvenirs and flowers, the theaters, the neon signs, the news traveling around the Times Building, and the cigarette ad blowing huge smoke rings were indeed a strange world to two youngsters from Monmouth.

Frank Hogan and I attended the theater to see a popular Broadway musical while Sue and Dickie were entertained by the Waldorf-Astoria baby sitter, a n'er-to-be-forgotten person.

Sue, Dickie, and I made a quick trip out to Fifth Avenue on Sunday morning to see the throngs of people as they came to and from church at St. Patrick's Cathedral. Later, Tony Salisbury from McCall's, called for us in his shiny convertible and took us for a close view of the Manhattan skyline. Our tour took us past Grant's Tomb, Columbia University, the Metropolitan Museum of Art, through Central Park, along the East River, through the Wall Street area and back to Rockefeller Center.

Tony, Sue, and I attended the stage show at Radio City Music Hall, and Dickie and Frank Hogan went to the Yankee Stadium to see the Yanks play the Baltimore Orioles. The Yankee pennant and the autographed baseball are the envy of every fourth-grade boy in Monmouth.

TELEVISION APPEARANCE

On our final day in New York we arose early because we were to be at the RCA Building at 7 o'clock in the morning for the Dave Garroway show. Inasmuch as I almost never see television I had no background for the Dave Garroway show and certain unpardonable errors resulted. The program was done three times for the benefit of the various areas of the Nation. After 3 hours of the Dave Garroway show—he proved very interesting—we went to see our benefactors, McCall's. The address is 230 Park Avenue, just above the clock in the Grand Central Building. Their offices were much like any office and, as you would expect, they were very busy people. The homemaking department, the kitchens, the appliance testing rooms and other related activities were very interesting. They were preparing to frost cakes but we could not wait to determine whether it takes more than one attempt to get one for a picture in the magazine.

We left at 12 o'clock noon for home. Inasmuch as New York was on daylight saving time, it was only 8 o'clock in the morning in Portland, but we had been up and active for 6 hours. You can imagine that there were three weary travelers who deplaned at Portland at 9:30 o'clock that night—still 1½ hours from our home.

The wonderful thing about this fabulous week in Washington and New York was that all expenses were paid by McCall's. In addition, we made many new friends on the McCall's staff—kind and friendly people whom any you would be delighted to know. We are deeply indebted and trust that the project brings equal pleasure to them.

FAN MAIL FOR TEACHER

There are many facets to the teacher of the year project. One has been the amazing amount of mail which I have received—from former classmates, students, and teachers, parents, fellow teachers, friends and, much of it fan mail, I guess, because I do not know the writers. It is very evident that the magazine is widely read and that many persons are really interested in education.

Several events have taken place locally which have given me great satisfaction. A surprise party which was sponsored by students and parents and a reception in my honor which was sponsored by the Civic Clubs in Monmouth and Independence and attended by many, many people who came to wish me well will never be forgotten. A desk pen from my local teachers' association with an inscription will be a daily reminder.

At the State level there was the certificate of recognition, a truly beautiful certificate, which was presented to me at the Governor's Conference on Education on June 15, 1955, "to Margaret Perry, outstanding teacher, friend of boys and girls, sympathetic counselor, professional leader, and an inspiration to all who know her." Those, as well as the comments made by Governor Patterson, are indeed generous words. Equally thrilling was the bouquet of red roses which was presented to me at the Governor's Conference and the celebrities dinner at the National Education Association convention in Chicago. Both presentations were made by Mrs. Antonia Crater, president of the Oregon Education Association, another outstanding teacher, who would be deserving of every remark which was made about me.

As Teacher of the Year I was a platform guest at the NEA convention in Chicago and a guest at the celebrities dinner.

All in all, I have been very fortunate to have been chosen as a representative of thousands of outstanding teachers. The June issue of School Life summarizes it very well thus:

"There are many teachers like Miss Perry in the Nation's schools. All of them deserve credit for the contributions they are making to the growth and development of children and young people. Although the Teacher of the Year project does focus attention upon one teacher's accomplishments, it is believed that they are symbolic of those of many other teachers."

The Defense Fraud

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. MULTER. Mr. Speaker, I direct the attention of our colleagues to the following article by Joseph and Stewart Alsop, which appeared in the New York Herald Tribune of December 18, 1955:

MATTER OF FACT

(By Joseph and Stewart Alsop)

THE DEFENSE FRAUD

WASHINGTON.—The country has not yet been told the real story of next year's defense budget—which can, perhaps, turn out to be a life-and-death story for every American. The administration has proudly announced an increase in defense spending of about $1 billion, raising the total in the new budget to about $35.5 billion. Great efforts have been made to convey the impression that this belated concession to the requirements of national defense is both generous and adequate. Nothing could be more misleading. The history of the increase is simple enough. On the one hand, defense spending in the current fiscal year had been held down by one-shot savings on a very big scale, especially in the Air Force. No more one-shot savings were possible next year. Hence a substantial increase in spending would have been necessary, in any case, in order to avoid quite serious cuts in fighting power. On the other hand, the Killian report on guided missiles development, first described in this space, had also forced the Eisenhower policymakers to face a really gruesomely unpleasant fact. In effect, the Killian report said that we were behind the Soviets in guided missiles; that we were getting further behind all the time; and that we would have to spend substantial sums to catch up.

Even the most ardent budget balancers did not wish to accept responsibility for this kind of fatal lag. Hence the National Security Council voted, some time ago, to give guided missile development an overriding priority. Thus spending on missile programs had to be increased by about $600 million, or 60 percent of the entire announced increase in the total budget.

Spurred on by the Treasury and the Budget Bureau, Secretary of Defense Charles E. Wilson tried long and hard to hold the budget at the current level. His aim was to barrow enough money from the Peter of general defense costs, in order to pay the Paul of guided-missile development, and to compensate, as well, for the absence of further one-shot savings. In the end, the resistance was too great. Further concealed cuts in fighting power were not made, after all.

But except in the single sphere of guided missiles, this leaves the defense problem almost exactly where it was before budget-

making began. A few fairly horrifying examples will show the nature of the problem clearly enough.

After producing no less than 15,000 MIG-15 fighters, the Soviets are throwing this immense investment on the dump heap, and are rapidly replacing the MIG's with the highly superior "Farmer" and "Flashlight" day and night fighters. When this became obvious last spring, Secretary of Defense Wilson declared that money was available from existing Air Force funds to step up procurement of our own advanced fighters, the F-101B, the F-102 night fighter, and the F-104.

Wilson promised to order the stepup immediately, and then broke the promise. Nearly 6 months went by before increased fighter procurement was finally ordered. Moreover, the increase was not massive. While the Soviets are getting "Farmers" and "Flashlights" in quantity, the next budget will only provide our Air Force with a tiny trickle of superior fighters.

The Soviet Air Force is now ahead of the American Air Force in the production of advanced types in every single important category but one—the medium-range jet-bomber represented in this country by our B-47s. Even in the vital long-range jet bomber category, our output of B-52s is still lagging well behind the Soviet output of "Bisons." Yet the appropriations in the new defense budget will actually give this country about 30 percent less new aircraft than were ordered under the current budget.

Other examples could be cited at great length. For instance, there is the fairly hair-raising fact that the Soviets are now rapidly remodeling at least the core of their huge ground forces for atomic war. But whereas the Soviets are "atomicizing" some scores of divisions, the United States Army has only been permitted to make this vital conversion in one division, with two more test divisions partly converted.

But examples do not need to be multiplied to suggest the real nature of the defense issue. Phony publicity and misleading token gestures have concealed the central fact. The Soviets have spent, are spending and clearly intend to continue to spend, enough to provide an enormous, fully modern force-in-being at all times.

This country is not doing anything of the sort. Therefore, if the worst happens, American soldiers and airmen will go into combat not only heavily outnumbered by the enemy, but also with weapons far less good than the enemy's weapons.

To maintain an adequate, continuously modernized force-in-being is an enormously costly task. Maybe the budget-balancers are right, that the United States cannot afford to pay the bill for survival. But if that is the settled national policy, it might at least be admitted to the country.

The Late John Dingell

SPEECH
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 3, 1956

Mr. ROONEY. Mr. Speaker, I was very much saddened when I learned of the passing of our good friend, the Honorable JOHN DAVID DINGELL, of Michigan, and take this opportunity to add my voice to those who have expressed such deserving tributes to the memory of our distinguished departed colleague.

JOHN DINGELL represented the 15th Congressional District in Detroit, Mich., from 1932 until his passing on September 19, 1955. His long continuous service is indeed a splendid tribute to the esteem in which he was held by his constitutents. During all those years he stood out as a champion of the little people and on every occasion fought valiantly to protect their rights. JOHN possessed a fine Christian character and never waivered in his devotion to duty or at any time sacrificed principle for expediency.

I am proud to say that I had the privilege of knowing JOHN quite well and one year traveled in Europe with him and his good wife. Despite the fact that he had been ill for a number of years he always had a kind word and a gracious smile for everyone, and it was a joy and inspiration to be in his presence. He had a great gift for knowing how to make friends and above all how to retain them.

During JOHN DINGELL'S distinguished career in this body he made many substantial contributions to good government and as a member of the Ways and Means Committee rendered valuable service as an authority on our Federal tax structure. His passing is a tragic loss to his district, his State, and our country. His capable and distinguished young son who follows him as a Member of Congress has every reason to be justly proud of his father's splendid record as a public servant.

I shall always miss JOHN DINGELL. I extend my sincere sympathy to his beloved wife and children in their great bereavement.

Address of United States Senator Thomas C. Hennings, Jr., of Missouri, Before the Lawyers' Association of St. Louis, St. Louis, Mo., November 3, 1955

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mr. BOLLING. Mr. Speaker, the following fine address by the distinguished senior Senator from Missouri, the Honorable THOMAS C. HENNINGS, JR., deserves the attention of all those who love liberty:

Mr. Chairman, distinguished guests, ladies, and gentlemen, about a year ago you graciously invited me to address the Lawyers Association of St. Louis on its 20th anniversary. And now again you have honored me with an invitation to participate in an equally significant ceremoney. It is a privilege to join with you tonight in paying tribute to the members of our Federal and State judiciary who sit here in St. Louis and in St. Louis County. We Missourians, indeed, are most fortunate in having as judges, lawyers of such outstanding ability and character. This fact is the pride of our bar. It is also the pride of the people of the State of Missouri.

This meeting is also held as part of the Lawyers Association's observance of the John Marshall bicentennial. We cannot discuss questions of American constitutional law, as we shall do tonight, without bringing vividly to mind John Marshall and his great leadership in shaping American constitutional doctrine. He has become a symbol of the Constitution of the United States. John Marshall was the first who fully understood the role of the Constitution in molding a national government. During his 34-year tenure as the Chief Justice of the United States he enunciated and implemented the constitutional position of the Supreme Court as 1 of the 3 great powers of our constitutional government and thus decisively determined the course of American democracy. With reverence we commemorate him tonight.

Last year, I emphasized that an incorruptible, independent judiciary and a learned, gallant bar are the mainstays of our country and of our civilization—one of the cornerstones of constitutional democracy. Liberty of person and security of property depend on our ancient tradition to provide a fair trial and an adequate defense for one accused of crime.

The highest dignity of law finds its manifestation in the administration of criminal justice, because here the State pits its authority against the honor of human personality. In a democracy, where the individual enjoys the constitutional guaranties of freedom, a criminal trial is also the crucial test of dedication to the principles of democratic society. And in this test the harmonious interaction between a high-minded, impartial judge and informed and fearless advocates is indispensable.

We lawyers often bear the brunt of heavy criticism for being conservative, for resisting change, for reactionary defense of the status quo. We lawyers and judges alike are proud of our conservatism. It is our tradition, our heritage. It flows naturally from our knowledge of history and from our intimate acquaintance with legal institutions—an acquaintance which is constantly renewed by our daily contact with the law courts. We know that liberty and security are, at best, precarious. Our training and our traditions at the bar impel us, in spite of the calumny that is heaped upon us from time to time as individual advocates and judges, to do everything within the law to preserve the hard-won rights of our people—the rights our ancestors wrung from the British Crown by revolutionary action. Most important of these rights is the right of one accused of crime, however heinous, to receive a fair trial and an adequate defense.

Where a government of law prevails, the legal profession exerts a decisive influence in society. Because of our training, we know intimately the protective value of our traditional institutions and fully realize the dangers of change occasioned by hasty rulings and hurried enactments. We are keenly aware of the dynamic quality of the law which may easily affect the balance of the social order. We recognize that, carelessly used, it may destroy the very rights and freedoms that our forefathers have fought for generations to establish. For these reasons—and rightly so—we instinctively follow the exhortation of Tacitus: "Think of your forefathers! Think of your posterity!"—as it was rendered by John Quincy Adams in his historic speech in Plymouth in the year 1803.

If this attitude of lawyers—our respect for the past and our care for the future—is termed conservatism, let us accept it as a compliment—as proof that we are fulfilling our highest duty to society and to our free institutions.

In this spirit, I sponsored in the Senate one of several resolutions calling for more orderly procedures of investigating committees. None of these have been passed, but several Senate committees have, on their own, established rules for a fairer treatment of witnesses and issues. The effort, as you see, was not in vain, and the dangerous investigative trends on which I reported to you last year, have subsided. The same ideas

led me to oppose such radical constitutional innovations as the Bricker amendment. And I have said, over and over again, that I shall resist with all my force any efforts to treat lightly the provisions of the Constitution.

In the same spirit of conservatism, I have looked with growing apprehension at some hasty, yet far-reaching, changes which recently took place in our municipal law. Their effect on individuals has been noticed by many, but their impact on the foundations of our law, I think, has escaped general notice.

As a lawyer, identifying myself with the conservative essence of the law, I shall discuss with you my apprehensions regarding some of these radical departures from our legal traditions.

The threat of Communist ideology and subversive activities to the survival of democracy calls for measures to secure our national integrity. This urgent task confronts us with the fateful problem: how to curb subversive elements without seriously jeopardizing democratic institutions—the cherished patrimony which we defend. The seriousness of our problem is highlighted by the fact that a totalitarian regime is burdened with no such considerations; it simply destroys its internal enemies.

The guarantee of a constitution lies, as Hegel said, "in the indwelling spirit and the history of the nation by which consituations have been made and are made." It is a proud task to examine, in this light, our national record.

The greatness of our Constitution is in its realism. With admirable skill and vision the Founding Fathers translated the spirit of our country into simple, restrained yet forceful words. For this reason, the Constitution has become our life, and our life—the Constitution. Not only do we Americans feel this, but it is a fact recognized the world over—by free peoples, with reverence, by totalitarians with hatred and misgivings.

The Constitution was born in the 18th century when man began to free himself from the political and economic shackles of feudal estatism and started on the road of individual self-determination. Our Constitution was the first political document that unreservedly gave expression to the new order of things and thus became the starting point of a new epoch based on the principle of individual liberty. Our social order is that of an association of free men protected in the expression of their personality.

The spiritual core of our Constitution is the Bill of Rights. Although the body of the Constitution itself contains few protective clauses, we know from the debates in the Constitutional Convention and in the First Congress, which passed the first 10 amendments that, in the view of the Founding Fathers, the Constitution itself embodied by implication the ideas of the Bill of Rights.

Through our entire history, these facts and principles have been recognized by the American people. Every generation of Americans dedicated itself to sustain them as the way of our life, despite some tendency in times of international and internal strain to depart from this straight road. Examples of such temporary departures can be found in the turbulent episode of the Alien and Sedition Acts and in the suppression by President Lincoln of the writ of habeas corpus during the Civil War.

Our consistent dedication to the supreme principle of individual freedom and dignity imposes on us additional strains today when, in the unprecedented conditions of the cold war with the Communist world, we seek a way to expose and to fight totalitarian subversion without endangering the tenets and practices of democracy. It is, therefore, not surprising that in our attempt to perform such a formidable task, we witness relaxations in the operation of the Bill of Rights.

Last February, Chief Justice Warren, speaking here at Washington University, called the attention of the country to the erosion of individual rights which the Constitution guarantees. Some thoughtful people, said the Chief Justice, have begun to doubt that the Bill of Rights would be passed by Congress at the present time. It was a shocking experience to hear from Justice Warren of a case where Government employees hesitated to display the Bill of Rights because, they argued, it is a controversial document.

Similar warnings have been and are sounded by other distinguished judges, by members of the bar and by church and civic groups and leaders. Recently, the Federal courts, by reversing administrative rulings involving individual rights, have indicated that grave constitutional questions confront us as a people. The fact of erosion cannot be doubted.

To understand the causes underlying the present abridgements of constitutional rights, however, does not justify apathy, nor does it minimize the seriousness of the relevant facts. The democratic traditions of our country forcefully demand a considered discussion of the issues that threaten their survival.

As lawyers, we all know a number of cases where individual rights have been violated and—this is most important—where the ax of infringement fell not on Communists or subversives but upon innocent people caught in the meshes of administrative practices. The cause of this evil, it seems to me, lies in a creeping but inordinate extension of administrative law, a kind of creeping statism. Such extension spells dangers not only to the constitutional guaranties but, if unchecked, will seriously affect our traditional concepts of justice and fair play. In this light, then, we must examine the practices of the Department of State governing the issuance of passports, and some features of the loyalty-security program.

According to the recent article of Chief Justice Warren in Fortune magazine, the loyalty-security program alone affects more than 8 million Americans, including some 3 million in the Armed Forces, 2.4 million civilian government employees, and nearly 3 million employees of defense contractors.

Actually, this figure is higher if we consider security investigations in nondefense industry and the families of these people. On this basis, the editors of Fortune magazine say that the total number of Americans now subject to Federal security investigations might be as high as 20 million. This program, as we see, is no longer remote; it has become a truly national problem. Now it touches you and me, our friends and our neighbors.

The administrative innovations, in their newest development, decisively deviate from our legal traditions. The use of undisclosed witnesses in security hearings who cannot be confronted or cross-examined; the shifting of the burden of proof to the accused (which is tantamount to a presumption of guilt); the doctrines of guilt by assiciation, guilt by friendship, and guilt by kinship—these are some of the strange aspects of the growing new body of law. If fully accepted and consistently followed, they may destroy our civil liberties and, in fact, nullify the protective clauses of the Constitution. The application of such doctrines, tending to make the Bill of Rights a simulacrum of right, can result only in the subversion of democracy and the destruction of the spirit of our country.

Considering the far-reaching and dangerous implications of these new legal practices, why is it that the discussion of this trend is not more widespread and that more people are not deply concerned? In a country with our traditions, this lack of keener interest cannot be accidental. In my opinion, it derives from our failure to evaluate in technical traditional terms the significance of these novel and undemocratic doctrines within the framework of our legal system. Into what part of our law do they fall? The answer is that they belong to a new branch of law which I would call administrative criminal law and which appears incompatible with the Anglo-Saxon ideas of justice, at least as we have known them in the past.

Administrative Law came into being during the last few decades as a result of the growing complexity of government. It introduced into our law a principle repugnant to our traditional notions of justice—the principle that an administrative agency, which, as distinguished from a court, may be a party in interest, has the power to decide controversies and to dispose of property rights involving individuals and corporations. The development of administrative law was recognized as a threat to individual rights, and administrative proceedings were subjected to judicial review. In this way, the danger to the operation of the due process clause was, at least in part, checked. Even so, some of us who have practiced before administrative tribunals feel that much more should be done to limit the authority of these agencies.

The position of administrative proceedings within the system of our law was pointedly defined in the following words of the United States Supreme Court:

"The vast expansion of the field of administrative regulation in response to the pressure of social needs is made possible under our system by adherence to the basic principles that the legislature shall appropriately determine the standards of administrative actions and that in administrative proceedings of a quasi-judicial character the liberty and property of the citizen shall be protected by the rudimentary requirements of fair play." (*Morgan* v. *United States* (304 U. S. 1, 58 S. Ct. 773, 999).)

Furthermore, in the process of judicial review, the United States Supreme Court established more detailed tests for the validity of administrative determinations. Aside from jurisdictional competence, a valid administrative proceding must be based on a hearing where the party in interest has the opportunity to submit and to scrutinize evidence. An administrative determination cannot stand unless it is supported by substantial evidence. Inversely, it is reversible of arbitrary and capricious. In short, administrative proceedings are admitted into our law only insofar as they represent administrative trials.

At this point, it is important to keep in mind that administrative proceedings were conceived as being in the nature of civil actions. Administrative law was intended primarily to regulate property rights. When it tends to enlarge the scope of its subject matter, we are confronted with a new situation. The fact that we have adopted administrative procedures into our law does not imply that we are willing to permit without a scrutiny de novo, the extension of administrative law to other domain of social relationships.

Suppose for a moment that an administrative agency would attempt to decide a divorce case, claiming jurisdiction because one or both parties are its employees. Would we recognize the validity of such arrogation just because we recognize administrative proceedings as an institution of our law? The answer is, of course, an emphatic no. The subject matter of the issue would stamp the proceeding as an, administrative divorce case, an institution utterly foreign to our legal tradition.

Some of you may consider this example as too remote and as such lacking persuasion. To this I would reply that institutions, like principles, once established and recognized have the tendency to expand themselves to the limit of logic. I still also remind you that equity acquired its jurisdiction by setting forth the doctrine of

adjudication in personam. This doctrine, when first asserted, caused a violent clash between the Chancellor and the courts of common law, and, as a result, equity jurisdiction found its beneficial though limited place, in the system of Anglo-Saxon jurisprudence.

At the present time, administrative law has invaded fields hitherto not within its domain. In this sense, though under different historical circumstances, the struggle between the courts of common law and the King's Chancellor, is revived. To understand this fact is our duty as citizens and as lawyers. It is also our duty to seek a sensible solution of the controversy.

For this reason, I feel it necessary to emphasize that in the loyalty-security program, administrative law has specifically invaded the domain of criminal law, and that these proceedings are administrative criminal trials.

If we detach ourselves from border cases, we have no difficulties in discerning the nature of criminal law. In the course of this discussion, a general definition is impossible and unnecessary, but we will all agree that it is severe law operating directly against the person of the individual, placing in jeopardy his life, social status, and honor. We will also agree that punishment is the outward manifestation of the logic of criminal law.

It is my submission that loyalty-security proceedings are substantially trials for treason which in the eyes of our law belong to the category of infamous crimes. As a matter of fact, our Constitution regards treason as the infamous crime and takes special care to afford the accused a special protection.

There is no question, I believe, that loyalty-security proceedings place the individual in jeopardy of infamy and punishment. As a matter of fact, the punishment that hangs over his head is a severe punishment. At first glance we may not see this, but it is clear the moment we determine legally the kind of punishment it is. In substance, it is outlawry. Modern criminal law does not recognize it, but primitive Anglo-Saxon law and early common law did. The security risk not only is stigmatized as a traitor, he is, in fact, expelled from the community, and his stigma may strike his entire family. In these circumstances, it is irrelevant to consider whether Government employment is a right or a privilege.

I am aware of the argument that a punishment which is not on the statute books cannot technically be considered as such. As lawyers we all appreciate the significance of statutory words and phrases. But in our time and age where the law has shed the idea of formulas magic, we cannot close our eyes to situations which do violence to our ideas of justice.

I am also aware that our statute books carry criminal provisions which deal with certain offenses akin to treason. The fact that these statutes do not mention treason, does not, however, lift them from the class of treasonable actions.

Here we come to another aspect of criminal jurisprudence. The recognized severity of criminal law has led to a special care for the protection of the accused person's rights.

It is certainly not accidental that modern criminal law rests on the principle nulla poena sine lege. Nor is it accidental that criminal statutes must be based on the traditional formulations of the common law or must be the result of considered legislative actions. This position is fortified by the corollary that criminal statutes are subject to strict interpretation and that there can be no prosecution for analogically constructed offenses. In the light of these principles, it seems an incredible thought that an individual may today be placed in jeopardy of infamy and outlawry on the basis of administrative regulations which can be altered by arbitrary administrative action. In this connection, it is sufficient to mention the 1950 amendment of the loyalty order of March 21, 1947. In the original order, the standard of disqualification of Government employees was reasonable grounds for belief that the person involved is disloyal. But a stroke of the pen, the amendment substituted the words "reasonable doubts" for "reasonable grounds." This substitution largely escaped notice but we as lawyers should not fail to realize that the change destroyed the presumption of innocence. From then on, the accused had the burden of proving his loyalty beyond reasonable doubt.

Here we have a flagrant example of how an easy administrative reformulation may, under the color of administrative law, casually remove an agelong protection of our legal institutions.

This example of the easy mood in which the loyalty-security program is operated is not unique. Another, by no means less significant, illustration is the Attorney General's list of subversive organizations. The International Military Tribunal in Nuremberg took months of hearings to declare some of the Nazi organizations criminal. Vast evidence was submitted, witnesses were heard and cross-examined and the issue was argued by counsel. Even so, the prosecution was granted only a part of its recommendations. But here, in the United States of America, where the issue touches on the dignity of United States citizens, the Attorney General, without hearings, on the basis of undisclosed evidence, declares innumerable organizations subversive with the inevitable result of stigmatizing their members automatically. And such a list now determines not only the fate of our Government employees, but has become a decisive factor in private employment.

The loyalty-security program equally disregards other rules of criminal procedure devised to protect the individual right of the accused to his freedom. Especially grave is the denial of confrontation with accusers and the resulting impossibility of cross-examination.

The argument for such denial is the reluctance of the Government to expose its sources of information. The detrimental consequences to the accused, however, create a situation which may be repugnant to constitutional guaranties. This issue has not yet been finally resolved by the courts.

The Supreme Court has not yet spoken. But last week the Circuit Court of Appeals for the Ninth Circuit in a 2 to 1 decision declared unconstitutional the Coast Guard's Port Security Regulations. The court's decision is squarely placed on the issue of confrontation and cross-examination. "It is a matter of public record," the decision states, "that the somewhat comparable security risk program directed at Government employees has been used to victimize perfectly innocent men." "The objective of perpetuating a doubtful system of secret informers likely to bear upon the innocent as well as upon the guilty, and carrying so high a degree of unfairness to the merchant seamen involved cannot justify an abandonment here of the ancient standards of due process."

This decision confirms me in my doubts as to the fairness of the Federal loyalty-security procedures.

Those of us who have had experience as prosecutors well know the necessity of relying on the testimony of informers and accomplices. During my many years as an assistant circuit attorney and later as a circuit attorney, I had occasion in a good many cases to use the testimony of informers before grand juries and in trials in open court. No one knows better than I how important such testimony is in obtaining indictments and in finally convicting the guilty. But not informers themselves are here at issue—only their omnious anonymity, which utterly destroys the principles of our law. Anglo-Saxon legal history retains a vivid recollection of the trial and execution of Sir Walter Raleigh. The chief evidence against him came from a confessed conspirator whose testimony thus was tainted by the suspicion that by accusing Raleigh he expected to save his neck. The court received his written statement but refused to permit confrontation and cross-examination. In this refusal, the court persisted even after the accused had produced a retraction. Finally, the judgment was passed when the prosecution produced a retraction of the retraction. But Raleigh was lucky. At least he knew the name of his accuser.

Incredibly enough, in the security proceedings, this anonymity does not stop with the accused. Not even the determining security officers and boards are permitted to hear the secret informers, but must rely on unevaluated summaries of investigative agencies. Even if we assume that by submitting its report the investigative agency expresses its belief in the trustworthiness of the informer, we still have only its word for it, a conclusion which no one else can check, reached by men, who being human, might err. And we know that men do err. The recognition of this fact is embodied in the sixth amendment.

Still another feature of the loyalty-security program is the lack of provision for the standards of its personnel. It is known, for instance, that the charges in the Fort Monmouth case were prepared by a man whose sole qualifications as a security officer were those of a chauffeur and a uniformed plant guard. By comparison, the administration of criminal justice lies exclusively in the hands of experienced judges and government attorneys, excluding even referees and arbitrators recognized in civil procedure.

The advocates of the loyalty-security program emphasize that it is carried out in good faith and that administrative proceedings themselves supply avenues of righting wrongs. Secretary Benson, for instance, was finally compelled to admit the injustice of declaring Ladejinsky a security risk. As now conceded by the Secretary, the loyalty-security stigma was used simply as an expedient. The real reason for dismissal was the opinion of Mr. Benson that the Department of Agriculture must be staffed with native-born Americans.

This case, relating to a recognized expert on agriculture and a faithful servant of our country, conclusively proves how dangerous it is to substitute the rule of men for the rule of law, and unchecked administrative procedures for established procedures of our traditional law. Even if it is true that our security procedures have the means of rectifying wrongs, it is a fact that the majority of our security cases were reversed only under the pressure of the press and public opinion.

During the last decade we have successfully checked the arbitrary growth of administrative law in order to protect property rights. And it seems inconceivable to me that now administrative law shuold be permitted free reing when it attempts to invade individual freedoms, freedoms which are the foundation of our Constitution. I respectfully submit that judicial review and legislative action are urgently needed to protect our citizens from administrative criminal trials where not only the principles of criminal law are being violated but where even the accepted rules of administrative proceedings—including confrontation and cross-examination—are disregarded.

I fully realize that the clash between the reluctance of the Government to disclose the sources of its information and the right of the accused to be confronted with witnesses against him, presents difficulties of the first order. But even this issue, I be-

lieve, with good will, is capable of practical solution. It occurs to me—and I submit this idea for your consideration and study—that it might be possible to appoint a sufficiently large panel composed of members of the bar who would get a top security clearance, and whose character would not be tainted by religious, racial, and other bias. The lawyers so appointed will have the right, on the request and in behalf of the accused or his counsel, to confront and to cross-examine the undisclosed witnesses. For their services these attorneys will be compensated by the Government and it should be provided that any indiscretion on the part of these, let us call them public defenders, will be subject to criminal prosecution and punishment.

The seriousness of the issues just discussed moved the members of the Senate Subcommittee on Constitutional Rights to undertake the difficult task of inquiring into the state of individual rights under the Constitution.

It was a task never before undertaken in our Nation's history, and we decided to make a comprehensive study of the questions before us. For the sake of completeness and objectivity we decided on a systematic examination of grievances following, clause by clause, the first 10 amendments, the Civil War amendments, and then the relative provisions of the Constitution. Also—and this seemed to me particularly important—we decided to examine individual cases indicative of some policy or rule or practice which in itself constitutes an infringement of some constitutional right.

In making this latter decision we knew that the facts revealed might, in many instances, be unpleasant and shocking. We knew that, in consequence, we might find ourselves in the realm of sharp controversy, personally unpopular, and subject to slander and political attacks.

We realized that extremists of all sorts and disgruntled individuals might do everything to frustrate and discredit our work. They might attempt by every devious means of innuendo, trickery, and downright deceit to impeach our motives, to stir animosities among us, and to demoralize our staff.

These tactics are not new and, unfortunately, I have been exposed to them before. Many of you, I am sure, will recall that these same unsavory methods were used in an effort to halt the work of several committees on which I served—committees which were assigned the duties of investigating the 1950 Maryland election campaign, of inquiring into the affairs of the junior Senator from Wisconsin, of investigating campaign expenditures. In none of these instances did the committee allow itself to be diverted from its purpose, and I know I speak for my fellow members on the Constitutional Rights Subcommittee when I say they will not be intimidated. We have chosen an uphill road, but, in good conscience, we could not choose the alternative.

This judgment of freemen by governmental boards or officials without either the safeguards given to property rights under administrative boards or the safeguards given to accused criminals in our courts may be illegal. It may be suicidal. This return to outlawry as a punishment without benefit of legal trial could produce public sympathy for those convicted as dangerous to our rule of law as that once given to Robin Hood. If our new and radical ways of weeding out traitors are, even though meant in good faith and for desirable ends, unconsciously leading us toward the destruction of our Constitution and our freedom under the Bill of Rights, we must know it. Our committee will try to find out the facts and show them to you as lawyers and to all the American people.

The peoples of the world have awakened to the unlimited possibilities of present-day technological revolution. They strive for a share in its benefits, and there is no doubt that they will proceed on the road of technical progress with ever-increasing insistence. This promising and happy development, however, is unfortunately not unmarred. In many parts of the globe, the break-through to technological mastery has been accompanied by social upheavals. It is tragic that the national and economic awakening resulted in the establishment of a number of totalitarian regimes. Never before was totalitarianism so strong and so beguiling. This plague seems to be the historical price mankind has to pay for its onward march. As a result, never has the struggle for freedom and dignity of the individual reached such tensity and sharpness. In fact, the deadly struggle between the free and the Communist world is waged on this spiritual issue. Dangers surround our social order.

In addition, experts tell us that the Communist world has challenged our technical ability and gradually matches our weapons and military strength. In the face of this threat to our national security, we must keep strong and dedicate our ingenuity to meeting the challenge. Yet it is possible that we are approaching a stalemate. If so, it is time that we search the arsenal of democracy for a superweapon.

In my view, democracy possesses it, a weapon unsurpassed and unsurpassable—I mean the Bill of Rights which guarantees man his individual liberty and dignity.

To defend it in its operation is the duty of all the people of the United States. It is a special duty of the American bar to guide the people in this sacred and fateful fight.

Such is the present. But time will pass, the intoxication of technical achievement will wear off. The achievements of our technological revolutionary age will solve economic problems which prior generations, because of scarcity, were unable to resolve. Then, I am convinced, a period of meditation will set in, and people the world over will long for individual freedom and dignity. When that happens, democracy will fulfill its historic destiny and the world will greet us as the fathers of the blessings of liberty.

With this faith in my heart, I say to our country the solemn words once addressed to Constantine the Great: "In this sign thou shalt conquer."

What of Japan?

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. AUCHINCLOSS. Mr. Speaker, under the permission granted me, I am very pleased to insert in the RECORD with a few of my remarks an abridged edition of an article, entitled "What of Japan?" written by Joseph Z. Reday, an American businessman, Far East general manager of the Celanese Corp. This article was brought to my attention by the Japanese Embassy and in doing so they asserted that in no way "constitutes endorsement or indicates agreement" to the views expressed by the author. Mr. Reday, who is a graduate of the United States Naval Academy, took special training in the field of economics and international affairs after he resigned from the service. In 1943 he represented the Board of Economic Warfare in Venezuela and returned to duty with the Navy during World War II. He was Chief of the Industry Division of Supreme Commander Allied Powers in Japan and served in the Military Sea Transportation Service in the Pacific. In 1953, after returning to civilian status, he served as Chief of Industry and Transportation in the Technical Assistance Mission in Indonesia, all of which indicates that he is experienced in oriental affairs. Mr. Reday states in a footnote to his article that—

The opinions or assertions in this article are the private ones of the author and are not to be construed as official or as reflecting the views of the Navy Department or the United States Naval Institute.

This is a thought-provoking treatise of the problems which confront our relations with Japan and as Japanese friendship is essential to us in our dealings in the Far East and as her economic stability must be adequately understood, I hope my colleagues in the Congress will take the time to read this article.

WHAT OF JAPAN?

(By Joseph Z. Reday)

It is perhaps unwary of a writer in this nuclear age to classify anything, even a country, as a key feature of a power position. But if there is any longer such a thing as an area of paramount importance to us in the Pacific, it is Japan. The reasons why this is so make an impressive list.

First: location. Japan is a string of islands about 2,000 miles long stretched across the main ocean approaches to East Asia. On our side, these islands do much to neutralize the ability of the mainland enemy to project its power anywhere and give us the ability to exert power on it. On the enemy's side, the Japanese islands would act as a gigantic shield, protecting the mainland from our Pacific power and enabling the enemy to use its power overseas. Our whole strategic posture in the Far East is based—as it should be—on a chain of islands from Australia north. Loss of Japan would neutralize the whole island system.

Second: strength. Japan is to East Asia what Britain is to Western Europe. With 89 million people and a modern industry Japan contains the greatest concentration of industrial power between the Western United States and Russia industry in Eastern Europe and Central Asia.

Not only is the East Asiatic mainland for the most part without an industrial complex, hence without power in itself, but also, unlike the Western European mainland, East Asia is without the network of modern transportation and communication facilities necessary to move and utilize power.

In Britain, therefore, we have a major industrialized island base athwart the approaches to Western Europe but subordinate in power itself to the adjacent mainland. In Japan we have the same industrialized base on Asia's doorstep, and in addition the best, most concentrated and most usable power potential in the East, facing an Asiatic littoral thousands of miles from the sources of its power.

We possess, one must believe, in the United States and in the Americas the ability to create enough power to counter anything that can be developed behind the Iron Curtain, regardless of Soviet progress in H-bombs, aircraft, and naval strength. As long as both Britain and Japan remain firmly on the side of the free world, this American power is mobile and capable of projection, and Soviet power can be contained within its heartland boundaries. The loss of the strength and strategic posi-

tion of either Britain or Japan to the free world would immediately reverse this posture and make us a beleaguered fortress.

Third: Ideology. In spite of Red China's ability to shoot its way into a de facto great power status, and in spite of the assumption by India's Prime Minister Nehru of a position as moral spokesman for Asia, the Japanese have enjoyed more than a half century of leadership in oriental political thinking.

* * * * *

On the economic and social side, it is easy for Americans and western Europeans to classify all of the Orient as an area of poverty and lack of opportunity. From an oriental point of view, however, there is a vast difference among countries, and Japan's living standards is far higher than that of any other country in the Far East. Her population is literate, health conditions are good, and her material technology is well developed and comparable to that of the West. Japanese technicians have participated in the post-war establishment of textile industry in India, Burma, and Pakistan, and in the development of iron-ore mines in Malaya and the Philippines, and of the fishing industry of Ceylon, and of many others. Japanese machinery, rolling stock, and ships are being extensively used in the industrialization of most of the oriental countries, and engineers from many of those countries are being trained in Japan at present. Japanese agricultural techniques, exported all over the orient, are the main hope for increasing rice and other food production the overpopulated and hungry Asia outside the Iron Curtain.

Not only does Japan represent technical and material leadership in the Far East, but also to the rest of the Orient Japan's social and economic organization has in the past provided a degree of opportunity for the Japanese people not readily avaliable in most of the other areas, hence an objective to them. Finally, the prewar decade or so of sword-clanking militarism in Japan obscured for the world the fact that Japan, before the Manchurian adventure, had attained a high degree of working political democracy, the only such example in Oriental history.

It seems obvious that the war of ideology between the free world and that of totalitarianism demands a set of ideas and social objectives to counter the blandishments of communism. If this is true anywhere, it is many times more true in the oriental half of the world. To a billion or so people who have always lived close to misery and who have been brainwashed to the point of attributing their misery to Western colonialism, communism will continue unbeatable until some better example is set before them.

We have succeeded to date in capturing relatively few oriental minds with our Western presentation of alternatives to communism. Our operation in Korea, though resolute and of salutory military effect, ended on a note of weakness in the eyes of orientals. If we are to achieve any real success in the direction of freedom in the Orient, we must do it through example, and leadership. Japan provides us not only with a logical choice as a field for our endeavors but with the only one we have. For that reason, if for no other, Japan becomes a key to the future of the free world in the Far East.

* * * * *

PASSIVE ISOLATION OF JAPAN

While budget troubles in the precariously hard-up Japan of today will make it very difficult to build the sort of defensive military organization necessary, it seems to this writer that the continued reluctance of the Japanese people is too universal to be attributed merely to lack of funds or distaste for the military inspired by the past war. It is a reflection of that inert and passive attitude toward the world and its own position in it which has characterized Japan until very recently. It can only be overcome by a foreign policy for Japan which makes sense to Japanese and which can give them a positive feeling of direction and position. From our point of view, this foreign policy must also be steeped in freedom as not only to establish Japan outside the Soviet orbit but also to make Japan a leading voice in the Orient for the free half of the world. The present period, therefore, constitutes an opportunity for us to try to guide the Japanese into a firm position on our side. It is also a large-scale hazard because the present passive state cannot go on. Like a pendulum, Japan must swing away from us if we fail to swing her toward us.

* * * * *

JAPAN NEEDS FOREIGN POLICY

In foreign affairs Japan has quite naturally remained very closely connected with the United States. We continue by treaty to maintain military forces in Japan, we have helped the Japanese economy with large scale military procurement in Japan, and in many ways we have intertwined our activities in the Far East with Japan. * * *

This interconnection of Japan with our activities in the Far East is good. The community of interest between us is great and it is both to Japan's advantage and to ours to strengthen these relations in every way possible. It is not healthful for Japan, however, to drift in international affairs with no foreign policy of her own. A community of interest between the two countries is good for both, but a dependence of Japan upon the United States for a foreign policy and particularly a Far East policy is not good.

In the first place, it leads to the passiveness in international relations which is the major handicap to Japan taking a leading role in Far East affairs at present. The Japanese people cannot be expected to resolutely make the secrifices necessary to build an adequate defense force if that force is looked upon merely as something dictated by American strategy. Nor can Japan make her voice felt in Far East affairs until the rest of the Far East knows that she is speaking for Japan.

Until Japan assumes more responsible leadership in the Far East, it is not likely either that she will succeed in solving the problems of unsettled relations with her Far East neighbors. * * *

* * * * *

Since modern political policies are governed so increasingly by economic demands, we must look at Japanese economics in order to estimate the course of Japanese politics, both domestic and international. For if Japan is to feel that overwhelming stake in the free world which is necessary to make her assume a leading position of partnership with us in the Far East, that stake will have to be as much economic as political.

None of the forces which tend to pull Japan toward the Iron Curtain are political. * * * Japan has no history of cordiality with Russia and is far too proud to accept a position subordinate to Red China in the Asiatic Communist hierarchy of power. The economic lure, however, is quite considerable, even though the trade Japan expects from the Reds would in all probability turn out to be mostly mirage. Furthermore, the existing lack of Japanese foreign policy is due as much to the economic frustration of Japan at present as it is to any other reason. * * *

ECONOMIC PICTURE IS FRUSTRATING

The Japanese economy * * * is extremely ragged. In very round numbers it may be called an economy capable of giving a reasonably good life to a population of something like 60 million, but called upon to support the 89 million Japanese now crowded into the home islands. The population goes up steadily at a rate of more than 1 million a year without a corresponding increase in economic productivity.

Japan has about 15 million cultivatable acres of farmland, intensively worked in rice, other cereals, and vegetables. The Japanese have raised production per acre probably to the maximum attainable. Rice output, for example, is about twice that per acre of the United States and may be three times that of India. So many people work at this production, however, that rice output per man is extremely low. In rough terms, total food production in Japan falls to supply the country's needs by about 20 percent. Some help may be obtained from land development in Hokkaido and elsewhere, but for all practical purposes Japan's food deficiency will remain large and will increase as her population grows. The much publicized land reform under the occupation was undoubtedly a popular political and social measure, but its status is transitory at best and its economic effect on production has been negative, if anything, by virtue of fragmentation of land holding.

Japan's food deficit must be met by imported food which must be paid for by exports. * * *

* * * * *

INDUSTEIAL RESOURCES LIMITED

The Japanese population pressure long ago forced the country into industry and world trade for economic survival. Here again, however, they have no resources but their own intelligence, organization, and willingness to work. The Japanese islands are barren of most of the raw materials needed by industry. In the all-important field of fuel, Japan is scantily supplied. They have a very ordinary grade coal, which is not suitable for steelmaking and costs so much to mine that coal in Japan retails at close to $30 a ton. Coking coal for the steel industry must be imported at about the same final cost. About 90 percent of the petroleum requirements must be purchased abroad.

The Japanese textile industry, one of the largest in the world, depends completely upon imported cotton and wool. About one-third of the woodpulp for rayon also must be imported. In minerals, Japan has enough of a poor grade iron ore for maybe one-sixth of her steel needs; she has no bauxite for aluminum; and only barely enough copper, lead, and zinc.

An industrialized country without rich raw-material resources must depend upon trade goods for production. Japan must import raw materials on favorable terms of trade, must process them in efficient low-cost industry, and must be able to sell enough of the product abroad and on terms favorable enough to pay for the consumed raw materials and fuel and to pay for the imported food and other deficiencies which her growing population has created.

* * * * *

The terms of trade on this distorted import supply for Japan are bad. Far too much of the coal, wheat, pulp, petroleum, and other bulk commodities now have to be imported from such dollar areas as the United States and Canada. Japan's trade was unbalanced in 1954 by $590 million per year in excess of purchases from the United States over sales to us. * * *

A corollary to the availability of industrial materials would be the efficiency of the industry which processes them. With some notable exceptions, this efficiency was lost with the Pacific war, from which Japan in an industrial sense has hardly begun to recover. Japanese industry is on an average at least 10 years and probably closer to 20 years behind the United States. * * *

As a consequence, Japanese industrial production costs, hampered by high-priced capital and obsolescence of equipment and by

very high cost fuel and utilities, have gone up fantastically. The pre-World War II Japanese bicycles which sold in South America for $5 have now become $25 luxuries. Even Japanese textiles, long a specialty which Japan could produce at a cost untouchable by other countries, now tend to be priced out of markets by other oriental producers and even by Europe.

Labor, organized by the occupation, is still relatively cheap in Japan by American or European standards, but has become a social force of greater and more inflexible cost to industry. Japanese management, though alert commercially, has not learned to get the most out of either labor, or plant, or high-priced fuel.

FOREIGN TRADE DIFFICULTIES

The third and last element of Japan's industrial position is that of favorable sales of industrial products abroad. This is obviously the key feature of her trading economy. It is at the same time the weakest link in the commercial-industrial chain and the one which can be made to offer the only hope of large-scale improvement in the overall economy.

Like Britain, Japan built her trading economy upon an industrial headstart over the rest of the Orient. And as in the case of Britain, the other areas, formerly undeveloped sources of raw materials and markets for consumer manufacturers, have begun to catch up. India, 20 years ago a large market for textiles, is now a major producer and likely to supply much of the oriental export market. All of the so-called undeveloped countries are bending every effort to establish industry, particularly the light manufacturing industry which has always been the source of Japanese export strength.

This is nothing more than historical progress, and Japan will have to learn to cope with it as Britain has, by reaching additional markets for machinery, rolling stock, ships, chemicals, and other more advanced products. The process is difficult, however, at best and for Japan at present is made enormously more difficult by the politics of the world.

Mainland China, for example, with its 500 million people is the major market of the Orient. As a matter of normal, peaceful development, Japan could be kept busy for a long while supplying merely the needs for establishing industry, transportation, and modern living in that country. So also the rich areas of southeast Asia badly need Japanese help and products in developing their resources. Indonesia is a third example.

Unfortunately for Japan, however, China is Red and committed to a wholly different method of development. * * *

While southeast Asia has been a postwar mainstay to Japan, the fighting in Indochina and guerrilla activity in Malaya and Burma have held trade more or less to subsistence levels and prevented any real development of the southeast Asia economies. * * *

Indonesia, with some 60 million people and substantially no manufacturing industry, is a logically large Japanese market. To date, however, wrangling over reparations and political adventuring in Indonesia have brought trade to a standstill, the large balance owed to Japan probably being written off by Indonesia. Current unsettled reparations hamper and threaten to sever trade also with the Philippines. The South Korean Government has in effect embargoed purchases from Japan and also owes a large balance to Japan.

Japan has not been appreciably more fortunate in trade with the rest of the world. The United States continues to sponsor the Japanese position, but * * * the so-called Flammable Fabrics Act indeed has served to reduce imports of Japanese silk scarves; and other competitive interests, tunafish and plywood, for example, are attempting quota limitations on Japanese goods. President Eisenhower's trade bill was, indeed, passed by the present Congress, but it seems to have evoked formidable opposition by large segments of American industry. In 1954 Japan bought goods worth $867 million from the United States and was able to sell only $277 million in the American market. Canada and Australia present the same unbalanced trade picture with Japan and show little evidence of willingness to allow entry to more Japanese products.

* * * * *

THE BALANCE OF PAYMENTS PROBLEM

As a major trading nation, and one with a weak and inconvertible currency, Japan suffers greatly in the postwar throttling of trade by reason of worldwide currency controls. With no freely convertible currency except the dollar, and a few others of little trade consequence, there has been no possibility since World War II of multilateral clearing of trade accounts. Under forced bilateralism, the trade between each two trading countries or, at best, group of countries has had to be balanced. This automatically limits the overall trade possible. Under multilateral clearing one country buys what it needs from another country and sells what it can, making up any unbalance by trade and clearing with other countries. The balancing between each two countries under bilateral trade naturally is done at the lower figure. Japan is doubly unfortunate since she normally buys more than she sells in the dollar areas, hence cannot accumulate dollars to settle other accounts at higher levels.

All of the above has meant a Japanese trade account heavily unbalanced, principally by dollar area purchases. In 1953 the visible foreign trade deficit reached the alarming total of $945 million. In spite of American Security Force spending including offshore procurement, which amounted to $809 million, the final balance of payments at the end of the Japanese fiscal year, March 31, 1954, was in the red by $313 million.

The rigidly applied tight money policy of the government has limited imports so drastically in 1954 and to date in 1955 that many industries are living on inventory for raw materials. The most strenuous efforts also have been made to boost exports. * * *

Japan can hardly better her 1954 payments record by her own efforts. Exports were promoted through every known commercial device of linkage, subsidy, and so on. Imports were held down severely, and since about 98 percent of imports are raw materials and food, they can be restricted further only by arbitrary reduction of the basic standard of living. In spite of this effort, the Japanese balance of payments came out plus only by virtue of continued spending by the American military.

Although necessary to balance her international accounts, the Japanese Government's tight money policy had the bad effect of severely reducing overall business activity in Japan without cutting substantially the cost of production. * * * All of this constitutes contraction of an economy which must support a population expanding by nearly 2 percent a year. It cannot go on.

JAPAN WILL BE PUSHED INTO ACTION

We have, therefore, an economic Japan squeezed between the demands of a far too large and far too rapidly growing population on the one hand, and a much restricted commercial and industrial environment on the other. * * *

The entire economic situation is one of frustration. As it stands it does not appear to the Japanese to give them enough return or enough hope from the future to justify an enthusiastic defense of freedom and democracy in the Far East. While it is nobody's fault specifically, it is a condition which is hazardous to our objectives in the Far East, therefore, one for which we must attempt to find a solution.

Politically, the Japanese have adopted no positive policy of their own and have no clearly thought-out Japanese objectives in international affairs. Frustrated economically, barred from participation in many of the international organizations and without coherent relations with most of her oriental neighbors, Japan drifts passively in a world which does not tolerate political aimlessness. Aimless and passive Japan remains still on our side through strategic, economic, and other ties, and probably is not in much immediate danger of slipping away completely from the free world. As a consequence of her lack of positive approach, however, Japan's voice means little in Far East affairs, and the weight she brings to the side of the free world is only a fraction of her capabilities.

This political stagnation, moreover, when combined with economic frustration can be explosive. The Japanese are much too vigorous and much too ingenious not to try some way out. * * * Japan will move in one direction or another and will do so shortly. If we can make Japan see that it is to her best interest to move strongly and independently along the lines we are following in the Far East, then we have a good chance of stopping communism and throwing it back in that half of the world.

If, on the other hand, Japan can see no help for her present frustration in close association with the aims of the United States, then we stand a good chance of complete debacle in the Far East. For the Japanese political and economic impasse cannot be solved by any sort of straddling the two sides of the cold war. There is not enough in either political prestige or economic gain for Japan in merely reopening diplomatic and commercial relations with Red China and the Soviet. Any attempt by Japan to enjoy the best of the two worlds is doomed, before it begins, to failure and a continued frustration.

If, therefore, Japan moves at all toward Red Asia, the movement is eventually bound to tempt political collaboration of one sort or another. This is especially true if the Chinese Reds manage to conquer by subversion or otherwise the balance of Southeast Asia, which would present Japan with something close to commercial collapse. The cards are all stacked in favor of Red China in any political collaboration with Japan; maybe the Japanese can see it. We however, can risk allowing it to happen only at a most deadly peril to ourselves.

What then can we do? What American policies can be changed to bring Japan more forcefully into our free world, and specifically what can we do to help Japan discover an independent policy and viewpoint in the Far East which will be good both for Japan and for the free world of which Japan is a part? Finally, what can we do to better the Japanese economy and to give it the opportunity which is necessary if Japan is to play its part in the free world?

* * * * *

PARTNERSHIP WITH JAPAN IS AN ANSWER

Our trouble to date lies not in what Japan is doing or in what we have done. It lies instead in the fact that the cold war and the strategic movement of power in the Far East has progressed too rapidly. We are now only 10 years away from the end of the Pacific war with Japan and roughly 3 years from our military occupation of Japan. But we do not have time to let what in another age would be called normal relations with

Japan develop. Japan is going to move one way or another and break out of her present passive and frustrated state. As a matter of imperative strategic necessity we must see that Japan stays firmly in the free world and makes a maximum contribution to it.

To bring that about will require nothing less than a working partnership between the United States and Japan in the Far East and a set of economic incentives which will make that partnership good business for Japan. Nothing less will retain our strategic military posture in the Pacific, in my opinion, nor will anything less give us a real chance of leading the oriental mind away from communism. This working partnership with Japan in the Far East would not be entirely a matter of give on our part. The Japanese are orientals and well versed in the ways of the Orient. Our judgment in things oriental has not to date been impressively good. A Japanese contribution could well improve it.

* * * * *

In the economic field the choice is simple. It hurts a little; therefore we back away from it. Japan's problem is that of not enough export trade to earn a living, and the only place that export trade can be found is in the American market. It is just as simple as that.

We try to think hopefully of development of Southeast Asia and other parts of Asia as providing enough outlets for Japanese exports to give Japan the expanding economy she needs. This is a mirage—just as much so as the Japanese hopes for Red China trade. Unless we wish to spend many billions of dollars on grant aid which will be largely wasted, there is little which can be expected from early Asiatic development.

The hard economics of Japan's trade imbalance lies in the fact that it derives mainly from buying many times more than she sells in the dollar countries, principally the United States. The only direction in which to expand is in those dollar area sales.

Expanded Japanese sales in the United States would hurt certain American industries directly competitive to Japanese products. They are already crying—too loudly, but not without reason. The question as far as some of these industries are concerned is one of survival, and they are right in objecting. Individual American businesses should not be called upon to sacrifice themselves.

But on a national scale the question is also one of survival in reverse. We must have a free and economically healthy Japan on our side, or we may not survive as a Nation. We must, therefore, find ways to allow Japan to export more to us. In a market of hundreds of billions of dollars a year, the problem of increasing Japanese sales on a selective basis can be done without sacrificing American business. Maybe selective import quotas are the answer in order to avoid concentration of low-price Japanese goods in certain fields. Perhaps graduated tariff scales based on volume in any commodity could limit competition against any one American industry.

Whatever the mechanics, we had better get busy and find the formula. The cost to us as a Nation is absurdly small. The required expansion of Japan's sales to the United States would be far less than the grant aid we have given to many countries of less than Japan's size and a fraction of Japan's importance. In doing this for Japan, we will give away none of the taxpayers' money. We will merely buy from Japan as much as Japan buys from us. In the process we can make a firm and economically vigorous friend of Japan—a bargain at any price. At this price, it is the bargain of this tortuous century, and one logical answer to a perplexing problem.

Reclamation in the West

EXTENSION OF REMARKS
OF
HON. WALLACE F. BENNETT
OF UTAH
IN THE SENATE OF THE UNITED STATES
Monday, January 9, 1956

Mr. BENNETT. Mr. President, on December 14, 1955, the Deseret News, a newspaper published in Salt Lake City, Utah, published two articles, the first entitled "It Pays Its Own Freight," the second relating to reclamation in the West, entitled "A Plan To Aid Waste," relating to the upper Colorado River storage project in particular. I ask unanimous consent to have the articles printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the Record, as follows:

[From the Deseret News, Salt Lake City, Utah, of December 14, 1955]

IT PAYS ITS OWN FREIGHT—RECLAMATION HAS BUILT THE WEST—WEALTH POURS INTO THE TREASURY LONG AFTER COSTS ARE REPAID

Opponents of the Colorado River storage project recently have broadened the scope of their attack to include reclamation itself.

"The Nation can no longer afford reclamation projects," they say.

Actually, the Nation cannot afford to pass up the opportunity.

Reclamation has built the modern West, and every westerner knows it. So does anyone who has taken the time to study the history and economy of our part of the country.

However, bitter foes of the Colorado River storage project currently are loudly proclaiming that the project is a western giveaway to be paid for by nonwestern taxpayers.

Quite frequently, uninformed citizens will be taken in by this "pocketbook" appeal; particularly if they are from the eastern or southern part of the Nation and are unfamiliar with the benefits which have resulted from our modern "pays-for-itself" reclamation policy.

These uninformed citizens are not aware that:

1. Today some 6,200,000 acres of arid and semi-arid lands are irrigated from reclamation projects and are producing wealth in which all America shares.

2. Power-generating capacity of reclamation units now stands at 4,300,000 kilowatts—enough to supply the power needs of 8½ million citizens.

3. Crops produced with reclamation water last year were valued at $865 million.

4. People in the areas served by reclamation projects have paid some $2,500 million in Federal taxes since 1916. This is 25 percent more than the entire cost of reclamation in our Nation to date.

5. The cumulative crop values on all reclamation projects up to 1953 is nearly $10 billion.

Reclamation creates wealth which continues to pour tax revenues into the Public Treasury long after the total cost of the project has been repaid.

Here is just one example of how reclamation has more than paid for itself.

This fall the $11 million Salt River project will be paid in full. The last contract installment will be paid by the water users, repaying in full the original investment.

REPAID COST

But, like all reclamation projects, this unit has more than repaid its original cost. The annual return in Federal taxes from Maricopa County, Ariz., in which the Salt River project lies, equals about nine times the total Federal expenditure in the original Salt River project.

The project has been largely responsible for the development of this county from just another desert valley into its present position as one of the Nation's leading and most prosperous agricultural communities.

And the benefits from this single reclamation project will continue to pour in as long as water continues to flow down the Salt River.

If anyone is still skeptical about the success of our Nation's reclamation policy, he has but to study another typical reclamation project on which we have first-hand facts and figures.

STRAWBERRY PROJECT

That is Utah's strawberry project. This project is the oldest one in Utah and one of the first in the Nation. It cost $3,348,518 back in 1905–13 to build a 3.75-mile tunnel and other structures needed to divert surplus water into southern Utah County.

Today, 42 years later, more than 80 percent of its cost has been repaid by water users. In another 10 years, every cent the United States Government spent on the project will have been returned.

And here are some of the things the project has done:

1. Some 45,000 fertile acres are safeguarded against drought.

2. The assessed valuation of the southern end of Utah County—that part of the valley which the project directly affected—jumped from $6,271,000 in 1911 to $30,558,000 in 1920. Most of the increase is directly attributable to the strawberry project.

The strawberry project also resulted in many new crops being introduced by farmers of the area—crops which replaced the former dry-farm grain staples. Onions, string beans, tomatoes, peas, lima beans, carrots, cabbage, squash, lettuce seed and grapes became major crops of the area.

And that example illustrates how the Colorado River storage project, even though it will bring new acreage into production, will not materially add to current crop surpluses.

As noted, crops presently in surplus are crops which can be grown on marginal lands—dry-farm crops like wheat, oats, rye, and barley. When those lands enjoy a stable water supply, the farmer then can grow diversified crops, crops which are in demand and not in surplus.

The Colorado project will provide supplemental water for 233,930 acres—acres now restricted to dry farm or limited irrigation crops, most of which is now producing Government-supported crops. It would do this while providing full water supplies to 132,360 new fertile but dry acres. (Both of these figures are based on the project as provided by the House-amended bill.)

DEMAND CROPS

With Colorado River project water, all this new acreage then could grow crops in demand: fruits, vegetables, livestock forage crops, beef and related items.

On the other hand, if the Colorado River storage project isn't built the water belonging by solemn compact to the upper basin States will flow downhill to southern California and Mexico. And there it very materially will add to crops which are in surplus, cotton for example.

Few persons realize the phenomenal growth of cotton acreage in California in recent years. Immediately after the war, California's Imperial Valley—whose crops are entirely grown with water from the Colorado River—had a total of just 9 acres in cotton.

Paloverde and Coachella Valleys in nearby Riverside County, also watered from the Colorado River, had a mere 829 acres in cotton production in 1946.

In 1953, however, Imperial Valley's 9 acres had grown to a staggering 116,630 acres and Riverside County had 46,500 acres in cotton production.

Cotton currently is California's most valuable crop, accounting for 13 percent of the total income of her farmers.

Cotton production also has been booming in parts of Mexico irrigated by the Colorado River. Mexico's cotton exports in 1946 totaled 47,664 metric tons; in 1954 the figure had risen to 259,419 metric tons. In recent years, Mexico, which is guaranteed 1,500,000 acre-feet of Colorado River water by treaty has been diverting as much as 4 million acre-feet a year, the surplus being water belonging to the upper basin States which cannot be used there until the river system is regulated and controlled.

[From the Deseret News, Salt Lake City, Utah, of December 14, 1955]

A PLAN TO END WASTE—A DOZEN RECLAMATION PROJECTS WOULD USE WATER STORED IN DAMS OF STORAGE PROJECT

Comprising the Colorado River storage project, along with the proposed 4 major dams, are 11 smaller participating projects which will put to use the water stored behind the large dams.

Typical of these participating projects—and by far the largest—is the Central Utah project. It would cost an estimated $207,939,600 to build.

The central Utah project is an ingeniously conceived plan to provide for current needs and future growth of Utah. It would involve the central section of the State from Salt Lake Valley on the north to Nephi on the south and extend eastward to the Colorado line.

It is designed to equalize a geographic deficiency. Bonneville Basin (the western section of the project west of the Wasatch Mountains) suffers from a shortage of water. Uintah Basin (the eastern section of the project east of the Wasatch Mountains) has a surplus of water.

WOULD DIVERT WATER

Simply, the plan is to divert Uintah Basin water westward by aqueducts and tunnels to where it can be used for Bonneville Basin municipal and farm use. En route, it would be used to generate power to help pay for the project.

The populous Salt Lake and Utah Valleys have a vital stake in the program. The project is the only foreseeable means of providing additional water and power, which the area will need soon to prevent its normal growth from being stunted. There is no other prospective water supply for the future.

This very real need was pointed up recently in studies conducted by two prominent engineering firms for the Metropolitan Water District of Salt Lake City.

These surveys reported that Salt Lake City will be in a critical water supply situation by 1970. In that year, the engineers predict, Salt Lake City's water demand will exceed the capacity of all existing supplies.

URGED ACTION

The engineers urged immediate action to augment water supplies for metropolitan Salt Lake City.

Making the survey were the firms of Headman, Ferguson, and Carollo, of Phoenix, Ariz., and Black and Veatch, Kansas City, Mo.

And if Salt Lake City is to have sufficient water in 1970, action must be taken now, to allow sufficient construction time. In fact, the time is already late. The solution: the central Utah project.

The central Utah project is of such magnitude that it has been planned in two parts:

1. The initial phase—a unified portion that could be developed and operated independently.

2. The ultimate phase—an extension of the initial phase which would more than double acreage served and quadruple power output.

ONLY INITIAL PHASE

The project now before Congress consists solely of the initial phase. The ultimate phase would have to pass Congress when needed. It is mentioned here because the two cannot fairly be considered separately.

Under the general plan of development, streams draining the southern slope of the Uinta Mountains in the Uintah Basin in northeastern Utah would be intercepted. They would be conveyed westerly by gravity flow through the Wasatch Mountains into the Bonneville Basin.

The water would be collected by an aqueduct leading to a storage reservoir high in the Wasatch range. From the reservoir the water would drop through a series of hydroelectric powerplants before being used for irrigation, municipal, and industrial purposes.

Replacement water and water for additional development in the Uintah Basin would be provided by smaller developments on local streams for the initial phase. And by a major diversion from the Green River for the ultimate phase.

The project primarily would serve the eastern portion of the Bonneville Basin, including the cities of Salt Lake City, Provo, Heber, Spanish Fork, Payson, Nephi, Richfield, Delta and Fillmore, and portions of the Uintah Basin. But also served eventually through aqueduct links with the Provo and Duchesne Rivers would be the Weber River, and thus the entire Weber Basin.

LIMITED DEVELOPMENT

In the initial phase of the project, only Rock Creek and Uinta Mountain streams west of Rock Creek would be diverted into the Bonneville Basin, where development would be limited to areas between Salt Lake City and Nephi. Initial phase development in the Uintah Basin would include the Jensen, Vernal, Upalco and Duchesne River areas.

The initial phase of the project would provide for the irrigation of 28,540 acres of new land and 131,800 acres now irrigated but in need of more water. Full seasonal regulation would be provided for 42,600 acres of land in the Duchesne River area, more than half of which is owned by Indians or has been acquired from them.

Some 48,800 acre-feet of water would be provided annually for municipal, industrial and other miscellaneous uses. Power plants with an installed acapacity of 61,000 kilowatts would generate approximately 373 million kilowatt hours of electricity energy annually. The power plants would be interconnected with plants of the Colorado River storage project.

Where practical, the project reservoirs would impound water for recreational and fish and wildlife purposes.

ULTIMATE PHASE

So much for the initial phase. The ultimate phase would merely extend the scope of the project. The flow of all important streams on the south slope of the Uinta Mountains would be intercepted by a 110-mile aqueduct which for its last 36.8 miles would parallel the initial-phase Strawberry Aqueduct. To compensate for the diversion of this water, water would be channeled into the Uintah Basin from the Green River.

With the ultimate phase completed, the central Utah project would provide a full irrigation water supply for 200,000 acres of new land, a supplemental water supply for 239,000 acres now inadequately irrigated, and 48,000 acre-feet of water to meet foreseeable demands for municipal, industrial and other miscellaneous purposes. Project power plants would have an installed capacity of 249,000 kilowatts and generate almost 1.2 billion kilowatt-hours of electric energy annually.

FIGURES ON COST

An average of 800,600 acre-feet or one half of the water available to Utah under terms of the Upper Colorado River Basin Compact would be put to use under the ultimate phase of the project.

Critics of the Central Utah project have singled out the cost of the project for special fire, charging that the cost per acre of putting water on the land will run as high as $5,000.

Fact of the matter is that the actual cost per acre is $715. And if the cost of water on Indian lands is not included, but is assumed by the Federal Government which is responsible for the tribes' welfare, then the cost per acre drops to $564.

This is the second highest cost per acre of the 11 participating projects. Highest is the Hammond project of New Mexico at $565. Average cost per acre for all participating projects is $491.

However, to westerners who understand how well-engineered and needed reclamation projects such as this quickly repay their initial investment, this price per acre is entirely reasonable. And after all, these citizens are the ones who will be paying for it, in the form of water and power revenues.

However, cost per acre is only one yardstick by which the project should be measured. Most important is its importance as a supplier of needed municipal and industrial water and power for the future, not just irrigation land.

Considering that it is the last source of water for the State, and thus involves the future of the entire area, the central Utah project would be feasible at twice the cost, Mountain Westerners—who will pay for it—feel.

There are also many subsidiary benefits not included in the statistical columns. For example, the interconnecting tunnels and aqueducts will enable engineers to exchange and shift water wherever needed. Thus the available water supplies will be utilized to the last drop. That is functional economy.

Prof. Daniel R. Mandelker Points the Way for Improving Our Poor Laws

EXTENSION OF REMARKS

OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1956

Mr. REUSS. Mr. Speaker, Prof. Daniel R. Mandelker, of the University of Indiana Law School, has written a recent article in the American Bar Association Journal on The American Poor Laws: A Legislative Backwater which commends itself to the attention of all those interested in welfare work. Professor Mandelker, though still a young man, has already made great contributions to legal research. His father, Adolph I. Mandelker, of Milwaukee, Wis., has long been a leader of the Wisconsin bar. I submit herewith Professor Mandelker's article:

The American Poor Law: A Legislative Backwater

(By Daniel R. Mandelker, assistant professor of law, Indiana University)

As the noted historian, R. H. Tawney, has written with reference to the poor laws, "there is no touchstone, except the treatment of childhood, which reveals the true character of a social philosophy more clearly than the spirit in which it regards the misfortunes of those of its members who fall by the way." However, with billions spent by local, State and Federal governments each year on over 5 million persons receiving some form of public assistance, the general assistance or poor laws still remain a little known and little understood legislative backwater. Yet, the consequences of public indifference appear all the more serious since the general assistance statutes, in many respects, are out of tune with contemporary democratic institutions.

Any attempt to write or communicate on this problem is difficult because even the function of general assistance appears to be a mystery to many people. Chiefly in the last two decades, many statutory programs have been adopted with the aim of affording some security against some of the common risks of an industrial society. Workmen's compensation laws were first adopted to compensate workmen for injuries received in the course of their employment.[1] With the help of Federal grants-in-aid, the States have also established programs of categorical public assistance to the needy blind, aged and disabled, and to dependent children of families in which the father is dead, absent, or incapacitated. Unemployment compensation seeks to protect workers against the hardships of temporary job layoffs, and Federal old-age and survivors insurance provides a form of security against retirement.

Despite all these attempts to provide against the contingencies that bring about economic need, the old poor laws are still with us. Their function must be defined negatively. Individuals who are not covered by one of the programs of social insurance or categorical assistance, or who are not adequately provided for under these programs,[2] or whose benefits under these programs have expired, must rely for subsistence wholly or in part on the aid provided by general assistance. For this reason, this program remains the last real bulwark against unemployment produced by a prolonged depression. Today, about 300,000 persons and families are dependent on the poor laws for their support.

Unlike the programs of categorical assistance, however, no Federal grants-in-aid are made available for general assistance. This program, which is usually administered at the municipal or county level, is entirely the creature of State statute.

In their basic outline, American poor laws vary amazingly little from their English prototype of 1601, from which they were derived. As was the case under the English statute, eligibility for general assistance is based on an economic need test. In addition, the applicant for public aid must usually have settlement, or residence, in the locality in which he is applying for help. Members of the applicant's immediate (and sometimes remote) family are usually made primarily or equally liable for any assistance that is granted, and the recipient of aid in many States is also liable to make restitution of what he has received in the event he is ultimately able to do so. Often there are special provisions containing civil and criminal penalties for any fraud committed by applicants or recipients in connection with the assistance program.

While a simple recitation of these provisions does not make them appear unduly severe, their cumulative effect, and a certain harshness which has been a part of poor law administration since its inception in this country, combine to make the lot of the individual in need of assistance an unhappy one.

The settlement requirement may be taken as one example. Most settlement laws contain a residence requirement of at least 1 year and many require more than this. The length of the residence period, together with the fact that residence must be acquired in most States on a local county or township basis, and cannot be acquired during the period public aid is received, often makes it difficult for the average working family, which tends more and more to be migrant, to get a settlement. If the community in which the individual applies for assistance turns out not to be his place of settlement, his only alternative usually is to search out his settlement and seek relief there. There are laws in most States making it a duty of the locality to assist nonresidents as well as residents, but they are ignored as a practical matter in many instances.

Pulling up roots, however, may not always be an easy thing to do. And in some cases one's settlement may turn up where it is quite unexpected. There are many technicalities in the law, and a young widow with children, for example, may suddenly find that she has settlement only in the distant and strange community of her husband's birth, a place where she may never have resided.

But the lot of the nonsettled person in need may be even worse in some jurisdictions. Some States still have in their statutes the English settlement law of 1662, which authorizes the compustory removal to the place of his settlement of any individual who does not have settlement in the town where he applies for relief. That persons may be forced to move against their will seems shocking in the 20th century, and there is some evidence that the judicial process under which compulsory removal orders may be obtained has fallen somewhat into disuse. However, the experience of the recent depression indicated that relief officials are not averse to dumping all nonsettled persons they find in need of relief on a near or distant locality. The reports have yielded a decision, handed down only 10 years ago, involving a helpless farm family forcibly removed from their home in subzero weather and dumped in a farmyard in a neighboring locality.

But it is in the administration of these statutes that their unnecessary severity seems most evident. There are a substantial number of States in which general assistance, like the categorical assistance programs, is administered by county welfare departments under the supervision of the State department of welfare. Where this is the case, the result has usually been improved methods of administration and utilization of better-trained personnel to administer the program.

Unfortunately, as a carry-over from the early English plan, local, unsupervised administration of general assistance is still the rule. This results in the placing of the program in the hands of unskilled political officeholders, who are not trained to carry out this function. They can make the receipt of assistance unpleasant in many ways. For example, few of the statutes contain any restriction on the method in which poor relief is to be paid, and the practice of making payments in kind instead of in cash was still found to be quite general in one recent survey. The humiliating consequences of being deprived of the power of choice that this system entails must be felt to be appreciated.

In many areas the policy is to deny general relief to anyone who can work, and several statutes so provide. If this policy were followed in times of serious economic dislocation, able-bodied persons, out of work in substantial numbers due to no fault of their own, would be denied aid. In addition, relief officials were found to deny aid to anybody who turned down an available job, whether this was required by statute, as in several States, or not. There can be no objection to this requirement as such, but where relief officials take an unrealistic view of what an applicant is able to do, he may as a practical matter be denied both a livelihood and public aid. In some areas the work test is used as a means of keeping many Negro applicants from receiving relief.

This brief review has pointed up only some of the anachronisms and inequities that inhere in the present patchwork of general assistance legislation. Not the least of these is the considerable variation in the quality of the program and in the level of assistance grants, not only from State to State but from community to community within a particular State. This is a consequence of placing the administration of the program in the hands of so many units of local government. The continued reliance on the New England town, and on townships in some States, as the administrative unit for general assistance, has led one authority to estimate that there are still 10,000 political units concerned with the administration of poor relief in this country.

What would seem to be needed is a wholesale revision and revaluation of the general assistance laws in the light of modern attitudes. Some States, indeed, have overhauled their general assistance statutes with noticeably beneficial results. In New York, for example, settlement in the State is all that is needed. In that State, too, by statute, the payment of assistance in cash rather than in kind seems to be the general rule.

Throughout most of the country, however, the trend seems to be the other way. Due apparently to burgeoning welfare costs, there is a strong movement, much like that which took hold of England in the early 19th century, to reduce the number of persons depending on public assistance for their support. The movement has been felt most by the general assistance laws, unprotected as they are by any minimum requirements imposed by Federal statute as a prerequisite to grants-in-aid.

What seems to have happened is that the unpenitent, sturdy, fraud-minded beggar has been conjured up to stalk the land. Several State legislatures in recent years have amended their general assistance statutes to elaborate the penalties for client fraud, to broaden the base of family responsibility and to find new methods for enforcing it, and to open the public assistance rolls for public inspection. Behind this new legislation there appears to be the feeling that usually persons who need public assistance are somehow personally deficient and personally responsible. Hence, these people must be deterred from applying for help by making public assistance as unpleasant as possible.

It is not denied that the problem of welfare costs is a staggering one, nor that there are persons who will use fraud to get public assistance. What the solution to these problems should be will take a considerable amount of serious thought, and the acquisition of more knowledge about the way people act. There are no easy answers. In the meantime, it seems a mistake to revert to the theory that poverty is based on personal fault.

Actually, this country has never solved its public-assistance problem. When the depression came in 1932 the poor laws were the only system of public relief available. Funds available under these programs proved inadequate to meet the need, and Federal help was inevitable. Federal help was only tem-

[1] New York and a few other States also have statutory nonoccupational accident and disability programs.

[2] In some areas, however, grants received under other assistance and insurance programs may not be supplemented by general assistance.

porary, and terminated once certain categories of individuals, such as the aged and the blind, were singled out for separate and more adequate treatment under programs for which the Federal Government shared the expense.

Even today, however, general assistance cannot meet all of the economic need that is dependent on it. In particular, the needs of families and individuals for public aid for medical expenditures is staggering and continues to become more so, with the continuing increase in medical costs. What will happen in the case of another prolonged depression that ultimately may involve the exhaustion of unemployment benefits can only be conjectured. In the meantime, the Nation must rely, for the underpinning of its entire welfare structure, on a statutory framework that dates back 3½ centuries, and that carries with it all the earmarks of an earlier and less compassionate age.

Statement in Praise of the President's Message on Agriculture and the Method and Spirit in Which It Was Evolved

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mr. DIXON. Mr. Speaker, President Eisenhower in his state of the Union message, Senator ELLENDER, Democrat, Louisiana, chairman, Senate Agricultural Committee, and Representative COOLEY, Democrat, South Carolina, chairman, House Agricultural Committee, have made earnest pleas that farm legislation be kept out of partisan politics. If it is possible for both parties to hold the line for this approach, which I devoutly hope will be possible, I am satisfied that we will come out with an excellent farm program.

The more political and emotional the issue becomes the greater the likelihood for the disputants to freeze on one solution to the exclusion of many other equally good solutions and to become insensitive to the recommendations of the farmers, the farm organizations, the professional people, the United States Department of Agriculture, and to the National Agricultural Advisory Committee.

The less political the issue becomes the greater the opportunity for a scientific approach and the greater the opportunity to include in the legislation the best ideas that have been developed regardless of their source and regardless of who gets the credit.

The President's message on agriculture still retains the flexible price support principle; yet he and Secretary Benson adopted the scientific approach in seeking from all sources suggestions for modifications in the former program.

I commend the President, Secretary of Agriculture, and the many people and organizations representing different parties and different points of view upon the democratic way in which the message was evolved, and also upon the great merit of this message.

A National Prosperity Budget for Agriculture—Part I

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mr. ROOSEVELT. Mr. Speaker, the President has rightly stressed in his state of the Union message the need for a broad vision in our approach to the problems of agriculture in the United States. The question is, Will the approach be not only broad but bold enough to accomplish a permanent solution? In November of last year there was published by the Conference on Economic Progress a most interesting booklet entitled "Full Prosperity for Agriculture." I would highly recommend that the entire booklet be read but realizing the pressure of time on my colleagues and because of the vast importance of the subject matter to all of us, whether we represent farm or nonfarm constituencies, I respectfully submit merely the summary and theme of the first chapter, "A National Prosperity Budget for Agriculture". Because of its length, I have divided it into two parts.

PART I

I. SUMMARY AND THEME: A NATIONAL PROSPERITY BUDGET FOR AGRICULTURE

The American farm problem has seldom been projected on a broad enough canvas to reveal its full significance or to promote a full solution. Hence neither rigid adherence to current farm policies nor unqualified return to earlier policies is adequate. The problem raises these momentous and unresolved issues:

Do commodity adjustments require sacrifice of human well-being? Must the incomes of 22 million farm people be severely depressed to dissuade over-production of farm commodities?

Is there real overproduction whenever farmers cannot market all their products, or is underconsumption the real problem when much of our own population suffers from malnutrition and inadequate clothing, and when our exports of farm products are below our free world responsibilities and our own capacities?

And if we need fewer farms and farmers, what practical alternatives are being offered to enable those dispossessed from agriculture to enjoy the full employment, production, and purchasing power written into national policy under the Employment Act of 1946?

The farm problem, viewed in the context of the whole economy rather than in superficial isolation, raises in acute form the whole issue of whether rapidly rising productivity on the farm and the advance of technology and automation in the factory are to lead inexorably to "surpluses" and mass unemployment or underemployment of plant and manpower, or whether increasing potential abundance can be translated into sustained full employment and rising living standards for all on an equitable basis.

Seven basic elements in the farm problem

1. Paradox of farm surpluses despite unmet consumer needs: If the 8 million multiple and single-person families in the United States with incomes under $2,000 before taxes were brought up to a moderate standard of diet and nutrition, the additional annual consumption of farm products would approach the average annual size of surplus production during the past 3 years. Our farm exports have dropped 25 percent since 1951; yet world consumtion of food would need to rise by 15 to 50 percent, for various items, to achieve by 1960 even a moderate improvement in the dangerously poor diets of the hungry countries. If in all the years since World War II we had raised very low income American familities to an adequate standard of clothing, and maintained even the minimum exports that free world needs and our own capacities justify, the accumulation of cotton stocks would have been held to a reasonable reserve. With proper steps toward full domestic and export consumption, farm product use would be up about 10 precent above 1954 levels in 1956 and about 22 percent in 1960.

2. Distortion of farm production relative to current and future needs: To meet population growth, changing domestic incomes and tastes, and changing world conditions, total farm production needs to be increased about 22 percent by 1960; however, great shifts in production are needed, and due to rapidly increasing yields about 8½ million acres need to be withdrawn from cultivation by 1960. But the current effort to force some lines of farm production and incomes downward, without constructive outlets for farm energies, is leading to more intensive cultivation and shifts to unrestricted lines. Thus the total surpluses are mounting.

3. Gross deflation of farm income, with other income rising: The decline in farm income became severe and commenced to accelerate after 1951. Since then, measured in uniform dollars, the net income of farm operators has dropped 35 percent, and about 12 percent during the past year. The total income of the entire farm population, including nonfarm sources of income, has declined 21 percent since 1951, and in 1955 has fallen about $1 billion or about 5 percent below 1954. In contrast, total national income, also measured in uniform dollars, has risen 13 percent since 1951, and 7 percent since 1954. The average per capita income of the farm population has fallen about $135 since 1951, and the income of the average farm operator's family about 20 percent. A minimum practical goal for 1956 would be to raise the income of the farm population from all sources to about $3½ billion dollars above the severely depressed 1955 level, which would still be about $1½ billion below 1951. By 1960, to bring a reduced farm population even to two-thirds of parity of income with other groups, its annual income from all sources needs to be raised by $10 billion above current levels.

4. The plight of the family-type farm: Of about 5 million farms, about 3 million are either commercial family units of very small size or noncommercial part-time or residential farms. These are generally marked by very low incomes and productivity, and contribute only about 10 percent to total farm product sales. At the other extreme, about 100,000 very large or giant farms contribute about 26 percent to total sales. In the middle, about 2 million adequate family-type farms are losing ground, hurt by the more powerful units and by the inefficient units. Between now and 1960, the low-income, low-productivity farms should be reduced by about a million, and family-type farms increased by about 450,000, while the trend toward concentration in giant farms should be checked.

5. Poverty in farm areas which transcends the traditional farm problem: Although the farm population is only about one-seventh of the national total, about one-half of all the families in the United States with incomes below $2,000 a year, and about three-quarters of those below $1,000, are farm operator families. More than a third of all farm operator families are below $2,000, and about one-eighth below $1,000. Including

low-income residential farm workers, about 3 million poverty-ridden American families are concentrated in farm areas. This poverty problem is far bigger than the traditional problem of income derived from farming, because many of these families would need to move out of agriculture to find an American living standard, while many part-time or nominal farmers suffer from low income from nonfarm sources to supplement their low farm incomes. Many are debilitated by inadequate educational and health services, poor housing, and a stultifying environment which affects their whole lives. By efforts on many fronts between now and 1960, the Nation has the economic capacity to lift 6 out of 7 of these families out of the below $1,000 income category, and to reduce the number below $2,000 to about one-third of a million.

6. Surplus farm population rooted to deprivation on the farm instead of offered other productive outlets: The deflation of farm income is not taking people off the farm; instead, during the past 3 years, the exodus from the farm population has been below the desirable long-term adjustment. Masses of underemployed people on the farm eking out a substandard living, nullify any assertion that the economy as a whole enjoys full employment, production, and purchasing power. Between now and 1960, about three-quarters of a million farm family workers and hired workers, comprising with their families about 2 million people, need opportunity outside of agriculture for an American standard of employment and living.

7. The American people hurt by disunity rather than unity on the farm problem: Urban consumers are told that lower farm prices help them; but a drop in farm prices of 22 percent since 1951 has been accompanied by a drop of less than 1 percent in retail consumer prices for commodities using farm products. Farmers are told that rising industrial wages hurt them; but whatever income gains farmers may make must be correlated closely with rising nonfarm incomes and consumer demand. Businessmen are told that the plight of agriculture no longer matters much to them, because the farm population and farm income are now a much smaller part of the national totals than a generation ago. But the spending of farmers for their business purchases, for industrial products, and for capital goods, are as high a percent of the national totals as a generation ago. When the true level of unemployment throughout the whole economy during the recent recession rose to about 3 million above minimum unemployment, the depressed state of farming may have accounted for 1 out of every 6 workers who should have had jobs and didn't. Progress toward parity of income and living standards for agriculture would create immense new markets for the products of industrial firms and workers.

Main defects in national farm policies

Current farm policies stem from the thesis that the surpluses of farm commodities reflect surplus farm productive plant and farmers; that the contrived deflation of farm income will reduce the farm plant and population; that less farm output will automatically raise farm prices and income; and that those forced out by this process will either land on their feet or have only their inefficiency to blame if they land on their heads. When the facts show that the commodity surpluses are mounting, farm incomes falling, and the human surpluses not moving with acceptable speed into rewarding nonfarm employment, the plea is for more time.

This effort to substitute spurious commodity adjustments for genuine human adjustments is a sad throwback to the method by which other surpluses were cured a generation ago. If mass unemployment (a labor surplus) arose, the cure was to let wages fall until reemployment became profitable, or until hunger-driven men would accept jobs at any wage. If prices were falling, the cure was to let them fall until they hit bottom. If production exceeded consumption, the cure was to let enough surplus smallbusinessmen fail. Thus every depression would ultimately end.

The great progress of our general economy during the past quarter century from boom-and-bust to improved stability, and from inhumanity to conscience, has rejected this mythology. The improvements in private business policy have included careful studies of expanding consumer market opportunities, and coordinated adjustment of business investment and price policies to the requirements for long-range growth on a balanced basis. These do not seek to adjust downward to cumulate depressionary forces; they strive to adjust upward to strengthen expansionist forces. Intelligent collective bargaining has helped to substitute stability of wage rates for wage cutting even during periods of economic recession and to develop regularized plans for income advances to keep pace with rising productivity. While we recognize the need for shifts in the patterns of production and consumption from time to time, we also recognize that the sum total of both should expand enough to maintain full employment, production, and purchasing power. And even when surpluses of plant and of manpower occur, we resort to public works, unemployment insurance, Government credit, subsidies, and many other devices which spread the risk and check the decline.

Even the farmer has benefited by these improvements in general economic policy; if the general economy were less stable and less inclined toward expansion, he would be even worse off than he now is. Nonetheless there is a farm depression in the midst of general prosperity because the gains in economic thought and action in other areas of the economy are not being applied with appropriate variations to agriculture itself. National farm policy reflects the outworn approaches which were tried with disastrous results in other general depressions—efforts to get rid of surpluses by putting millions of people through the wringer to eliminate the inefficient. The farmer on the whole is not less efficient than others; farm productivity has risen faster than other productivity. Nor is the farmer singularly guilty of overproduction. The farm surpluses, while too large, are neither so big nor so costly as surpluses of unemployed plant and manpower elsewhere. And even where there are no substantial surpluses and no support prices, for example livestock, the farmer recently has taken extremely severe income losses. When total farm production was far short of effective demand during wartime, the farmer was much better off than now but nowhere near attained parity of income or living standards with other groups.

Farmers are depressed primarily because of their chronic relative weakness in the market place; because their organization does not permit them to stimulate consumption or rationalize production and prices and incomes as others do; because trends in food distribution and prices have cut their share of the consumers' foodbasket dollar from 51 cents in 1947 to 40 cents now; and because farm policy is not countering these disabilities.

A National Prosperity Budget for Agriculture—Part II

EXTENSION OF REMARKS

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1956

Mr. ROOSEVELT. Mr. Speaker, the concluding portion of the summary and theme of the booklet Full Prosperity for Agriculture, part II, follows:

PART II

Farmers are depressed primarily because of their chronic relative weakness in the market place; because their organization does not permit them to stimulate consumption or rationalize production and prices and incomes as others do; because trends in food distribution and prices have cut their share of the consumers' foodbasket dollar from 51 cents in 1947 to 40 cents now; and because farm policy is not countering these disabilities.

Main policy recommendations

The short-range and long-range (1960) program recommended in this study suggests these steps toward genuine parity for agriculture.

To expand domestic and export consumption of farm products, the study recommends a rounded program to promote full employment for all, with the highest noninflationary rate of growth that our technology permits; consideration of proposals to subsidize food distribution to needy consumers, plus expansion of the school-lunch program; further mutual liberalization of trade barriers, and an increase in imports in an expanding economy, which could substantially enlarge dollar availability to other countries; and a sizable immediate increase in foreign economic assistance and technical aid for all purposes with reduction by 1960 to a level about half a billion dollars about 1954, but with a higher level of loans and a lower level of grants.

On the production front, the study recommends that current and future production of farm products be adjusted on a carefully coordinated basis to desirable long-range and sustainable growth targets for domestic and export consumption. It rejects as shortsighted the effort to force production below long-range and sustainable consumption objectives, in order to get rid of the "surpluses"—first because this policy has not worked, and second, because even if it worked it would produce shortages in future and thus perpetuate a feast and famine cycle for agriculture. Simultaneously, the current farm surpluses should be worked down in the immediate years ahead by more liberal food distribution policies at home and abroad than would be sustainable or desirable for the longer run.

A large program of land conservation and food reserves is recommended, coupled with withdrawal of acreage from cultivation coming to an estimated 8½ million acres by 1960. But unless payments to farmers for this purpose are geared to adequate income objectives any such program would fail in a major objective and also be unworkable because income deflation forces farmers to overproduce through even more intense cultivation.

On the farm income front, the study stresses that the correct guiding objective

for all price supports or other protective measures is to help farmers move gradually toward parity of income and living standards with other groups. Unless guided by clearly defined income objectives, such protective measures are mere shots in the dark. An expanding level of domestic and export consumption between now and 1960 is the main road toward farm income progress. But because of the farmer's intrinsic weakness in the market place, special measures are also needed. Guided by proper income objectives, the study recommends as a first emergency measure the restoration of price supports in 1956 averaging in the neighborhood of 90 percent of parity, because, in view of the depressed condition of farm income, tested devices should precede innovations. But as soon as feasible, price supports should be used in combination with income or production payments, at least for some commodities. This combination can be fairer to the farmer, less burdensome to the taxpayer, more consistent with improved export markets, and more suited to inducing shifts in production to conform with consumption goals. Any workable system of income protection must be meshed carefully with adjustments in acreage and other productive units to feasible levels of consumption. But income protection rather than income penalties are conducive to such adjustments—and much fairer to the farmer.

To strengthen the family type farm, and to reduce and ultimately remove the acute problem of farm poverty, farm income protection should be realined so that more of the benefits accrue to the family type farmer, instead of being substantially dissipated in payments to large or giant farm enterprises; farm credit should be expanded and made cheaper, and cooperatives encouraged; and public services—including education, social security, health, and housing—should be expanded with increasing resort to equalization.

To facilitate the shift from farm work to nonfarm employment, the study stresses the prime importance of an overall full employment program. Underemployment on the farm is only a shade less evil than unemployment in the city. A surplus labor supply on the farm is bad for urban workers. Special emphasis should be placed upon further industrialization, improved labor standards, the expansion of collective bargaining, and enlarged "employment servicing," especially in those areas where a large part of this new opportunity needs to be created.

The total net cost to the Government under this recommended program is estimated to come by 1960 to about 4 percent of the Federal budget, moderate amount, indeed, measured against the size of the problem. This includes not only income protection and other payments to farmers, but also the subsidies to low-income consumers. The net cost to the Government of the basic price-support programs during more than 22 years of operation through mid-1955 has been less than $2½ billion, or on the average less than $1 a year for every person in the United States. This has been a relatively inadequate effort, compared with public outlays to stabilize markets for industrial products, to cushion industry against the shock of reconversion, to conserve and develop other resources, to maintain purchasing power during unemployment, and for other desirable purposes.

Above all, a national prosperity budget for agriculture is proposed. All aspects of "the farm problem" interact upon each other, and any effort to solve one without meeting the others falls of its own weight and tends to increase the distortion at all points. Therefore, the study recommends that the Department of Agriculture, working in concert with other agencies, and with representatives of farmers, workers, businessmen, and consumers, be required to develop a national prosperity budget for agriculture. This budget would project ahead, at least until 1960 (with appropriate annual readjustments) interrelated goals for the expansion of domestic consumption and export of farm products; for corresponding adjustments in farm production; for handling of farm surpluses; for the movement of farm income and living standards toward parity with those of other groups; for improvements in the farm structure to strengthen the family type farm; and for the reduction and ultimate liquidation of mass poverty in rural areas. These goals should be squared with overall full employment goals which envisage opportunity for those moving off the land to obtain an American standard of employment and living in industry or in service occupations.

This national prosperity budget for agriculture involves neither dictation to farmers, nor excessive planning, nor major additions to the range of coverage of already well-defined Government services. Even now the Government exerts, and will continue to exert profound influence upon all of the important aspects of the farm problem to which these goals would relate. There are already references in basic farm legislation to the desirability of establishing these kinds of coordinated goals; moreover, their pursuit could not be undertaken without the voluntary concord of formers nor without the approval of the elected representatives of the American people. The provisions of the Employment Act of 1946, that "needed levels of employment, production, and purchasing power" be established as a guide to needed economic policies, is another assertion of this responsibility.

In other sectors of the economy, these goals are largely established by large groups of businessmen and workers, as their economic education advances and as their sense of responsibility for the well-being of the whole economy increases. But it is manifestly clear that the farm population or its leadership cannot alone perform any similar function in view of the organization of agriculture. This is why the initiators of national farm policies, working in concert with farmers and others, should help develop the very approaches which have worked so well in other sectors.

All members of the National Committee of the Conference on Economic Progress, listed on the back cover of this study, do not necessarily subscribe to all of the analysis or all of the recommendations. But they all join in the desirability of placing the study before the public for full discussion and consideration. Those members of the national committee who are not members of farm organizations are desirous to avoid any semblance of intrusion into the province of farm people or their leadership, although they desire the elevation of agriculture to a fair share in an expanding national prosperity. The staff work on this study, directed by Leon H. Keyserling, has been done by Joel Darmstadter, Peter G. Franck, Mary Dublin Keyserling, Philip M. Ritz, and Warren C. Robinson. The study has benefited by comments of a number of economists and others, especially John A. Baker, Louis Bean, Frank Fernbach, Carl Huhndorff, Robert A. Rennie, Gordon Roth, and Elmer E. Walker.

From Hogs to Pork Chops

EXTENSION OF REMARKS
OF
HON. EVERETT M. DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, January 9, 1956

Mr. DIRKSEN. Mr. President, I noticed recently on examining a current issue of the Farm Journal a very interesting article entitled "Who's Making the Money on Your Hogs?"

The article was written by Dean Wolf, a well-informed person, who took the time to follow a shipment of hogs from an Iowa farm to a farmer in New York who purchased and prepared pork chops taken from the hog.

The author undertakes to show all of the costs that are applied as the hogs move from the market to the dinner table. This information throws considerable light on the challenging question of the price spread between producer and consumer.

I believe the article will prove to be informative to Members of the Senate and House, and also to the people of the country; therefore, I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHO'S MAKING THE MONEY ON YOUR HOGS?

(By Dean Wolf)

How come hogs are selling for less than 13 cents at the farm—a 13-year low—and pork chops are still bringing 79 cents a pound?

Who gets the money in between and why?

And is everybody along the line getting less than a year ago, or are farmers the only ones taking a beating?

Those questions Farm Journal put to me early one morning about 2 weeks ago. By the next afternoon I was on a truck loaded with hogs in eastern Iowa, headed for Chicago.

My job was to stick with those hogs until they were sold and butchered. Then follow the meat to a supermarket somewhere—even go home with someone who bought some pork chops and help eat them.

"Keep score along the way on who makes what on these hogs, and why. Compare it with a year ago if you can," were my instructions.

I started out on the farm of Mrs. Anna Hack, operated by her son Henry in Jones County, Iowa. Farmers in their area raised 5 percent more spring pigs than last year; the country as a whole, 9 percent more. But the week these pigs went to market, slaughter was 24 percent higher than a year ago—and that explains much of the trouble.

The first cost on the Hack hogs started when the Frahm Bros. truck picked up the 32 head and took them to nearby Clarence, Iowa. There they were reloaded into one of Frahm's big semis for the 200-mile trip to Chicago. I climbed aboard and went along.

By the time we got to the Chicago Stock Yards we'd rolled up charges of 63½ cents per hundredweight: 50 cents for the truck; 3 percent Federal tax on the trucking charge; and 12 cents for in-transit insurance.

"How's the trucking business?" I asked Freeman Frahm.

"Not good. I'm making less money than I did a year ago. Costs are up; income down," he said. "Trucks, tires, gasoline, maintenance—they all cost more. Our rates are the same as last year, and there's too much competition to raise them."

One of the big tires on the semitrailer blew out on the trip. Frahm told me it cost $127 new.

We rolled into Chicago at 3 a. m. I helped unload, caught a short nap, and then watched the pigs sell. The Union Stockyards' bite came to $11.16 for yardage on the 31 head (1 died on the truck) and $4.20 for the 2 bushels of corn. Fire insurance took 7 cents; the National Livestock and Meat Board got 21 cents to use for promoting pork.

The corn charge is 15 cents a bushel cheaper than last year. It's the only yard charge that's changed since then—even though the CIO unionized stockyard employees got a 5-cent-per-hour raise last December and another 13-cent boost in August. Average base pay at the yards is $1.60 an hour. Labor makes up 75 percent of the total stockyards costs, says M. J. Cook, vice president in charge of operations.

"We're holding the line on our charges," Yard President William Wood Prince told me. "We decided that despite the wage boost it's a poor time to raise our charges when the farmer is taking it on the chin."

Commission firms have held the line, too. Dolan and Ludeman sold the 31 Hack hogs, charging $11.77 or 38 cents a hog. Their rates haven't changed since November 5, 1951, but their firm's salaries (their biggest cost) have gone up 5 percent to 10 percent in the past year.

So, the commission firm and the stockyards company are making no more than a year ago—and probably less. But the men who work for them are making more money.

Up to this point, all the charges on the hogs came out of the pocket of Mrs. Anna Hack & Son. Their hogs, which sold for $14 a hundred pounds in Chicago, returned them $12.88 a hundred back in Iowa. With hogs down $5 a hundred from last year, the Hacks, like many farmers, have taken a big cut in income.

The minute the hogs were bought for 14 cents a pound, more people started getting a "take" out of those pork chops that I found selling for 79 cents a pound at the end of the trip.

Armour & Co. bought the 31 hogs to slaughter in their plant in Jersey City, N. J., so I climbed on the caboose of an NF6 (no-feed) Pennsylvania Line freight train and was off with the hogs for a 30-hour ride for Jersey. The hogs made the 971-mile trip without a stop for feed, water, or rest. (I didn't get much of these, either, back in the caboose.)

This is what the railroads call a "hot-shot" train. Other freights and even local passenger trains were shunted aside to give us a clear track. This nonstop service is one way the railroad is trying to cut costs; it gets faster turnaround on freight cars. For the packers it cuts livestock shrink about a third, eliminates feed charges en route, and reduces injury and death losses. One veteran Chicago order buyers say "hot shots" save the packer about $50 per carload of hogs.

Freight charges on these hogs were 15 percent higher than a year ago and now total $1.05 a hundred pounds as the hogs come off the cars. (The shipper doesn't have to pay freight on shrink.)

Railroad officials say their costs are up, too, so it's hard to tell whether they are making more money on livestock hauling today than a year ago. Their employees are making more for sure. Yardmasters' paychecks are $21 a month fatter. Base pay for trainmen is up 10½ cents an hour.

As we sipped strong black coffee between jolts in the caboose, the conductor told me he makes $7,300 a year. He's been on the railroad a long time and he's happy.

By the time the Jersey City plant started slaughtering, those $14 hogs had now cost Armour $16.48. The $2.48 spread included freight charges, commission for the Armour hog buyer who bought the hogs in Chicago for Armour's Jersey City plant, a service charge, and feed bill at the holding pens of the Jersey City Stockyards.

Actually, Armour's cost was more because the 192-pound hogs had shrunk 12 pounds apiece on the trip, or 6.34 percent (it usually runs closer to 8 percent). I expected it would be more by the way that caboose threw me around.

That shrink was the only thing I didn't see converted into some kind of salable product. Everything from snout to tail was put to some use.

The only reason for shipping the hogs live at all is that the eastern trade will pay 1½ to 2 cents a pound more for fresh pork processed in the East than for meat shipped from the Midwest. Why? No one seems to know—apparently it's just habit carried over from the days when we didn't have good refrigerated freight cars.

The week that these hogs sold, packers were paying 28 percent less for hogs than a year ago (down from a $19.16 average to $13.79 in Chicago). However, the New York wholesale price on pork loins had dropped only 17 percent (from $45 to $37.20). The October wholesale price on all pork in New York was down only 16½ percent from last year.

The packers' handling margain on the fresh pork from a 192-pound hog averaged $3.89 the week these hogs sold compared to a $3.17 margin a year ago, according to Government figures. That's an 18½-percent boost, compared to the farmers' 28 percent cut in price—and packers were getting this on 24 percent more pork volume than a year earlier.

This isn't all profit—costs are also averaging 12 percent higher than a year ago in the Jersey City plant, according to plant officials. Labor, the biggest cost item, is up 19.3 percent. Packinghouse workers in this plant got a 5-cent raise per hour, plus fringe benefits, in September 1954. They got another flat 14-cent raise in August. The average wage rate there is now $1.97 per hour.

B. F. Bracy, manager of the plant where these hogs were killed, summed up his books for the year this way: "We're doing a little better than last year—because we're losing a little less money." By the time he toted up his costs he figured he was out 69 cents on every hog in the Hack shipment.

Each 192-pound hog—killed, cut up, and in the plant's cooler—was worth $31.80 to the packer, according to his figures, and costs up to that point had amounted to $32.49. The hog ended up a 132½-pound carcass which yielded: 25 pounds of ham valued at $8.64; 12 pounds of picnics worth $2.53; 8½ pounds of Boston butts, $2.12; 20½ pounds of belly, $5; 20 pounds of loin, $6.54; 3 pounds of spare ribs, 87 cents; 2 pounds of neck bones, 11 cents; 3½ pounds of feet, 20 cents; ¼ pound of tail, 1 cent; 4½ pounds of skinned jowls, 50 cents, and 4¼ pounds of trimmings, 76 cents.

Besides the carcass, there were 7 pounds of variety meats worth 94 cents to the packer at this stage. These include brains, liver, tongue, cheek and head meat, ears, heart, kidneys, spleen, snout, and stomach. And there were 27½ pounds of lard worth $2.92 loose.

The rest which goes into byproducts, brought 66 cents. This includes hair, blood, yellow grease, casings, tankage, pituitary and thyroid glands.

Only a small portion of the pork goes immediately into the wholesale market. The rest may not be sold by the packer for several weeks, if processed further, or for months if it goes into storage. This delay can either make or lose the packer money. This year, packers claim they have sold on a declining market as farmers have. Up to this point, it was easy to tell who had been paid, and how much, for handling these hogs. From here on out, it was impossible: The hogs were cut into dozens of pieces and went in all directions. So I followed a pork loin to the Grestide Bros. supermarket at 17th Street and First Avenue in New York City.

Grestide paid Armour a wholesale price of 40 cents a pound, only 3 cents less than on the same day a year ago. (The live hog brought the Hacks 5 cents a pound less back in Iowa, remember.)

Center-cut pork chops from that 40-cent loin sold that day for 79 cents a pound in the Grestide supermarket. Yet, the meat department manager said he was having a hard time making year-ago profits. Like everyone else, he complained about rising costs.

Supermarket costs on a pork loin are for slicing, drapping two chops in a cellophane package, and various overhead charges. Labor, a big item, has gone up 30 percent in the Grestide store in the past year, I was told. The average wage rate there is now $1.83 per hour.

It costs 12 cents just to put an empty package on the Grestide's meat counter by the time all of the overhead is figured in.

What the retailers of the country are making on meats is impossible to say. All the major supermarket chains have been showing good earnings, and in most of them meat accounts for a fourth of their volume. Typical New York stores took $10.98 for handling the pork from a 192-pound hog in October last year. This year, they're taking $11.25 and are handling more pork.

I watched Mrs. S. J. Ciaccio, a New York City homemaker, shop for meat. She just didn't walk up and pick up some pork chops. She looked at beef, lamb, chicken, and pork. And once she made up her mind on pork she was pretty choosy about the kind of chops she bought—she didn't want too much fat or waste.

Right there, I realized that Mrs. Ciaccio's decision on what to buy—multiplied by the decision of millions of homemakers like her—is a big part of what makes hog prices go up or down.

I wound up this trip riding the tube-train under the Hudson River to the Ciaccio home in one of New York City's big, tall apartment buildings at 301 East 21st Street. There I enjoyed pork chop dinner with the Ciaccio family.

Mr. Ciaccio, I learned, is a dentist and there's a 12-year-old daughter, Theodora. The family's meat bill runs about $15 per week, about a fourth of it for pork.

Mrs. Ciaccio winces a little at 79-cent pork chops, but she buys only the most popular cuts of pork.

What could I conclude from the trip? Well, one thing was that the farther you go back toward the farmer in the line-up of middlemen, the less anybody was making. And the farmer is by far the worst off of all.

It was hard to tell what the retailer and the packer were making compared with a year ago, but it is generally believed that they are doing better. The railroads are showing increased earnings, too.

But the one group that is doing better for sure is organized labor, whereever you find it.

And the one group that is doing a lot worse is the hog raiser.

The Late Vera Buchanan

SPEECH

OF

HON. CECIL M. HARDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 3, 1956

Mr. KELLEY of Pennsylvania. Mr. Speaker, I yield to the gentlewoman from Indiana [Mrs. HARDEN].

Mrs. HARDEN. Mr. Speaker, I know that all Members of the House shared my shock and deep regret at the passing of our beloved colleague, VERA BUCHANAN during the recent recess period. When I first became a Member of the House, I had the pleasure of living in the same building with her and her good husband, and we cherished their friendship. Dur-

ing the 5 years of VERA BUCHANAN'S service in the House, I learned to know her well and to know her was to love her and to respect her. She was a valued Member of this body, and she served her district and her State and Nation with distinction.

I, and my husband joins with me, extend our very deepest and sincerest sympathy to the members of her family. May God strengthen and comfort them.

Interference of Federal Government in Administration of State Criminal Laws

SPEECH

OF

HON. JOHN J. FLYNT, JR.

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. FLYNT. Mr. Speaker, will the gentleman yield?

Mr. LANHAM. I yield to the gentleman from Georgia.

Mr. FLYNT. Like my colleague from Georgia [Mr. LANHAM] and also my colleague from Georgia [Mr. FORRESTER], before being elected to the House of Representatives of the United States I served as a solicitor general of the State of Georgia. In fact 8 of the 10 Members of the House of Representatives from Georgia have served either as Superior Court Judge, Superior Court Solicitor General or as a member of the bar and as an officer of the courts of Georgia. I commend my colleague the gentleman from Georgia [Mr. LANHAM] for bringing the attention of this body to the unwarranted and unprecedented action by the United States Department of Justice, which he has so well and so ably referred to in his remarks.

Mr. Speaker, I support the position which has just been taken by my colleague, the gentleman from Georgia [Mr. LANHAM]. The Justice Department of the United States, by and at the direction of the Attorney General, Mr. Brownell, and an Assistant Attorney General, Mr. Olney, has brought about an action, referred to in detail by my colleague, the gentleman from Georgia [Mr. LANHAM], which is a direct invasion of the sovereignty of the State of Georgia and which is an effront and an insult to our system of jurisprudence, and a personal insult to the distinguished judge—Hon. James T. Manning— and solicitor general—Hon. Luther C. Hames, Jr.—of the superior court of Cobb County, Ga., both of whom I know well and for whom I have the very highest admiration and regard.

Recently, the Supreme Court of Georgia in the case of *Amos Reece* v. *The State* (211 Ga. 339) affirmed a death sentence imposed by a jury in the superior court of Cobb County. Upon writ of certiorari to the United States Supreme Court, this latter court in an unprecedented procedure went wholly outside the record and transcript of the case and found imaginary procedural errors, not real errors which in fact existed and were shown to exist by the certified record in the case but imaginary errors which were conceived and born in the fragmentary imagination of one or more of the Justices. In that opinion of the United States Supreme Court, the Court said that an error might have been committed when such an allegation did not appear in the statement of the case nor in the assignments of error—and they could not have so appeared because they did not so exist.

Among other things the laws of the State of Georgia, on the question of jury selection, provide as follows:

59–101. (813 P. C.) Jury commissioners; appointment; number; qualifications; terms; removal: In each county there shall be a board of jury commissioners, composed of six discreet persons, who are not practicing attorneys at law nor county officers, who shall hold their appointment for 6 years, and who shall be appointed by the judge of the superior court. On the first appointment two shall be appointed for 2 years, 2 for 4 years, and 2 for 6 years, and their successors shall be appointed for 6 years. The judge shall have the right to remove said commissioners at any time, in his discretion, for cause, and appoint a successor. (Acts 1878–9, p. 27; 1887, p. 52; 1901, p. 43.)

59–103. (815 P. C.) Same; oath, entry on minutes of court of ordinary: Jury commissioners, before entering on the discharge of their duties, shall take and subscribe before the ordinary of their respective counties, the following oath which shall be entered on the minutes of the court of ordinary, viz: "You shall faithfully and impartially discharge the duty of jury commissioners for the county of ——— in accordance with the constitution of this State, to the best of your skill and knowledge; and the deliberations and counsel of the jury commissioners, while in the discharge of their duties, you shall forever keep secret and inviolate unless called upon to give evidence thereof in some court of justice of other legal tribunal of this State. So help you God." (Acts 1832–3, p. 101.)

59–104. (817 P. C.) Same; clerk of superior court as clerk of the board; oath, duties: The clerk of the superior court shall be the clerk of the board of commissioners, and shall perform all the clerical duties required by law. Before entering upon the performance of his duties as clerk of said board he shall take an oath, before the ordinary, to faithfully discharge his duties as required by law, and that he will never divulge, any of the proceedings and deliberations of the jury commissioners, unless compelled to testify thereof in some court in this State. (Acts 1878–9, p. 28; 1882–3, p. 101.)

59–201. (811 P. C.) Qualifications of grand jurors; incompetency of certain public officers to serve: All citizens of this State, above the age of 21 years, being neither idiots, lunatics, nor insane, who have resided in the county for six months preceding the time of serving, and who are the most experienced, intelligent, and upright persons, are qualified and liable to serve as grand jurors, unless exempted by law: *Provided, however*, That county commissioners, tax receivers, tax collectors, members of the county board of education, county school commissioners, ordinaries, and county treasurers shall be incompetent to serve as grand jurors during their respective terms of office. (Constitution, art. VI, sec. XVIII, par. II (sec. 2–4502), Acts 1887, p. 53.)

59–202. (812 P. C.) Number of grand jurors: A grand jury shall consist of not less than 18 nor more than 23 persons. (Cobb, 547. Acts 1869, p. 140.)

59–701. (856 P. C.) How drawn and summoned: Petit juries shall be selected, and their names placed in a box, as provided in sections 59–106 and 59–108. At the same time, and in the same manner, that grand juries are drawn, the judge of the superior court shall draw out of the same compartment of the jury box 36 names to serve as petit jurors for the trial of civil and criminal cases; and such petit jurors shall be summoned in the same manner as is provided in section 59–206 for summoning grand jurors. (Acts 1869, pp. 139, 140; 1878–9, p. 27.)

59–703. (857 P. C.) Panels, how made; procedure where parties do not agree on panel; striking jurors: The judges of the superior courts, at each term, shall, from the petit jurors, have made up 2 panels of 12 jurors each, which shall be known and distinguished as panels "number one" and "number two"; all cases in said courts shall be tried by one or the other of said panels if the parties shall agree upon a panel. If the parties shall not agree upon a panel, the clerk shall furnish the parties or their attorneys a list of both panels, from which the parties of their attorneys may strike alternately until there shall be but 12 left, which shall constitute the jury to try the case. In all cases the plaintiff shall have the first strike. (Acts 1869, p. 141.)

59–704. (858 P. C.) Parties entitled to full panels; filling panel with tales jurors: In civil cases and cases of misdemeanors in the superior court, each party may demand a full panel of 24 competent and impartial jurors from which to strike a jury, and when one or more of the regular panel of traverse jurors shall be absent or for any reason disqualified, the presiding judge, at the request of counsel for either party, shall cause the panel to be filled by tales jurors to the number of 24, before requiring the parties, or their counsel, to strike a jury. (Acts 1878–9, p. 145.)

59–706. (860 P. C.) Oath of panels of jury: Each panel of the petit jury shall take the following oath: "You shall well and truly try each cause submitted to you during the present term, and a true verdict give, according to the law as given you in charge, and the opinion you entertain of the evidence produced to you, to the best of your skill and knowledge, without favor or affection to either party, provided you are not discharged from the consideration of the case submitted. So help you God." (Acts 1869, p. 141.)

I regret to lengthen the record and belabor you who might be listening with an enumeration of these code sections, but I want them made a part of the record at this time so that anyone interested might know the stautory requirements and procedures which are provided for and followed in the courts of my State.

We are proud of our courts and the constitutional and statute provisions and system of jurisprudence under which the courts of Georgia are operated. I have practiced considerably in the courts of Georgia, other States, and in the district courts, circuit court of appeals, and Supreme Court of the United States since 1938, and I might add that I was quite active in both office and courtroom practice until my election to Congress—excepting, of course, the time I served in the Armed Forces of our country, and even then I performed my full share of duty as trial judge advocate, trial counsel, defense counsel, and member of many general and special courts-martial; and I believe that I am qualified to compare Georgia courts with not a few but with many others.

Of all the courts in which I have practiced, and all the others which I have seen in operation, there is none which more zealously protects and defends the rights of the accused and—and I emphasize—the rights of the victims, too, than do the courts of the State of Georgia, without fear of favor, and without regard to the race, creed, or color of either the accused or the victims.

I am devotedly proud of my State and its people, and I am equally proud and jealous of the courts of my State and our system of law and jurisprudence. They need no defense from me or anyone else, but I would be derelict in my duty as an American citizen, a Georgia citizen, and a Member of Congress from Georgia, if I did not here and now openly and without apology denounce the unprecedented arrogation of powers unto themselves by the Supreme Court of the United States in its recent decision in the Reece case and by the Department of Justice in its unwarranted encroachment upon the perogatives and duties of the superior court of my State.

I denounce these actions, and I condemn them as usurpations of power by the Federal judiciary and Federal Justice Department which are more reminiscent of Germany under Hitler and Russia of today than they are of orderly procedure under the constitutional Government of the United States of America.

Mr. Speaker, I call upon you and upon every Member of this House to solemnly consider the full impact of what has happened in this case. If the Supreme Court and the Justice Department of the United States can drive a wedge into the court system of the State of Georgia, not on facts which really exist but upon pure figments of the imaginations in the minds of utopian dreamers, and thereby weaken or seek to destroy the judicial and court system and rules of law and procedure of our State to any degree, however small, and go unchallenged by us; then the next step by arorgant, power-mad groups, will be to seek to break down and destroy every last and remaining vestige of local self-government and local self-determination.

Never send to know for whom the bell tolls, it tolls for you.

Hearings Are Work

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mr. UTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to quote for information a letter from the Anchorage Chamber of Commerce, Anchorage, Alaska, which was sent to a newspaper in the congressional district which I represent. The letter, which followed the hearings conducted by a subcommittee of the Interior and Insular Affairs Committee, is as quoted below:

OCTOBER 1, 1955.

DEAR SIR: We would like to take this opportunity to send to you a copy of an editorial from the Anchorage Daily Times of Saturday, September 24, lauding the work of the Subcommittee on Territories of the Interior and Insular Affairs Committee of the House of Representatives, United States Congress.

We call this to your attention because the Representative from your district, JAMES UTT, played an outstanding role in making these hearings such a success. We would certainly like to point out that Representative UTT's sincere interest and hard work would make every voter in your district proud that you have such a Representative in Congress. To the people of Anchorage's Alaska, this subcommittee of the Interior and Insular Affairs Committee conducted the finest hearings that we have ever had in this community, and worked so diligently and hard that the committee themselves hardly had a moment to relax and enjoy the beauties of Alaska and the hospitality of our people.

We want you all to know that we here in Anchorage, Alaska, appreciate it.

Sincerely yours,

WILLIAM A. STOOKEY,
President, Anchorage Chamber of Commerce.

[From the Anchorage Daily Times of September 24, 1955]

HEARINGS ARE WORK

The House committee conducting hearings in Alaska this month is chalking up a record that must represent a new high mark for application to duty.

In a short period of 2 weeks the committee has scheduled public hearings in 17 different places. The places are scattered widely over Alaska's 586,400 square miles. They include Point Barrow in the north, Nome in the west, and Ketchikan in the south.

The hearings will occupy between 75 and 80 hours. Actually, the total will run even higher because extra sessions have already become common.

The hours devoted to Alaska problems in this 2-week interval will be greater than those devoted to all legislation that came before the committee during the first session of Congress.

This is impressive. It means that Alaska is getting more committee attention now than did all the Territories and insular possesions, and the various States, during the congressional session.

While this record must be a new high mark, it is not the first time Alaskans have seen congressional committees work arduously while in the Territory.

Alaskans have seen many committees carry heavy work schedules while in Alaska. They have also learned of the value of the sessions.

They have found hearings so beneficial in the handling of their problems that they have come to welcome and even solicit them.

The visitations of congressional groups, often called "junkets," have been such that Alaskans view them with none of the ugly connotation that goes with that word.

Congress is the top authority on everything pertaining to Alaska. The greatest need of the Territory is a proper understand in the body that controls.

The Members of Congress have more power over Alaska than the people's elected representatives who sit in the territorial legislature. They have more power than the bureaucrats who administer the Federal agencies. If that power is to be used intelligently, it must be used with a thorough understanding of the people and the area involved.

As long as this system prevails, there is no better approach to that understanding than by public hearings such as are now being held.

The Congressmen who come here do more than conduct hearings that are fat and bulky when the record is printed in book form.

They form impressions that are invaluable in guiding them as to the potentials of the people and the land. Their personal observations enable them to understand the facts more thoroughly. A map may tell a story but it is often harder to discover and understand it from the map than it is by visiting the people and the places that are shown as names and dots.

The record itself is a document that has an enduring value in Washington. The testimony of the witnesses makes a reference document that is used by the Congressmen as they deliberate the legislative matters that follow.

Without the record, the testimony of the witnesses would be only a memory when the visit has been concluded. With it, all the Members of Congress can check the details of the views expressed.

The House committee is compiling a volume of some 500,000 words which will be their compendium of the reports and observations of Alaskans on the many subjects that need legislative attention.

While the Alaskans have found it arduous, too, in preparing and presenting this information, they are appreciative of the patience and sincerity of the Congressmen in coming to the Territory and devoting so many hours to the job.

The only criticism that might be made of the present schedule is that it has required constant attendance at hearings. The Congressmen have had no opportunity to become acquainted with the many glorious features for which Alaska is famous. These include fishing, hunting, sightseeing, and social activities that have been given no attention at all.

Mr. John J. Forbes (Mr. Mine Safety) Retires as Director of the United States Bureau of Mines

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mr. VAN ZANDT. Mr. Speaker, on December 1, 1955, the American people lost the services of one of the finest officials in public life in the person of John J. Forbes, formerly Director of the United States Bureau of Mines, an agency in which he spent 41 fruitful years.

No finer tribute can be tendered Mr. John J. Forbes than the following editorial which appeared in the December 15, 1955, issue of the United Mine Workers Journal:

THE SAGA OF JOHN J. FORBES

(By Jeanne Dubendorf)

John J. Forbes, who has played a pioneering role in developing and winning acceptance for many of the safety standards and practices regarded as basic in the coal industry today, retired December 1 as Director of the United States Bureau of Mines after nearly 41 years with that agency.

His long association with the coal industry, going back 60 years to a stint as an anthracite breaker boy, was capped by a

4-year tenure as Director of the Bureau of Mines, during which time notable and hard-fought safety advances were realized.

During that time also, Forbes saw the bituminous industry hit bottom economically and begin a comeback this year which he predicts is just a starter on a very bright future. And he is optimistic about the future of the depressed anthracite industry, which stands to benefit from current research developments and an impending shortage of coking coals for steelmaking.

Forbes, who reached the mandatory retirement age on November 21, when he was 70, started with the Bureau in 1915 as a first-aid miner. He was the first career man to rise through the ranks to the directorship.

Until a successor is appointed by President Eisenhower, subject to Senate confirmation, James Westfield, Assistant Director in charge of health and safety, will serve as Acting Director.

Mr. Eisenhower, in a personal letter to Forbes, praised his twoscore years of dedicated work in the Bureau and credited him with helping to save thousands of lives in American coal mines.

Two leather-bound albums of pictures, including many taken at mines where Forbes directed disaster recovery work, and two albums of farewell letters from Bureau associates, including nearly every health and safety emlpoyee, were given to him on his retirement. One letter spoke of the revitalized enthusiasm, reminiscent of the Bureau's early years, under his directorship; another of his "open door" policy; others referred to his humanitarianism and real contributions in the safety field, to which he has devoted most of his energies and enthusiasm in the past 40 years.

Secretary of Interior Douglas McKay, who was persuaded by the Senate Interior Committee to drop his plan to place a political appointee in the directorship when the present administration took office, had words of high praise at a Washington ceremony honoring Forbes. He noted that Forbes has "earned worldwide recognition as a pioneer in the field of mine health and safety." His long years of service, McKay said tell "the story of a man who has dedicated his entire working life to the greatest of all causes, the conservation and betterment of priceless human life."

In recognition of his safety work, he was given a distinguished service award in 1951 by the Interior Department.

The Bureau had been in existence less than 5 years when Forbes began his Government career. It had about 400 employees and a budget of $758,000 a year. It now has 4,000 employees and a budget of $28,563,000. About the future, he says:

"There is no reason why things shouldn't go forward. The coal industry, with which I have been very closely associated, has a very bright future. The research now underway in hydrogenation and gasification of coal will bear real fruit in the not-far-distant future, in my opinion.

"The metallurgical research, the experimental work going on at the various Bureau stations, is also doing a good job for the future. The Bureau of Mines has some of the finest scientific minds that exist in Government."

In 40 years with the Bureau, Forbes worked up from the bottom and has played a key role in developing important programs, such as the Federal Mine Inspection Service organized in 1941–42. As with the law that created the agency in 1910, a shocking series of mine disasters galvanized Congress into authorizing Federal mine inspections in 1941. It appropriated money for 107 inspectors the first year. But the inspectors had only the power to recommend improvements. There are now about 265 Federal inspectors.

Forbes has continually emphasized the need for safety education in the coal and other mineral industries. Under his supervision nearly 2 million men have been trained in first-aid, about 100,000 have taken rescue training, and more than 130,000 coal miners have taken accident prevention courses. He has visited the coal and metal mine fields of every State in the country.

Shortly after he was appointed director by President Truman in November 1951, the West Frankfort (Ill.) mine disaster prodded Congress into passing a bill giving Federal inspectors limited enforcement powers to prevent such disasters. Forbes supported the measure in the congressional hearings in 1952, as he had a similar bill in 1949 when he headed the Bureau's Health and Safety Division.

"In this day and age there is no excuse for a major mine disaster," he reiterated recently. "We have the knowledge. It is just simply a question of applying that knowledge."

This conviction grew out of personal experience in recovery operations and investigations of around 100 disasters, including the West Frankfort explosion.

After 3 years under the mandatory Federal law, he believes it has been proved a "complete success" and most producers "now appreciate that it is for the benefit of the industry. It's a long story and I'm very happy to have been a part of it."

He adds that he has "looked forward for many years to finding a situation like we have today, where the mine workers, the operators, States and Federal bureau are cooperating sincerely to bring down the death and injury rates in coal mines. In other words, they might have differences of opinion regarding wages and working conditions, but when it comes to life and limb, there should be no differences of opinion. The situation today is better than it ever has been in my lifetime."

Born in Shamokin, Pa., November 21, 1885, Forbes became a breaker boy when he was 10 years old. By work during summer vacations as a laborer, miner and engineer, he obtained a teaching degree in 1905. After teaching 2 years and continuing mining work in vacations, he entered what is now Pennsylvania State University and graduated with a Bachelor of Science degree in mining in 1911. He received a "distinguished alumnus" award from Pennsylvania State University in 1952.

In 1913 he was offered a job as safety inspector for an eastern Ohio producer, one of the first in the State to recognize a need in this field. It started him on a rugged road that was to make him a widely recognized expert on mine safety, on mine rescue and rehabilitation work.

In such work, one of his precepts, shared by close associates, was that "we never expected our people to go anywhere we would not go." In the early days especially, that involved risks which probably no mining man in his right mind would take today. It meant a lot of "dirty work."

"I wouldn't want to go through it again," Forbes recently said of his early experience, "but thank God for it."

One of his first assignments with the Bureau, in 1915, was at the Harwick Mine of the old Harwick Coal & Coke, Co., Cheswick, Pa., where he helped train a rescue crew. He had been with the Bureau less than a month. In conversation with the superintendent it came out that just over 11 years before 179 men lost their lives in an explosion in the mine. This disclosure was on the minds of the rescue men as they rode the cage down.

After the training session, they were met by the "super" who was waving a Pittsburgh newspaper telling of an explosion in Layland, W. Va. Forbes recalls that Bill German, an associate, took off for Layland, hopped freights and everything else to get there. German led a crew that found some 50 survivors who had barricaded themselves against afterdamp. One hundred and twelve others died in the disaster.

Other photos recall circumstances that illustrate the long road traveled by Forbes and other veteran safety advocates. It took a long time to convince the industry that black powder is extremely hazardous. It took even longer to convince the industry that all bituminous coal dust will explode, and that rock dusting is an elementary precaution.

One of the photos shows a rescue team in a mine near Pittsburg, Kans., situated in a then (1917) productive field which had a shotfirer explosion about twice a month. Black powder was used for shooting the solid coal. A Bureau man and the chief State inspector customarily stayed in the latter's office until all shotfirers were accounted for.

Forbes took an explosion call one cold evening in February, 1917, from a mine that had had about a dozen previous explosions. Some rescue crewmen he had just trained—never met a finer bunch—were rounded up. With the cages knocked out, they descended the 250-foot shaft on a rope-and-pulley rig. They rescued the lone survivor of four shotfirers caught in the mine, and later that night they crawled 3,500 feet in low coal looking for the others.

Meanwhile, the future Mrs. Forbes arrived by train in Pittsburgh, but was not met by the intended bridegroom, as planned. They were to be married the next day. The postponed wedding took place on March 26, 1917.

A month later, on a railroad siding where the Bureau's old Rescue Car No. 4 was hastily loaded, Mrs. Forbes saw her husband off to the Hastings, Colo., mine, where an explosion had just snuffed out 121 lives. He was gone 3 months.

Recovery work in the Hastings mine was a terrible job. Forbes recalls there were as many as 100 men doing nothing but carrying bodies. The entire mine was destroyed and the Victor American Fuel Co., he adds, had to sell out to raise money for recovery operations. The bodies of eight of the victims are still in the mine. A trip rider who crawled out a slope portal was the only survivor.

Mrs. Forbes made a trip into a mine in 1918 at Somerset, Colo., after a fire there. It had a thin seam, and she remembers her trepidations at seeing men crouched on the floor of the mine cars. She has been content ever since to acquire her mining knowledge secondhand.

In the early days, Forbes was on the go so much his family sometimes lived in a town only 2 or 3 months at a stretch. His wife, daughter of a Kansas miner, and their two youngsters, a son and a daughter, now grown, accompanied him whenever possible. Mrs. Forbes is convinced today's Bureau wives are very well off in comparison.

The Clymer, Pa., mine disaster in 1926 resulted in Forbes missing his only national first-aid and mine-rescue contest during nearly 41 years with the Bureau. He was director of the last three national contests, and previously took an enthusiastic hand in many State and local contests.

War Claims Commission

EXTENSION OF REMARKS

OF

HON. KARL M. LeCOMPTE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1956

Mr. LECOMPTE. Mr. Speaker, the Monroe County News, of Albia, Iowa, of recent date carried an editorial on the

subject of the War Claims Commission hearings held for eight former prisoners of war in Korea. I recommend that it be read by every Member of Congress. The same editorial was reproduced in the Bloomfield (Iowa) Republican of January 3. Under leave to extend my remarks in the RECORD, I include this editorial, calling attention to the arbitrary manner in which these hearings were conducted.

INVESTIGATE THE ARMY

The United States Army, which once was the victim of McCarthyism and fought back bitterly—although not too well—now appears to have adopted the very philosophy it resented.

The latest instance is connected with War Claims Commission hearings recently held in Chicago for 8 former prisoners of war in Korea.

Based on information compiled by the Army, the 8 men have been accused of giving "aid and comfort to the enemy" and, under the war claims act, becomes ineligible to receive prisoner of war compensation at the rate of $2.50 a day.

Some of the former war prisoners involved have honorable Army discharges. Others are still in the Army.

Each was called before the bar in the United States Court of Appeals Building in Chicago and told that he could not hear any details of the accusations against him, nor learn when, where or what acts he allegedly committed.

The hearings were conducted by Henry J. Clay, a member of the 5-man War Claims Commission. Like the other members, Clay was appointed by President Eisenhower and is responsible to him.

One of the men called before the bar, Robert W. Mahrenholz of Des Moines, protested to Clay: 'This is contrary to all the principles of the American Constitution. I believe I have the right to know the charges in details and face my accusers."

Mr. Clay is said to have agreed with the statement, but added, "I can do no more than inform you of the circumstances of this hearing. The Army has declared that its files relating to you and to accusations against you to be top secret and therefore not releasable even to you—the accused.

In that connection it is possible Mr. Clay is confused about the identity of his boss. After all, he's working for Mr. Eisenhower, not the Army. Couldn't he tell the Army to stand back of its allegations with witnesses who could be questioned by the accused?

The actions against the 8 men and 79 others in similar circumstances began after they filed claims with the Government for the $2.50 a day bonus for any prisoner of the Korean war who "suffered cruel and inhuman treatment, or whose rights under the Geneva Convention for prisoners who were contravened."

One of the eight, who lost several fingers and toes because of exposure to freezing weather, was informed by the Army he had been accused of getting preferential treatment in the hospital and better rations.

This same man has Army hospital records showing he was suffering from malnutrition and amputations when he returned from the prison camps.

Another, charged with editing a Communist newspaper and writing propaganda radio skits, is listed on Army records as nearly illiterate.

The Army's denial to soldiers of the rights soldiers are supposed to fight and die for is not limited to these particular cases. It has cropped up in other phases of military management.

The Army's get-tough policy with former prisoners of war in comparison with the Air Force policy of accepting germ warfare confession signers as heroes would be a national scandal if it occurred outside the military.

There's nothing sacred about the Department of Defense. It is an agency of the Government just like the Department of Agriculture and Department of Interior.

Generals and admirals and colonels and majors and commanders are employees of the people—just like postmasters and school teachers and extension directors and cabinet members.

It is hight time the military explained to the people of this Nation just what caused some soldiers to become turncoats. After all, they were indoctrinated by our Army before the Communists got them. Why weren't they indoctrinated good?

It is high time the military explained to the people of this Nation just why a man accused of an offense against the people of this Nation cannot hear the accusation detailed and be faced by his accusers?

It is hight time the military explained to the people of this Nation just what it thinks is wrong with the United States Constitution and the Bill of Rights.

A well-conducted congressional investigation of the military's policy in regard to subversives, real and alleged, would be healthy for it and the Nation.

This is, after all, Democracy—not a military dictatorship. Let's prove it. (Monroe County News.)

The Late Vera Buchanan

SPEECH
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 3, 1956

Mr. GAVIN. Mr. Speaker, it was with great sadness we recorded the passing of our beloved friend, VERA BUCHANAN, of McKeesport, Pa.

VERA BUCHANAN joined us in the 82d Congress succeeding her late husband, Frank Buchanan, to represent one of the great industrial areas—not alone in Pennsylvania but in the United States.

She was very close to the people of her district, and she understood the people of her district, which eminently qualified her to so ably represent them. She evidenced a love of people by her good counsel, kind deeds, and useful services. She had the power of understanding and sympathizing with people regardless of whom or what their difficulties may have been. She was a very hard-working, conscientious Representatives who took the problems of her people to heart, always manifesting great interest and concern for the welfare of those she represented.

The people of her district loved her and respected her ability which was evidenced by the great popularity she enjoyed.

She was very faithful in the performance of her duties and by her work in the Congress won great respect and the admiration of the membership on both sides of the aisle.

VERA had a legion of friends. In a life such as hers, perhaps the thing most to be admired was her gracious, kindly attitude and the great civic, social, and spiritual contributions she made to the area in which she lived.

It can be said of VERA that she made the best of life as she found it and rejoiced mightily when any little word or deed of hers added to the happiness of any of us. In all things she had charity; tolerance was of her nature. She respected in others the quality she possessed herself—sincerity of conviction and frankness of expression.

She was a firm believer in our American way of life and her great ambition was to hand on to posterity and the generations of tomorrow a greater and finer America than was handed to her.

She was kindly and sympathetic to all; always glad to see one; gracious to everyone; and will be long remembered for her many little acts of kindness that marked her friendship and good will toward all of us who knew her.

So today we mourn her loss. She will be greatly missed by her many friends and by the people she represented. It is with profound sadness we record her passing. We extend to her family our heartfelt sympathy.

Mrs. Bolton: A Truly Remarkable Woman

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mr. MINSHALL. Mr. Speaker, in the Cleveland Plain Dealer of January 5, 1956, there appeared an editorial entitled "Mrs. BOLTON: A Truly Remarkable Woman," which I recommend to the attention of each Member of the Congress.

Our distinguished colleague has represented her country in the Congress with true distinction. Her diligence, her unselfish devotion to duty, and her brilliant service could well serve as a guide to every Member.

While her plaudits have been justly acclaimed throughout the world, it is a privilege and an honor for me to insert this latest testimonial with her already outstanding record in the annals of the Congress of the United States:

MRS. BOLTON: A TRULY REMARKABLE WOMAN

There are newsletters and newsletters, but few possess the charm of those written by Representative FRANCES P. BOLTON, 22d Congressional District, Ohio.

Mr. BOLTON returned recently from what loosely might be called a junket to Africa—99 days on the African Continent itself. But it differed from the usual junket in that Mrs. BOLTON was in dead earnest in her attempt to study Africa, and that, although the trip was made in an official capacity, she paid most of her expenses out of her own pocketbook.

True, she met such leaders as the President of Liberia, the Prime Minister of the Gold Coast, and the Emperor of Ethiopia—but she didn't stop there. She talked with the people themselves—and in a 20,000-mile trip in 24 countries and territories, one is bound to see a lot of people.

It required the use of commercial aircraft, trains, riverboats, coastwise freighters, cars, and jeeps, but she did it. And it rings true when she writes:

"• • • If you could have gone with me into the 'native cities' • • • if you could have seen the efforts being made to give de-

cent homes and the beginnings of education and health training * * * if you could have seen the passionate eagerness to learn. * * * It is no simple matter, this overwhelming urge that wells up out of the very ground of Africa. There is no question but that the African must and will be his own master, but if he is to make a successful leap from the past he will need to learn many things. No; he will not need to experience all the stages through which others have come from the era of the wheel to the era of jet planes, but some transition period is absolutely necessary. If you could have experienced some of these things with me, I am sure you would feel—as I do—that the people of Africa are going to play a wonderful part in the world's future."

FRANCIS PAYNE BOLTON: a truly remarkable woman.

Coal Is Coming Back

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mr. HENDERSON. Mr. Speaker, the prosperity of southeastern Ohio is dependent to a large degree upon the production of coal. With its abundance of this natural resource, the people of my area have experienced a long period of curtailed coal production. To some extent, the outlook for the future bears promise of reversing this trend. This has resulted largely from the establishment of plants which utilize coal to generate vast quantities of electric power. Abundant coal and electric power coupled with the concerted effort of the people of the area I represent to press forward on the economic front, are causing major industries to take renewed interest in these rich resources in selecting plant sites.

I wish to recommend to the House the following editorial from the Marietta (Ohio) Daily Times for December 19, 1955, which deals with the resurgence of the coal industry in Ohio:

COAL IS COMING BACK

Ohio coal production continues to improve, the State Department of Industrial Relations reported after getting its third-quarter statistics compiled. In the 3 months ending September 30, Ohio's mines had an output of 8,700,000 tons, which is more than a half-million tons better than second-quarter production and 1,400,000 tons better than the third quarter of last year.

Ohio coal producers started this year at a good pace. Production in the first quarter was up 14 percent over 1954. By the third quarter the increase had risen to 20 percent. Such improvement is not in itself sufficient to lift the depression from the coal industry, but it is not without significance in visualizing a trend.

These comparisons are, of course, being made with a poor year for the industry. Coal production in 1954 was down 7.7 percent from 1953 in Ohio, which was much better off in this respect than some of the other coal States. National production was down 13.7 percent.

The coal industry should be making a comeback, and particularly in Ohio. The new and projected powerplants of this State are going to require enormous amounts of this standard fuel. The atomic energy plant in Pike County alone has power requirements which mean consumption of 3 million tons a year, or close to one-tenth of Ohio's total 1954 production.

Coal has long been the source of chemicals as well as of energy. A great growth is certain in the use of coal by the expanding chemical industry. One of the most promising developments is hydrogenation of coal, which Union Carbide & Carbon Corp. is bringing closer to the large-scale commercial stage. It has been frequently stated that the upper Ohio Valley, adjacent to vast coal reserves, will continue to have a major share in the chemical industry's growth.

Ohio can provide coal in just about any amount industry demands of it. Belmont County alone is reported to have nearly 2 billion tons of unmined Pittsburgh coal. Known recoverable reserves of the entire State, which are concentrated in the eastern and southern counties, are considerably more than 40 billion tons. For another century at least, there will be no reason for worrying about a possible shortage of coal in this region.

Mexico Uses Colorado River Water Too

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. HOSMER. Mr. Speaker, little consideration has been given during the discussion of the upper Colorado River storage scheme to the fact that Mexico has substantial claims on the river's waters in addition to those of the upper and lower basins. The United States is obliged by solemn treaty to see to it that sufficient waters to meet these claims crosses the Mexican border.

Water withheld upstream by the gigantic and unneeded storage reservoirs proposed in the upper Colorado River project would, of course, not be available for use by Mexico and would have to be made up out of allotments of the river's water to domestic users.

The December issue of Western Water News carried the following item showing that even now Mexico's needs are 300,000 acre-feet annually in excess of her allotment:

COLORADO RIVER IN MEXICO

All of the 1,500,000 acre-feet of Colorado River water allocated to Mexico, in accordance with the treaty, is used and actually more is needed, declared James W. Stone, managing director, Cia. Industrial Jabonera de Pacifico of Mexicali, B. C., Mexico, speaking before the recent meeting of the Colorado River Water Users Association at Las Vegas.

Stone, who estimated the 1956 needs of Colorado River water in Mexico at 1,800,000 acre-feet, told the group that for 5 months—from March to October, 1955, not 1 drop of river water reached the Gulf of California and urged the group of Colorado River users "not to begrudge this water to Mexico."

WHERE USED

The water is used in the Mexicali Valley, which includes 900,000 acres of land with 841,000 in the irrigation district. The economy supports some 200,000 people. There are 50 coton gins; 4 oil mills; and 4 compresses in the area with the result that Mexicali is the largest cotton ginning center in the world.

During 1955, some 503,000 acres were cropped, with water the limiting power in expansion of the acreage, Stone estimated that 200,000 additional acres could be cultivated if water was available. In 1955, 482,000 acres of cotton were produced which went into export markets. Actual diversions from the river have totaled 1,955,000 acre-feet in 1953 and 1,977,000 in 1955 for an average of 3.4 acre-feet per acre which is not a sufficient supply to meet the needs of the plants and maintain a satisfactory salt balance.

PROGRAM

To supplement the anticipated limited quantity of river water the Mexican Government has under way a comprehensive well development program which will eventually supply 800,000 acre-feet to the project from the large underground basin.

Address of Mayor Robert F. Wagner, of New York

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. KLEIN. Mr. Speaker, on December 12 of the year just past, the Greater New York Fund, an agency that raises millions of dollars for the support of philanthropic institutions in the city of New York, held its fund distribution ceremony at the Hotel Sheraton Astor. Among several fine addresses delivered on that afternoon, there was one by the Honorable Robert F. Wagner, mayor of NewYork, an address that, though brief, manifested the same quality of broad compassion, depth of human feeling, and understanding that marked his late father, himself so distinguished in Congress for achievements that have left a permanent imprint on American history. This philanthropic effort, the Greater New York Fund, was responsible for the collection of over $5,600,000 during 1955, which was distributed to 425 charitable institutions in New York City. It is only natural that such a humanitarian effort and such philanthropic generosity, unlimited by race, creed, or origin, should evoke the special tribute of the distinguished mayor of the city of New York, Robert F. Wagner. I think his remarks on that occasion, that I am here inserting in the RECORD, deserve to be read and reread.

REMARKS BY MAYOR ROBERT F. WAGNER AT GREATER NEW YORK FUND DISTRIBUTION CEREMONY, HELD AT HOTEL SHERATON-ASTOR, MONDAY, DECEMBER 12, 1955

This distribution ceremony of the Greater New York Fund is a happy occasion and I am delighted to be here to greet the friends and representatives of the fund.

Long before I was privileged to become mayor I took an active part in the city-wide work of the Greater New York Fund, an organization which in the widest sense is close to home.

My work in volunteer philanthropy is brief indeed, however, beside the impressive record of your chairman, Mr. Norman S.

Goetz. He has given without stint to many civi and philanthropic causes for more than 30 years. I salute him as one who has lived up to the highest standards of his citizenship, his religion and his profession.

As your mayor, with a natural concern for the health and welfare of all the people of our vast metropolis, I wish most of all to commend the many hundreds of firms and corporations and the hundreds of thousands of persons, including organized labor union members who work within this city, for making it possible to disperse these millions.

Their gifts, made during this holiday season when we reaffirm our faith in the doctrine of good-will to all men, have a peculiar carrying power. While there are faint sounds of sleigh-bells in the canyons of Manhattan today, these gifts this afternoon will last throughout the year. They are the 12-month gifts—the ones that last. They may bring laughter to a boy or girl in a swimming pool next summer, new hope and courage to a family next Spring or soothe pain of an old woman 2 years from now. These gifts bring direct benefits to 3 million persons who use hospitals and health and welfare agencies helped by the fund.

These gifts, gathered by an army of volunteers headed by Mr. Richard S. Perkins, the 1955 campaign chairman, represent a side of New York we seldom have the time or opportunity to study. That is why, at such a gathering as this, we can be both proud and happy.

Many sides of this great capital of the world are known around the globe. People of both the Atlantic and Pacific basins know of our great shipping, manufacturing, transportation, and communication facilities; of our great retail establishments, libraries, and educational institutions, and of our entertainment and finance; and, of course, of our compelling skyscrapers.

What they don't know about is our 8 million people, people with hearts, consideration, and kind feelings toward their fellow humans—the people who make up the vast concourse from Todt Hill to the Yonkers line and from Chelsea to Little Neck.

Without being vainglorious, we can say that the dateline on a news story—New York—or the stencil on a crate—New York—or the label on a dress—New York—stands with the best in any market in the world.

I only wish that the world knew a little bit more about the warm heart that is New York—a heart for the world and a heart for its own.

Millions of dollars flow from this town to spell help all over the world. And millions of dollars are given here, in private and public contributions, to ease pain, combat disease, encourage good citizenship, hold families together, or give a boy and girl the chance to take the right road toward good citizenship. It is not something new in New York. It is as old as the original Dutch founders, and it persists in our polyglot town today.

New York has a big heart.

You here today represent a big part of that heart.

Thank you.

The University and the American Jewish Tercentenary

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues the following article which appeared in the Bulletin of the Catholic University of America for October 1955:

THE UNIVERSITY AND THE AMERICAN JEWISH TERCENTENARY

(By Rev. Henry J. Browne, Ph. D., archivist, associate professor of history)

This year marks the 300th year since the first Jews arrived in the area that was to become the United States. The occasion is being marked by tributes of all kinds, by lectures, by concerts, and by publications. On the campus of the university, the Washington committee for the celebration has sponsored under the auspices of the history department an essay contest with a $50 prize for the best contribution on American Jewish history. This is then a fitting time to pause to recollect what the University has done for the American Jewish community and what it in turn has contributed to the national and pontifical university of their Catholic fellow citizens.

Very early in its history, the sole test of intellectual qualification was enunciated at the university by its rector, Bishop Thomas J. Conaty, at a reception for President McKinley in 1900, when he said: "like the Catholic Church, with its message of knowledge to the world, it knows no race line, and no color line, while its doors are open to non-Catholics who may desire to receive instruction at its hands." That this was carried out in practice was shown by the fact that the very first degree in social sciences was given to a Negro school teacher from the District of Columbia. This fact is known only from the comment of a local newspaper, not from any record of the university. A similar obscurity of records hides the first Jewish students from the searcher, but the list of names for the first 20 years reveals that it was even only a rare German, Italian, or Pole who broke into the Irish ranks.

Yet it is obvious from the recent years of the university that young men and women of Jewish religious affiliation have been found on the campus, and it may be estimated that this has been so for at least a half of its 66-year history. They have studied engineering and law perhaps in greatest numbers, and have also been in the graduate school and school of social sciences. A survey of charitable agencies conducted by Jews between Richmond and Baltimore would show that a great many of their workers have been trained in social work on the Washington campus. Many of these students are remembered by present faculty members as being beyond the ordinary in their loyalty and appreciation of the university. More interesting still are the several rabbis who in the past 10 years have studied Semitic literature in the department of Semitic and Egyptian languages and literature.

Through the advancement given to Hebrew studies, this last division of the school has made a contribution to American Jewish life. Father Patrick Skehan, at the invitation of the Institute of Oriental Studies, is currently spending time in Jerusalem deciphering the ancient Hebrew manuscripts being found in the desert places of Palestine. Msgr. Henri Hyvernat, the first professor recruited by the university, was the founder of this important department. Through his efforts and the care of his successors there has been built up one of the outstanding libraries in the country on Semitics and related fields. Monsignor Hyvernat had most cordial relations with Hebrew scholars throughout the world and especially with those at Dropsie College in Philadelphia, who often came to see this patriarch, who died only in 1941, while on their trips to Washington. The Semitics department as it is popularly called has continued its tradition of interest in Christian oriental literature, but naturally work on the Old Testament, the common heritage of Jew and Catholic, continues to absorb a good deal of its efforts.

In other less direct ways the faculty has made a contribution to American Judaism. One study done under the guidance of the Latin and Greek department by Dr. Robert Wilde dealt with Jewish as well as Christian history in treating the opinions of the pre-Nicean Greek Fathers concerning the Jews. In areas of action as well as theory, the tradition of social justice dating from the university's first professor of moral theology, Thomas Bouquillon, through Doctors William Kerby, John A. Ryan, and Francis J. Haas has counteracted anti-Semitism in the United States. When Pope Pius XI called on the Catholic universities of the world in 1938 to undertake to refute the raging Hitlerian doctrine of racism, two volumes of symposia were edited from the campus, in 1941 and 1944. They were entitled, Scientific Aspects of the Race Problem and Race: Nation: Person. Social Aspects of the Race Problem. In the field were found such as Father Maurice Sheehy, who in 1938 became a member of the Council against Intolerance in America and spoke on the Papal condemnation of anti-Semitism. Professor Richard J. Purcell of the history department in 1945 joined with Albert Einstein in a public petition to the President of the United States to seek to have Palestine opened up to the Jewish refugees of Europe.

In recent years, under the inspiration of the department of sociology, a program of interest to many community-minded people has been developed in the intergroup workshop conducted every June. Various races and religions have always been represented, including both religious and lay Catholics, and Mr. Issac Franck, executive secretary of the Washington Jewish Community Council, has been an enthusiastic faculty participant.

Occasionally, university faculty members have been respected Jewish citizens of the Nation's Capital, and this has been particularly true of lecturers from Government positions who have assisted greatly in the professing of the social sciences. Henry Spiegel, professor of economics, is the first Jewish faculty member promoted to the rank of ordinary professor; and also currently on the faculty is Arthur Lustberg in the department of speech and drama.

There have been Jewish benefactions toward the university in money and books, but the one that stands out in the history of the university is that of Max Pam, prominent Chicago lawyer, made in 1911. At a time when the institution was badly in need of financial help, he established a scholarship in the social sciences which continues to the present day and is held by a student from the city of Chicago. Pam was attracted to the person of the chancellor of the university, James Cardinal Gibbons, and it was to him he explained his motives of hoping to advance mutual tolerance in America and of showing his admiration for the Catholic church which stood for authority, for government, for the rights of the individual, and for the rights of property, and these to my mind are the chief elements that enter into individual and national happiness.

The presence of Babe Greenberg on this year's boxing team in a position of prominence points up Jewish participation in the sports life of the university. His counterpart in the 1920's was Isidore Goldberg. Eddie LaFond, for over 25 years athletic director on campus, tells of the time he was jokingly accused of being anti-Semitic when he had Coach Fox for football line coach; for basketball, Abe Rosenfield, and for wrestling, Dave Bernstein, all Jewish. Athletes of that belief are scattered throughout the university's sports pages without any evidence of such devices as that said to have been used to cover a partially colored baseball player about 30 years ago, when his

teammates called him Chief to pass him off as an American Indian.

The Catholic University of America is national and accordingly serves more than an immediate community, and in doing so it has served to a measure unmeasured American Jewry. No one has ever counted the numbers of Jewish students on campus and only little things, like several very faithful members of the alumni association being rabbis, serve to remind a predominantly Catholic scholastic community of its catholicity. The institution has profited greatly, as have all in America, by Jewish contributions to scholarship, sometimes made directly by its own lecturers. If the university in turn has made any contribution for the making of a better America for the descendants of the pilgrims or refugees of three centuries ago, it has in that served also the cause of the God of truth and justice who is the greatest common bond with our Jewish neighbors.

International Labor Organization, Communist Dominated—Contributions to It Should Be Reduced

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including a news item that appeared in Human Events for July 31, 1955.

It points out that Mr. W. L. McGrath, a Cincinnati businessman, who has represented the United States at the Geneva organization since 1949, has stated that the ILO, known as the International Labor Organization, is just another Communist-dominated organization. He recommends that the United States should withdraw from the ILO and that no further funds be appropriated to maintain it.

Mr. Speaker, I agree with Mr. McGrath, and trust that the President will not submit a request for additional funds to maintain this Communist-dominated organization. The United States last year contributed $1,750,000 to it and there is a move underway at the present time to increase the contribution to $3 million a year. This is a most fantastic request in view of the makeup of this world organization.

Mr. Speaker, the article from Human Events follows:

On the eve of the return of Congress, congressional staffers are looking for unpopular requests for appropriations to eliminate and, it is widely agreed, they could well start with money put up for the socialistic International Labor Organization of Geneva, Switzerland, of which the United States share amounts to $1,750,000 annually. The opportunity for a paring job is all the better for two reasons: (1) there is a move underway to raise the United States contributions to ILO to $3 million a year; and (2) the United States employer delegate to the ILO for many years has issued a scathing attack on the organization. That delegate is W. L. McGrath, a Cincinnati businessman who has represented the United States at the Geneva organization since 1949.

McGrath, in a recent statement, recommended that not only United States employers but also the United States Government refrain from sending delegations to the ILO and granting it further financial support. The immediate reason for Mr. McGrath's revolt against the ILO stems from the more aggressive policies of the Soviet Union and Soviet satellite delegations in the ILO since 1954. Mr. McGrath particularly objected to the presence of what the Iron Curtain countries termed businessmen delegates to the Geneva meetings. Obviously, the so-called employer delegates from the Communist countries are simply government agents and per se agents for the Communist Party. McGrath led the fight in 1954 and 1955 to get these employer delegates thrown out of the ILO, but was overruled by the majority of the ILO. "At the 1955 conference," says McGrath, "I withdrew the United States employer delegation from participation in any ILO working committees upon which Communist so-called employers had been seated."

The United States in the ILO today finds itself very much in the minority. The Iron Curtain countries now have a total of 32 votes within the ILO to 4 from the United States. McGrath until recently entertained some hope that the ILO would disqualify the Communist worker and employer delegates. But today he sees no such possibility and envisages the future of the ILO as one of just another Communist-dominated organization. Hence, his statement and recommendation—that the United States should get out of the ILO and give it no more money—will undoubtedly have a powerful effect on the next session of Congress.

California's Cross-Filing System

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. HOSMER. Mr. Speaker, for those non-Californians who are concerned about the golden State's cross-filing system, I offer the following explanatory editorial carried recently in the Long Beach, Calif., Press-Telegram newspaper:

CROSSED UP BY CRISS-CROSS, CROSS-FILING

California's cross-filing system is widely misunderstood. Many Californians are confused about it, and the confusion is multiplied outside the State.

In a recent editorial comment on the prospective clash between Adlai Stevenson and Senator Estes Kefauver in the California presidential primary, the Wall Street Journal said California is a State where primaries are so confused with cross-filings and criss-cross voting that nobody ever knows what they mean.

The Wall Street Journal is incorrect if it believes cross-filing will affect the presidential primary in June. In presidential preference voting in California, registered Democrats only will ballot on Democratic preference, and registered Republicans only on Republican preference.

Cross-filing applies only on State primary contests for partisan offices. Under that system, a candidate may seek the nomination of another party as well as his own. But presidential candidates, if they decide to enter the California primary, are not given that privilege. There is, in fact, no criss-cross voting in any phase of the California primary. Voters ballot only on nominations by their own parties.

California's presidential preference primary differs from those in some other States in that no presidential nomination candidate can be entered without his consent. And the convention delegates chosen at the primary are pledged by oath to the candidate who wins at the primary.

Farmers Need Tax, Labor Cuts

EXTENSION OF REMARKS
OF
HON. JOSEPH P. O'HARA
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mr. O'HARA of Minnesota. Mr. Speaker, in the issue of the Fairmont (Minn.) Daily Sentinel of December 6, 1955, appears an article by Harold Groven on the problems which confront farmers in Minnesota.

Certainly one of the most difficult problems that Congress has today is that of dealing with the critical problems of the farmer, and I am sure my colleagues will be impressed with the article written by my constituent, Mr. Harold Groven, of Huntley, Minn.

FARMERS NEED TAX, LABOR CUTS

(EDITOR'S NOTE.—The following article is written by Harold Groven, one of the Martin County soil conservation district commissions and one of the most well-known Martin County farmers. He is interested in the tax problems facing Minnesota as well as its conservation needs.)

I have been asked to write a brief summary of what I think of the farm problem, or, better stated, the farmers' problems.

We realize that to determine the right solutions to these problems is as dangerous and controversial as a discussion on what is the best religion.

All one can do is to stick as closely to the truth and as far away from politics as possible. When one discusses the weather or clothes or automobiles he does not think of politics, but, just as soon as the farm situation comes up there is immediately a suspicion as to what party one may belong.

This is the first serious hurdle in its solution. It is like trying to judge cattle while wearing a blindfold. It can be done by feeling, but the total conformity is lost.

The farmer is often accused, and, in many cases, justly, of taking a negative attitude. He does have problems and serious ones, and problems with which he cannot individually cope, such as unreasonably high labor costs and taxes.

There are the begging and griping kinds of farmers and—I feel in the majority—the positive farmers who try to create for themselves a more efficient system of farming. Any businessman or professional man who takes a grumbling attitude soon defeats himself.

Along this line, we have a good example in the dairy industry. When it took a positive attitude and began advertising, its problem was pretty well solved.

If the pork and beef producers who, certainly, have the best selling points in the food world, would advertise their products even half as much as a distillery, a tobacco company, a home permanent wave company or a beer company, I am sure they would not only improve their own financial situation, but also the health of the Nation.

I feel that there are farmers on small farms who should hire more custom work. It would not seem economical to have a $5,000 combine on a quarter section of land when one can hire it done for $4 per acre. This applies to many processes which cause some farmers to have three or four tractors. It would pay many of these farmers to spend more time on their livestock.

It seems that in all phases of work, specialization is of prime importance. We must assume that it should also apply to farmers. The farmer who does a good job of milking—hog production—beef production—egg production would make a larger net profit than one who does a haphazard job of all of them.

Bookkeeping with a disregard for a large gross profit and emphasis on a large net profit are necessary in any business. There are a number of farmers like the new businessman, who explained to his worried banker, "I couldn't show a net profit but you would be surprised how much goods I sold." Since the war, farmers must watch the cost of operation even more closely.

This leads to a little talked of and important cost—taxes. So many of our taxes today are hidden. They are necessarily added to the price of manufactured products and with the large amount of machinery and high protein feeds, it might surprise farmers that they spend several thousand dollars on these hidden taxes every year.

Farm real estate is bearing a disproportionate share of the cost of State and county government. According to Dean M. Schwieckhar, Minnesota Commissioner of Education—"Farm property with an estimated market value of $3.4 billion was assessed at $1.5 billion by various assessors, while $5.3 billion of residential property was valued at only $1.6 billion. Therefore you can see that farm real estate was assessed at 40 percent and residential at only 30 percent.

"This means that farm property valued at $10,000 is assessed at $4,368 while residential property is valued at only $3,044," according to James P. McDonnell, president of Minnesota Taxpayers Association.

He states, "A farmer is taxed out of all proportion to the owner of residential property so far as State and county governments are concerned. The farmer is also being penalized where the State school aids, which are based upon the wealth of a community as measured by assessed values, are concerned."

We know the personal property tax in Minnesota is a great burden on farmers. The assessor knows when a neighbor gets a new stove. He knows how many cattle you have or when you bought your manure spreader. There is no way of hiding these products.

Now consider the manufacturers agent in the city—he has nothing visible to tax. Think of the many people in apartments and trailer houses who escape these taxes entirely or their taxes are so small that they do not cover the cost of collection.

The farmers of Minnesota would do well to create a committee for revision of taxation.

Now we cannot entirely escape politics, inasmuch as subsidies and ASC are concerned. It would seem that the Government should not promote new irrigation areas to compete with the already too-large farm production areas, but rather buy up much of the marginal producing land, where fertility can be saved for other generations.

Payments for commercitl fertilizers and land clearance seem ridiculous when we already have overproduction. I think it would be much better for the farmer to set up good rotation and soil conservation practices.

It is my old fashioned opinion that every farm should have some livestock on it. This is taught us by nature the world over, and where, over a period of years, people have not conformed with this practice, soils have deteriorated and civilizations have disappeared.

Lowering of taxes to farmers and a reasonable control over increasing labor costs would be the greatest boon to establishing sound agricultural economy in this country.

Aping the Gestapo

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mr. PRICE. Mr. Speaker, civil-service employees throughout my congressional district have directed complaints against the recent revelation that the Civil Service Commission has been collecting and filing rumors derogatory to 2 million Americans.

Under leave to extend my remarks in the RECORD, I include herewith an editorial which appeared in the Belleville News-Democrat of December 5, 1955, titled "Aping the Gestapo." I sincerely feel that such files described are an injustice to the people, and I call upon my colleagues to join with me in appealing to the Civil Service Commission that these files be destroyed and their maintenance discontinued.

APING THE GESTAPO

The revelation to the Senate subcommittee by United States Civil Service Commission Chairman Philip Young that during recent years the Commission has been collecting and filing rumors derogatory to 2 million Americans, should have been voiced with shame, not pride.

Chairman Young boasted that the Commission's rumor and gossip files are second in size only to the FBI files, but he didn't justify to the Senators why his organization had strayed so far from its legitimate function. It has busily collected hints, innuendos, rumors, sly remarks, particularly anything which alleges that persons are subversive. These are put into the black book without any investigation as to truth, and this information is used as a guide by personnel officers and other Government agencies.

It is quite likely that in the United States Civil Service Commission's slander and rumor files repose unfounded and vicious gossip reports against some good people here in Belleville, and that some day in some matter involving a passport, Federal job application, congressional inquiry, legal residence, jury or election committee service, etc., the Commission will bring out its nasty black book.

Hundreds of sterling citizens have been fired from jobs, subjected to humiliation, branded for life, by similar rumors, such has been our patriotic climate of late. It is an unhealthy climate which makes suspect any organization mentioning terms like peace or world brotherhood. It is a climate which makes a casual $5 contribution to a movement two decades ago suddenly become a stigma or dropping in on a meeting of public affairs zealots back in 1940 now emblazoned as an act intended to overthrow our whole Government by force and violence.

How much can we imitate Hitler's Gestapo or Russia's secret spies without feeling shame?

A Grand Old Man of American Agriculture

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mr. MASON. Mr. Speaker, Mr. Henry H. Parke, of De Kalb County, Ill., will be 80 years old on February 4, 1956. He is the father of the American Farm Bureau. He was presented with the 1952 award for distinguished and meritorious service in the interests of American agriculture by the American Farm Bureau Federation.

The Civic Committee, of Sycamore, Ill.—the county seat of De Kalb County—is planning a countywide celebration in recognition of Mr. Parke's 80th birthday. I am a friend and great admirer of Mr. Parke; therefore this personal tribute.

Mr. Speaker, the name of Henry H. Parke has an honored place on the pages of "Who's Who in American Agriculture," and stands especially high upon the records of the Illinois Agricultural Association. Mr. Parke is a pioneer in the field of better farming, livestock improvement, soil conservation, better marketing of farm products, as well as in the field of better human relations in farming. He was closely associated with and an ardent coworker of the Honorable Frank O. Lowden in the Governor's efforts to improve American agricultural methods. American agriculture can say with Shakespeare of old: "Here is a man, whence comes such another?"

Mr. Speaker, in connection with the ceremonies granting the 1952 Distinguished Service Award to Mr. Parke, Mr. Wilfred Shaw, secretary of the Illinois Agricultural Association, prepared and presented a well-deserved tribute to Mr. Parke. In this tribute Mr. Shaw listed the services Mr. Parke had rendered and outlined briefly Mr. Parke's biography. It is quite a colorful tribute to Mr. Parke, a much more effective and interesting presentation than any I could possibly prepare; therefore, Mr. Speaker, I include Mr. Wilfred Shaw's tribute to Mr. Henry H. Parke as a part of my remarks on this occasion for the benefit of my colleagues in Congress, and for the information of the American people in general. I think it is especially fitting at this particular time in the history of American agriculture—when the so-called farm problem looms up so large on the congressional horizon—that this tribute should be paid to Mr. Parke, a grand old pioneer in American agriculture, and be included in the CONGRESSIONAL RECORD.

A TRIBUTE TO MR. HENRY H. PARKE

(By Wilford Shaw, secretary, Illinois Agricultural Association, September 1952)

The name of Henry H. Parke, of De Kalb County, Ill., is written widely across the pages of American agriculture. A pioneer in

the development of the Farm Bureau and in the promotion of an improved agriculture, Mr. Parke's influence has been recorded far beyond the limits of his home community and State.

The story of Henry H. Parke, his zeal for better farming, and how his search led to the formation of a farm organization in his county to further the science of agriculture, is a fascinating one and exemplifies the traditions that have made this country great.

Dean H. P. Rusk, of the University of Illinois College of Agriculture, made one of the most able estimates of all time of Mr. Parke when he presented the Illinois Farm Managers Association award to the De Kalb pioneer in 1945.

Said Dean Rusk in part:

"Henry H. Parke was born on a farm in De Kalb County where his mother's father settled in 1836 and built the original log cabin that became the Parke homestead. Since then the name Parke has become legend not only in De Kalb County and in Illinois, but throughout this land.

"In 1898, Henry Parke received his B. S. degree from the University of Michigan and his M. S. from the same institution in 1900. He was for a time a member of the faculty of the University of West Virginia, where he taught biology. He has the scholar's passion for mastery of facts and has an intellect that would have earned him distinction in any field he cared to enter.

"The black prairie soil of Illinois, however, was the magnet that finally attracted him to his lifework in the service of agriculture. In the University of Illinois library I found a little booklet published in June 1922, on the occasion of the celebration of the 10th anniversary of the Farm Bureau movement in Illinois.

"From this booklet, I quote:

" 'The birth of the Farm Bureau was not an accident. We now know that as early as 1902 the mind of a certain young college trained farmer was inoculated with the germ of improved agriculture. This young man's father before him was an exponent of improved breeding, better feeding, and a more or less regular crop rotation.

" 'It was this father who influenced his son, Henry Park, of De Kalb County, Ill., to go to college to study agricultural science. It was he who gave Henry the responsibilities which directly led him to attend the agricultural short course at Urbana in 1903 and 1904.

" 'From this time on,' " says the publication, " 'Henry Park was a leader.' "

"He is named as the man largely responsible for an important series of events that finally culminated in the organization on March 27, 1912, of the De Kalb County Soil Improvement Association, the forerunner of county farm bureaus in Illinois.

"This made De Kalb the first county in the United States to build a definite farmers' organization to carry local responsibility for extension work in agriculture. It was the pattern set in De Kalb County and followed throughout the State that gave the Agricultural Extension Service a firmer anchorage with the people of Illinois than it enjoys in any other State I know."

Henry Parke was secretary-treasurer of the De Kalb County Soil Improvement Association from May 11, 1912, to January 28, 1922; served as vice president from that date to February 12, 1923. He was president of the organization when it changed its name to the De Kalb County Farm Bureau on February 12, 1923, and served until December 13, 1924, in that capacity. From 1924 until April 28, 1926, he served as vice president.

From these early beginnings, Mr. Parke went on to serve agriculture on a broader basis first as assistant director of agriculture in Illinois from 1917 to 1921; then as director of the Chicago Producers Commission Association from 1924 to 1927 and as president from 1927 to 1947. His leadership and contribution to the livestock industry of the Midwest and Nation is also a matter of record.

Henry Parke gave constructive counsel and assistance in the development of the old National Producers and in its reorganization into the National Live Stock Marketing Association, together with the formation of two subsidiary companies—the Feeder & Finance Corp. and the National Live Stock Publishing Co.

He also played a prominent role in the original organization of Producers Live Stock Credit Corporation, forerunner of the entire credit setup of the country's cooperative livestock industry.

Henry Parke became president of the Producers Live Stock Credit Corporation in May 1924, and held this office until December 1946. He served as vice president and later as treasurer of the National Live Stock Producers Association.

In 1938 he was elected a director of the National Council of Farmer Cooperatives and served in that capacity until his retirement in 1947.

As the November 1942 issue of the National Live Stock Producers publication pointed out:

"* * * with a pride in farming and an enduring hope that the lot of the average farmer and stockman can be elevated best by intelligent self-help, H. H. Parke, of Sycamore, Ill., has devoted much of his life for the past 25 years to the common problems of farmers. Marketing, legislative, social, and recreational activities have offered opportunities for his quiet, effective leadership to find expression, while all the time he has successfully operated his 410 acres of fertile DeKalb county land, to say nothing of his contribution to cooperative livestock marketing."

Another longtime associate of Henry Parke said of him recently: "To know Henry Parke is to love him, and probably his greatest achievement has been his demonstration and pioneering in the field of human relations in agriculture so that farmers could have a voice in determining their proper sphere in this wonderful country of ours.

"Trying to describe the influence of Henry H. Parke in agriculture is comparable to attempting to describe the benefits of good soil, sunshine, and rain to the people of this planet."

National Minerals Policy

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. RHODES of Arizona. Mr. Speaker, the Arizona delegation to the Western Governors Mining Advisory Council introduced the following resolution at the November 9, 1955, meeting in Sacramento. Since it was beyond the authority of the Western Governors Mining Advisory Council to approve such a resolution, the council referred the resolution to the Western Governors Conference presumably to be held in Reno in early 1956 with the council's unanimous recommendation that the governors give this resolution favorable consideration. The resolution follows:

Whereas the mineral industry of the United States is vital to the welfare of the Nation both in war and peace, ours being essentially a minerals and metals economy; and

Whereas for the above and other reasons it is essential that the United States be as nearly self-sufficient as possible in both the minerals and metals commonly used as well as those classified by the Government as strategic and critical; and

Whereas dependence upon foreign sources of supply for our minerals and metals needs, in this atomic age, would invite possible national suicide; and

Whereas only by constant exploration, development, research, and production can our minerals industry maintain its reserves and its supply position in a healthy condition: Therefore be it

Resolved, That the Western Governors Conference ask the Congress of the United States to declare a national minerals policy recognizing the aforementioned basic facts, and implement its declaration of policy with appropriate legislation to make our Nation self-sufficient insofar as possible in respect to our tremendous minerals and metals requirements.

Information Service Is in Need of New Slant

EXTENSION OF REMARKS
OF
HON. JOHN E. MOSS, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. MOSS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial in the McClatchy Newspapers of California for November 7, 1955, dealing with the operating policies of the United States Information Agency. The editorial follows:

INFORMATION SERVICE IS IN NEED OF NEW SLANT

Emily Davie, of New York, wrote a book entitled "Profile of America." She described it as an autobiography of the United States. It was copiously illustrated and got many good notices.

One of its admirers was Theodore C. Streibert, head of the United States Information Agency. He was so impressed with its presentation of the history of this country that he sent a copy to President Dwight D. Eisenhower for his personal reading.

He also ordered the book sent to all American libraries overseas, where it was an immediate hit.

But the later story of Profile of America is not such a happy one. The book was withdrawn from circulation abroad because some Congressmen objected to it for such reasons as this:

It has a picture of a little red schoolhouse which Russians might think represents American schools of today. Yet the picture is captioned 1750.

Another illustration shows the dust bowl.

A southern Member of Congress took offense because two Negro Americans are shown in a dance routine. Another does not think anything not typically American should be circulated abroad.

What mountains out of molehills picayunish minds can raise.

In discussing the fate which overtook her book, Miss Davie suggested in the Saturday

Review that Congress appoint a joint committee, similar to the atomic energy committee, to give the United States Information Agency the protection it so badly needs and find a way to circumvent small minds at home.

A backbone for the USIA not so much resembling rubber might be useful also.

How Will Digging Up Corpses Improve Internal Security?

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Reading Times of January 7, 1956:

HOW WILL DIGGING UP CORPSES IMPROVE INTERNAL SECURITY?

At the opening of 3 days of hearings by the Senate Internal Security Subcommittee on Communist infiltration of newspapers, radio, television and the theater, Senator THOMAS C. HENNINGS said the committee wanted to "make it abundantly clear that this is not in any sense an investigation of the free press in the United States" and Senator JAMES O. EASTLAND, chairman of the subcommittee, echoed the remark: "Why, certainly that's true."

If this little expedition isn't an investigation of the free press in the United States, we pause to wonder what in the world it is. A strawberry festival, perhaps? For, judging from the testimony that so far has come from witnesses summoned by the committee, it certainly serves no other purpose than to cast a cloud over some highly respected and respectable newspapers and newspapermen. Let's look at some of the testimony.

Clayton Knowles, a member of the New York Times Washington bureau from 1947 to 1954 and for some time before 1947 and ever since 1954 a member of the New York staff of the Times, testified that he was a Communist from 1937 until 1939, when he was on the staff of another paper.

James Glaser, a copy reader for the New York Post and onetime editor of the Daily Worker, Communist organ, admitted membership in the Communist Party in the midthirties but said he quit the party and his Daily Worker post in 1936.

Nobody in his democratic senses can, of course, condone communism, either the variety we have today or the variety that existed in the 1930's. One can only feel sorry for those who were its dupes at any time. Apparently at least one of these now feels sorry for himself, for Glaser labeled himself as a "chump" and a "lunkhead" for ever having joined the party in the first place. Knowles said he was "naive" ever to join the party.

In the matter of communism and membership in the Communist Party, those who read the story of Knowles and Glaser might consider two angles of their testimony. First, both renounced the party nearly 20 years ago and have denounced it ever since. There is no question whatever about their having any connection or sympathy with the party today or for these many years past. Again, they might reasonably concur with the New York Times, which said editorially, in commenting on the hearing, that "we do not believe in irredeemable sin. We think it is possible to atone through good performance for past error, and we have tried to supply the security and the favorable working conditions which should exist in a democracy and which should encourage men who were once misled to reconsider and to reconsider and to reshape their political thinking."

It is little short of amazing how some former Communists are regarded by congressional committees as against other former Communists. The Elizabeth Bentleys, the Louis Budenzes, the Whittaker Chambers are loved like brothers and sisters—yet they were active much more recently in the party and had much greater influence in it than the Knowles and the Glasers and the Jimmy Wechslers, the New York Post editor whom McCarthy brutalized.

Why, at this late date, after such long and obvious recantation, does the Eastland committee now choose to crucify these men? What purpose does it serve, nearly 20 years later, to dig up their past sins? How will it make the security of the United States any more secure? The questions produce only an echo of themselves, and no answers.

It seems to us that Senator EASTLAND might well turn his attention to the problem his own State of Mississippi now refuses to face squarely, the Supreme Court's antischool-segregation order, rather than to a handful of potlically and ideologically dead Communists.

Hydro Versus Atomic Power

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. HOSMER. Mr. Speaker, the December Bulletin of the Sport Fishing Institute has reprinted a persuasive warning by Governor Langlie, of Washington, against hasty investments in costly hydroelectric without fully considering the rapid advancements being made toward the production of electric power at small cost from nuclear fuels. This warning is particularly appropriate at a time when Congress has before it the multibillion dollar upper Colorado River storage project scheme that would require 6-mill power to be commercially saleable for a full century in order to recoup the taxpayer's investment in its construction.

Governor Langlie's warning was reprinted as follows:

HYDRO-STEAM-ATOMIC

Important comments by Governor Langlie (Washington) in a talk delivered over KTNT-TV, Tacoma, August 1, from an editorial in the Connecticut Outdoor Sportsman (Meriden) for November:

"There is the question of the benefits to be derived in the future from the power that can be developed by atomic energy. Almost monthly the reports indicate that such rapid strides are being made in that field that within 8 to 10 to 12 years the cost of electricity produced by nuclear fission, will result in power that will be competitive with steam and a few years thereafter competitive with low cost hydroelectric energy. It is on the basis of this information that I presently feel that we should go slow on building hydroelectric dams that mitigate against the use and development of other resources that are valuable to the people of the State of Washington. Within 10 or 15 years we will have developed all of the low cost hydroelectric power in the Pacific Northwest. When that power has been developed we will turn to steam generation and to atomic energy power for further expansion of our power facilities. As that time nears we should keep constantly in mind that we cannot afford to build high cost hydroelectric energy because it does damage to our streams, does not produce for our people the values that are oftentimes held up for us. For whatever investment is made in these dams it must be retired with interest charges and, afer all, if we can build steam plants, use our own energy soures such as coal and do it as cheaply as some of these dams, in the long run we will have a more adjustable facility that will serve us better at lower costs and in the long range benefit us most by protecting some of our valuable resources."

The Republican Party and Its Adherence to Our Concepts of Liberty

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mr. UTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to insert a letter from Mr. Willard M. Hanzlik, an electrical contractor at Seal Beach, Calif., addressed to the Seal Beach Republican Club. I believe that this letter contains an extremely accurate description of the Republican Party and its adherence to the concepts of liberty which we as Americans have so long cherished. The letter is quoted as follows:

SEAL BEACH, CALIF., *September 29, 1955.*

DEAR FELLOW REPUBLICANS: Some people believe that our ultimate destination must be socialism. And many of these people are actually hopeful that our journey to this Never-Never Land will soon be resumed.

I say resumed because for about 20 years the United States did embrace the welfare state, did denounce business. It might charitably be said that it was somewhat discreetly done. Everything was not collectivized and nationalized overnight. Instead, regulation, super taxation, allocation, subsidization, coercion through labor monopolies and other devices were used to hamstring private enterprise so that eventually it might become necessary for Government to "liberate" industry and farming from private hands.

During this period the minds of too many Americans became conditioned: The traditional love of liberty was supplanted by desire for a phantom substance called security. Perhaps these words don't tell the story forcefully enough. What actually happened was destruction of faith in individuals, destruction of self-confidence, destruction of belief in a man as a man. It might be described as a vast brutally ignorant destruction of the components of that pioneering force which made this country great. And along with this, the handing over of enormous powers to those very same individuals who were bleating that only the state, not the individuals, must have power.

A period of frantic spending of public funds raised by mortgaging the future of our grandchildren failed to accomplish what was promised. And it was only the threat of war, then the promise of war, then war it-

self, creating the chaotic era when money was thrown wildly about without any but wartime justification, that kept the pump handle bobbing.

Now we are in the midst of the first Republican administration in 20 years, an administration which was faced by this complicated problems of stopping bloodshed and at the same time stiffening resolve; of encouraging private enterprise and at the same time stabilizing the workingman's standard; above all of stopping the insidious process of "creeping" socialism.

Yet in spit of its problems, the Eisenhower administration has accomplished tremendous progress. And the accomplishments have been made in a businesslike manner, without fanfare and the lurid expensive agonies of self-admiration we became so accustomed to during the 20 years.

But political facts are often peculiar facts. People seem to delight in doing the unexpected. And for some unaccountable reason the very people who trooped to the polls and put Dwight Eisenhower into office have become politically indifferent. Perhaps we as a Nation became so conditioned to hearing politicians bombard us with oratory of their simply wonderful deeds that unless we hear such sounds we think nothing is being done.

This is a dangerous condition. We won something very valuable 3 years ago. And we may well lose it now by sheer indifference.

We have every intelligent, practical argument on our side. Unfortunately, those people who were so thoroughly conditioned by 20 years of fairy tales don't always take easily to practical reasoning. To many of them the ethereal dream of a money tree or a candy mountain is still more real than the facts of life.

It is peculiar to the point of being alarming that many people fail to realize that one of the biggest reasons Russia has not opened wide her gates and invited the world to visit freely is that within a state of that kind life is not all money trees and candy mountains.

Think about Russia for a moment. Think hard about Russia.

Then realize that there, but for the grace of God, goes America. Under the tutoring of our dewey-eyed liberals America was certainly headed in that direction. A few more years and the momentum might have been unstopable.

It could happen again.

It is corny but there isn't any other way to say what I want to say: if you believe in the inherent rights of individuals; if you think that personal liberty is more than a catch phrase; if you distrust intense concentrations of power in any central government—then you must know that the Republican Party, standing fast against further Socialist encroachment, is the party for you to sustain. The party is not perfect, and the people who work within the party are not perfect. But the direction is right; and the belief in America is sincere and rock hard.

During the coming months much emphasis will be placed on the physical condition of President Eisenhower. The opposition will openly exhibit long faces and indwardly gleefully greet all notices of his illness. We should strongy feel our great loss and recognize the enormous loss the Nation will suffer if the President does not rally; but perhaps this attack will stimulate a cohesive and moving force in the Republican Party. Perhaps we will grow in stature to where we can face the job ahead without the "Eisenhower crutch." Perhaps we can figure a way to win next year's elections by hard work.

It has been done before. Let's try it again.

Sincerely,

WILLARD M. HANZLIK,
Electrical Contractor.

Neutral Nehru

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following editorial from the Detroit Times of November 25, 1955, entitled "Neutral Nehru":

Nehru of India says he is neutral.

These are his words:

"We are convinced it is not by military pacts and alliances and by piling up armaments that world peace and security can be attained * * * There is talk of a cold war and rival camps and groupings and military blocs and alliances—all in the name of peace.

"We are in no camp and no military alliance.

"The only camp we should like to be in is the camp of peace and good will, which should include as many countries as possible and be opposed to none.

"The only alliance we seek is an alliance based on good will and cooperation."

This is well and good, but where do we come off?

United States is now engaged in a bitter struggle to prevent Soviet Russia from conquering more countries and peoples in Asia and from expanding its influence in Germany beyond the River Elbe to the River Rhine.

In this struggle, the United States has allies, the NATO and SEATO countries. India is not one of those allies.

Nehru says India is strictly neutral. In the United Nations, India has sided consistently with Soviet Russia and against the United States.

At the Bandung conference, India was the leader of the pro-Russian and pro-Red Chinese faction.

Is that strict neutrality?

As a matter of fact, when Nehru visited Mao Tze-Tung in Peking, he drew up a formula of five points for peaceful coexistence which was precisely what the Kremlin was saying to all the world. He became an advocate of their line of thought.

Was that strict neutrality?

It is possible and even probable that Nehru believes he is neutral. It is difficult, if not impossible, for any of us to view our own thoughts and their expression objectively.

Nehru might pay some heed then to the impression he has made upon the world and even more, the impression that his spokesman, Krishna Menon, has made.

Surely in the United States, it is difficult to believe that Menon's conduct has been strictly neutral.

Via Peking radio, Prof. Chien Hseuh-Sen, who had lived in the United States for 20 years, from 1935 to 1955, working on jet propulsion at the California Institute of Technology, had much to say about the United States.

He spoke of the problems facing Chinese students who desire to return to Red China. This paragraph in his interview is particularly pertinent:

"They always worry about whether they have enough money on hand for them to live in the United States between the day they announce their intention to leave the United States and the day they can actually leave, and the money for the long journey home.

"They know they most likely will lose their jobs as the first consequence of announcing their intention.

"This is especially a problem for those with a large family. But this problem now is resolved by the well-known support and help offered by the Indian Embassy at Washington, D. C., as a result of the negotiations at Geneva."

What does the Indian Embassy have to do with the Chinese living in the United States?

Are they recruiting these Chinese on behalf of the Red Chinese?

Are they financing them?

By what authority does a foreign embassy function in this manner in the United States?

And is this activity a sign of strict neutrality?

Address by National Commander J. Addington Wagner, of the American Legion, Before the Indianapolis Chamber of Commerce Luncheon, Indianapolis Athletic Club, November 17, 1955

EXTENSION OF REMARKS
OF
HON. ORVIN B. FJARE
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mr. FJARE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an address by National Commander J. Addington Wagner, of the American Legion, before the Indianapolis Chamber of Commerce luncheon, Indianapolis Athletic Club, on Thursday, November 17, 1955. I think the message will be of interest to the Members of the House:

Mr. Chairman, members of the chamber of commerce of Indianapolis, friends, it is a very great pleasure for me to have lunch with you today, and to represent before you the American Legion. I have visited Indianapolis many times in recent years in the course of my Legion activity. I have always enjoyed coming to your city.

The American Legion has maintained its national headquarters in this heartland city of America for nearly 37 years. Obviously, we like it here; we prize the fine relationship we have always enjoyed with you people of Indianapolis. We consider it to be important and significant that we maintain the nerve center of our operations here in the great Midwest. There are many reasons for this, including geographical location and the fact that here we feel able to keep in closer touch with the grassroots thinking of the Legionnaires—and of all the American people. And not the least factor in our remaining here has been the friendly hospitality which has always been shown us by the people, and by the many business firms with which we deal, day in and day out, here in Indianapolis.

So I come here today, very much aware of the fine kinship which has existed through the years between the American Legion and this great city. On behalf of the American Legion, I renew to all of you our pledge of friendship, and our warm assurance that we will be here as long as we are welcome.

On at least two occasions each year you may notice a bustle of activity for a few days

around our national headquarters building. Red caps, white caps, and blue caps are in evidence at these times. These are the meetings of our State commanders and adjutants and of our national executive committee, which is the board of directors so to speak, and the chief policymaking body of the American Legion between our national conventions.

You may wonder sometimes what we are doing and what we are thinking down in our Indiana-limestone building on Pennsylvania Street. As a matter of fact, we are engaged in the routine business of housekeeping, budgets and finances and personnel, and things of that kind. And at the same time we are thinking about and considering those things which concern most Americans, the welfare and the betterment of our beloved country.

I want to tell you about one of the things to which we are giving much thought during the course of our fall meetings, which are now in session. We are much troubled as to whether the American people are alert to the fact that at the present time there is in the United States a well-financed and a seemingly well-planned movement to dissipate the efforts of our Government to protect itself from the destructive forces which are at work within our borders.

The American Legion, through our former national commander, Seaborn Collins, spoke out a few weeks ago, warning our members against the dangerous effect of the work being done by the Fund for the Republic. I would like to tell you, if I may, just exactly how the American Legion feels about the Fund for the Republic, and its management—and why we feel that way.

The Fund for the Republic has a $15 million dollar principal fund which it apparently feels free to dispose of in any way that it wishes, without any tax accountability. We say that by virtue of its tax-exempt status, the American public acquires a legal and moral interest in how the fund spends its money.

I submit to you that by their own words and actions, the managers of the Fund for the Republic have clearly demonstrated that it is their intention to debunk what they consider to be the myth of the Communist menace in the United States. They say they are against communism, and in the next breath they say that the greatest danger to the country lies, not in communism, but in those whom they claim will cost us our freedom in the effort to destroy communism. In example of this I quote from the report of the Fund for the Republic dated May 31, 1955: "A political party in this country has been identified with the enemy. * * * It has appeared that the peril to the country could be dealt with only by methods that drastically departed from those which have characterized Anglo-American jurisprudence." Incidentally, the Fund report puts the word "enemy" in quotation marks as they use it.

Communism in the United States is not a political party. It is rather a conspiracy to organize a revolution by force against the Government. It has been so judged by the courts of the land. Anyone who does not recognize this fact by now is either implicated in the conspiracy or is so naive as to be wholly irresponsible.

I quote to you the purpose of existence of the Fund for the Republic as expressed by the fund's board of directors in a statement to be published in the December American Legion magazine: "We hope to make a contribution to the better understanding of effective procedures for dealing with the Communist menace while at the same time strengthening the American traditions of liberty and freedom." Now I give you this significant quote from the same source of how the fund proposes to implement this noble purpose: "The areas on which the board has long since decided to concentrate its attention are: (1) Restrictions and assaults upon academic freedom, (2) due process and equal protecton of the laws, (3) the protection of the rights of minorities, (4) censorship, boycotting, and blacklisting activities by private groups, (5) the principle of guilt by association and its application in the United States today."

Now without arguing with any of these stated methods, may I inquire whether it might be in order for this fund to spend some of its $15 million to find out how it became possible for Communist agents to successfully infiltrate the United States Government to its highest councils, and perhaps to make some suggestions as to how we can prevent such a thing from happening again? Would it perhaps be helpful to our country for the fund to spend some of its plentiful funds to check into the methods whereby communism has been able to exert a disproportionate influence in our schools and colleges, confusing our children and implanting in their minds ideas which bear evil fruit?

No, the fund officials do not seem to feel that this would be good. Instead, what projects do they see fit to finance? Permit me to give you some choice examples.

There is the case of Mrs. Mary Knowles. This lady was identified by Herbert Philbrick, an undecover agent for the FBI, as a member of the Communist Party. Before a Senate investigating committee she refused to testify on the grounds of constitutional privilege. When her employer, the William Jeanes Memorial Library, of Plymouth Meeting, Pa., declined to fire her for her action, the Fund for the Republic took the amazing action of granting the library the sum of $5,000 for, as they termed it, "courageous and effective defense of democratic principles." At the moment I do not argue whether this lady should be fired from her job. But that the fund should give money for such a purpose defies my comprehension. I am not aware that they have offered grants to persons like Herbert Philbrick for his courageous and effective efforts to preserve democratic principles.

Another example, according to its annual report of May 31, 1955, the fund has made, and I quote, "an expanded version of the television film of Edward R. Murrow's interview with J. Robert Oppenheimer available to educational institutions and groups concerned with public affairs." They spent money for this, and the film was shown in many schools. The interview was a clear attempt to show Oppenheimer to be a victim of character assassination due to anti-Communist hysteria. We ask why, in fairness to both sides of the question, the film did not report the mass of evidence laid bare by the special board of the Atomic Energy Commission, which shows Dr. Oppenheimer's record to be a tangled skein of Communist association and doubtful conduct, much of which the doctor himself did not deny. Why, for example, did the film not report that in 1943, during the most crucial period of the development of the atom bomb, the Counterintelligence Branch of Military Intelligence, responsible for the security of the Manhattan project, recommended that Dr. Oppenheimer be disassociated from the project? This recommendation was made after intensive personal surveillance of the doctor's activities. To this day, the Chief of that counterintelligence agency does not know why the recommendation was not carried out. The film did not report this fact, nor many other things, including the doctor's admission that he made a deliberate effort to confuse and misinform the security agency charged with protecting the Manhattan project.

Another example. The fund has financed the distribution of 35,000 copies of a book titled "The Fifth Amendment Today," written by Edwin N. Griswold, dean of the Harvard University Law School. This book is an exposition of the theory that American jurisprudence sanctions the invocation of the fifth amendment by a witness, and that the people at the same time are not supposed to infer that the witness has anything to hide.

The spring, 1955, issue of the Fordham Law Review carries an article by C. Dickerson Williams, a prominent New York attorney. This article, entitled "Problems of the Fifth Amendment," adopts a premise opposed to that of Dean Griswold. Mr. Williams proposes the theory that the fifth amendment is designed only to protect the witness from criminal prosecution as a result of his refusal to give evidence which might incriminate him. It argues that the courts and the people are entitled to draw the inference that he who refused to answer has something to hide, and that while a man may not be put in jail for this reason, neither is he entitled to benefit by reason of his action.

The Fund for the Republic distributed 1,000 copies of this article. That is a ratio of 35 to 1. When asked in a recent interview the reason for the disparity Dr. Robert Hutchins, president of the fund, explained that it was a matter of judgment, while stating that he personally leaned toward Dean Griswold's view of the matter.

We ask the question: Is this a fair and impartial approach to a controversial subject, or could the fund be promoting one school of thought as against another?

One further example. It has recently been revealed that the fund is paying a salary to Mr. Earl Browder, former head of the Communist Party of the United States, for information which he is providing, as an expert on communism (which he most assuredly is), in connection with a fund project. So that now we have a privately endowed, tax-exempt fund, paying money to a man for information on the very same subject on which he has repeatedly refused to testify before congressional committees and on which he has repeatedly refused to cooperate with the Federal Bureau of Investigation, not for money, but as a matter of civic duty. How patriotic can we get?

On the basis of these and other available examples the American Legion believes that the Bureau of Internal Revenue should study the activities of the fund, and determine whether it qualifies for tax-exempt status.

This brings me to the question of just who is responsible for the direction which the activities of the fund has taken. On the basis of our evaluation of the record, the principal direction emanates from Dr. Robert Maynard Hutchins, the president of the fund, and from Mr. W. H. Ferry, the vice president.

Dr. Robert Maynard Hutchins' record shows a willful refusal to consider communism as anything more than a political ideology. As late as July of this year, Dr. Hutchins hired as the fund's press agent a man named Amos Landman, who had, 3 weeks before his employment by the fund, repeatedly pleaded the fifth amendment before a Senate investigating committee when asked whether he was, or ever had been a Communist. In reply to questions from the press, Dr. Hutchins reportedly said that Mr. Landman was not now a Communist and had left the party in 1939. He said that he had taken Mr. Landman's word that this was true. This was more information, apparently, than Mr. Landman was prepared to give to the United States Senate. In an interview with the press on November 7 of this year—less than 2 weeks ago—it is reported Dr. Hutchins said that he would not hesitate to hire a present member of the Communist Party to do a job for which he was qualified. I say to you that the record of Dr. Hutchins, and the record of the Fund for the Republic under his direction, is replete with evidence that he does not believe communism is a clear and present danger in this country, and that

he is more interested in opposing communism's enemies than in opposing communism.

Dr. Hutchins is aided and abetted in his direction of the fund by his vice president, Mr. W. H. (Ping) Ferry. The actions of Mr. Ferry indicate that he holds substantially the same beliefs as his chief.

My friends, I solemnly say to you now that none of us here knows how much damage has been done—how many American lives have been lost—what future catastrophe may yet befall our people as a result of the successful operations of the Communist espionage apparatus in this country. I do not speak idle words. Read the official records in the cases of Alger Hiss and Harry Dexter White and those associated with them. Read the sordid trial records of the Rosenbergs and the Greenglasses and the others. And after reading ask yourselves whether our Government is justified in taking security measures deemed necessary by the agencies responsible for America's national security.

It is true that a few errors have occurred in the operation of the Federal loyalty program. When you consider that more than four million individuals have been checked, the wonder is not that there were a few mistakes but that there were so few. Certainly, that record is a credit to President Eisenhower and the judgment of the civil servants who have carried on this work.

I would leave one final thought with you I believe that it is now time for the American people to make known whether they personally approve a heavily-financed, tax-exempt movement whose actions have served to discredit the legislative and executive agencies of the Government in carrying out their constitutional responsibilities to preserve the security of the United States.

You may be sure that in all that the American Legion does it is guided by only one principle: What is best for America. We would not destroy one fraction of the freedom of our people. But freedom connotes duty. It does not embrace license. Freedom does not permit murder, robbery, nor any act which hinders the right of each citizen to live in tranquillity with his neighbors. By the same definition it does not encompass the right of any person or group to subvert or violently overthrow the form of government which we have chosen for ourselves.

The American Legion formally charges that by its action under its current direction, the Fund for the Republic renders comfort to the enemies of America.

We are convinced that the fund is doing evil work. We intend to tell the facts about this organization and its leadership to the American people throughout the country. We believe that it is your responsibility as American citizens to satisfy yourself as to the truth of what we say. Check the record. It contains a great deal more evidence than time has permitted me to relate here. If you will study the facts in the light of patriotism, I am confident you will join with us in combating and exposing this massive threat to the security of our country.

Hon. Sam Rayburn

SPEECH
OF
HON. HENDERSON L. LANHAM
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. LANHAM. Mr. Speaker, I am happy to join with my colleagues in felicitating our beloved Speaker, SAM RAYBURN, on the 74th anniversary of his birth.

It has truly been a privilege for me to serve with and to know intimately this great American. Everyone loves, admires and respects Mr. SAM.

"Mr. Democrat," as he is so well and often called, has rendered a service to his country beyond our power to express. My hope and prayer is that he may be spared for many, many more years of faithful and fruitful service.

Mr. RAYBURN, my heartiest congratulations.

Cult of Doubt

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following article by William A. Rusher, which appeared in the November 3, 1955, issue of the Harvard Times-Republican:

CULT OF DOUBT

The gravest problem facing America today is neither political, economic nor military, but moral and psychological. It is the loss, by a substantial segment of the American society, of faith in that society and its values.

The most cursory review of history will bring to mind many nations and communities which have flourished like the green bay tree without any particular pretensions to cultural or intellectual preeminence in their milieux. At one time or another, great nations have sanctioned almost every reprehensible practice known to man—not excluding infanticide, ritual sacrifice and cannibalism—yet the species has survived, an on balance has even progressed. The one sin for which nature exacts the supreme penalty of national extinction is a failure on the part of the members of a society to believe in its inherent worth.

When a society loses faith in itself, its destruction is only a matter of time. Since the disease is commonest among mature and elderly societies, whose cultural and intellectual attainments are high, the process of disintegration is often obscured by a fluorescence of the arts and the intellect. But once the dread threshold has been crossed, no cultural supremacy, no intellectual subtlety, no exquisite refinement of the spirit can commute the death sentence of the doomed society. As Greece, for all her brilliance, succumbed to the Roman legions; as Rome in turn, its grandeur blotched, fell to the Goths; as the hothouse blossom of the T'ang Dynasty crumpled under the blade of An Lu-shan; as the Third French Republic, wielding its cynicism like a paper sword, died at the hands of Adolf Hitler—so must every society die which forgets to preserve its belief in itself.

In the United States today, there are many people, dangerously many, who have lost their faith in the American society. I am not referring to the domestic Communists—though they, of course, have condemned the society to death and welcome each sign of weakness. The great bulk of those who have lost faith in the society, however, are not actively disloyal to it; they have merely become indifferent or hostile to its tenets. They exist in both parties and all economic and social strata, for theirs is a fraternity of the intellect.

To these people the rights which according to the Declaration of Independence were conferred upon all men by their divine Creator are merely the benevolent statutes of a humanistic national society, and the society in turn is but a convenient transitional form on the road to a more perfect (but still completely materialistic) international union. To the holders of such opinions, the preservation of the American society as such can mean little. Deprived by their materialistic premises of the ability to accept its moral postulates, and unable for the same reason to formulate others of their own, they accept the protection of the American society while denying it their moral support—constantly refining their analyses of its defects, and guiltily identifying themselves with its active enemies.

Such people are philosophically incapable of a robust contribution to the vitality of the society. Organizations of a patriotic character, avowedly dedicated to the support of the society, are (not surprisingly) their particular bêtes noires; organizations designed to encourage the ultimate supersession of all national societies by a single materialistic international commonwealth are their special pets. As for the Communist world, hostile to the West yet philosophically unassailable from the standpoint of the thoroughgoing materialist, it exerts upon such people the same hypnotic fascination that a snake exerts upon a chicken.

These people uneasily sense the social danger posed by their loss of faith in the society. But, rather than abandon their tacit opposition, they have sought to camouflage it by treating it as a virtuous skepticism. Thus has arisen the cult of doubt, a complete relativistic philosophy, which denies all positive beliefs in the sphere of social values and elevates doubt itself to the status of a first principle.

We are told, for example, that Harvard's greatest merit is its insistence upon the constantly questioning mind. Or again, learned judges enunciate a new doctrine of chronic dubiety, and warn us against the dangers of firm convictions. At last the very holding of an opinion becomes a sign of bad taste, and an opinion favorable to the American society is considered in the worst taste of all.

How can people in that condition defend the American society against its philosophical rival, communism? They can't, they haven't, and they won't. Let no one suppose that an array of questioning minds, however cooly balanced, can defend a free society against the fiercely held convictions of the brilliant leaders and propagandized masses of the Communist world. We will either meet and defeat the challenge of the Communists with convictions stronger than their own, or we will lose to them the battle for the future of the world.

In this connection, we do ourselves a great disservice to regard Communist leaders like Khrushchev and Mao as mere power-mad barbarians. No political revolution in all history, and few religions, have ever relied less than communism upon force as the preferred weapon of conquest. The Communist dictators are grimly adept politicians, no doubt, and able soldiers as well; but they are also passionately sure of the supposed scientific rightness of their social theories—as Molotov's recent rather ludicrous recantation of a dialectical solecism clearly demonstrates. Against that sort of earnestness, have we nothing better to hurl than the other-handed insipidities of the cult of doubt?

There is some hope that we have. The revelation in the past 8 years of how deeply the morale rot of materialism, not to mention the cancer of communism, had bitten into the body politic has produced a revulsion of popular sentiment whose consequences are

not yet wholly foreseeable. The great majority of the American people are now convinced that the struggle for survival must not be led, on behalf of the American society, by some doubt-riddled egghead exquisitely poised between yea and nay. The world will go—and perhaps rightly—to those who want it most. If it is to go to the defenders of freedom, they must want that freedom, not merely in order to doubt, but to believe.

It will not matter if what they believe proves wrong in the perspective of a millenium. Perfect rightness is the prerogative of God; man's role is to strive for a perfection he cannot achieve. And while final success will forever elude him, he does not always fail. Through the smoke and haze of history we have seen him struggling on—now lost, now stumbling, now rising again "with truth a silver trumpet at his lips."

Greater North Dakota Association Asks Federal Funds To Help City of Williston

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mr. BURDICK. Mr. Speaker, I would like to submit with my remarks a copy of a resolution recently made by the Greater North Dakota Association. This resolution supports an appropriation of Federal funds to pay for the replacement of municipal facilities of the city of Williston, N. Dak., which may be damaged or rendered useless, if the Army engineers get their way and operate the dam at the 1,840-foot level. The resolution follows:

RESOLUTION OF GREATER NORTH DAKOTA ASSOCIATION SUPPORTING AN APPROPRIATION OF FEDERAL FUNDS FOR PROVIDING REPLACEMENT OF MUNICIPAL FACILITIES OF THE CITY OF WILLISTON, N. DAK., DAMAGED, RENDERED USELESS OR MADE NECESSARY DUE TO THE CONSTRUCTION OF THE GARRISON DAM AND RESERVOIR PROJECT ON THE MISSOURI RIVER, OR FOR REIMBURSING THE CITY THEREFOR

Whereas the operation of the Garrison Dam and Reservoir project works on the Missouri River in North Dakota to their maximum height and capacity will adversely affect, damage, and render useless many of the essential municipal facilities of the city of Williston, N. Dak., and may require additional and new facilities; and

Whereas in order to replace, relocate and reconstruct such facilities to adequately serve the present and foreseeable needs of the municipality it will become necessary, among other things, to—

1. Relocate, alter, and reconstruct the water treatment plant;

2. Relocate, extend, alter, and reconstruct the raw water intake facilities;

3. Locate, design, and construct sewage treatment facilities;

4. Replace, relocate, and construct the garbage dump;

5. Replace and reconstruct the powerline to the raw water intake and to the treatment plant; and

Whereas it appears that most, if not all, of the cost of providing such replacements and new facilities is the responsibility and obligation of, and should therefore be fully borne by, the Federal Government because of the construction and operation of the Garrison Dam and Reservoir project: Now, therefore, be it

Resolved by the board of directors of the Greater North Dakota Association, the North Dakota State Chamber of Commerce, in annual meeting in the city of Bismarck, N. Dak., November 28–29, 1955, That this association actively support an appropriation of Federal funds for the complete relocation, replacement and reconstruction of the municipal facilities of the city of Williston, N. Dak., adversely affected, damaged or rendered useless or inoperable due to the construction and operation of said public works project, as well as for providing such new facilities as may become necessary by reason thereof, all of such replacements and necessary new facilities to be of sufficient size and capacity to adequately serve the present and foreseeable needs and requirements of said municipality, or for the full reimbursement therefor in the event said city provides such replacements and necessary new facilities; and be it further

Resolved, That copies hereof be mailed to the City Commission of Williston, the State water conservation commission, the Chief of Engineers, Corps of Engineers, United States Army, to Senators WILLIAM LANGER and MILTON R. YOUNG, and to Representatives USHER L. BURDICK and OTTO KRUEGER.

Foreign Aid

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following press release from the National Federation of Independent Business regarding foreign aid:

"Let Congress start the new year right," says George J. Burger, vice president, National Federation of Independent Business.

Burger's remark is made with reference to the foreign-aid prorgam which will be considered shortly after the reconvening of the Congress.

Mr. Burger voiced the opinion of the nationwide membership of the National Federation of Independent Business, comprising approximately 100,000 independent business and professional men nationwide, as a result of a poll recently completed, which discloses that 80 percent of the members voted for discontinuance of the foreign aid as a permanent feature of our Nation's foreign policy.

The 80 percent of the members voting came to the conclusion from facts submitted, that the United States taxpayers have ponied up about $69 billion for foreign aid since July 1, 1945, which has resulted in our Nation having the highest deficit of any country in the world. The members believe that "You can't finance or buy friendship." Korea was a good example—where the United States taxpayers bore almost 90 percent of the burden.

Mr. Burger added: "The foreign-aid program is now centered on aid to Asia, and the facts will show that India, an Asian country which has taken foreign aid, is flirting with Communist China. Indonesia which would get aid has indulged in ventures sure to wreck its economy."

Small business, the grassroots of our economy, has spoken, and, Burger concludes: "It is now up to Congress to pay heed to the voice of this largest segment of our Nation's economy."

Friendship Airport Could Solve Washington Problem

EXTENSION OF REMARKS
OF
HON. RICHARD E. LANKFORD
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mr. LANKFORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Evening Capital, Annapolis, Md., of January 5, 1956:

FRIENDSHIP AIRPORT COULD SOLVE WASHINGTON PROBLEM

The recommendation of the Department of Commerce that Andrews Airport, a military airbase, be developed as a supplementary commercial airport for the Washington area, instead of using the facilities of the Friendship International Airport, should, and will, likely run into opposition in the Congress.

As a matter of fact, Sinclair Weeks, Secretary of Commerce, in his letter to Senator MAGNUSON (Democrat, of Washintgon), chairman of the Interstate and Foreign Commerce Committee, placed Friendship in third place, rating Andrews Field as first; a proposed airport at Burke, Va., second, and Friendship last.

Yet, both the Andrews field and the proposed field at Burke, Va., have been debated and discussed many times in past years and have always been pigeon-holed.

The Department of Commerce made its recommendation in spite of the fact that its survey concluded that "Friendship Airport could serve as a supplemental facility for Washington for some time" and added "even though it does not provide the best long-range solution of Washington airport needs."

It is estimated that it would cost $30 million, or twice the cost of the Friendship Airport, to develop the Andrews military field as a commercial base. In addition, despite, protests in the past, the Federal Government has acquired 1,030 acres of land at the Burke site at a cost of $900,654.26, which has been lying fallow since construction there was stopped in early 1953. It was estimated that the cost of constructing an airport at Burke would be more than $48,400,000.

One of the main problems facing the Congress which recently assembled will be the balancing of the Federal budget and tax cuts. Why should the Federal Government rush into spending $30 million on the Andrews base, after investing $900,654.26 at the Burke site, when its own survey concludes that the Friendship Airport could serve as a supplemental facility for some time? Why not use the Friendship Airport to relieve the congestion at the Washington Airport and save considerable Federal funds? There is no definite date that can be given when traffic at the Friendship Airport will grow to such an extent that another airport might have to be considered.

Objections that have been made in the past to the use of the Andrews base are just as pertinent today. They have been founded on the mixing of military and commercial air traffic. Speaking of long-range planning, in event of a war, the Andrews base would probably be in such use that commercial flying might have to be banned or curtailed.

One thing that the selection of the Friendship Airport as a supplemental site would do would be to cut down traffic at the Washington Airport almost as soon as an agreement was worked out. This would tend to reduce any stacking of planes that may exist over

the Washington Airport, waiting clearance to land, by dividing the volume of traffic between Washington and Friendship.

At a recent meeting held in Indianapolis on flying safety, some astonishing facts were brought to light dealing with "crowded air" over major airports.

W. G. Jensen, of the Air Transport Association, representing the scheduled lines, gave the conference details of the agency's survey of near-misses in commercial flying.

He asserted that 65 percent of the near-misses occurred in full daylight and 43 percent under conditions with 15 miles or more of visibility. And he noted that almost a third took place in the Nation's chief terminal areas—New York, Chicago, Washington, Los Angeles, San Francisco, Dallas, Kansas City, and Miami.

To underline what is happening with the great growth of civil and military aviation, Lt. Col. Jack Tueller, Chief of the Strategic Air Command's Flying Safety Branch, reported that since January 1 of last year, up to the time of the meeting, there had been several hundred incidents in which bombers and fighters narrowly averted midair collisions.

And not all of them were missed. It was pointed out that from the second half of 1950 to the second half of 1952, Air Force collisions in midair rose from 4 to 7 a month. Since then the rate has leveled off.

Naturally Air Force planes by the nature of their business often fly in close formation with relatively small clearance margins.

Though military and civil air operations differ markedly, there is a big common element in the congestion problem they face. That being the case, why should the Department of Commerce seek to complicate the problem at the Andrews Base, by mixing military and commercial flying in the same area?

The Friendship Airport, with facilities available, would seem to be the ideal answer to the Washington problem, rather than mixing types of aviation, and pouring out sums of Federal money.

The recently completed Baltimore-Washington Expressway offers an ideal highway artery between the Friendship Field and Washington, and the speed of travel between the two points is more to be considered than actual mileage between Washington and Andrews Field or between Washington and Burke, Va.

The statement in the Department of Commerce report that Washington air traffic is predominantly shorthaul, deserves some inquiry by the Congress.

What does the Department consider shorthaul traffic? Planes land at the Washington Airport from any distant points. One reads time and again of diplomats and representatives of foreign countries being met at the airport.

Is a flight from Washington to Chicago considered a shorthaul for instance? Is one from the Midwest to Washington shorthaul? It would seem that this phase of the report should be clarified.

Harry Sandager

SPEECH
OF
HON. RICHARD B. WIGGLESWORTH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. WIGGLESWORTH. Mr. Speaker, I have learned with deep regret of the passing of our former friend and colleague, Harry Sandager, of Rhode Island.

Born in 1887, he played an active part in public life in the field of journalism; as a Representative in the Rhode Island General Assembly for 8 years; as a Member of the 71st Congress, and as Republican national committeeman for the State of Rhode Island.

He had a very wide circle of friends, among whom I have been happy to be included. I have valued his friendship ever since the day of our service here together in this House.

I join in heartfelt sympathy to Mrs. Sandager and to all those close to him.

The Church of Christ in Italy

EXTENSION OF REMARKS
OF
HON. ROSS BASS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1956

Mr. BASS of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

LAWRENCEBURG, TENN.,
January 2, 1956.

Hon. ROSS BASS,
House of Representatives,
Washington, D. C.

DEAR ROSS: Copy of my letter of last September to the Honorable John Foster Dulles, Secretary of State, is enclosed.

Cline and Harold Paden went to Italy 7 years ago to reestablish the Church of Christ in Italy. Although Harold had been successful in helping win the battle for Italy in World War II, Cline had, by resisting orders of the government which had violated his conscience, to close the orphanage in 1949, to close the churches in 1952, and finally the order in 1953 to take down the church sign which was a question of religious liberty, become "the symbol of the persecuted religious minorities in Italy," and, as such he had to be removed, even though the appeal of his arrest was pending and juridical recognition to enable the Church of Christ to function freely continued to be withheld.

While Paden was receiving the third degree in reverse fellowship at the hands of a supposedly friendly Christian democratic government, a news story distributed by the Chicago Daily News Service on November 19 from Rome told of plans for a Catholic colony in a rural area of South Carolina, evidently for the specific purpose of evangelization, as Priest Ligutti stated: "I want healthy Italian wives to increase the number of Catholics in that area." In contrast, the cry against Paden had been: "We do not need missionaries from the Church of Christ in Italy for the Italians are satisfied religiously and, certainly, we do not need foreigners to teach us religion." Incidentally, under the President's refugee relief program up to now 62,000 persons from Italy out of the total of 131,750 refugees will have found haven in the land of the free. Yes, everything would appear to be in readiness as we extend the handclasp of welcome for President Gronchi's state visit late next month.

The religion may be primarily an internal matter under the jurisdiction of a sovereign government, yet, in any country where it is necessary to go to the police for permission to worship, even though my voice be a lone one, I feel impelled in the goodly heritage of freemen, to cry out against such a despotic system condoned by a government sealed in the blood of American arms and transfused by almost five billions from the American taxpayer.

While all would agree the desire to return to the "meritorious inquisition" is inopportune and out of place in our time, at least the equality of all religious professions and the freedom of conscience should like the rose be indigenous to every clime and especially so in that country where it is the duty of the ruler under the 8-year old Italian republic to respect and have respected its constitutional guaranties.

With cordial good wishes, I remain
Sincerely,

MARCUS A. GALLAHER.

LAWRENCEBURG, TENN., *September 16, 1955.*
The Honorable JOHN FOSTER DULLES,
Secretary of State,
Washington, D. C.

MY DEAR MR. SECRETARY: On August 16, Mr. Cline Paden, head of the Church of Christ mission in Italy, informed the American Embassy in Rome of his intention to return to America. His replacement is Mr. Hillard Story. The conviction of Cline Paden of refusing to obey police orders in erecting the sign "Cheisa di Cristo" on the meeting place of the church in Rome has been appealed. "Both the Italian and American Governments have shown great interest in the outcome of the trial which was expected to end the 2-year-old controversy over the sign."

Italy in adopting the republican constitution of 1947 guaranteeing freedom of worship to all, neglected to repeal a Fascist law of 1929 prohibiting public worship by "cults" without police permission. Even though the ban has been lifted for the moment—the power to ban remains—and the basic question is, therefore, still unresolved.

It was the Fascist-Lateran pact of 1929, signed by Mussolini and the Roman Catholic Church, which was opposed by Croce, one of modern man's great thinkers, and four other senators, all in the liberal tradition critical of close relations between the Roman church and the Italian state, that met half-way the papal claim to sovereignty. Manifestly, the crooning of some about modern liberties cannot be based on canon law but finds its melody in expediency, since old Fascist restrictions dangerously curtaining democratic freedoms are interpreted in effect though in conflict with the constitution and make a mockery of it. Even collaborators would appear to strain a point in blessing the invasion and ravishing of Ethiopia, one of the oldest Christian countries, and the destruction by aggression of the late Spanish Republic.

Dictator Franco may with impunity curtail freedom of speech, harm the religious sensibilities, and restrict the right to worship of Protestants in his fortress of catholicism, yet contrarywise in Peronland where similar measures now sometimes fit the other foot, some face the dilemma of obeying conscience or a temporary ruler, making a difference as to whose foot the shoe pinches, thus, it would appear to be benign where church and state are one, but malign where even a "moral separation" exists, to naturalize over here but to normalize over there.

Mr. Secretary, believe me, this is not an effort to bedevil, but in the peace of Christian conscience it is really mortifying, that in Italy, an ally with whom we have a treaty of friendship, a land thousands leave from each year to make new careers in this land of refuge and promise, should withdraw the handclasp of welcome from a friend and brother in Christ, since there is one God here as there and His unchanging law is universal.

Certain ecclesiastics in America are adepts at adjusting in volume problems similar to Cline Paden's by use of the private immigration bill device. In the 83d and 84th Congresses no less than 100 such bills, each of which would grant permanent residence to

from 1 to 14 priests, nuns or nurses who have overstayed their visa extensions in this country, have been introduced. Although they are no longer called up and passed out of regular order they are usually favorably reported by a generous Congress, while during this period Messrs. Caliandro and Geno, American citizens and Protestant ministers, were among those ordered out of Italy.

It is interesting to note that across history those manifesting the greatest ecclesiastical sensitivity, while coercing with the tyranny of thought control in clear violation of individual freedom so often nourished in blood and basically cherished and yearned for by all mankind, have remained insolent and bigoted in continuing their drive for temporal power and aiming at keener and sharper ecclesiastical control and immunities.

Every reason persuades that in a country consecrated by the blood of American heroes, the avengers of freedom, that the liberty of conscience and of worship proclaimed by the Republican constitution of 1947, and guaranteed for American citizens in Italy by the 1949 treaty of friendship, should not be flouted and interfered with by police action, but respected as Italy's highest administrative tribunal, the Council of State, has ordered.

To this end, may I respectfully solicit and commend your continued interest and intervention in justice and equity.

Yours very respectfully.

MARCUS A. GALLAHER.

The Charm of the U. S. A.

EXTENSION OF REMARKS
OF
HON. EDWARD A. GARMATZ
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mr. GARMATZ. Mr. Speaker, the members of the Columbia Democratic Club, a very active organization in my district, are keenly aware of the rights and privileges we enjoy as American citizens, and endeavor to keep the community in which they are located, conscious of these benefits and also of their duties. They are particularly active in getting the voters to the polls at election days.

Mr. Ernest J. Pegelow, president emeritus of this club, has written a song poem entitled "The Charm of the U. S. A," which I would like to include in the RECORD, under permission to extend my remarks:

THE CHARM OF THE U. S. A.

Out where the sky meets the ocean,
The sentry on New York bay,
Holds forth the great lamp of Freedom,
"The charm of the U. S. A.!"

Greeting the weary trav'ler,
A welcome to those who despair,
Liberty offers a haven,
To those so oppres'ed "Over There."

"Miss Liberty;" "My Country 'Tis of Thee,"
Millions of hearts proclaim.
"Miss Liberty:" Forever you shall be,
The symbol of "Old Glory's" fame.

For "Columbia the Gem of the Ocean,"
A vigil you keep "Night and Day."
"God Bless" "The Statue of Liberty,"
"The charm of the U. S. A.!"

—*Ernest J. Pegelow.*

Russia Objects

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. BURDICK. Mr. Speaker, Mr. Nikita S. Khrushchev, head of the Communist Party in Russia, got on his "high horse" last week and balled out the President of the United States for sending Christmas greetings to the people of Eastern Europe and expressing the hope that some day they might be free and have a government of their own choosing. That was the most Christian greeting that could be imagined. It did not fit in, however, with the ideas of the dictatorship of Russia, where 3½ percent of the population govern absolutely the other 96½ percent.

The President replied to that tirade and announced that it has been, still is, and will continue to be the policy of the United States to liberate the voiceless people behind the Iron Curtain, and that we will not cease our efforts until we are successful. That was all he had to say, period. That gave Mr. Khrushchev something to chew over, and I am glad someone gave this bragging, chest-pounding dictator something to digest. I do not think we need fear enemies of this stamp, for usually anyone who prances around, pounds his chest, exhibits his biceps and announces what he is going to do, uses up all his energy before the fight begins, and such boasters are not difficult to dispose of.

While I am glad the President tackled Khrushchev for a loss, it will be a long costly grind if we undertake the liberation of all peoples behind the Iron Curtain. Those people must realize that they themselves will have to fight for their liberty. They did that before in Russia, and they can do it again. They cannot count too much on our intervening in their revolution.

First of all, it is a costly undertaking in money and men, and many of the people here, or their ancestors, came to America in the first place to get away from the wars in Europe. They saw how useless it was to try to keep the peace, as history shows that every three years from the date of recorded history there has been some conflict raging somewhere. They objected to having their boys compelled to join the armed forces, and were tired of being submerged in a sea of taxation. They pulled stakes and came here and proceeded to build on these shores a government that existed for the people, and which guaranteed liberty and freedom. How well they succeeded is evidenced by the wonderful progress made by the United States in the last 150 years. We started out with 13 settlements, called colonies, with no fixed central government, and were probably the weakest looking nation in the then list of nations. After 150 years of free government we became the world's strongest government, and one which many other nations envied and endeavored to copy.

Our first step in European entanglements was taken in 1918. Again in 1941 we got enmeshed, then once more in Korea. After World War II stopped we endeavored to use our money, men and resources to establish peace. Since that date we have expended the following sums: Outright gifts to foreign governments, $44,103,112,291; credits—which will not be paid—$12,347,775,908; other credits—still gifts—$10,123,872,197.

Today everyone will admit that we are no nearer to world peace than we were before we began this program. In the meantime we have increased our debt limit, and now again we are dangerously near the new limit. In addition, we are running on an unbalanced budget. Other countries like Great Britain and Yugoslavia have balanced their budgets from gifts made by the United States. What is more important, the above costs do not take into consideration that other awful price element which was inflicted on our troops by death, wounds, imprisonment and torture.

The argument is made that it will not take us long to carry out our intention of liberating the enslaved people of other countries. It has been 10 years since the end of World War II, and still we have not accomplished our purpose, nor have we made much progress. As the second session of Congress starts, one of the first things to come before it will be a request for a further appropriation of $4 billion in foreign aid.

The official opinion seems to be that in this atomic age a war will not last long. It will be a matter of days, not years. The people have been given to understand that one bomb, or at best a very few of them, will destroy the earth itself. I do not subscribe to this theory at all. This earth was created by divine power, and people were put here on this planet by that same power. It is consistent with faith to say that a few insignificant creatures inhabiting the earth by the grace of this divine power can undo in a matter of minutes all that the Almighty has done? This is fear in the nth degree. If the mind of man can contrive such a dangerous instrumentality the brain of man can also contrive a means of making it ineffective. Every positive has a negative, and the whole world and everything in it constitutes a system of balances.

I would like to see the people of Russia liberated, but remember that when a reigning government which has 3½ percent of the people voluntarily supporting it and the other 96½ percent of the population are vassals living under the heel of dictators, any change will have to come from within. The people themselves will finally have to take action to emerge from their condition of serfdom. There will be much blood spilled, but the road to freedom is costly, and no nation knows it better than we do.

However, there are certain things that we can do now to help the people of Russia and other dictator-dominated countries. They are: First, withdraw recognition from this bloody regime of

Russia; second, oust Russia from the United Nations or get out ourselves.

We know now, and should have known right along that Russia is our enemy, and has, does, and will continue to oppose every move we make in the interest of world peace. While we sit in the United Nations with our arm around our beloved brother, with both of us pledged to world peace, this beloved brother is looking for the most favorable opportunity to stab us in the back, and is working with unremitting energy to destroy us and all we stand for.

If we take the steps above suggested these moves will give the people behind the Iron Curtain new hope, and they will gain new strength when they see that the United States will no longer uphold or condone the tyranny of the Russian leaders.

Van Zandt Urges Congressional Action on Proposed Amendments to the Railroad Retirement Act

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mr. VAN ZANDT. Mr. Speaker, as the Representative in Congress of a large group of active and retired railroad employees, at their request I introduced on January 3 a series of bills designed to liberalize the Railroad Retirement Act and increase benefits.

During the past several months in covering the 20th Congressional District of Pennsylvania I had the opportunity of meeting and talking personally with hundreds of active and retired railroaders as well as widows of deceased railroad employees and other survivors. Not only did I find a lot of dissatisfaction among the retired people because of the failure of Congress to increase benefits, but also a general feeling among active railroaders that the retirement law should be revised for the purpose of providing a more adequate annuity at the time of retirement.

The series of bills introduced today are in addition to the following bills introduced in January 1955 at the beginning of the first session of this Congress, namely:

H. R. 856, which provides full annuities at compensation of half salary or wages based on the 5 years of highest earnings, for individuals who have completed 35 years of service or have attained the age of 60.

H. R. 858 provides retirement on a full annuity at age 60 or after 30 years of service and that such annuity for any month shall not be less than one-half of the individual's average monthly compensation for the 5 years of highest earnings.

H. R. 859 provides for an across-the-board increase of 25 percent in the annuities and pensions payable to retired railroad employees or their survivors.

H. R. 2443 provides that an annuitant may be eligible for his retirement annuity even though he renders compensated service for an employer other than railroads by whom he was last employed before his annuity became effective. This bill covers the situation where a retired employee is denied the opportunity to serve as a clerical employee of a church, civic, fraternal, or social organization.

In regard to the series of bills which I have introduced this date they are as follows:

H. R. 7982 provides that the present dual benefit restrictions on spouse's annuities shall be eliminated. If this bill becomes a law some 6,000 spouses who have earned social-security benefits in their own right will be entitled to receive such benefits without having the amount deducted from their railroad retirement benefits as is being done at the present time.

H. R. 7984 provides for a 25-percent across-the-board increase in the annuities and pensions payable to retired railroad employees, their widows, or other survivors. This bill is a revision of H. R. 859 and is necessary because of changes made by the 1955 amendments to the Railroad Retirement Act.

H. R. 7990 provides a 10-percent across-the-board increase in the annuities and pensions payable to retired railroad employees, their widows, or other survivors.

H. R. 7988 provides a 15-percent across-the-board increase in the annuities and pensions payable to retired railroad employees, their widows, or other survivors.

H. R. 7986 provides a 20-percent across-the-board increase in the annuities and pensions payable to retired railroad employees, their widows, or other survivors.

H. R. 7983 is a bill designed to provide a 25-percent increase in widows' annuities.

H. R. 7989 provides a 10-percent increase in widows' annuities.

H. R. 7987 provides a 15-percent increase in widows' annuities.

H. R. 7985 provides a 20-percent increase in widows' annuities.

Mr. Speaker, on November 1, 1955, the Railroad Retirement Board was paying 313,116 annuities and pensions to retired railroaders, 108,896 annuities to spouses of retired employees, and 205,371 monthly survivor benefits to widows and other survivors, or a grand total of 627,383 monthly annuities. Many of these beneficiaries under the Railroad Retirement Act live in my congressional district, and it is at their request that I have introduced railroad retirement legislation in both sessions of this Congress.

Already in an effort to secure prompt consideration of the bills mentioned I have written to Chairman PERCY PRIEST, of the House Interstate and Foreign Commerce Committee, and to A. E. Lyon, secretary, Railway Labor Executives Association, as well as to the legislative representatives of the railroad brotherhoods, the International Association of Machinists, and the A. F. of L.-CIO.

Mr. Speaker, the interest of the active and retired railroad employees in seeking amendments to the Railroad Retirement Act should receive serious consideration by Congress. This is their retirement system supported entirely by contributions from the employees and railroad management, and its is the duty of Congress to give full consideration to the request for liberalization of the Railroad Retirement Act and an increase in benefits.

Tide of Wetbacks Cut 90 Percent

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mr. WILSON of California. Mr. Speaker, 2 years ago, my district was overrun with thousands of so-called wetbacks who were looking for traditional employment in the truck farms and citrus groves of southern California. They were victims of an unrealistic and unworkable agreement between Mexico and the United States whereby employment of contract workers was so complicated that most farmers felt compelled to hire illegal workers rather than contract workers.

The 83d Congress, 2 years ago, remedied this situation by passing legislation that makes it possible for the farmers to hire workers who are experienced and readily available. The new law, coupled with the effective administration of the border patrol by Joseph M. Swing, United States Commissioner of Immigration, has remarkably improved the picture as evidenced by the Commissioner's report submitted to Attorney General Brownell.

Under unanimous consent, I enclose the following newspaper article from the San Diego Union, of December 31, 1955, pointing up the success of this program:

TIDE OF WETBACKS CUT 90 PERCENT

WASHINGTON, December 30.—The number of Mexican aliens crossing illegally into the United States was reduced more than 90 percent in 1955, Joseph M. Swing, United States Immigration Commissioner, reported today.

In an analysis of immigration-naturalization service for the year, submitted to Attorney General Brownell, Swing said continued patrol of the border against welbacks was "the top operational achievement of the service in 1955."

The 1954 roundup of illegal Mexican aliens brought effective control of the international boundary for the first time, Swing said.

"Continued vigilance and effective use of men and equipment has maintained that control this year," he said.

THREE THOUSAND EACH DAY

Prior to 1954, he said, border patrolmen were picking up 3,000 Mexican aliens each day. In 1955 the average was fewer than 200 a day.

In 1955 fewer than 105,000 Mexican aliens were arrested for illegal entry, compared with more than 640,000 in 1954, Swing reported.

He credited the revamped United States-Mexican farm labor importation program as a major factor in reducing the infiltration of wetbacks, along with the border patrol's vigilance.

Under the farm labor setup agreed upon by the United States and Mexican Governments this year American farmers were allowed to draw their workers from border

reception centers minus much of the red-tape and procedural delays which hampered the program previously. The two Governments have agreed to continue the program through 1956.

CRIME REDUCED

Swing said the sharp cut in wetbacks has reduced crime by a corresponding rate in areas previously overrun by Mexican aliens. It also has diminished charity demands and has improved health conditions, he said.

"These improved conditions were accompanied by increased employment opportunities for Americans formerly displaced by illegal wetback labor, both in agriculture and industry," Swing reported.

Swing disclosed he set up a headquarters intelligence branch last November to deal with the wetbacks.

An air intelligence center was established at El Centro, Calif., as part of the border patrol air arm, he reported.

"This organization collects and disseminates information concerning illegal aircraft crossing the Mexican border into the United States," he said.

Free Enterprise Benefits All

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting an editorial in the Evening Observer published at Dunkirk, N. Y., Wednesday, December 14, 1955, on the subject of Free Enterprise Benefits All. I am quite sure that those who have benefited by these benefactions from the Ford Foundation will agree with this editorial:

FREE ENTERPRISE BENEFITS ALL

The money which the Brooks Memorial Hospital is receiving from the Ford Foundation is one of the fruits of the American system of free private enterprise.

The Ford Foundation received the money from the Ford family.

The Ford family made the money by the production of motorcars.

The Ford enterprise made the money not by exploiting the market nor yet by exploiting labor. Most of the money was amassed when Ford was making motorcars and delivering them to the public at a cheaper rate than any other manufacturer could duplicate.

At the same time he was pioneering in advancing wage rates beyond those of his competitors. When five dollars a day was the rare exception rather than the rule Ford announced a plan to make that sum a minimum for the humblest jobs in his shops. And at the same time he was putting the motorcar, once regarded as a luxury reserved for the rich, within the means of virtually every American.

It was the miracle of quantity production possible only through the free play of private enterprise. It marked a new concept in production for human use—producing in quantity at the lowest unit cost at the same time that higher and higher wages were possible and paid to the workers. Ford set a pattern and America has prospered to the benefit of all and without the exploitation of anyone.

For a time Ford got the lion's share of the market but as he introduced his old Model T, once at a price as low as $298, he was creating a market for others. And he was making money, a lot of it, more than he could ever spend. Millions of his vast earnings are being returned to the people through the Ford Foundation.

Beyond a certain point money becomes only a system of scoring, a means by which men can measure their success in enterprise. The power to produce or to organize production is unlimited with some men of special talents. But the power to consume is strictly limited. The body can only be adorned with one outfit of clothing at a time, and its intake is limited to a certain number of calories a day. Beyond those basic needs the earnings of the wealthy must revert to general uses through taxation, through the capital provided for other enterprise, through gifts and legacies.

Under the American system the fruits of extraordinary ingenuity and production find their way back, deviously but inevitably, to the general welfare. What is announced as the goal of socialism can be shown to be the indisputable fact of capitalism. For the capitalists cannot take it with them, nor can they leave it in idleness. Nor is it possible to use accumulations of money in any way whatsoever without some benefit to others.

Money begets money but only if it be employed in ways which benefit others than its owner. Even the glutton who consumes more than he needs can only consume the things which others have profited in producing.

So Dunkirk has $62,300 available for improved hospital facilities. That car you bought in 1925 yielded a profit to Henry Ford. Now you are getting some of the profit back. And all the other profit earned that year or any other year by anybody found its way back to benefit all. Under the free enterprise system the employment of the genius at the very maximum rate justified by his peculiar abilities is profitable to all. Ford tapped riches which nobody else thought existed but in one way or another the riches he accumulated helped to enrich the Nation.

You can carry the thought along indefinitely, for you know that the riches of America, based more on quantity production than on natural resources, have spread to the farthest corners of the world. In witness whereof, take a look at the 60 billions America has given or advanced to scores of other nations in the last decade.

Ownership Pride: Hundreds Start Improvement Projects

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mr. WILSON of California. Mr. Speaker, immediately after I was sworn in as a Member of Congress in January 1953, my first official duties concerned the sale of Linda Vista homes to the occupants. Linda Vista was a defense housing community and the Government had promised for many years to make the homes available to those who had lived in them. I was happy to have played a part in making good on this promise.

Now, at a time when we are considering additional units of public housing for other parts of the country, I feel that my colleagues will be interested in learning what happens when public housing units are put into private ownership. Everyone benefits when this happens. The Government gets its investment back, the property goes on the local tax rolls and Government tenants become individual homeowners with a pride of ownership that adds to the community well-being. I am proud of the manner in which the citizens of Linda Vista have spruced up their homes and have demonstrated in a very forcible way the many advantages of private versus public ownership. Under unanimous consent, I include the following article from the San Diego Union, by Clyde V. Smith, the homes and building editor:

OWNERSHIP PRIDE: HUNDREDS START IMPROVEMENT PROJECTS

Linda Vista is sprucing up.

Families are fixing up the homes they have newly acquired from the Government.

Now they are homeowners instead of tenants in a public housing project.

The new Linda Vista is living, obvious proof of the values in the pride of home ownership, contrasted with what happens when all residents are renters.

Better homes and a better community with a better appearance are being created.

Linda Vista has 2,999 permanent dwelling units which were built by the Federal Government in 1940 and 1941 to meet the housing needs of San Diego's defense and war-swollen population. Originally, there were 3,000 permanent units, but one of the houses was destroyed by an airplane crash.

For 15 years, Linda Vista has been a public housing project, operated primarily for low and moderate-income families. The Government last fall began selling the homes under a priority system that gave veteran and non-veteran occupants the first choices.

The opening sale was last October 25. By the time these deals cleared escrow, it was December before the first families acquired title to their homes. The progress in home improvements has been amazing in the interval of 6 to 8 months since the first group of tenants became homeowners.

Projects are large and small. Remodeling has been undertaken on a major scale. Room additions have been numerous. Garages and carports are going up, literally by the hundreds.

Patios are popular. The fence companies have had a field day in Linda Vista. There are miles of new redwood fences in assorted patterns and designs. New concrete block walls have created private outdoor rooms in the backyard of many homes. Other families have bordered their property with chain-link metal fences.

Cement sales also must have been heavy in Linda Vista during the first half of this year. The new homeowners are pouring concrete driveways and concrete terraces. Many are building barbeque fireplaces.

Kitchen remodeling is one of the favorite projects for those who can afford it. A few are adding interior fireplaces. Second bathrooms also have been added in some homes.

The new Linda Vista is also a community of gardeners. Landscaping changes are evident everywhere in the areas that have been sold. A nursery owner with a garden shop off Morena Boulevard, at the western entrance of Linda Vista, reported his sales of plants and garden equipment has increased 50 percent since the Government started selling homes in the project.

Hedges are being planted, new trees and shrubbery have been planted, flower borders are blooming and lawns are being renovated.

It would be nearly impossible to estimate the gallons of paint sprayed and brushed on

Linda Vista homes, inside and outside, since the pride of ownership began to show.

There is even a new private swimming pool in the rear yard of one Linda Vista home, belonging to Mr. and Mrs. Charles D. Hopkins, 1755 Coolidge Street. After enclosing their yard with a high redwood fence, their first project was a plastic pool, 13 by 27 feet and 6 feet deep in the center. It now adjoins a sun deck which extends from the rear of their house.

Many families after purchasing Linda Vista homes could not afford immediate improvements, other than painting or gardening, but most of them have ambitious plans for the future which involve room rearrangements, carports or garages, and patios.

Even those who have made improvements are not through. They are now excited about additional possibilities to make their homes larger, convenient, and more attractive.

With many it will be a continuing project, lasting 5 to 10 years or more, depending on time and finances. A large share of the home improvements are being undertaken by do-it-yourselfers.

However, the building contractors have also found business good in Linda Vista, especially with projects involving structural changes, room additions and new plumbing installations.

Of the 2,999 permanent units in Linda Vista, 1,007 are single-family houses, each with 750 square feet of interior space, 2 bedrooms and a single bath. The typical house has two doors, one at the kitchen and the other at the living room, both at the front of the house. There is no rear access. These places also lack a carport or a garage. What can be done? Here are a few examples of what has been done:

Mr. and Mrs. H. F. Clonts, 1584 Acheson Street, added a wing 7 by 12 feet on the kitchen side, making a window out of the former kitchen door and moving the door to the rear. This gave them a much larger kitchen, with breakfast nook.

There was a complete plumbing exchange, bringing it up to city code. (Plumbing in Linda Vista does not meet city requirements, although it satisfies safety regulations of the health department.) Natural birch cabinets were installed in this kitchen, and the hot water heater, formerly exposed, was enclosed in a cabinet. The addition also provided a laundry corner.

Other improvements made by the Clonts family included expansion of the living room by removal of a former closet, installation of sliding doors to make more room in existing closets, a garage at the rear of the property which also provides part of the enclosure for a concrete patio, and a complete redecorating job, with fresh paint inside and outside and wallpaper in the living room. A brick planter border added to the exterior trim.

The Clonts have plans for other improvements. So far they have spent about $3,000 on remodeling and additions, half the cost of the original price. Veterans are able to buy these single-family homes from the Government for $5,690, with a downpayment of 5 percent, plus escrow and closing costs.

Mr. and Mrs. W. D. Makinson, 1489 Acheson Street, are remodeling their home another way.

Cognizant of the trend toward open planning, they removed all partitions that separated living room, dining nook, and kitchen, making it one large room. They plan later to install an open divider to define the kitchen area, but they have refinished this area with maple plywood cabinets, thus making it an attractive living kitchen.

They also added a bedroom and utility room at the rear, with a laundry and a half bath. Farther back on their property, in a separate building, they erected a carport and a storage room, also a patio slab. Their home has been reroofed with a white-rock covering.

Some families who purchased duplexes plan to convert these into a single, large home. Mr. and Mrs. H. G. Nielsen, 1517 Coolidge Street, plan to convert part of their second unit into a larger residence for themselves, and reduce the rental side to a one-bedroom unit.

Mr. and Mrs. Gus DeFord, 6560 Osler Street, also bought a duplex and have ambitious plans. They have already walled in a large backyard with concrete block 6 feet high. Later they plan to add a breakfast room off the kitchen, erect a garage, and build a barbecue and shuffleboard court inside this wall.

One of the major projects under way is at the home of Mr. and Mrs. William F. Wilson, 1430 Coolidge Street. Wilson, a masonry contractor, has already installed a used-brick interior fireplace. Now he is putting up an extra bedroom, walling in a large yard with concrete block, erecting a huge outdoor fireplace, and plans a covered terrace, also a carport.

Some Linda Vista homes have outstanding view sites. An example is the property of Mr. and Mrs. Ben C. Strange, on the rim at 1402 Burton Street.

Their view matches some of the best in San Diego. They look down on the fairways and greens of the Mission Valley Golf Course, the spreading buildings and swimming pool of Town and Country Hotel, the stables with oval training tracks on the valley floor, the cloverleaf at the intersection of Cabrillo and Mission Valley Freeways, and a winding strip of Cabrillo Freeway with its constant traffic streaming both from and to downtown San Diego.

To take advantage of this view, the Stranges plan to add a big living room at the rear of their house with a glass wall overlooking the valley. But this is a future project. Already they have started on a patio with brick barbecue, which also takes advantage of this view.

Compared with prices other view sites are commanding in San Diego, their land alone is probably worth more than the Stranges paid for the entire property.

Mrs. Faye Hartman, special field representative of the Public Housing Administration in San Diego, said the agency hoped to close out the sale of all permanent dwelling units in Linda Vista by the end of this calendar year.

For the purposes of the sale, Linda Vista was subdivided in six separate units. Four of these subdivisions have been sold and only 200 buildings in the last two remain, most of them multiple-unit buildings of 4 and 6 units each.

Most of the 1,077 single-family houses and the 503 duplexes have already been sold. In the project are 103 4-unit buildings with a total of 412 dwelling units, and 84 6-unit buildings, adding 504 more dwelling units. Qualified veteran occupants may buy the 4-unit buildings for investment purposes, but the 6-unit buildings are available only to mutuals or private investors who submit sealed bids.

Holding first priority in buying the Linda Vista homes are veteran occupants. The second priority goes to nonveteran occupants. Third on the list are veterans living in Linda Vista who wish to buy homes other than the one they occupied or who lost out in the draw with another veteran in the same duplex or 4-unit building.

Veterans who reside outside of Linda Vista make up the fourth class on the priority list and it was these veterans who recently formed lines at the Linda Vista PHA office, awaiting their turns to buy the limited number of dwelling units that remained available.

Dedication of Historical Marker at the Eisenhower Ancestral Home, Elizabethville, Pa., on October 23, 1955

EXTENSION OF REMARKS

OF

HON. WALTER M. MUMMA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. MUMMA. Mr. Speaker, last October 23 it was my privilege to attend the dedication of a historical marker at the ancestral home of the Eisenhower family at Elizabethville, Dauphin County, Pa., in the 16th Congressional District, which I represent.

The dedication address was given by Dr. Robert L. Johnson, of Temple University, Philadelphia. It was entirely worthy of the occasion, and gives a good insight into the background of our beloved President. I am sure you will enjoy reading it.

Pursuant to the privilege granted me, I include Dr. Johnson's address in these remarks. It is as follows:

We are met on a site that marks an important stage in the development of an American heritage. It is a heritage not of accumulated wealth, nor social position, nor intellectual genius. What was planted in this beautiful valley of the Susquehanna long ago was the seed of a family line which in its flowering perpetuated a name to represent to the world in troubled times the best hopes of mankind. It is this little community's legacy to all people of all times.

Every man is the product of his environmental and biological inheritance. When that inheritance brings into being one with singular capacity for understanding and serving the people of his day, then his inheritance belongs to them, too. The qualities that made him great become a built-in feature of national pride and tradition. That's why we are here.

You may remember when you played ball as a boy how you had to come back at certain times and tag up or touch base again in order to proceed without penalty. Visiting sources of greatness is for me semething like returning to touch base again. We are establishing contact with fundamentals.

One of the fundamentals suggested to me by this occasion today is that in a democracy, greatness comes out of everywhere when it is left free to come. The history of those who first brought the Eisenhower name to Pennsylvania contains little that would set them apart from hundreds of others in the stream of migration that came to America more than two centuries ago. Their ancestors lived in the Palatinate of Bavaria. Like Puritans, Quakers, and others, they came to the New World to escape unending wars and persecutions and to worship God in the way that they thought was right. Pennsylvania, with its guarantee of religious freedom, was their haven.

The first of the family line, Nicholas Eisenhower, stepped from a sailing vessel in the Port of Philadelphia one day in 1741. He had a son Peter, who in turn had a son Frederick. Frederick was the father of Jacob F. Eisenhower who, with his wife Rebecca Mather, was to establish the family in this pleasant valley, build the ancestral home where we are gathered, and become the grandfather of the 34th President of the United States.

Jacob Eisenhower built the homestead on a parcel of 100 acres. The deed in the Dauphin County Courthouse shows he and Rebecca paid $3,698.46 for the land. The exactness of the figure, down to a fraction of a cent, indicates the acute sense of money values characteristic of the Pennsylvania Dutch.

Neither the family of Jacob Eisenhower nor that of his son David knew the comforts of soft living, but they were rich in sturdy bodies, intelligent minds, and strong bonds of family affection. They were self-sufficient, God-fearing, and freedom-loving. The young people assumed responsibilities early in life, and these families asked nothing more of the county to which they had come than the modest rewards that accure to those who work hard and live by a code of strict but simple virtue.

Jacob Eisenhower was a farmer. He also equipped himself with a cobbler's workshop in the attic of his home where he mended shoes for all his family. Besides his temporal tasks, he was a spiritual leader in the community. To members of the sect known as Brothers in Christ, he was Pastor Eisenhower. He built this dwelling both as a home for his family and a meeting place where his neighbors could worship. His ministry was practical. He preached the word to those who would come to hear, and he kept the home open at all times to give freely of his hospitality to strangers and travelers passing his way.

This was a home, as I interpret the historical accounts, which was essentially temperate in character—temperate in the sense that frugality mingled happily with the spirit of liberality, duty found place for pleasure, and discipline was part and parcel of loving kindness. Thus we see the shape which this Pennsylvania home gave to the family heritage. It was the heritage that David Eisenhower, son of Jacob and Rebecca, took with him to Kansas where he went to college and met and married Ida Stover. It was the heritage to which Ida added so much from the rich store of her own character. It was the heritage they both bequeathed to their six sons, Arthur, the banker; Edgar, the lawyer; Dwight, the general of the Army and President of the United States; Roy, the pharmacist; Earl the electrical engineer, and Milton, the educator and public servant. It was the inheritance that enabled these men, each in his own way, to make his community better and his Nation greater by reason of his being part of it.

This homestead symbolizes something that went into the lives of all these men.

Perhaps you have read, as did I, the episode once related by Edgar about his father. It is a touching and eloquent recognition of filial heritage.

The boys had come back to the little white house in Abilene, Kans., where they had been reared. Their father David, in his 79th year, was dying. In his last hours, he asked Edgar to come to his bedside. Falteringly, he told his son that something was bothering him. He knew his sons had been helping out, he said, and now he had to go and he had nothing to leave them. His possessions were few. He had nothing of value to turn over to them. It didn't seem right.

Edgar was deeply touched. He knew his father had never been as communicative as some members of the family. To reveal his deeper feelings was always a hard thing for him to do.

"Dad," said Edgar gently, "you probably don't know what you're leaving us. You're really leaving us a very great heritage. We all have good clean, healthy bodies. We all have good, clean, healthy minds. We all have a deep feeling of appreciation and gratitude for the inheritance which we have already enjoyed from you and mother."

The old gentleman still seemed not satisfied. It was as though he was oppressed by something more than his physical illness, so Edgar tried again.

"Look, dad, I happen to sit on a number of boards of directors in Tacoma, and one of the greatest satisfactions I get as a director comes in voting dividends to the stockholders, because this indicates to them that we have managed the business successfully. Did you ever consider your six boys as an investment you made? Well, these boys are now paying dividends. Each one, whenever he can contribute anything to your comfort and your welfare, is showing he has managed so well the things you gave him that he is in a position now to pay you the things we call dividends."

David Eisenhower looked up at his son and smiled, blinked his eyes, then turned his face to the wall to hide the tears that Edgar knew were rolling down his cheeks.

As I said in the beginning, the Eisenhower heritage that Edgar speaks of is not unique. It is as typically American as anything I know. The only thing unusual about it is that it has been used so well by so many for the benefit of so many others. Yet that heritage by itself does not explain all that we know about these brothers.

What, for instance, is the ingredient, and where did it come from, that produced a leader so beloved at home and abroad as Dwight D. Eisenhower? That is a matter about which we may wonder but never know. In a democracy, destiny has a way of going down among the common people, tapping the shoulder of a youth and by a transmutation too wonderful for human understanding, making him ready to become the champion of his people in times of trial yet undreamed of.

What is the magical element in a man that can draw trustingly to him other men of many minds, contrary interests, varied fortunes, diverse backgrounds, and contrasting temperments? I asked myself that question just a month ago on that cheerless Saturday that gave to the country the news that the President was seriously ill. Never have I seen such genuine outpouring of concern and good will for any public figure. It came from all levels of society—big people and little people, Democrats and Republicans, the poor and the prosperous, the cynical and the sentimental, the godless and the devout. I remember the stricken look that swept the faces of people when they heard the news. It was as though this was something that was happening to a kinsman or an intimate friend.

"What is it that can do this to people?" I asked. "Is it the profundity of a man's knowledge? the sureness of his judgment? his organizational ability? the eloquence of his utterances?" I have known men having all these qualities in varying combinations and degrees but without the slightest ability to command the respect and affection of people in the mass.

I have been thinking it over for a long time. I think I have the answer.

What is it that everybody wants more than anything else? Is it money? health? security? No; he only thinks he does. These are conventional, surface desires. Satisfy them all and the universal yearning, the deeper dissatisfactions, still exist. What everybody wants fundamentally is to establish identity with what I may call, for lack of a better term, the spirit of man.

What I mean is this. We can be surrounded by family, friends, and neighbors and be as lonely as a hermit. Many are in that plight, as any psychologist knows. A man may be known to hundreds, yet be known by none. The ego, the psyche, whatever it is that is the real person is held apart from that element in everybody else. It is encased by walls of selfishness, layers of lethargy, barriers of timidity and reserve, barricades of inhibition, introversion, and all kinds of mental and spiritual blocks. More than anything else, we want to break from these shackles in an effort to find understanding and true communion with other human beings.

If we could do it, that would be, of course, the ideal state. We may never find this condition outside Utopia. But once in a while, once in a long while, a man comes along with those rare personal gifts that enable him to penetrate the barricades. His presence melts the walls. He has an uncommon power of understanding and of making others feel they are understood. Such a man is Dwight D. Eisenhower.

Like every man who has ever had personal contact with the President, I have felt that power and seen it in action. The instances I am thinking of are little, unimportant, everyday episodes, but they are examples of the power that Krushchev felt at Geneva, the power that prompted Bulganin to say: "Your President we can talk to. We trust him." That's one proposition, anyway, on which the Russians can get a majority vote from the American people any time.

A man who is a world figure and another who is not known beyond the street where he lives have a common quality for Mr. Eisenhower. They are both people. Four or five years ago, Temple University honored itself by granting degrees to Gen. Dwight Eisenhower and to his distinguished brother, Milton, who has been the president of two of America's great institutions of higher learning and who has spent more years of his life in Washington in the public service than has Dwight himself. To present the brothers for their degrees we had selected two fellow Kansans, Ben Hibbs, editor of the Saturday Evening Post, and Bob Reed, editor of the Country Gentleman.

On that morning before the exercises, my office and my reception room were filled with persons of prominence who wanted to greet our guests of honor. Public officials, university trustees, administrative officers, and faculty members came and left. The lady who manages my office so efficiently came in while I was occupied seeing to it that everybody had a chance to meet the Eisenhowers. This was her busy day. She was getting out academic regalia and checking guest lists, seating arrangements, luncheon reservations. I had not noticed her come in. That is the way it is with efficient people. You forget about them because you know they are always where they are supposed to be. General Eisenhower was more observant. After a few moments he excused himself from the group clustered about him, walked across the room to Betty Reid with extended hand and warm smile and said: "I'm Ike Eisenhower. I just want to meet the lady who is running the show."

Yes, that was Dwight Eisenhower. In a room full of people or in a country full of people, he tries to see to it that nobody is left out. To him, everybody is important.

That quality was apparent so many times 2 years later in Chicago where he was nominated for the presidency. Early one morning he was walking briskly through the lobby of the Conrad Hilton Hotel with 2 or 3 aides. Not many people were about yet, but a young GI with a camera spotted him and tried to get a picture. Because the General was walking fast, the youth could not quite get the focus. As Mr. Eisenhower was about to pass, the boy reached out impulsively and touched his sleeve. "Please, sir," he said, "could you wait just a second?"

One man in the party tried to brush off the young soldier.

"You have only 10 minutes to make your appointment," he said to Mr. Eisenhower as the General paused. "That's all right," the boss said. "This won't take long." He reached for the GI's camera and looked at it. Passing it to another of his attendants, he

said, "Do you know how to work this thing? Get over there and take a picture of both of us—this soldier and me together." The picture taken, he said to the boy, "Thanks, son, and good luck," and went his busy way.

Somewhere in America there is a young man who will never forget that act of kindness, and the picture of himself standing alongside the General of the Army will always be his most prized possession.

Some of Mr. Eisenhower's political foes have spoken of such incidents as play-acting. Well, the old timers in Abilene will tell you that whatever it is, it isn't play-acting. They say that Ike was never worth shucks at acting. When he was in high school he could do everything else—he could ride and box and play ball—but in dramatics, the only role he could play was that of Ike Eisenhower. That's the way its always been.

Thinking of it that way, I guess that's why we love him. He's always just himself. He never shuts us out with barriers of pretense, and so, when we look at him, we find just the plain man, a man who resembles the kind of person that each of us feels himself to be. Trusting him, then, is just like trusting our own best selves. As someone once said of Abraham Lincoln, he's everybody, grown a little taller.

James Reston, now the chief of the New York Times Washington Bureau, summarized it well one day in Chicago during the 1952 convention. The Times had assigned him to cover Mr. Eisenhower's activities after the General returned from Europe. He followed him on his trips, went with him to Denver before the convention, and rode with him on the train that brought him by slow stages back to Chicago. After breakfast on the morning of his arrival, Mr. Reston sat down with a group of other correspondents covering the convention. They wanted to know what he thought of the candidate. He had seen more of him than any of them.

In substance, what Mr. Reston said was this:

Mr. Eisenhower is not a genius. He does not impress people by cleverness and brilliance. At present, he does not pretend to be an expert on civil government. He has been out of the country for a long time, and he is not even well-informed on some of the things that might become campaign issues. He answers many questions, some think too many, with a frank "I don't know." But somehow that does not seem important. He has plenty of experts around him now who can supply him with the information that he needs. What impressed me is that Mr. Eisenhower—you may smile at the old-fashioned word but I can't describe him any other way—Mr. Eisenhower is a "good" man. You can't be around him long without feeling that goodness. It is a positive power, instilling confidence. Frankly, I have reached a conviction in these weeks that this goodness is something that America needs right now more than anything else.

This was the verdict not of a partisan but of an astute observer of the political scene.

The history of the last 3 years is the validation of Mr. Reston's judgment. May I express the hope that the memory of those years will shape standards by which we judge the fitness of all men for public service. America from this point on is going to need more than anything else a leadership of goodness—not goodness of a sticky, sentimental kind but the goodness symbolized by this homestead, the goodness inherent in simplicity, honesty, and courage, the goodness passed on to us in the lives of those whose roots reach back to these acres.

Fort Worth: 100 Years of Progress or When the West Began Beginning

EXTENSION OF REMARKS
OF
HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mr. WRIGHT. Mr. Speaker, on the banks of the Trinity River in Texas, a city rises out of the open prairie. It is Fort Worth, where the West begins. It is the capital and queen city of west Texas, a 120,000 square mile domain.

Down the canyon of West Seventh Street the wind whistles off the plain at 45 miles an hour between tall buildings that stab at the sky as if pointing the direction of Fort Worth's future. It is a friendly, big, garrulous, open-hearted town. Here live 350,000 people in this year 1956.

All of this began 100 years ago with four events noted at the time by only a handful of interested and determined settlers. In 1856, the first general school was created by community action. The first industry was launched. A post office was established. And in that fateful year, by dint of undaunted determination, Fort Worth became the county seat.

The future was pregnant with promise. Fort Worth's hour of destiny had not yet struck, but the wheels of history had been set in motion.

Only 6 years earlier, the United States Army had founded here on the untamed prairie a fort, charged with the mission of protecting the increasing wagonloads of settlers from the ravages of the savage Indian tribes which roamed the area.

In 1853, with the thin edge of settlement pushing westward, the fort had been abandoned and in its place had sprung up a tough-rooted little civilian community on a bluff overlooking the Trinity Valley and the southward tilt of the rolling plain.

Other settlements, to be sure, had clawed a tenuous foothold in this new frontier. Others opened schools and post offices, hopefully started infant industries, became county seats.

But there was, even then, something about the spirit of this frontier village which marked it for permanency. It was like a hardy little prairie flower, determined not to wither on its vine under the scorching southwestern sun.

Wagon trains of settlers were rolling westward, looking for a place to get a new start and stake the family future. Some 30 miles to the east lay Dallas, already established, like a roadblock across the trail.

When the wagons rumbled through on the westward track, Dallas men would stop them with lurid tales of danger to the west. "The Indians will surely scalp you if you venture to Fort Worth," they warned. Here, perhaps, began Fort Worth's much vaunted early reputation as a wild and woolly place.

Here, too, began an intense rivalry which has raged for a hundred years. Picking up the challenge, the Fort Worth settlement sent riders to intercept the wagons east of Dallas and escort them to Fort Worth along a trail that bypassed the neighboring village.

And here, also, was born a tradition of resourcefulness in building a city. Fort Worth had no doctor. When Julian Field, a leading community figure, became ill, it was necessary to send to Dallas for young Dr. Carroll Peak. The townspeople immediately set upon him with blandishments. They would not hear of his leaving. He and his wife were put up in an abandoned barracks, and he stayed in Fort Worth.

Unwilling to trust the schooling of the children to the erratic comings and goings of wandering tutors, the infant community in 1856 called an election, chose a school board, imported two regular teachers, and erected a crude school building.

The first industry, appropriately enough, was milling. Julian Field, R. S. Mauk, and David Man built a gristmill to make flour from the wheat brought in from neighboring farms.

The nearest post office was Dallas. Dr. Peak hired a horseman to ride over semiweekly and bring back all missiles addressed to Fort Worth's residents, and for this service he charged a dime a letter. In 1856, President Franklin Pierce recognized the new community carved out of the frontier by appointing Julian Field as the postmaster, and Fort Worth built its own post office.

The dauntless tradition then aborning was most dramatically portrayed, however, in the circumstances surrounding the removal of the county seat to Fort Worth from Birdville, then a separate village some 5 miles to the east.

A delegation went to Austin, buttonholed lawmakers, finally prevailing upon the legislature to call an election in which Tarrant County's settlers could choose between the two villages for their seat of justice.

The competition was keen, if not entirely clean. As an added lure to voters, Birdville leaders cached a big barrel of whisky in an oak grove at the edge of town. Fort Worth merchants, with less propriety but not to be outdone, stationed huge barrels of free whisky on the public square. Adding insult to injury, an overzealous group of Fort Worthers stealthily made their way into Birdville's grove and siphoned away their neighbors' liquor, leaving the adversary dispirited in more ways than one.

Riders went out from both cities in all directions to round up voters. It was afterward contended that the total vote far outnumbered the aggregate male population of the county, but a precise census was virtually impossible.

Sam Woody, of Decatur, told in later years of having brought in 14 men from Wise County to vote for Fort Worth that day in 1856. When all ballots were in, Fort Worth had carried the election by seven votes.

That night a torchlight procession gleefully made its way to Birdville and physically removed the courthouse effects, then and there conveying them to their new and permanent home.

This same instant resourcefulness and unashamed partisanship have characterized every step of Fort Worth's ascent up the ladder to eminence.

Two decades later, the Civil War-disrupted Texas economy was pulled out of the doldrums by the cattle drives which took bawling herds of rangy longhorns up the long, dusty trail to Abilene, Kans. It was in this era that Fort Worth, still a drowsy hamlet of but a few hundred people, seized upon opportunity and became the base of supply for West Texas stockmen.

Adjusting its pace to the trail-driving age, the town provided a welcome release for the pent-up energies and appetites of the cowhands after long, dull months on the range. It was a noisy, lusty, brawling place, but nobody cared. The cowboy was king; and this was Cowtown.

The open sesame for any aspiring township of the day was a railroad, and Fort Worth set out to have one. In the 1870's B. B. Paddock, editor of the Fort Worth Democrat, displayed the town's unrestrained ambition when he published a drawing that he called the Tarantula Map. Its center was a heavy blob denoting Fort Worth, while lines, like the hairy legs of the huge Southwestern spider, reached out in 9 directions to represent the 9 railroads which the editor prophesied would 1 day serve the town. Although rival towns scoffed, his prediction eventually came to pass.

With enthusiasm, Fort Worth leaders set out to promote their first railroad. An agreement was struck whereby the Texas & Pacific would be given large land grants from the State of Texas and 320 acres at Fort Worth, donated by such local enthusiasts as Van Zandt and Daggett, upon the condition the road reached Fort Worth by January 1, 1874. Work was begun, and the town danced with excitement over the prospects.

Catastrophe loomed when the powerful northern financial house of Jay Cook & Co. went broke. Risk capital froze in panic throughout the Nation, and the twin rails were halted in the middle of nowhere, several miles east of town.

Not to be denied, Fort Worthers determined they would have the road completed, if they had to build it themselves, foot by painful foot. They organized the Tarrant County Construction Co., subscribing its stock with cash, materials, labor, supplies—whatever they had. A bargain was driven with the T. & P., whereby the local company agreed to prepare the roadbed, the railroad to lay the track.

In a dramatic night-and-day race against time, with townswomen bringing food and coffee to the perspiring workmen and section crews resorting to the most unorthodox improvisations, the tracks were laid and an old wood-burning engine puffed into town to beat the second deadline set by the State legislature.

A churning cauldron of activity then erupted upon the prairie. Oliver Knight in his excellent work, Fort Worth, Outpost Upon the Trinity, from which most of this information was derived, has said that this was "by all odds the greatest day in the history of Fort Worth," pointing out that within a few weeks after the first train rolled into town 59 new busineses had opened, and that within 4 years there were no less than 460.

Now joined to the East by railroads, the rapidly growing city attracted a web of stagecoach lines, becoming in 1878 the eastern terminal for the world's longest stage route which stretched for 1,500 aching miles to the California border at Fort Yuma, Ariz.

The Fort Worth story is one of vision, and of a community's ability to adapt to changing circumstances. While money flowed into town on the wings of transportation and cattle drives, Fort Worth was not content to soak up this boon with the impassivity of a sponge. Why not capitalize permanently upon these two advantages?

On Fort Worth's old North Side, where all the accoutrements of the early West are still much in evidence, a group of farsighted leaders founded the Texas Dressed Beef & Packing Co. A stockyard and slaughtering pens were built. Meat was dressed and shipped under refrigeration to the eastern markets, and the plant paid ranchmen 50 cents a head above the prevailing Kansas City price.

The taproot was driven deeper into the bruised soil upon the Trinity's banks. Fort Worth had industry.

It was then, near the turn of the century, that an air of real permanence began to settle upon the ebullient Cowtown. Other industries slowly took hold. Municipal improvements came in a wave—a dependable water system, sanitary sewers, street paving and a modern fire department. Law and order took firmer grasp, churches thrived and women's clubs burst upon the scene.

The boisterous, rough-neck town was growing up. Like a self-conscious overgrown farm youngster in the city, the seam-splitting prairie colossus developed a newfound interest in higher education.

The Methodists in 1881 founded Polytechnic College on the present Texas Weslyan site, then some 4 miles southwest of Fort Worth.

The Christian church in 1889 took over Add-Ran Institute, began in Fort Worth as early as 1869 but moved by its founders to Thorp Springs to avoid "the alluring vices of the city." The Church transplanted the Institution for a time in Waco, then brought it home to Fort Worth in 1910 as Texas Christian University.

In that same year, the Baptists opened Southwestern Baptist Theological Seminary which has flourished ever since.

But even with the stabilizing influences of culture, the spontaneity of fierce community pride continued. With the new century came the automobile, and Fort Worth took up the craze.

In their penchant for new horizons, the town's civil leaders forsaw that highways would one day be the new arteries of commerce. The State adopted a constitutional amendment in 1904 permitting counties to issue road bonds, and with characteristic vision Tarrant County became the very first in the entire Southwest to approve road and bridges bonds for $1,600,000.

Aviation evoked immediate enthusiasm in Fort Worth. The first daredevils to schedule a barnstorming tour through this part of the country made the mistake—or perhaps it was not a mistake for them, as it turned out—of booking an exhibition in Dallas but none in Fort Worth. This would not do. Amon Carter raised a public subscription and paid the four-man troupe $5,000 to demonstrate their talents in Fort Worth.

Fort Worth became an early aviation center at the outset of World War I. The Canadian Government established three flying fields near the city—Hicks Everman, and Benbrook—where pilots were trained for the Royal Canadian Flying Corps.

In recent years, Fort Worth has carved itself a permanent niche in the history of aviation. During World War II, its Convair plant performed the impossible in production of our B–24 Liberator bombers. And in 1949 a new epoch in world history may even have come into being with the very first nonstop flight around the earth, originating and ending at Fort Worth's Carswell Air Force Base.

It is today the home of one of the world's most thoroughly modern international airports, known as Amon Carter Field.

As it had become the capital of the cattle industry, Fort Worth in the 1920's again grasped the elusive figure of opportunity and gambled on oil. With the throbbing exhilaration of west Texas boomtowns, Fort Worth girded itself as the gateway and supply base for the oil kingdom.

Just bring out something new, and it will find a home in Fort Worth. In 1921, Harold Hough held the torch of vision which had lighted the wilderness for Cowtown's early planners when he pioneered radio with WBAP. Twenty-seven years later, Fort Worth had the first television station in Texas.

The most recent sales management survey indicates that during the decade just ended. Fort Worth was the fourteenth fastest-growing city in the Nation. In the latest census of manufactures, Fort Worth's rate of industrial growth is shown to outstrip that of any other industrial center in the United States.

Today, the city's skyline glistens in the bright Texas sunlight. The rather tired old courthouse overlooks the Trinity in the same spot where the Army dragoons built their fort more than a hundred years ago. But in the city's heart pulsates the rhythm of change, of growth, of still untamed ambition. It dreams new dreams and still believes in a better tomorrow.

Appendix

Atomic Energy and Its Future Effects in Industry

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Thursday, January 12, 1956

Mr. BUTLER. Mr. President I ask unanimous consent to have printed in the Appendix of the RECORD a speech entitled "Atomic Energy and Its Future Effects in Industry," which I delivered on September 24, 1955, before the executives' industrial relations conference, sponsored at Valley Forge, Pa., by the Past Presidents Association of the Pennsylvania Industrial Management Clubs.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ATOMIC ENERGY AND ITS FUTURE EFFECTS IN INDUSTRY

(Address by Hon. JOHN MARSHALL BUTLER, of Maryland, before the executives' industrial relations conference, sponsored by the Past Presidents Association of the Pennsylvania Industrial Management Clubs, September 24, 1955, Valley Forge Military Academy, Wayne, Pa.)

It is my intention today to discuss some aspects of the industrial future of atomic energy. This great new source of power and varied tool for industrial applications has received much attention recently. I may be able to suggest very few new uses to a group of informed men who have followed the public press and listened to the radio. But I do have fresh impressions to offer you, based upon my experiences at the Atoms-for-Peace Conference in Geneva. I also can offer some thoughts on the future of the atom from the vantage of the Senate, as I have studied these problems in Washington.

I think it is safe to say that no one can really know what exciting new developments will come from atomic research already completed or underway today. It does seem certain that it is destined to bring about great changes, improving our lives and creating fresh business opportunities. Although life will go on much as it always has, with many serious economic problems remaining to be solved, nonetheless the atomic future shows greater promise than the so-called realists were conceding not so long ago. And these changes are coming sooner than many expected.

We can recall the first announcements of our conquest of nuclear fission made at the close of World War II. Public speculation ran all the way from fearing the world would blow up in some chain reaction carried beyond human control to stories of a world with all goods virtually free. Our automobiles were to run for a year on a small pill dropped in a tank of water. Both the military hazards, great though they may be, and the peacetime uses, promising as they are, were exaggerated in that first flush of excitement.

Then it became popular to debunk the atom. The bombs were shown to do little damage to many types of targets, and to be insignificant as compared with the power of nature on a rampage in a hurricane or a flood. Power costs were demonstrated to be very high and shielding problems of radiation too great to warrant the use of mobile powerplants. While the public debunking became more scientific and conclusive, the secret work in our laboratories and those of other countries continued.

Now a large number of the debunking claims are clearly obsolete just as were the first stories which went to the other extreme. The so-called little bombs which were dropped on two Japanese cities have been superseded by giant fusion weapons of many megaton yields. Their radioactive fallout can destroy great nations. These weapons at first were also "debunked" as nondeliverable, but that has changed, too. There are aircraft in being that can deliver such weapons. We all know these things, and one of the adjustments of our life, economic and political, must be to these realities.

But fortunately, the understanding of the atom has brought great promise of good as well. If we have faith in man's future, and in the future of America, we must believe that its potential for good is even greater than its potential for destruction. Mankind must develop the wisdom to make this true, for it is in his power to do so.

Developments in the laboratories are coming so fast that we cannot now see all the applications which will be made of this new knowledge. It is most important that we sustain our effort in research, to push back the frontiers of the unknown in the basic sciences. This is necessary if we are to achieve the practical applications of the atom which seem to rest in it. For example, one of the most exciting discussions at Geneva involved the possibilities of harnessing the fusion method of the so-called hydrogen bomb to create controlled release of energy. This would be a tremendous step forward. But much hard work will be required to make it a reality, if it can be done. New basic research will have to aid this effort.

But while we are waiting for this kind of development, and others still more startling, there is already available for the taking a tremendous business future in the atomic field. For convenience of discussion, let me suggest by categories some of the opportunities which confront businessmen.

ATOMIC POWER

Large power plants now being built in this country, the United Kingdom, and the Soviet Union will not deliver power at very low cost. This is because they are based upon simple and tested designs of a rather primitive nature. Our first of this type is, of course, here in Pennsylvania at Shippingport. The British equivalent is the plant at Calder Hall which will probably be in operation sooner. The presently operating Soviet plant outside Moscow is only a tenth the size of our plant. But the Russians also seem to be in the preliminary steps of developing some large plants, quite possibly as soon or sooner than this country.

Such plants, whatever their delivered power cost, will give an invaluable amount of experience so necessary to the lowered cost revolution which can be expected. Presently published data indicate that improved breeder and homogeneous reactors offer power prospects whose costs will rival the lowest of modern thermal or hydroplants. We can expect additional powerplant construction to come at an accelerated pace. This may rival the great railway boom of a century ago.

The significance of these developments is at least threefold. In the first place, there is the promise of tremendous capital expenditures which will help to expand our whole national economy. In the second place, the location of new industries will be oriented less by bodies of coal or oil or gas, than by markets and other resources. In the third place, the threat of rising power costs caused by the exhaustion of the most accessible chemical fuels will not be the danger it was.

But probably it is necessary to add one qualification to this very happy outlook. It is apparent that power will not be free. The capital investment in facilities for the preparation of atomic fuels, for the operation of the pile, and for the recycling of spent fuels will be very great. There is also the normal investment cost for turbines and for electric generating and distribution systems. The future is glorious enough without asking the impossible. This means that exploitation of our present knowledge of the atom will guarantee us fresh new supplies of power, soon at competitive costs. But there will not be any revolutionary cost reduction for those areas which already enjoy the advantage of moderate cost chemical fuels or good hydro sources.

One distinct impression I bring back from Geneva is the necessity for speedy development of moderate-sized atomic powerplants which operate with good efficiency. In the United States, our hope for making atomic power costs competitive has been to build much larger plants, in the range of from 50,000 to 250,000 kilowatts. This promises to bring us economies per kilowatt of capacity. Plants of such size at so early a stage of development of the science run the risk of becoming obsolete almost as fast as they can be completed. But we must build them for the invaluable experience they will give us. Only a rich country with very large supplies of both private and public capital can afford this kind of developmental risk.

The many delegates from the smaller countries of the world who came to Geneva were greatly impressed by what they saw and heard. Yet they knew, in many instances, that they will have only limited opportunities to share immediately in this new source of power. This is because they cannot afford to build very large atomic powerplants, and their needs are not yet for such concentrations of power output. They want experimental reactors, which our Government is prepared in the interest of world peace to help them construct.

They also would like moderate-sized plants which will produce usable power at a cost which is lower than they now pay in conventional plants.

It is important to recognize that one reason commercial atomic power in this country may have lagged, if indeed it has, behind that

of the United Kingdom and possibly the Soviet Union, is that most of our country already has available fairly cheap power from conventional sources. The business realities of breakeven costs have tended to rule out any rush to build atomic power plants on a purely commercial basis in competition with modern thermal plants or with favorably situated hydro sources. The only hope of breaking even, as I have suggested, has been with very large plants.

In many of these foreign countries, however, the problems are different. The British for example have faced many years of declining availability of cheap coal and rising needs for imported oil. The Japanese will face similar problems. The Russians are notably short of good fuel near their largest industrial cities of Moscow and Leningrad. Many other countries have been held back in their development by either a lack of fuel or by its very high cost. Some of these, then, are places where even a fairly primitive atomic power source which we would not consider competitive would be a great aid to the users. It is for this reason that some of the first spurts of construction in plants may come in foreign countries rather than in our own.

But we cannot afford to sit back, or to play a passive role in the development of these more modest power plants which other countries could use. We must apply ourselves to increasing the efficiency and lowering the costs of such plants, for they can be useful to us in several ways.

In the first place, such power plants developed by our know-how and our manufacturing companies will keep us in the atomic lead. We must do this in a rapidly changing world, where American strength is so important to our survival. In the second place, unless we demonstrate this kind of progressive cooperation, we are likely to find that foreign rivals both friendly and otherwise, will be taking the orders for equipment, supplying the technicians; controlling the fuel sources. This would isolate us from other peoples with whom we should maintain close relations in the interest of peace and prosperity.

In the third place, we must not neglect the advantages which can accrue to our own country if we develop competitive modest-sized power plants. We know that once electricity has been generated, there are great losses of that power if it must be transmitted any considerable distance. There are many parts of the United States which would enjoy a better development and be able to bring into full use their other resources if they were able to generate power at moderate cost without either long hauls of heavy fuel or long distance transmission of electric power. The established areas of our country should not worry about new home rivals brought by cheaper local power. The whole country can expect to go forward with the general growth and prosperity which is within our reach if we show the right wisdom in ordering our affairs.

For the future, we are faced with more speculative conclusions than the ones I have emphasized. Perhaps we will learn to convert on a large scale, atomic energy directly into electricity without having to go through a steam-turbine, heat-transfer cycle. Perhaps we will learn to control the fusion process. Perhaps there are other even more economical methods waiting to yield to determined research.

RADIOISOTOPES

I am sure that most of you are aware that the byproducts of atomic fission are more than a radiological hazard. These byproducts are some of the most surprisingly important consequences of the new peacetime use of the atom. After all, uranium, thorium, and plutonium are today only different fuels which are used to generate heat to create conventional power no less in cost than that available many places already. But the radio isotopes created in atomic piles have opened up a host of new applications limited only by the ingenuity and inventiveness of our people. There are almost certain to be many new uses for such isotopes in the years ahead; we have barely scratched the surface.

Among my listeners, almost certainly there are some who are making applications of these new tools for research and for production. In manufacturing we see how the introduction of small amounts of radioactive materials into a product can create the means for measuring the thickness of materials with great ease. The uniformity and thickness of coatings can be measured on a production line without taking time out for laborious analyses. With tracer elements it is possible to test the effectiveness of designs, such as internal friction and wear in engine parts. In the chemical industry the movement of catalysts, the travel and behavior of many elements can be identified for the first time.

Biology and medicine are making similar new aplications. Some of these are in basic research, particularly as tracer elements. But, also, anyone of us here may have a better chance to stay alive because of the availability of new tracer elements which can identify the functioning of parts of our bodies and locate troubles within them. An illustration of the dual use of isotopes is the ability of one of these materials to locate a brain tumor if present, and for another radioisotope to serve as a directed source of energy. It can selectively destroy cancerous cells which might be almost impossible to reach through surgery. Our supplies of these isotopes have been the equivalent of an almost unbelievable increase in the amount of radium available to hospitals everywhere. Radium is expensive, and only very small amounts are available. Now, for the same purpose, radio-cobalt can be used with much greater freedom from limitations in cost or quantity.

In the field of agriculture the isotopes are providing much help to research. Serving as tracer elements, it is possible to determine the effectiveness of fertilizers and methods of their use, the importance of specific elements in plant growth, and even to probe the secrets of photosynthesis. If we solve all the mysteries of how plants can create food from sunlight, carbon dioxide, and water we may change the problems of food shortage for those parts of the world which are feeling population pressure. We may be able to create new synthetic foods, industrial raw materials, and chemical fuels which will mean a more abundant life for our people. Many problems promise to yield to research made possible by the new applications of radioisotopes. Controlled exposure of foods to radiation may serve as an efficient substitute for refrigeration.

Some of you probably recall another application of isotopes which is both simple and effective, although one of the surprise bonuses of the new age. Now we control the movement of different batches of petroleum products through pipelines by introducing tracer elements which can be monitored along the way to identify the beginning and end of a particular shipment.

The opportunities for further applications are a matter of individual ingenuity, and many a small business in this country has as much chance to think up and apply these new uses as do the larger corporations. The size of the investment is often not a serious obstacle to success.

MOBILE SOURCES OF ENERGY

Although the day of the atomic-powered automobile is not here yet, there has been significant progress in learning how to use atomic energy to move vehicles. This, of course, has had its initial impetus under the pressures of military rivalry.

The *Nautilus* is now an operating reality, and the *Sea Wolf* will presently join the fleet, too. Not only do these submarines represent a significant advance in naval power to safeguard America, but they have immensely speeded the development of the land-based powerplants which I have discussed earlier. A larger seagoing reactor is likely to be installed in some of the big aircraft carriers of the *Forrestal* class. Not many people doubt that our country leads the world in military applications of mobile powerplants.

But our position as first partner in a world of friendly nations requires that we demonstrate leadership in peacetime use of atomic-powered ships. The President's dramatic plan to build an atomic-powered merchant ship which could tour the world as a floating exhibit of our peacetime atomic progress was a very important proposal.

I was the cosponsor of a bill this year introduced into the Senate to undertake the construction of such a ship. It was a simple and direct plan to give the President the authority he required to accomplish the construction of such a vessel at the earliest practical date. I hope very much that the Congress will again take up this bill and make it law. Such a ship, carrying an atomic powerplant would allow it to cruise for months at high speed without the necessity of refueling. It could give us invaluable experience for the day when perhaps most ships will carry such powerplants and do so with economy. Further, the kind of wonderful exhibits which I saw at Geneva, instead of being limited to the few people who can reach Switzerland would enable millions near the great seaports of the world to share in a glimpse of the new age we are entering so rapidly.

The nuclear-powered aircraft seems destined to come first in a military version, and our step-up of funds for research and prototype building suggests important breakthroughs in our attack on what had seemed like insurmountable problems. One of the most critical has been how to reduce the weight of shielding the airborne atomic pile required for the protection of the human beings in the craft. This problem is being solved, and we should see an atomic-powered plane in the air within a very few years. But here, too, conventionally-powered turbine planes are likely to have a long future, for passenger transports are not yet ready to shift to the newly designed atomic engines.

On land, it is likely that the first practical application of mobile atomic power will be in a railway locomotive. Because shielding is still a problem, few other vehicles are immediately ready to carry the weight that will be involved. Detailed plans for an atomic-powered locomotive have been offered publicly in engineering circles. These designs may be further improved by new principles which allow the moderator-coolant-heat exchanger part of the pile also to serve as its shielding agent. If the concepts proposed for this advance prove successful, the day of both airborne and land-carried atomic power-plants will be greatly speeded.

The exhibits at Geneva were an eye-opener even to the most blase observer. The great variety of applications, the number of firms prepared to manufacture components were a revelation that the atomic age which has been hidden by security is about ready to burst forth with revolutionary swiftness. I have told you I think the atomic-powered ship with its traveling exhibit is a very necessary move in our world relations. I am of the opinion that the American people, even with the splendid coverage our press and radio give the news cannot be fully aware of these great changes until they see such exhibits first hand. For this reason when the Congress convenes again in January, I am going to offer a new bill to authorize the speedy construction of an atomic-powered railway locomotive. This forced development of a vital new device will speed the revolution

in domestic transportation, and will also serve the same purposes as the atomic-powered floating museum on the seas.

Such a locomotive could tour the United States pulling an exhibit train which would dramatize the changes coming. Every American could experience the thrill, and gain the vital knowledge good citizenship requires, of the atomic wonders which we can have. Almost certainly such an exhibit train as a result of its tour would stimulate new applications of atomic methods, and increase interest in capital expenditure for new atomic power sources. Thus it could do as much as any single act to spark our expansion in a new economic age.

CONCLUSIONS

Our Government has spent vast sums of money in creating its atomic industry, its nuclear weapons, and its prototype power sources. This has been necessary to launch so revolutionary a change. Government control was necessary, too, because there was a period where a major attempt to maintain security of information was important in a world torn by dissention.

But conditions have changed, and Geneva was living proof of this change. On the one hand, we have learned enough about the workings of the atom to be ready for aggressive development of the science and its engineering applications. Private capital, with opportunities unlimited for both large corporations and many small businesses, must find its own future in this field. It is only as we can make information available, and license more broadly the processes and materials of atomic energy that this American ingenuity can come into play on a broad front. This, it is most important that we do.

On the other hand, Geneva revealed that although our policies were wise at the earlier stage to maintain security of information, conditions in this respect have changed, too. Some of our secrets were stolen by rival powers. But in their own right, drawing upon a common fund of worldwide scientific knowledge and upon the resourcefulness of their own scientists and engineers, other countries are moving rapidly into applications of this atomic know-how. We can no longer pretend to any monopoly of such knowledge. This we must accept, and adjust our policies and our laws accordingly. For it is in our interest not only to share our information on peacetime uses of atomic energy, but to learn from other countries, too. Scientific knowledge has never been the monopoly of any one country, and the exhibits and the technical papers at Geneva certainly made this clear.

Of course, judgment must be used as to what we are to disclose, and we must show commonsense in knowing what is to be left hidden by security rules. We must decide what is to be licensed, and what is to be freely exchanged with other countries for mutual advantage. The reasons for this exchange are many, and some of them I have suggested already in my talk. They are partly military, partly political, and partly technical. Others are a matter of good business. Freedom of access to markets, of availability of fuels, of design competition, offer us the best hopes for rapid atomic development. Such development in turn will help to create a world in which all men including our own people will be more prosperous and contented.

Valley Forge is a name famous in American history. It combines for us memories of our own political revolution and military struggle against heavy odds and great hardships to create the country we love and serve today. It also suggests the industrial beginnings of our country. Now with the passage of time this region is part of the great industrial concentration of the Delaware Valley. In this part of the country, we know that a good future lies ahead, with proper effort made to develop our potentialities.

The facts now are different because we live in another age, but we must have the same spirit of faith in the future of our country and in our own ability to meet the challenges of today. Valley Forge is a fit symbol of the force which must motivate us to continue our development and to take in stride the industrial and political changes which the new atomic era will bring us.

Admiral Burke's Address at "Add" Wagner Homecoming

EXTENSION OF REMARKS

OF

HON. AUGUST E. JOHANSEN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1956

Mr. JOHANSEN. Mr. Speaker, the city of Battle Creek, Mich., located in the Third Congressional District of Michigan, which I have the honor to represent, takes deep pride in the fact that a fellow-townsman, J. Addington Wagner, is the new national commander of the American Legion. Commander Wagner was elected to that post at the Legion's 37th national convention in Miami, Fla., last October 13.

Expressive of the pride felt by Battle Creek and the entire State of Michigan, was the Add Wagner homecoming ceremonies held in Battle Creek November 11 and 12.

Principal speaker at the dinner honoring Commander Wagner and his charming wife was Adm. Arleigh A. Burke, Chief of Naval Operations, United States Navy—a fitting recognition of Commander Wagner's own distinguished service in the Navy during the Second World War.

Under permission granted by this House, I include the text of the able address delivered on this occasion by Admiral Burke:

It is a welcome pleasure to be in Battle Creek today to attend the homecoming of the new national commander of the American Legion, Commander J. Addington Wagner.

It is a great honor and privilege to help pay tribute to this man who has contributed so much to his community, to his State, to the American Legion, to the United States Navy, and to the security of the United States.

The Navy is especially proud of Commander Wagner's contributions to his fellow citizens. We are proud of his work as a citizen and as a naval reserve officer. We are proud that the American Legion has placed great responsibilities on his shoulders. But more than anything else, we are proud of his fine World War II record as a fighting captain of a fighting man-of-war. Commander Wagner commanded a rocket ship off Okinawa until he was seriously wounded in action. After recovering from his wounds, he returned to command his ship ready to fight again, and then victory came. The Navy is grateful for his contribution to our combat record; and consequently, it is an honor to render to him the Navy's traditional salute today.

There is yet another reason why the Navy is happy to be in Battle Creek today. It offers the opportunity to visit the home port and honor the memory of a truly great American, the late Congressman Paul Shafer. Few people understood, loved, and supported the Navy and the Marine Corps as did Congressman Shafer. He was a keen student of military strategy. He made a lasting contribution to our national security. Our country is fortunate to have as his worthy successor Congressman JOHANSEN, who had the good fortune of long association with Mr. Shafer, and who is carrying forward in the same excellent manner as did his predecessor.

Battle Creek's record of progress is well known. It is the home of the healthy. Its advanced educational system, its wonderful churches and church attendance, dependable banking institutions, expanding industries, beautiful recreational facilities all testify to the achievements of the people of Battle Creek and the reasons why Battle Creek is one of the best-known cities of its size in the world.

Naturally, all of us are hoping for peace. But, we all know, too, that if war should come, either a limited war or an all-out global war, we must be prepared to win it. We must prepare for the worst kind of war and hope for the sake of humanity that it never happens.

In order to prepare for the future, a large measure of our country's national security depends upon the Navy's ability to do its job, on its ability to control and exploit the seas, on its ability to protect our own convoys and the convoys of our friends and allies. The Navy must be prepared to protect ships which carry our troops, our men, and the vital cargoes to United States forces deployed overseas. We must be prepared to make amphibious landings. We must be prepared both to lay and sweep mines. We must be prepared to attack with submarines and we must be able to kill enemy submarines as well. We must be able to destroy enemy surface raiders, to detect, intercept, and destroy enemy aircraft and missiles. We must be able to launch aircraft and missiles from the sea against seaborne targets and against land-based targets. In short, the United States Navy must retain its championship of the oceans. We must be able to threaten the enemy's entire periphery. We must be prepared to defeat any threat to our sea supremacy regardless of what the threat may be, regardless of when or from where it may originate. If the day ever comes when the United States Navy cannot do this, our country will be at the mercy of an enemy who can control the sea.

Let us now take a closer look at the progress currently being made in the art of naval warfare. First, I would like to take up amphibious warfare because that is the type of warfare in which Commander Wagner distinguished himself.

In amphibious warfare we are improving our capability to project our combat power across the seas. The material needs of modern armies and tactical air forces are greater than they have ever been before. Their equipment is bulky and heavy. To sustain them in combat requires tremendous quantities of fuel, ammunition, and other supplies. The transport of such vast quantities of men, equipment, and supplies can be accomplished only with ships, and if these forces and their equipment must be landed on hostile shores, this can be done only by employing the amphibious assault.

This does not mean, however, that we will use the same amphibious techniques that were employed during World War II. In fact, in the 10 years since the end of World War II, the Navy and the Marine Corps have developed an entirely new concept of amphibious assault—the vertical envelopment.

Speed, mobility, and flexibility are the essence of the new concept. We have increased

our speed in many ways. We are building faster ships to reduce the time en route to the landing area. We are developing faster methods of loading and unloading ships. We are testing landing craft equipped with hydrofoils which show great promise. We are employing helicopters in increasing numbers to speed up the initial assault and to provide tactical mobility for the troops. The helicopter permits us to launch an initial assault while our ships are still well out at sea. It enables us to project naval power, through the marines, deeply ashore. The helicopter permits the marines to concentrate and disperse rapidly once ashore. It permits us to keep our ships well dispersed as a passive defense measure against atomic attack. Its speed and mobility will facilitate the rapid concentration of marines to knock out enemy beach defenses and other strong points. It makes virtually any point of the enemy coastline vulnerable to amphibious assault. No longer are we compelled to use only the sandy beaches which can be strongly defended.

All types of Navy weapons will come into play during such an amphibious operation. We will need the fighters and bombers from our aircraft carriers. We will need the guns, rockets, and missiles from our cruisers, destroyers, and rocket and missile ships. All the research and effort that went into development of guided missiles over the last 10 years has now begun to pay dividends. Many members of the missile family have reached voting age.

Regulus, a surface-to-surface bombardment guided missile, is now ready for use against both land targets and sea targets. Regulus is a powerful and hard-hitting offensive weapon which greatly increases the striking power of the fleet. It is currently operational in some of our submarines, cruisers, and carriers.

The cruiser *Los Angeles* has had a Regulus capability for over a year. Carriers can launch this missile with their steam catapults. Some fleet submarines have been modified to carry and launch Regulus. This new bombardment missile gives the American naval task forces deployed overseas the ability to launch atomic attacks at a range of several hundred miles. Although the present Regulus missile travels at just slightly less than the speed of sound, an improved Regulus is now on the way. It will be used by the same ships as the current missile.

The Navy entered the nuclear propulsion stage in 1955 with the commissioning of the submarine *Nautilus*. We have entered the guided missile age with the commissioning of our first missile cruiser, the *Boston*.

The United States Navy is not the only navy interested in submarine-launched guided missiles. A Soviet admiral, Adm. L. Vladimirskiy, has strongly implied recently that Soviet submarines either have or will be equipped with guided missiles and atomic torpedoes. He laid great stress on the ability of submarines to attack enemy bases and coastal targets. The Soviet admiral put it this way: "One must realize that a submarine equipped with rocket weapons can be extremely dangerous for naval bases and other enemy targets. * * * Submarines which previously were provided with torpedoes and which operated with these weapons against enemy sea communications inflicted terrific losses to the Anglo-American merchant marine during both the First and Second World Wars. * * * The new rocket weapons which can be installed in submarines undoubtedly increase the submarines' striking power. They cannot only carry out traditional war activity against communication lines, but can also attack targets along the coasts. * * * The submarines' main weapon, the torpedo, can be provided with atomic explosives. This increases the striking power of the submarine to an extraordinarily high degree."

The Soviet admiral goes on to say, "In order to sink a battleship, 8 to 10 normal torpedoes are required, and to sink a cruiser, 3 to 4 are needed. These ships can be sunk or made useless by only 1 atomic torpedo, and it is not necessary for the torpedo to hit the ship."

The Soviet admiral made mention of mines, also. He said that, "during the years after the war (World War II) the mine has been developed and improved. It is known that the most serious threat to ships is the influence mine. That is to say, mines that will explode without touching the ship's hull. They will explode my magnetic, acoustic, hydrodynamics, or other effects which are generated by the ship. Such mines can be used advantageously for the defense of one's coast or to blockade ports and straits and disrupt the enemy's communications. Combatting such mines is very difficult, as the mines can be provided with different firing arrangements."

This Soviet admiral is not speaking idly, and unfortuantely, he is correct in this case.

It is true that submarine-launched missiles and submarine-launched mines could constitute a serious threat to our ports and to our coastal cities.

The United States has more than 6,000 miles of coastline exposed to attack from the sea. More than half of the major cities of the United States lie within 100 miles of the coastline.

The submarine at sea is the weapon of stealth. It is the weapon that even small navies can use effectively. A handful of submarines at sea, forces an opposing power to take many types of defensive precautions. A few submarines will force an opponent to protect his shipping, to provide harbor defense both for his continental and his overseas bases. They force him to establish antisubmarine patrols, to maintain hunter-killer forces, and naval air attack forces.

But the Soviet Navy has more than a handful of submarines. Latest published reports indicate they already have around 400 and they are currently building many more. Hitler started World War II with 57 submarines. On top of this, the Soviets have, since World War II, built more cruisers and destroyers than all the rest of the world combined. Their navy now ranks second in the world, and it's coming up fast—too fast.

Our Navy views the Soviet navy building program with grave concern. We have been building some new ships, too, although not nearly as many as the Soviets. We have built some new destroyers that have better seakeeping qualities, better armament, and better equipment than their World War II predecessors. These ships have better means of finding and killing the submarine. We are placing more submarine countermeasures aboard our ships and aircraft. We are building more intelligent and deadly torpedoes. We are building rocket-propelled antisubmarine weapons. We are building submarines to kill other submarines.

But one of the best ways to stop the submarine-launched missile and the mine is to kill the launcher before he gets to sea. That is where naval air striking power comes into the picture. We have improved our capability to strike retaliatory blows at enemy ports both with missiles and with supersonic aircraft. We can strike with supersonic aircraft from ships like the newly commissioned *Forrestal*. We have naval aircraft, such as the *Skywarrior* and the *Skyhawk*, that are capable of carrying any one of many types of atomic weapons. Last week it was my pleasure to witness the flight of our new *Seamaster*, an aircraft which has great promise in projecting our naval power from the sea. She performs beautifully in takeoff, in landing, and in flight. She has tremendous speed at low altitudes. In fact, she is the fastest low-altitude attack aircraft in existence today. She is the first of our naval seaplanes that will add much versatility, flexibility, and power to the Navy's ability to exploit the seas.

You will notice that all naval weapons have two things in common: They are mutually supporting and they are multipurpose. The submarine's guided missiles can destroy enemy naval bases or neutralize hostile beach areas. The submarine can launch mines or project marines on raids ashore. She can refuel and rearm the seaplane.

Our new destroyers are the nemesis of enemy submarines. They can destroy enemy surface raiders. They can shoot down enemy aircraft with guided missiles. They can provide early warning for the fast carrier task forces. They can defend convoys.

The aircraft carrier can launch missiles or supersonic aircraft.

The new seaplanes that are coming along can lay mines. They can do low-level reconnaissance. They will supplement the atomic wallop of the carrier task forces. And so it goes.

The Navy of today is a versatile, hard-hitting outfit. Tomorrow it promises to be even more versatile and it will hit harder.

As I mentioned earlier, it is to be devoutly hoped that wars will no longer be necessary, and one of the best deterrents to another war is for our country to remain strong—strong enough to win on the ground, in the air, and on the seas. To this philosophy our Navy is making concentrated effort.

A Tribute to Hon. John D. Dingell, of Michigan

SPEECH
OF
HON. WILBUR D. MILLS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 3, 1956

Mr. MILLS. Mr. Speaker, I would like to join with other Members of the House in expressing a tribute to an honored and esteemed colleague, JOHN D. DINGELL, of the 15th Congressional District of Michigan, who passed away on September 19, 1955.

The details of my beloved friend's distinguished career, his long record of accomplishments, have been recalled to mind by those who have preceded me this afternoon. I would like to join in the remarks of those members of the House who have so ably lauded the record that our departed colleague left as a stirring monument to his long and creative service in Congress. To their remarks I would like to add the view that the influence of JOHN DINGELL will be reflected in forward-looking social and economic legislation that may pass the Congress in the decades ahead.

I would not give this sad occasion appropriate recognition if I were not to express my great feeling of personal loss over the passing of my beloved and distinguished friend. The years of our mutual service in the House of Representatives, on the Committee on Ways and Means, and on the other groups on which we mutually served resulted in a warm personal friendship between us. During our association I learned not only to recognize his great foresight as a legislator and statesman but I also learned to esteem him as a friend and be honored by his friendship.

The people of America, his beloved family, and his colleagues in the Congress have sustained a great loss in the passing of JOHN DINGELL, of Michigan, but we have each gained an inspiring record of achievement to use as a personal goal.

Mental Problems of the Aging

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. SCHERER. Mr. Speaker, there are approximately 14 million persons in the United States today who are over 65 years of age. Their number is increasing at the rate of 400,000 a year.

In view of the growing number of senior citizens in the Nation a symposium on gerontology in Cincinnati today takes on added importance.

The meeting, titled "Constructive Medicine in Aging: Problems of the Mind in Later Life," is the second annual symposium on gerontology sponsored by the Wm. S. Merrell Co., of Cincinnati. Producer of medicines since 1828, Merrell is recognized as a leader in gerontological research. It is directing currently over 50 percent of its research activities toward the development of new and better drugs for our older citizens.

Although gerontological research is comparatively new, several drug discoveries already have been made possible through research activities at Merrell.

The first drug, meratran, was released early in 1955. Dr. Howard Fabing, of Cincinnati, has reported it is highly effective in combating mild depression and emotional fatigue. Since these are often complaints of the older patient, the drug is valuable for geriatric use.

Frenquel, the second drug, was made available in December 1955. It is anticipated that this drug may provide new hope and a return to normal life for many mentally ill patients suffering from acute schizophrenic hallucinations.

Merrell also has produced tace, a unique type of estrogen valuable for treatment of certain ailments striking chiefly our older men and women. The Journal of the American Medical Association recently editorialized on the properties of the ideal estrogen and compared tace favorably with the ideal standards.

Merrell is aiding the medical profession's attempts to meet an impending challenge to our social stability. It is accepted generally that medicine has been largely responsible for prolonging life and now is gravely concerned with finding ways and means to make these extra years productive and enjoyable. Through the combined efforts of the medical and allied professions it is hoped that later years will become golden years.

Thus, this increasingly important challenge of medicine—the search for ways to make the sunset years productive and useful—is bringing several hundred doctors to Cincinnati to hear eight experts tell of the most recent developments in the field of mental problems of the aging.

Hon. Lamar Fleming, Jr.—Part I

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. TEAGUE of Texas. Mr. Speaker, on December 14 the Agricultural and Mechanical College of Texas initiated what is hoped to be the first of a series of student conferences on national affairs. At this first meeting, aside from the distinguished guests, representatives from 47 colleges and universities were in attendance.

The keynote address was made by the Honorable Lamar Fleming, Jr., who, along with other influential men in Texas, urged and assisted the students in conducting this conference. Mr. Fleming is chairman of the board of Anderson, Clayton Co., of Houston. In 1953 he was appointed by President Eisenhower as Vice Chairman of the Randall Commission, which explored the foreign economic policy; and in 1954 he was a member of the United States delegation to Geneva to review and revise the General Agreements on Tariffs and Trade.

Under leave to extend my remarks in the RECORD, I wish to insert herewith the text of Mr. Fleming's keynote speech which I commend to every Member of this body:

ADDRESS BY HON. LAMAR FLEMING, JR., BEFORE THE STUDENT CONFERENCE ON NATIONAL AFFAIRS, AGRICULTURAL AND MECHANICAL COLLEGE OF TEXAS, COLLEGE STATION, TEX., DECEMBER 14, 1955

I always appreciate being invited to College Station and feel at home and happy when I am here. Like many Texans, I am an immigrant from another State; but during my 31 years in Texas I have seen a great deal of A. and M. College, students, and faculty and of the fine people of the experiment station and extension service, largely because of the many interests held in common by a dealer and processor of farm products and by people who are dedicated to teaching and improving the science of agriculture. All of us in my company feel we owe a great deal to College Station.

If I say I like everything I have seen of A. and M., it does not signify disloyalty to Rice, of which I am a trustee. The fact is I had to leave the recent football game 4 minutes before its conclusion, when the score was Rice 12, A. and M. 0; so I didn't see the 4 minutes that changed the score to A. and M. 20, Rice 12.

I am especially happy and proud to be here at the first meeting of the first student conference on national affairs. I remember when four smart-looking cadet officers called on Norman Ness and me some months ago and told us of their plans for a conference on national affairs, for students from southern and southwestern States, which they hoped would develop into a regular annual event. I was fresh from a conference on agriculture held by the national assembly, an institution which President Eisenhower started when he was president of Columbia; and I was confident of the merit of carrying the American assembly plan into the undergraduate field. I did not know much then of the success which West Point has accomplished in that field, but later have learned that its experience provides not only a splendid guide but also vast encouragement for similar activities elsewhere in the country. So I was enthusiastic then and I am enthusiastic today; and Dr. Ness was no less so, which means more, since his judgment has the benefit of years of teaching in college and of dealing with international matters in the Treasury and the State Department. And I hope I am not in bad taste in adding that those young men made a lasting impression on us both and have made a complete Aggie of Ness.

I believe great problems are being solved for better and for worse and will be so solved, some of them in the remainder of my lifetime, and more of them during the lives of those who now are undergraduates. Their generation will inherit most of them, since mine approaches the age when they put old horses out to pasture. I envy the younger generation for the great opportunity it will have for good and for what I expect will be the greatest adventure in man's experience to date. I don't think it is extravagant to expect this adventure to be greater than any heretofore, having in mind that the speeds of communication and the amounts of energy which men command today must endow or curse their acts with impacts greater and more farflung than were possible at any earlier time.

And the place of the United States in the decisions and the adventure is greater than ever before; because the rapid growth of our economic power, while the economies of the other principal nations were being depleted by war upon their own soils, has created a situation in which civilization can look nowhere for leadership except to us. Ours is the responsibility to furnish that leadership and to point it in directions that will bring betterment of man's lot.

The responsibility is made greater by a menace to civilization that has spawned in the frustration and misery of peoples whom war and destitution had deprived of faith and hope. False prophets sold them the agelong fallacy that their relief lay in taking away from others and in a general sharing of everything as common property. It has not taken long for experience to prove that common property is state property, and that the actual beneficial owners of state property, and that the actual beneficial owners of state property are the men who run the state; so that the end result of what is falsely called communism is that those who can grasp the position of rulers own everything, including the rest of the people. The beautiful name of communism turns out to be a misnomer for totalitarian despotism.

There is something about this outlaw type of order which makes it incompatible with types of government and society where the individual really owns himself and owns the things that he produces and saves and where government and order are administered in accord with the will of the majority. The outlaw rulers, having achieved their pinnacles by violence, fear violence from below and maintain a regime of terror to suppress it; and they fear violence from outside and feel not only that they must keep their peoples on something approximating a perpetual war footing but also must maintain assiduous campaigns to subvert, undermine, and eventually bring about the collapse of the more orthodox orders and governments of other countries, particularly neighboring countries and countries strategically located. On the one hand, the burden of perpetual

military preparation overtaxes the resources and energy of their subjects, at the expense of the productivity that is left for satisfaction of human needs and desires. On the other hand, the unceasing buildup of military might and of subversive forces presents a menace to all who are determined to maintain and cherish faith and hope.

It will be the awesome responsibility of the younger men who will have the guardianship of human destiny in the years ahead to dissolve this dragon with the solvents of wisdom and virtue, which we pray will be the outcome, or else to vanquish him. That responsibility will be not just to their generation but to all generations to come.

I don't mean to imply that any generation will complete the whole task. Impatient or frantic action, or insistence on getting everything done at once, is one of the easiest ways to failure. Success comes a step at a time, with the objective of each step limited to the means of accomplishment available at the time.

The American people were slow to recognize the leadership responsibility which destiny had placed upon them through the First War's upsets to the previous power equilibrium. They do not yet recognize generally how greatly this responsibility now has increased, after the Second War left such vacuums of power and then as the Russian rulers forged their power from the subjugation and misery of Russians and other subjected or subverted peoples.

To discharge our responsibilities, we need understanding of the forces that govern phenomena in the relations between people and in those between peoples and that affect the course of their happiness, welfare, and safety. In the physical sciences, we study the forces that govern physical phenomena, seeking scientificaly to find the laws that determine the effect which will follow a given cause. So we learn and make use of the immutable laws of physics and chemistry—and those of biology, botany, and agriculture, which seem less immutable because we cannot always discern all the collateral causes. We can be less satisfied with our studies of human phenomena, through philosophy, economics, government, and, above all, history. History is the record of all human experience. A thorough study of that experience certainly can reveal sequences of cause and effect that are invariable. Many of these sequences stand out so clearly that we can be sure they are immutable laws; but nation after nation and generation after generation have committed over and over again the acts that history advertises as causes leading inevitably to disaster.

We know we must produce more physicists, chemists, and engineers. But it seems to me even more important that we undertake ourselves to become and to induce the rest of our countrymen to become more enlightened scholars in history, the experience of man, so that we may learn to find and read the signposts of destiny. And we must go about it with mental honesty and objectivity, seeking through history to learn the true laws of human phenomena, rather than reading it for the interest of the story or to find support for our national self-satisfaction or for preconceived predilections. This conference and those that will follow it through the years have the opportunity to show men how to pursue this search with greater effort and objectivity.

I have touched upon the outstanding present power of the United States and Russia. Economic strength is the principal base of our power. The principal base of the Russian power appears to be the regimented strength of hordes of Russians and subject peoples, maintained continually on a war footing regardless of the cost in denial of human satisfactions, complemented by the subversion weapon, to undermine other nations from within.

The contrast between the power of the United States or Russia and the power of any other country is so great that the statesmen of other countries must look to one or the other if seeking an association to improve their country's security. In some countries of Asia and perhaps of Africa, where the people's emotions are stirred by recent emancipation from European rule or by ardent aspiration for emancipation from it, and where inexperienced new native rulers have not been able to cope with poverty and disorder, many of the leaders lean toward Russia and Communist China and many among the people are gullible to the false promises of communism. In the countries where the individual's free possession of himself and of the products of his labor and savings are an inherited principle, the peoples regard Russia with loathing and fear, the more so the closer they are to her. The statesmen of these countries aspire to no alliance except with us; although some of them, in countries close to Russia, dare not form alliances with us for fear of Russian reprisals. And in some of the countries generally favorable to partnership with us, there are difficult economic conditions and consequent chronic unemployment and want, which tend to make some of the population susceptible to the subversive blandishments at which the Russians are so skilled.

Generally speaking, the peoples who look to us as friend-in-need are those with ingrained traditions of individual freedom and property rights and those who have progressed most economically. Generally speaking, the peoples most susceptible to Russian blandishments are those who feel themselves captives of another power, or who but recently have emerged from that kind of captivity, or who suffer the greatest economic want.

From this, I think we can see which nations logically want association with us. In England, Canada, Australia, New Zealand, France, the Lowlands, and Germany, the traditions of individual freedom and personal property are fundamental, and the material conditions of the people are far above the average for the world (though not equal to ours). These nations clearly belong on our team, provided we have the wisdom and capacity to make it and keep it a winning team and provided we keep it the kind of team in which all concerned see hope of betterment of their lots.

Hon. Lamar Fleming, Jr.—Part II

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. TEAGUE of Texas. Mr. Speaker, herewith the second portion of the speech of the Honorable Lamar Fleming, Jr., before the student conference on national affairs at the A. and M. College of Texas follows:

There are other countries, where the traditions of individual rights are less ingrained or less generally conceived and where poverty is more extensive, which nevertheless logically belong on our team, provided the team, and particularly the United States, is clearly committed to sincere and steadfast cooperation in the betterment of the lots of all its members. I do not mean do-goodism for charity's sweet sake, which is a field that might best be left to private generosity; I mean the kind of cooperation that will benefit customers and partners and benefit us in the long run.

Then there are the countries, previously mentioned, recently emancipated from foreign rule, where the economies and public order are handicapped by political ineptitude or immaturity, the countries where the inhabitants are stirred by desire for emancipation from rule by other races, and finally what we might call the aboriginal countries, whose peoples have not attained to a level of civilization at which order is conceivable unless administered by people of more advanced races. In all these countries, there are the elements of frustration or discontent and of resentment of the gulf between their standards of welfare and those of the more fortunate nations, which are the materials that Russian subversion works upon. On the other hand, this gulf between standards breeds also an ardent desire among these peoples for improvement in their material lot; and this aspiration is a material which we can work upon. Some of the first group of countries lie close to Russia or China and so are particularly vulnerable to subversion or invasion; and this introduces an element of fear of the Communists, which can draw them to the Red fold if the fear becomes paramount, but on the other hand can draw them our way if we can give them the conviction that our team can assure their security.

The degree of success of our adventure will depend to a very great extent upon the number of countries of these various categories that will be attracted to our team and upon the degree of wholeheartedness of their teamwork. That in turn will depend largely on us, on our wholehearted dedication to maintaining a joint military power that will justify nations in risking their security with our team and to developing and maintaining an economic teamwork that will afford the prospect of greater welfare and abundance for the peoples of all the members of the team. And of course it will depend greatly upon the wisdom, reasonableness, and humility with which we play our part. I would stress this word "humility"; for we come as amateurs to a major role in world affairs, in which it will be wise to respect the wisdom of partners of longer experience and also to respect the sensitivity of those whom circumstances have moved from leadership to secondary status. And perhaps humility and patience are needed even more in our relations with the races of other colors, where great gulfs in understanding have still to be crossed by both sides and where low material standards and political immaturity enlarge the problems of sensitivity.

The military and strategic angles of our task are of paramount importance; but I have no competence to discuss them. I will talk only about the economic phases.

Our opportunity in this field is to develop and maintain a system of economic relations between the members of the team that will make it clearly the interest of their nationals to continue within the team, and the interest of the nationals of other countries that their countries should join the team, or else maintain friendly and cooperative relationship with it if and so long as special circumstances deter them from full membership.

How can this be done? It becomes a question of how we and those of our partner nations who enjoy the greatest relative economic strength can facilitate and expedite improvement in the material lot of the peoples that we want to attract to our team or win to friendly cooperation.

Before attempting to deal with this question, I think we should review the ways in which human beings have improved their lots in the past. I ask your indulgence in case my review of this appears to be very elementary.

There are two ways a person can improve his material lot. One is to take away from

someone else, if he can. The other is to work hard and efficiently and produce more, making the best of the resources and talents available.

According to the story, Robinson Crusoe made the best use he could of the resources that he found on his lonely island, with only 1 brain and 2 hands at his command, until Man Friday entered the scene. After he and Friday found each other, 2 brains and 4 hands worked in unison, to accomplish things that half the number could not accomplish. This was possible because the two men respected each other and avoided the waste of time and effort that might have been consumed in thieving from each other and fighting each other. So they produced more and enjoyed more. And they did not merely double the production of which one alone would have been capable; because, by dividing tasks, each was able to specialize on the tasks at which he was most adept, so that the product was multiplied by much more than two.

This is a rudimentary illustration of what classically is called division of labor. In any community of persons who understand and bear good will toward each other, it develops naturally that different members of the community specialize on tasks at which they are or can become singularly adept, to then exchange products and services with one another through trade. Such a development, once begun, goes on progressively to an ever more specialized specialization. And, of course, with the successive steps of specialization, the products multiply progressively, in variety, quantity, and quality; so that the result is progressive increase and imprvement of the things and services which all enjoy.

At an early stage, some members of the community applied themselves to invention and creation of useful things that were not destined for consumption. Among the early examples of such things were primitive clothing and housing, to help maintain the health necessary for effective work, and primitive tools, commencing with such things as a wooden spear and a rock fastened to the end of a stick for hunting, and a forked limb for use as a grub hoe and later for use as a plow after man had domesticated draft animals. These things, created for subsequent use, had the nature of savings, because the labor of fashioning them was devoted not to the satisfaction of immediate wants but to the facilitation and enhancement of future production. Except for surpluses of directly consumable goods produced for later consumption, they were the only useful kind of savings before the institution of money evolved. They were the capital of primitive times.

Division of labor started in the family community and then expanded into larger communities. Prerequisites were the development of understanding between members of the community, which could not advance far except as a language was developed so that they could communicate with each other, and the development of mutual trust and good will, which could not grow faster than the progress of mutual understanding. So the earliest specialized economic cooperation was within the family, then the clan, and then the tribe—within the circle of those who had a common language. Generally it was confined to small areas, because of absence of long-distance communication and contact, except where rivers, seas, or unforested plains facilitated the mobility of man and broadened the contacts of a community with other communities.

By degrees, as men learned to move about on rivers, seas, horses, and camels, contacts were multiplied and tribes and communities began to learn the languages of others with whom they came in contact and to merge local or tribal languages into new languages that were more widely used.

As man's ability to transport goods by water, pack animals, and later by roads expanded, the exchange of the surplus products of specialized individuals, groups, and communities with other specialized individuals, groups, and communities expanded into an extensive commerce through barter. But barter is a limited instrument, because it is based on the swapping of a given value of one article for an equal value of another article. For instance, a merchant from a camel-breeding community, learning that a hundred camels were needed in a grain-growing community, would make the entire swap if his community wanted a quantity of grain of the value of a hundred camels, but not if his community wanted less grain than that. So someone conceived of the introduction of a new kind of article of exchange—things generally precious, imperishable, and easily transportable, outside the realm of consumable things—which a man in the position of this camel dealer would accept, because he knew that someone would accept them at full value from him later on. This started the institution of money, the balancer of temporary imbalances of trade.

Many kinds of articles served as the early moneys for commercial exchange in different parts of the world. Precious stones enjoyed the greatest acceptability until gold and silver were introduced and eventually coined.

Hon. Lamar Fleming, Jr.—Part III

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. TEAGUE of Texas. Mr. Speaker, following is the third portion of Mr. Fleming's remarks:

This was a great step in the advancement of division of labor. Up to then the only forms of savings useful to production, that is capital, were land and physical improvements, and tools that the individual could fashion or obtain by barter for his surplus products; and the individuals and communities that became rich through surplus production were inclined to put much of the proceeds of their surplus into land and unproductive things, like splendid buildings and the Pyramids. The invention of money provided a vehicle for savings in a readily exchangeable medium. The thrifty thus could convert their surplus production over a period of time into money, with a view to ultimate use of it for purchase of tools to multiply their productivities. The especially successful might accumulate enough to provide tools and equipment to multiply the production of others, for use under arrangements varying from slavery in some societies to wage-employment in others. And gradually systems were developed of using saved money in ways involving more complex cooperation—loans for interest to help others to buy and benefit by tools and equipment, and investment in shares of the enterprises of others—both of which enabled others to produce more than they could have on their own resources.

Division of labor also made possible specializations in study, exploration, and invention, without which we would enjoy but a fraction of the knowledge, resources, and enjoyable products that we enjoy today. It made possible the general services which we enjoy today—maintenance of order for the protection of all of us; transportation, from the humblest country road to the finest rail, air, and ocean lines; communication services; light and power; banking and insurance; services of education and health; and countless advantages that multiply the productivity of our hours of effort and minimize the wastage of them through time lost in thieving and defense against thieving, in getting to and from our work, in sickness, in misguided endeavors, and in many other ways.

It is estimated that our 65 million American workers have the use of privately owned plant and equipment of a value of some $700 billion to multiply their productivity, together with $160 billion of publicly owned facilities like roads, schools, hospitals, and other public plants that serve their production directly and indirectly. Taken together, these multipliers of productivity amount to $13,000 per worker. It is largely due to this wealth of machines and facilities that the American economy has achieved a level measurable by full employment, by over $1,850 gross earnings per man, woman, and child before taxes, equal to $1,640 of disposable income, and by 61 million automobiles and 55 million telephones in use, together with fabulous numbers of radio and television sets and of the many new appliances to save effort in household work. Despite the taxes we are paying to support enormous budgets for the Armed Forces and for foreign aid, we are living infinitely better than we or any other people ever lived, and much better than the present living scale of any other people except our Canadian neighbors.

Let us seek the reasons for this contrast between our present and past conditions and between our conditions and those of other peoples.

One obvious reason is that our country was spared the invasions and bombings that were visited upon other nations during the last two wars; so that the expansion of our productive plant was accelerated during both of them, while the plant of some of the other leading nations was losing more through destruction than it was gaining through new construction. This is a very important difference, but it is only a partial explanation of the contrasts in welfare. We have to look farther back for more fundamental explanations.

The American Colonies were settled by people who came from European countries that had long been under a politico-economic regime which history calls mercantilism. The feudalism of Western Europe, in which the baron substantially owned the land and people of his community, under a tenuous allegiance to the remote monarch, had given way to relatively absolute monarchy, as the development of road systems gave the king's forces the mobility to assert their power over the barons. Having established supremacy over the barons, the kings directed their ambitions to enlargement of their kingdoms, at the expense of neighboring kings and princes, and toward a race for preemption of the new lands which navigators had discovered in the Western and Southern Hemispheres and in the Orient. This was a contest through centuries cluttered with wars and intervening periods of cold war that was at least as hot as our cold war today. The monarchs and their ministers, seeking every resource and weapon that could be devoted to the contest, soon recognized the importance of a productive economy as source of supplies and funds and they organized step by step the regimentation of their national economies under their control. They developed their overseas colonies as tributary dependencies, designed to contribute supplies and funds to the mother country. Having appreciated the importance of supplies and trade to themselves, they developed blockade and privateering as a means of denying supplies and trade to their antagonists; and they sought by all means to confine the trade of their colonies to themselves and keep it away from their antagonists. These interferences with trade put a premium upon economic self-suffi-

ciency for all the governments involved, with the result that all kinds of protective measures were introduced to foster the development of national productions of articles regarded as essential and reduce dependence upon imports.

The effect of mercantilism was a regimentation which paralyzed initiative and a compartmentalization of trade that tended to frustrate division of labor. Another effect was that too much of the proceeds of production was channeled into warlike expense and royal palaces, away from expansion of productive plant.

The early American Colonists probably had no more antipathy for mercantilism than their cousins who remained in Europe; but they were confronted with a very seamy side of it. They were its instruments, far away from the mother country's center of power to protect them. Tribute was demanded of them, freedom to trade with others was denied them, and help in time of adversity and protection against Indians and other Europeans was so far away that it often came too late and in insufficient measure. To survive, they had to learn self-reliance rather than reliance on the mother country. To prosper, they had to resist the demands and prohibitions from the mother country. So a new concept of the relation of the individual to sovereign authority gradually incubated in the Colonies. It appears in the emphasis on individual rights in the constitutions and charters of several of the Colonies. It finally took a more finished form in the Declaration of Independence, the Revolution, and the Federal Constitution.

I think the point is that the people of the newly born American Republic were a people conditioned to self-reliance and individual independence, embittered against the regimentation and restrictions that they had known under the mercantilist regime.

Another significant development was that the authors of the Constitution incorporated in it a ban upon import and export duties between the States. This gave us a greater area than ever before had enjoyed free trade between all its parts, hence the largest area in the world in which division of trade could be practiced without restriction.

Skipping down to today, it is to the freedom of trade between the States that we owe the fact that each of our 65 million workers can reach 165 million men, women, and children as his customers free of any customs toll, and conversely that each of the 165 million can enjoy anything that the 65 million produce, free of customs toll.

This tremendous free market has permitted us to go further with division of labor than any other people, because none of them enjoy so big a free market. It has permitted us to go further than any other country in mass production, because our home free market is big enough to absorb the products of mass production. Through this circumstance, we, and we alone, have the buying power for the products of a General Motors Corp. and so we alone can enjoy the full benefit of its economies in efficient and varied production.

Another advantage has to do with the savings funds that financed the erection of our great plants, the development of our agricultural and mineral resources, and the creation of all the public services that add to the efficiency of our division of labor. We recognize that we have been helped in this by the absence of war on our soil since the Civil War. But partly for that reason, partly because of our forefathers' tradition of self-reliance, and mostly because our currency has been for some decades the most trusted of all currencies, Americans and foreigners look up savings in dollars as reliable provision for future needs. So our banks and insurance companies have become the repositories of unprecedented sums, with which they finance industry and trade for interest; and our people, insurance companies, and pension funds provide a ready market for the bonds of our Federal and local governments and our private companies. And the greater part of these savings, seeking a higher return or the prospect of enhancement in value, provides the market for the stocks of our private companies.

It seems to me that these are our two principal advantages: a greater domestic free market than any other people enjoys and a great flow of savings to furnish the tools of production than any other people enjoys. They have combined to give us the greatest scope of any people for division of labor and the benefits which accrue from it.

If we are seeking ways by which other peoples can achieve standards of living better than they now enjoy and closer to ours, I believe we should look for means of enlarging their opportunities to make use of division of labor, particularly through greater freedom of markets for their sales and purchases, and for ways toward a greater integrity of and confidence in their currencies, to make thrift and investment at home more attractive to their own nationals, and toward conditions that will attract American investment for the development of their resources.

This has been a constant preoccupation of our Federal administrations since the war, of whichever party. We contributed vast sums in the years immediately following the war to the war-torn countries to help offset the deficits between their imports and exports until their productions could be restored and their currencies again could become convertible. When we recognized the buildup of the Russian threat to them and to us, in 1947, we found that this kind of aid would have to continue longer; and we did continue it under the Marshall plan. As the threat sharpened in 1949 and with the developments in Korea, we supplemented economic assistance with military assistance.

At the same time we continued the policy of negotiating agreements with other nations for reciprocal abatements of rates of import duties, under the Trade Agreements Act, which had been adopted before the war. And we enlisted with other countries in the so-called general agreement on tariffs and trade, through which the nations that are parties to the agreement meet periodically to negotiate customs abatements, removal of restrictions on trade and on currency transfers as the emergencies which dictated the imposition of them are brought under control, and on other measures conducive to mutually beneficial enlargement of trade relations. The goal is to relieve world trade so far as can be agreed from high customs rates, from quantitative quotas on imports, and from exchange restrictions with the effect of import quotas; to promote general abandonment of import quotas and exchange restrictions as instruments of protectionism; and to arrive as generally and early as possible at what we loosely call convertibility of currencies, by which we mean release of international trade from quantitative restrictions and from restrictions through the administration of exchange controls.

Our actions under the Trade Agreements Act and in conjunction with the General Agreement on Tariffs and Trade have contributed to a very appreciable lowering of tariff rates here and in other countries, and to great progress toward broader convertibility. Advances in prices have reduced the percentage of value of all rates that are not on an ad valorem basis. In the last years, England has restored the freedom of her principal commodity markets and has removed most of the restrictions upon transfers arising from current commercial transfers. The Netherlands, Belgium, and West Germany have moved right along with England, in some particulars ahead of her.

Additional progress has been made toward convertibility on a regional scale among the countries of Western Europe through the European Payments Union, which acts as a clearinghouse among them and provides for a more rapid removal of controls as between its members than they yet feel strong enough to make on a worldwide scale.

Our policies under the Trade Agreements Act and the general agreement and our cooperation with the European Payments Union all are designed toward enlargement of international trade for everybody, through reduction of tolls upon it and of obstacles to it. By this we seek to promote the worldwide extension of division of labor, more trade for everybody, and more earnings for everybody.

A serious limitation is the scarcity of funds for development of resources, plant investment, and working capital in most of the countries of the world. This stems from scarcity of savings entrusted to the currencies. In some cases scarcity of production and earnings is sufficient explanation of the scarcity of savings. In many countries, indeed in most countries, although production and earnings afford savings, the owners of them do not entrust them to the local currency, so that the savings do not appear in local bank deposits or fiduciary funds. Those who have saved hurry to get rid of the currency, to convert it into things that they trust more, like land and buildings, or into American and Swiss bank deposits or American stocks and bonds. In these latter instances, we see the paradox that nationals of countries poor in capital are furnishing working capital to two of the countries that have the greatest abundance of it.

A part of our policy has been to furnish capital to countries that need it. Much of this has been taxpayers' money—granted, invested, or loaned by Government agencies, including the Export-Import Bank. Some of it has been loans through the International Monetary Fund and the International Bank for Reconstruction and Development, of each of which our Government is the principal stockholder.

The question arises: Why should our tax money be sent to these capital-poor countries, instead of private American investors' money? A partial answer is suggested by the way the savings of nationals of those countries flee into dollars and Swiss francs, real estate and bricks and mortar, depriving their local economies of capital that could go into productive use there. If the judgment of these people is right, it is understandable that many Americans reach the conclusion that they had rather have an investment at home.

The hesitation of the private investor is not due alone to fears as to the value of the currencies. In many of the countries in question, the demands for rehabilitation or for development of natural resources and public works and for improvement in standards of living have been allowed to run ahead of the fiscal means to meet them; and this has brought on price controls and other controls that have been very hurtful to private business and controls and manipulations of exchange transfers that discourage investors from abroad as to the prospects of realizing

Hon. Lamar Fleming, Jr.—Part IV

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mr. TEAGUE of Texas. Mr. Speaker, herewith follows the fourth portion of the speech of Mr. Lamar Fleming, Jr.:

in their own currencies the earnings and amortization of their investments.

I do not mean to convey that there is not a great movement of private American investment abroad. American industries anxious about adequate future supplies of raw materials, even current supplies in some cases, are investing great sums abroad; and so also are other Americans who do not have that reason. But it would be idle to deny that this flow of private investment is much smaller in some of the countries whose development needs our money than it would be if the governments and economies could return to more orthodox policies that would permit our investors to move in with greater confidence and would encourage their own citizens to invest their earnings at home.

This part of the subject cannot be passed without mentioning also the discouragement that comes from ultranationalistic trends in some of the countries. I believe the man who invests outside his own country should accept the full obligations of a national in the country of his investment. If he accepts these obligations, I believe the government of the country should recognize the obligation to assure him a treatment equal to that of its own nationals. If a government does not accept that commitment or establishes a record of not fulfilling it, wise investors from other countries are deterred. This is a difficult matter to cope with.

Reviewing these aspects of our postwar policies and looking beyond, it is my feeling that grants or precarious loans or investments of taxpayers' funds are a form of help to the foreign economies that is objectionable, of course, to us as taxpayers and objectionable in many respects to the beneficiary country, except as the help may be absolutely indispensable. If you give chronically to a man, you finish by corrupting him. If you give chronically to a government, you finish by corrupting it, in that you put it into business and start it along the road to mercantilism and that you mortify the national pride. So, while I do not complain that we have been doing too much as taxpayers, I hope we gradually will reduce and abandon this form of helpfulness.

I draw a distinction between economic grants and grants for strictly military purpose. If a country wants to be on the team and does not have the means of providing the equipment which membership on it requires, I am glad to see us provide it for them judiciously.

In my judgment, the most valuable cooperation which we can offer is a continuous, steadfast, and not half-hearted, cooperation in enlargement of trade with the other countries and of their trade with one another. The principal ways that we can contribute to this, I believe, are to pursue constantly the goal of low tariff rates here and everywhere and of removal of restrictions like import quotas and exchange controls as rapidly as is practicable. To make this policy work, we must commit ourselves to it very definitely; for the benefits of it will not accrue if the outside world fears that our adherence to it is an on-again-off-again affair.

If the world knows this is our enduring policy, I believe the natural profit-and-loss stimuli will give a worldwide acceleration to the development of resources and expansion of production, and that a general increase in earnings will ensue automatically. I believe that this improvement would more than offset the decline and eventual discontinuance of the flow of American taxpayers' money through grants and precarious investments and loans. I believe the improvements in national economies would be such as to permit governments, that not now are able to do so, to lift controls, return to more orthodox fiscal and currency practices, and provide conditions conducive to the inflow of investment capital that their internal development requires. Out of all this, I confidently would expect a widespread uplift in material welfare and in general goodwill.

Some of our countrymen fear that a low tariff policy would bring on serious dislocations in the United States economy. They point to our high hourly rates for labor and say that many of our lines of production cannot survive if exposed to the competition of the much cheaper labor of some other countries.

Dislocations would result; in fact, I am sure that dislocations will occur regardless what we do. For healthy economies are never static. With every invention, a new line of production emerges, and those whose products capture the public fancy take their place among the leaders so far as profits are concerned. Likewise, changes in what the consumer wants or in economic conditions constantly are causing shifts of relative usefulness and prosperity from one line of production to another. These shifts, or dislocations, benefit our economy if the effect is to increase our useful production and to make it higher in quality, wider in variety, and of lower cost in terms of manhours per unit.

Production is the fruit of combination of natural resources, labor, and capital, using this last word to cover plant, equipment, and all the public services that add to the productivity of labor.

We are very fortunate in our endowment of natural resources. The advantages which we enjoy in capital, including particularly our splendid transportation facilities, not only help us to bring our own resources in raw materials cheaply to our sites of conversion, they also enable us to do the same with materials that are available only abroad, or that are available there more abundantly, more cheaply, or in better quality. A trade policy that permits our production to make the most of the available resources, foreign together with domestic, is the policy that will serve our production best in the matter of needed materials.

The wage for an hour of labor is higher here and in Canada than elsewhere. It always is higher where capital makes the greater contribution to the multiplication of the product of a man-hour of labor. Our relative abundance of capital gives our labor great advantages in education, health, and mobility through our wealth of public services; and backs it with plants, machines, and implements to a degree unknown elsewhere, which multiplies its productivity prodigiously. We are far in advance of the rest of the world in substitution of mechanical energy for human sweat. This reaches its culmination in the great mass-production lines which our mass domestic market makes possible in a degree not possible today in other countries.

Related to our whole economy, what we have the least of is human hands, and what we have the most of is the means to multiply the product of each human hand and to provide conditions favorable to the use of them to best advantage. Under these conditions, we are at an advantage in production cost in those lines in which our means of multiplying the productivity of the human hand outweigh our scarcity of them and our consequently high wage scale; and we are at a disadvantage in the lines in which the means of multiplication of individual productivity cannot make up for our high wage scale. This means that the profitable lines of production for Americans naturally are the lines in which capital in all its aspects can multiply most the productivity of the individual, and hence that we will prosper most to the extent that our new investments of men and capital follow toward the lines of production most susceptible of labor-saving through mechaniaztion and other technological improvements. Of course, we can resist and delay this natural evolution by artificial means like tariffs, quotas, and subsidies in one form or another, and keep some uneconomic productions alive for the time being. But this only can be done at the expense of all of us as taxpayers and consumers; and the subsidized existence of those maintained in the uneconomic occupations will be what a subsidized existence of those is—a second-rate existence. There is not a doubt in my mind that people who need public help to stay in their occupations would benefit, and particularly that their next generation would benefit, by shifting into other occupations which, due to nature and national circumstances, are profitable without help.

Hon. Lamar Fleming, Jr.—Part V

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. TEAGUE of Texas. Mr. Speaker, herewith follows the concluding portion of Mr. Fleming's speech:

I live close to an example of this. For a combination of political, social, and sentimental reasons, we have been following for many years a farm policy which subsidizes agriculture through the Government supporting domestic farm prices. During this period a revolution has come about in farming efficiency through substitution of tractors for mules, and of larger and more efficient kinds of implements that tractors can haul for those that a mule could pull. At the same time, we have advanced greatly in seed varieties, fertilization, insect control, irrigation, and farming knowledge; and new roads and automobiles have increased the accessibility of farms and potential farms. So we now have a condition in which one man, with the present labor-saving equipment, can farm, say, three times as much land as he used to farm, and farm it better, provided he uses land that is flat enough for the tractor-drawn equipment, and in some cases for irrigation, and that is fertile enough to amortize the cost of the equipment and, where irrigation is used, to pay the water costs. All those conditions being right, the farmer using the new equipment can outproduce and undersell the farmers on lands which, due to sharp contours or other reasons, are unsuitable for mechanized farming. But, with the prices supported by Government, the cottongrowers have not had to undersell each other; the new type of cottongrower increased his production, and fewer of the old type shifted to other callings, which had become attractive due to our industrial expansion, than would have shifted if the price of cotton had not been guaranteed. The result has been the accumulation of a great surplus of cotton and the imposition of acreage controls, as an alternative to reduction of the price-support levels. Among the effects of this are: that uneconomical cotton farming has continued in some places, with benefit to no one; that economical cotton farming has been rendered less economical by curtailment of the efficient farms below the acreage at which their unit cost would be lowest; and that exports of American cotton have declined because our Government pays more for it through the price-support program than it costs the foreigner to grow it. In the end, somehow or other, our farmers will regain the free use of their land; and I am sure that our efficient cotton-growing operations will show that they can compete with the foreign growers, who pay more than we do for tractors and equipment, if they have them, and for almost all the

materials used; pay heavy export taxes on their cotton, pay much higher interest; and suffer generally from lack of roads, communications, and general services which we just take for granted. I am sure it will turn out in the end that the people of the South are worse off for this experiment in subsidization and will be better off when we return to a free market and to freedom of the citizen to use his land according to his best judgment.

You have noticed, I am sure, that leaders in both the parties are talking now about what they call a soil bank, which is a name for paying farmers to take land out of production. In the particular circumstances of the moment, I believe this strange idea has some merit. If there are occupations in this country that cannot survive without unreasonable protection, I am sure it would cost the American people less money to pay the individuals involved for not working in those occupations than to continue, as taxpayers and consumers, to pay the price of unreasonable protection for them. This is not a suggestion.

Another way to look at the matter is to compare the conditions under which the protectionist movement originated and grew in the United States with the conditions today. Our Nation was born of an ardent aspiration for independence from a then mercantilist Europe and for freedom from its wars and blockades. Men like Hamilton wanted to see us as independent as possible of Europe, economically as well as politically; and for this reason they thought it worth while to subsidize the birth and infancy of industries whose products were essential to us.

Our economy until World War I was in a stage of rapid development of the resources of our continent, requiring loans and investments from Europe; and we needed an excess of exports over imports to service these loans and investments, which need had been compounded by the costs of the Civil War. Because for so many generations we had to maintain an excess of exports over imports, we called this excess a favorable balance of trade, and we came to regard it as something always to be desired, regardless of circumstances. Hence imports were not a favored child; and pleas for protection against them received a hearing colored by this circumstance.

The circumstances changed with World War I, although our public and political opinion was slow to grasp how fundamental the change was. No one could ignore the revolutionary dimensions of the change as it confronted us after World War II. Almost all countries now owe us money, and we are investors in all countries. The debt and investment service of the foreseeable future will be a net of international payments to us, if the service occurs, instead of payments by us. In these conditions, we will have to reverse the old terms: the only "favorable balance of trade" for us will be an excess of imports over exports; for that will be the only way in which we, as international creditor and investor, can receive service upon our loans and investments. Of course, we can narrow the gap in certain periods by lending more and investing more abroad; but the effect of that will be to increase the total of the annual debt and investment service to be collected later on.

However, I am sure we will lend more abroad and invest more abroad over the years to come, particularly as the Government agencies withdraw from this function in favor of the citizens. When England was the money center of the world, her economy was the world's principal banker and investor, not because the role was virtuous but because it was profitable. Now that we are the money center of the world, we will become the principal banker and investor for the world, not out of virtue, but because of profit-and-loss considerations.

When England assumed this role after the defeat of Napoleon, she moved from mercantilism and extreme protectionism to complete free trade, so that her then outstanding industry could enjoy cheap materials and her people cheap food, and so that she could collect the service charges on her loans and investments abroad. Our circumstances inevitably will lead us in that same direction.

These developments will make us better customers for the rest of the world. They will increase foreign earnings, and these increased earnings, together with our loans and investments, will help to cure many foreign problems. They will make it possible for other countries to become more liberal in their import policies, to everyone's advantage, and will promote the flow of credit and investment from other countries, to supplement our help in the countries most in need of developing their natural resources. As the resources of the presently underdeveloped countries become more fully developed, better earnings and living standards should tend to dissipate the frustrations which today stand in the way of better understanding and greater good will. And as the earnings in the low-income countries increase, wages should increase also, and the great contrast should be lessened between wages from country to country, which should reduce the demands for protection, here and in other countries.

I do not regard our ultimate course as a matter for argument, or even as a matter of choice in the last analysis. To me the pattern of historical cause and effect is definite, and our course is a matter of inevitable destiny. I regard our choice as one of whether to swim gladly in the smooth middle of the stream of destiny, or to wait for the flood to wash us in, with bruising bumps against the rocky banks.

The course available to us lends itself to teamwork and partnership among peoples, toward betterment for all. We have the opportunity to make life in the community of civilized nations so attractive that all who have free choice will join it. I even am naive enough to believe that it is the way toward ultimate solution of the East-West conflict; for I do not believe that Russia and China will be ruled forever by men utterly indifferent to the sacrifices of their countrymen. In this faith lies my hope that our children and theirs will be spared a supernuclear cataclysm.

In this talk I deliberately and too often have applied the first person to Americans; because we here are Americans and are discussing the responsibilities and opportunities of Americans. But I think we must avoid confining our conception of the words "we" and "us" to Americans when thinking about world affairs, just as a duly humble and wise individual seeks to use rarely the word "I" when he can say "we."

On the team of international cooperation, no country is more wholeheartedly dedicated than Canada. England and several other European countries are as earnest members as we are, in spite of the disabilities of battered survivors of a recent grueling fight. As they recover, their contributions to the partnership in all its phases will become more substantial; and the burdens of it will be spread more equally among the partners. So, in this field of thought and endeavor, not only the amenities among partners but also realism call for deemphasis of our "I" as Americans and emphasis of the "we" 'that includes all the responsible partners who are dedicated with us to betterment of the human lot.

The Reece Case

EXTENSION OF REMARKS
OF

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1956

Mr. DIGGS. Mr. Speaker, at my request the National Association for the Advancement of Colored People has prepared the following reply to certain statements made on the floor of the House January 5 and 9, 1956:

You have asked about the speeches by Congressman LANHAM and others concerning the FBI's investigation of the selection of jurors in Cobb County, Ga.

As the speeches indicate the investigation has come out of the Supreme Court's recent decision in *Reece* v. *Georgia* (100 L. ed. (Adv. 111)). In fact the Court's decision in the Reece case received perhaps the greatest amount of the Georgia Congressman's attention.

At the outset we should note that the speeches all completely misrepresent the Reece case. Congressman LANHAM on page 158 of the RECORD states:

"The Supreme Court of the United States granted a writ of certiorari and reversed the Georgia Supreme Court in its affirmance of the conviction upon the ground that the judge of the Cobb superior court had not appointed counsel for the accused until after he had been indicted by the grand jury. It was suggested in the decision also that he might have been denied a fair trial in the absence of proof that there were Negroes on the panel which tried him."

Congressman FORRESTER on page 160 of the RECORD states:

"They should join with us and say to the Department of Justice, say even to the Supreme Court, 'We simply will not tolerate a decision holding that a person must be granted a new trial because he had no attorney furnished him before the indictment.'

"Mr. Speaker, after 30 years in the practice of the law, I know it was not uncommon for defendants not to have an attorney until after they were indicted. If there was no indictment, they hired no attorney. It is in contrast with the law, in contrast with order, and in contrast to public decency; and shame, shame it is how low the Supreme Court of the United States and the Department of Justice have fallen."

The Reece case did not hold that a defendant must have a lawyer before indictment or else his conviction will be reversed for denial of due process. Georgia law required that one my object to the constitution of the grand jury only before the indictment is returned. Grand juries are often assembled and are in being long before a defendant is indicted and it is hard to think of a case in which one could object to a grand jury before an indictment against him is returned. Negroes have been systematically excluded from grand juries in Cobb County, Ga. The evidence in the Reece case reveals the following:

"In the hearing on his motion to quash before the first trial he presented uncontradicted evidence to support the following facts: No Negro had served on the grand jury in Cobb County for the previous 18 years; the 1950 census showed that the county had a white population of 55,606 and a Negro population of 6,224; the same census showed a population of 16,201 male white

citizens over 21 years of age, and 1,710 male Negro citizens over 21 years of age. Petitioner's motion alleged, and this was not contradicted, that there were 534 names on the grand jury list and of this number only 6 were Negroes. Of the 6 Negroes, 1 did not reside in the county and the other 5 testified in this proceeding. Two were over 80 years of age; 1 was partially deaf and the other in poor health. The remaining 3 were 62 years of age. Each of the witnesses had lived in the county for at least 30 years. None had ever served on a grand jury nor heard of any other Negro serving on a grand jury in the county. The clerk and deputy clerk of the court testified that the jury boxes had been revised in 1952, that there was no discrimination or systematic exclusion of Negroes from the grand jury list, that six Negroes were on the list, and that neither had ever known a Negro to serve on a grand jury in Cobb County."

Nevertheless, despite the obvious discrimination against Reece he was unable to object to the composition of the grand jury because under Georgia law he did not make his objection before the indictment was returned. In fact Reece did not have knowledge of the grand jury nor benefit of counsel before his indictment so he could not have objected to it.

The Supreme Court's holding was that Georgia procedure denied due process of law because Reece had no opportunity to object to the grand jury which was constituted in a discriminatory manner. The Court did not hold that Georgia is required to furnish counsel in criminal cases prior to indictment. Furnishing counsel prior to indictment might, in some cases, afford an opportunity to object to a discriminatorily constituted grand jury and thereby afford due process of law. But the Supreme Court's holding appears merely to be that some reasonable opportunity must be given to object to the composition of a jury from which Negroes are systematically excluded.

The FBI's investigation of court officials connected with jury selection in Cobb County is being conducted entirely pursuant to the law. The record and the Supreme Court's decision in the Reece case make clear that Negroes have been systematically excluded from grand juries in Cobb County. Title 18, United States Code, section 243, makes this a crime:

"Exclusion of jurors on account of race or color.—No citizen possessing all other qualifications which are or may be prescribed by law shall be disqualified for service as grand or petit juror in any court of the United States, or of any State on account of race, color, or previous condition of servitude; and whoever, being an officer or other person charged with any duty in the selection or summoning of jurors, excludes or fails to summon any citizen for such cause, shall be fined not more than $5,000. (June 25, 1948, c. 645, sec. 1, 62 Stat. 696)."

It is certainly necessary and proper that the investigative Department of Justice look into whether a crime has been committed, especially where evidence of crime is as clear as it is here.

The speeches make some other points which call for a comment. This will be taken up in the order in which they are made.

1. On page 158 it is stated that the solicitor was asked whether or not he intended to again prosecute Reece. From my experience this question is sometimes asked to determine whether the offending officials should be prosecuted. I believe that it is sometimes felt that if a defendant is to be prosecuted once more it may be unwise to prosecute county officials or perhaps to defer their prosecution for the reason that it may prejudice defendant's defense. There is nothing official on this which I know, but I have gathered this impression from other cases.

On page 158 the statement is made that 2 Negroes served on a grand jury in 1955 and 1 in 1956, and the service of other Negroes is mentioned. This is, of course, something new and is a salutary result of the Reece case and perhaps threatened prosecution under title 18, section 243. These small numbers of Negroes, however, surely do not absolve any past crimes and do not foreclose investigation of whether other Negroes are still being systematically excluded.

On page 156, six points are made concerning the current investigation in Cobb County: (1) It is stated that it can be used as threat of prosecution against local court officials. This is true; (2) That it was taken to deter the prosecution from taking further action in the case. I would really doubt that the FBI would have any interest in this at all; (3) That the information obtained may be used as a matter of defense. As I understand it, information given to the FBI is confidential and cannot be obtained in any way; (4) That there has been no race hatred despite the nature of the crime (which was rape). This is good, but appears to be irrelevant; (5) That the right of the State to proceed against crimes against its own laws has been violated. This is, of course, not true. The investigation is merely concerned with violations of Federal laws; (6) That this is a gestapo proceeding, etc., etc. This does not merit any reply. If anything, the Federal Government should investigate deprivations of civil rights—which are crimes—more frequently and thoroughly.

Today's Prosperity: Accidental

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial taken from a recent issue of the San Diego Union:

TODAY'S PROSPERITY: ACCIDENTAL

Three major factors underlie the prosperity the Nation enjoys today:

1. Inflation has been curbed.
2. Deflation has been avoided.
3. Initiative and expansion have been encouraged.

The result is what Treasury Secretary Humphrey calls "the greatest period of prosperity that our fast-growing, now unhobbled economy has ever known."

All three factors stem from the Republican approach to government. At least two of them would have been totally unlikely under a Democratic administration.

Inflation was part and parcel of the previous Democratic administration. And the candidacy of Adlai Stevenson offered no hope of a change.

The end of Democratic controls, the return to sound fiscal policies, and the encouragement of individual initiative have been behind the record expansion of business and industry. This, too, has been a direct result of Republican policies. It logically must be given credit for the record high in local and national employment and with the new peak in take-home pay.

The proof of these contentions can best be found in comparing the records of the Democratic and Republican administrations.

Between 1940 and 1953 inflation became the greatest economic threat to high living standards. Pay raises were accompanied by price raises and tax increases. The result was little net gain and sometimes a distinct loss.

A $1,000 saved in 1939, if left untouched, was worth only $522 in 1953. Inflation, often encouraged by the Democratic administrations, had stolen $478 from the thrifty person.

Between 1939 and 1953 the cost of living index rose from 60 to 116. Only 18 of these points came as a result of wartime inflation. The remaining 70 percent of the inflationary spiral was the direct result of a total failure of the Democratic administration in handling postwar domestic economics.

The 3 years of the Republican administration have seen the dollar stabilized. Inflation no longer is robbing the thrifty or the family on a pension. A pay raise can now have real economic meaning.

During 1956 the Democrats will claim that they, too, could have given the Nation greater prosperity. But the answer lies in the facts. They had the opportunity and failed. The policies they now propose are the same ones with which they went out of office.

It would be a serious mistake to regard present prosperity as accidental. Without the sound fiscal policies of the Republican administration it would not have been possible.

The Anniversary of President Wilson's 14 Points

EXTENSION OF REMARKS
OF
HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mr. MACHROWICZ. Mr. Speaker, under leave to extend my remarks, I wish to place into the RECORD a statement on the 14 points of President Wilson, whose birth we celebrate this year.

The hundredth birthday anniversary of one of our greatest Presidents, Woodrow Wilson, will be celebrated this year all over the United States. During his Presidency, at the turning point of American history, the ideals of the American Declaration of Independence spread all over the world.

At that time the United States made a colossal effort to establish a just peace among nations, and for these efforts President Wilson, still in the White House, was awarded the Nobel Peace Prize in 1919.

President Wilson's idea of a just peace was based on the principle of every nation's self-determination and full independence, notwithstanding the size of the country, or the number of people, or their importance in the world. The most powerful expression of President Wilson's ideas was his attitude toward Poland. During the First World War the international situation put the problem of Poland into the foreground. Even before the United States entered the First World War, President Woodrow Wilson said in his message of January 22, 1917:

Statesmen everywhere agreed that there should be a united, independent, and autonomous Poland.

Now it is fitting to remember, that on January 8, 1918, President Wilson announced his famous 14 points, which expressed fully his peace program. And it is also fitting to remember that his

peace terms announced on January 8, 1918, were fully accepted by the defeated Germans on November 11, 1918.

President Wilson's 13th point, concerning Poland, made the greatest impression of all. This point reads as follows:

An independent Polish state should be erected which should include the territories inhabited by indisputable Polish populations, which should be assured a free and secure access to the sea, and whose political and economic independence and territorial integrity should be guaranteed by international covenant.

At that time the message of the President made it clear to all, that the regaining of independence of Poland is one of the main aims for which the war was fought by the Allies.

When Poland regained her freedom and independent after the First World War, the Polish nation never failed to express its gratitude for President Wilson. His message of January 8, 1918, strengthened and deepened the traditional ties of friendship between the American and Polish nations.

The fundamental principles of the American foreign policy still follow the tradition of American ideals: The ideals of every nation's self-determination, their full independence in a just and lasting peace—these ideals are still alive. This policy was reaffirmed by Presidents Franklin D. Roosevelt and Harry Truman. They were expressed in the declaration of December 30, 1955, on behalf and with the approval of President Eisenhower:

The peaceful liberation of captive peoples has been, is, and until success is achieved, will continue to be a major goal of the United States foreign policy.

Soldier and Patriot

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. HENDERSON. Mr. Speaker, today our Nation mourns the passing of Lt. Gen. Daniel Van Voorhis, who died January 9, 1956, at Walter Reed Hospital. A native of Zanesville, Ohio, in the 15th Congressional District, General Van Voorhis is remembered with deep affection by his host of friends in Zanesville and Nashport, where he resided since his retirement from active duty. Among those who served with him in the Army he is revered for his vision and his contributions to the fighting power of the Army and to our national security through his long career of service. This service spanned the tumultuous period of our history from the outbreak of the Spanish-American War through 1942.

Among his many signal achievements in the Army, General Van Voorhis became known as the grandfather of mechanization, having developed and carried out the first concepts of mechanized warfare utilizing mobile armored forces.

I wish to commend to the House the following editorial published in the January 11 Zanesville (Ohio) Times-Recorder honoring this man of great stature who has passed from us:

SOLDIER AND PATRIOT

It is the American custom to assess the value of a man by four standards of measurement. Listed in the ascending order of their importance, they are: First, what he has; second, what he knows; third, what he does, and fourth, what he is.

Some men are important as measured by one standard, some by another, but it was the distinction of Lt. Gen. Daniel Van Voorhis that he was an exceptional man measured by all four.

True, he was not a wealthy man, but had amassed a comfortable competence, and while he was not the heir to great fortune, he did inherit the immensely valuable tradition of an American gentleman.

In the second, his experiences had given him vast knowledge of diverse subjects, plus an education gained at Ohio Wesleyan University and Washington and Jefferson College. All his life he was a student, and was still learning at an age when most men's intellectual development has come to a standstill.

In the third, what he has done, we cannot go into detail, since even a short account of all his activities would demand great space. For almost a half century he served his country in its Armed Forces, taking part in three wars, much of the time in posts of high military command. He served in the war with Spain, in the Philippines, in Mexico, and France, and was known as the grandfather of the armored forces. He had received numerous decorations from his own and foreign governments, indicative of valorous and meritorious service.

But the fourth measure of man, what he is, counts in the final analysis. And throughout his life he remained a gentleman, a friendly gentleman, who retained the respect of his subordinates, the regard of his superiors and the friendship of his neighbors. He had received many honors, he had associated with the great and the near-great, without losing the capacity to understand and enjoy the companionship of the man on the street. He was never one to erect an invisible wall around himself, retiring within to hold the mass of mankind at arm's length.

General Van Voorhis was definitely one of the notable men of Ohio, a credit to his native Zanesville and Muskingum County.

He will be buried Thursday with full military honors in Memorial Park. And as the riflemen fire the final salute, as the bugler sounds the final taps, we will say goodby to a man whose life was full of honors, who spent that life in his country's service, and in so doing gained the respect and admiration of us all. His memory will be enshrined in the hearts of a grateful people.

Persecution of the Church in the Ukraine

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. FORAND. Mr. Speaker, under leave to extend my remarks, I include the following memorandum, which was prepared by members of the Church of the Ukraine in the United States, protesting the persecution of their church in the Ukraine and citing numerous cases of persecution to members of the clergy in that country.

It will be noted that these constituents of mine request that the Congress inquire into this antichristian terror and that a special committee be created to hold hearings on the subject.

That this persecution is permitted to continue without the Congress of the United States raising its voice in protest is not in the American spirit. I therefore protest publicly this persecution and urge both the Congress of the United States and the administration to take whatever steps it may be possible to bring an end to the persecution of the church, in the Ukraine and elsewhere. The memorandum follows:

Christianity has been existing in Ukraine for more than 1,000 years. It has fostered a profound faith in God among the people, and has begotten abiding moral principles, and nourished a new culture and erudition.

In December 1917, Communist Russia invaded Ukraine and in 1919–20 occupied the eastern provinces of this country. The Soviets were bent on extirpating Christianity from these regions. In their coup d'etat they published aggressive antireligious propaganda and terrorized the people with threats of exile, torture and death.

First, the Communists attacked the Church in Eastern Ukraine. Within 10 years, from 1921 to 1931, they unjustly arrested and ruthlessly murdered 34 Ukrainian Orthodox bishops and more than 3,000 priests. Hundreds of thousands of the faithful were inhumanly tortured in prisons or deported to concentration camps in Siberia; a greater part of these innocent people died martyrs to their Faith; the remainder still endures the appalling trials and hardships of imprisonment.

The Reds destroyed 80 percent of the churches (many of these churches contained precious historical relics, as for example the Golden Domed Michalivsky Monastery in Kiev from the 12th century); other churches were despicably converted into warehouses, theaters and convention halls; monasteries were outraged and cemeteries profaned.

By 1930 the Communists had completely liquidated the entire Ukrainian Orthodox Church, barring it from all public activity.

Though article 123 of the Soviet Constitution, which is binding in Ukraine as well as the U. S. S. R., explicitly recognizes freedom of religion, yet, during the first Red occupation of Western Ukraine (1939–41), the Communist regime overtly persecuted the church, arresting many Ukrainian priests and ruthlessly murdering 27 of them.

This anti-Christian terror adopted more hideous means of exterminating Christianity in Ukraine during the second occupation of this country beginning in 1945. On April 11, 1946, the Soviets arrested the Metropolitan of Halych and Archbishop of Lviv, Joseph Slipyj, 80-year-old Bishop Gregory Khomyshyn, Bishop John Latyshevskyj, Bishop Nicholas Charnetskyj, C. SS. R., and Bishop Nykyta Budka. On June 25, 1946, Bishop Josaphat Kotsylovskyj, OSBM, and Bishop Gregory Lakota were imprisoned. All these bishops were condemned to forced labor for 8 to 10 years and even life; the imputation was lawfully unjust. Some of these bishops (for instance Bishop Gregory Khomyshyn and Bishop Josaphat Kotsylovskyj) later died from maltreatment in prison. Still more, when Archbishop Joseph Slipyj's or other bishops' term expired, the Reds would not release them from prison.

In the autumn of 1947, the Communists murdered Bishop Theodore Romza, Uzhorod, Carpathian Ukraine, and in 1950, the Bishops

Paul Gojdich, OSBM, and Basil Hopko, Pryashiv, Czechoslovakia, were imprisoned. On January 15, 1951, Bishop Paul Gojdich was tried and unjustly condemned to forced labor for life. Bishop Basil Hopko is now in a concentration camp.

Altogether, 10 Ukrainian Catholic Bishops have been liquidated by the Reds.

In 1946, the Soviets enjoined the legal continuance of the Ukrainian Catholic Church in Ukraine. Thus, in our own 20th century, it has been reduced to the sorrowful plight of the Church of the Catacombs, as was the primitive church during the Neronian persecution.

Two thousand secular priests and monks, for rightfully refusing to acknowledge the Patriarch of the Russian Orthodox Church as their head—this church is now subservient to the Communists—were arrested and deported to slave labor camps. The Reds exterminated all 5 dioceses of the Ukrainian Catholic Church, desecrated 4,440 of its churches and chapels together with 195 religious houses. The Communists continue to oppress mercilessly the Ukrainian laity for remaining steadfast to its Christian heritage, church and faith.

Therefore, I respectfully request to present to Congress the dreadful situation of the religious persecution in Ukraine and ask to propose that Congress inquire into this anti-Christian terror, and that a special designated congressional committee hold hearings of witnesses of the aforesaid situation.

I, also, request that the Secretary of State propose to the American Delegation in the United Nations that the condition of the persecuted church in Ukraine be placed on the agenda of the United Nations Assembly.

Niagara Stalemate

EXTENSION OF REMARKS
OF

HON. EDMUND P. RADWAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. RADWAN. Mr. Speaker, in March of last year, I introduced one of the most important bills which it has ever been my privilege to sponsor, a measure which would authorize immediate construction of power development works on the Niagara River while present difficulties which have stymied this project for almost 6 years are being ironed out.

This bill is the only solution, to the costly deadlock, now before this Congress. In further support, I offer the following editorial which recently appeared in the Buffalo Evening News, Buffalo, N. Y.:

NIAGARA STALEMATE

Congressman WILLIAM E. MILLER, of Lockport, coauthor and chief congressional promoter of the bill to develop Niagara Falls power under private auspices, has glumly concluded that the chances of getting any Niagara bill through this session of Congress are slim.

The Senate's complexion, he says, is such that "I can't see it passing" a private-enterprise bill. Likewise, he says, "I can't see the House, in view of the almost 2 to 1 margin it gave my bill in 1953, making an about face and handing the project over to the public-power advocates." So he predicts another year of stalemate.

From the standpoint of the Niagara Frontier's economic progress, that is a sour prospect indeed. The congressional deadlock is already in its fifth year, and Canada, meanwhile, has begun to use its share of the Niagara power and has started to use ours too, as the 1950 treaty gives it every right to do until Congress makes up our mind what to do with it.

We do not question Mr. MILLER'S realistic estimate of the congressional temper. What we do urge—if it turns out that this Congress is just as deadlocked as previous ones have been, and as he anticipates—is that a start on the construction at least be salvaged out of the deadlock. If Congress can't agree this year on the ultimate ownership and operation of the Niagara development, it should at least recognize that there is no basic disagreement on the engineering details of what kind of development it should be. That being so, there is no good reason why it could not commission the United States Army engineers to start the project at once, and leave it to the next Congress—or the next—to decide who will take over from there.

This is the course Representative EDMUND P. RADWAN, of Buffalo, has been urging for the last year. And the longer the stalemate over ultimate operation continues, the more realistic his proposal for immediate construction by the United States engineers becomes. The hard fact that everybody should bear in mind is that the Niagara development will take about 5 years to complete from the time the project is authorized. If it's going to take that long for Congress to make up its mind, at least we might as well have a finished project for it to dispose of, instead of merely a set of blueprints.

We still prefer the private-enterprise to the public-power approach. But more important than who develops it is getting it developed by someone. Let the proponents of the rival plans lock horns once more this year, if they must. But if the result is another stalemate, let them then, for heaven's sake, rally to the Radwan banner and get the project under construction while the debate over ultimate control drags wearily on.

Paint Mixing Facility at Mare Island Naval Shipyard

EXTENSION OF REMARKS
OF

HON. JOHN F. BALDWIN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1956

Mr. BALDWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to insert a statement which I made on Tuesday, January 10, 1956, before the House Appropriations Committee in opposition to the proposed closing of the paint-mixing facility at Mare Island Naval Shipyard, Vallejo, Calif.:

Mr. Chairman and members of the committee, it is my understanding that the Defense Department has provided notice to the House and Senate Appropriations Committees that certain activities of the Navy and Army will be terminated unless an objection is received from the House Appropriations Committee or the Senate Appropriations Committee. It is my further understanding that one of the activities which the Defense Department proposes to terminate is the Navy's paint mixing facility at Mare Island Naval Shipyard, Vallejo, Calif.

I should like to register a strong protest against the proposed closing of this paint mixing facility, and I hope that this committee will disapprove this proposal. In my opinion the closing of this paint mixing facility would be most unfortunate, and would be against the best interests of our national defense.

During World War II the Mare Island paint mixing facility was an essential operation in manufacturing paint for naval use, much of it a special plastic paint for ships' bottoms. This special plastic paint had been developed at Mare Island after more than 7 years of laboratory work and field testing. It is important to note that the paint industry did not develop this formula—the Navy Department did at Mare Island Naval Shipyard.

This bottom paint permits ships to remain at sea in war areas for years without having to leave their station to proceed to a drydock, which may be many days' sailing, and hundreds, or even thousands, of miles away. Before the successful development of this formula, ships had to drydock frequently, as a clean bottom, as you well know, is an important factor in making maximum speed. A foul bottom also means that ships use more bunker fuel per mile, which means more frequent fuelings. The logistics supply of fuel to a fleet at sea over great distances is always a serious problem, as tankers can be sunk.

With the extension of our sea frontiers to far horizons as an implementation of national policy, bases are often inaccessible, and anything which can be done to extend the sea-keeping days of a fleet is vitally important, as I see it. Thus it is important that the bottom paint furnished the fleet be of impeccable quality and in exact conformity to the formula. The Navy's manufacture of its own paint under its own formula has met all service tests. We should not tamper, in my opinion, with a proven system and a proven product. The paint industry, although it has had every opportunity to conduct a similar laboratory and testing program, was never able to develop this bottom paint. The Navy, on the contrary, is consistently experimenting in laboratory and testing facilities to improve paint for the Navy's peculiar need. This was the reason why the Navy established the paint-mixing facility at Mare Island Naval Shipyard. This facility meets special requirements which industry cannot, or at least has not, met.

At the present time, the Mare Island paint-mixing facility is limiting its production to the special plastic paints solely for Government use. If this work were transferred to commercial plants, it would be necessary for the Navy to establish a costly inspection corps at each commercial plant involved, as it is vital to national defense that this paint be manufactured exactly to formula. In addition, such a transfer would mean that the expenditure and investment that the Government has already made for the equipment and buildings occupied by the Mare Island Paint Mixing Facility would lie idle. It would certainly appear that using plastic paint produced commercially would add to the Navy's costs, rather than being an economy.

I fully understand that it is the Defense Department's desire to stop Government competition with private industry whenever there is no harm to the national defense involved. However, in this case, I am convinced there would be harm to the national defense.

Another factor which to me seems important to national defense is that if the Mare Island paint-mixing facility be closed, the skills of the group of employees which grew up with the development of this paint would be dissipated and lost. Without these skilled men, the paint-mixing facility will be an empty shell when the next national emergency requires its reopening.

It seems to me of essential importance to the Nation that the Mare Island paint-mixing facility be allowed to continue to operate in the modest way in which it is now operating in the manufacturing of special plastic paints, and be allowed to continue its research and tests looking toward the further betterment of this product. It would seem most important that the research and testing which has been in progress for many years be continued.

Of extreme importance is the complete flexibility of this paint-mixing facility. Production of urgently needed paint can be started immediately on reecipt of even a dispatch order, with no lead time as commonly required in commercial practice for special type paint.

The Mare Island paint-mixing facility now employs only approximately 50 people, and specializes in this special antifouling and anticorrosion bottom paints and vinyl system paints specifically designed for the Navy's own use. The continuation of this specialized operation certainly can have no great adverse impact on our country's huge paint industry, and yet could have a most unfortunate result on our readiness for the expansion of production of this most essential naval paint in time of war.

In view of these facts, I should like to recommend strongly that the House Appropriations Committee disapprove the proposed closing of this paint-mixing facility. I believe this closing would be a false economy and a definite disadvantage to the Nation's defense.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. MASON. Mr. Speaker, the crux of the recent White House Conference on Education was whether or not the Federal Government should grant more Federal Aid to public education. The central question of all the discussions was, "Shall or shall not the Federal Government launch out on a broader basis than at present in giving Federal Aid to schools?"

One of the pertinent factors in the problem of Federal Aid is the way Federal Aid is being distributed to the schools at the present time. Federal grants-in-aid to schools today are distributed not on the basis of need, not even on the basis of the average pupil daily attendance, as one would expect. It is distributed today in direct contradiction to these three basic criteria.

For example, Federal grants-in-aid to schools during the fiscal year 1954 shows the following inconsistencies:

State	Rank according to State effort	Number of pupils enrolled	Federal grants-in-aid	Average grant per pupil
West Virginia	17	448, 280	544, 963	1. 21
Nevada	39	42, 187	1, 664, 385	39. 45
Virginia	28	702, 671	14, 950, 285	21. 27
Mississippi	16	540, 157	2, 551, 600	4. 73
Illinois	43	1, 490, 000	4, 170, 345	2. 79
Wisconsin	35	561, 000	1, 150, 359	2. 05
Washington	23	490, 184	8, 522, 481	17. 39
Wyoming	1	63, 837	1, 257, 060	19. 69
New Mexico	2	187, 480	5, 003, 917	26. 68
Kansas	20	386, 915	5, 498, 760	14. 21

Mr. Speaker, anyone can readily see from the above table that there is little rhyme or reason in the present method of granting aid. For instance, Nevada, a State that stands high on the basis of per capita income and ability to finance her own schools, stands 39th in her effort to support her schools, yet she receives $39.45 per pupil Federal aid; while West Virginia, a State that stands quite low on the basis of per capita income and ability to finance her schools—her coal mines, potteries, and glass factories being very hard hit—although she ranks high in effort, receives only $1.21 per pupil in Federal aid. Wyoming, the State that ranks No. 1 in her effort to support her schools, gets less than half the aid given Nevada, the State ranking 39th in effort. If this is a sample of the way Federal aid to education is being distributed today, do we want to extend these basic inequities? What guaranty will there be that the present inequitable method of distribution will be improved or corrected?

Mr. Speaker, three other real factors enter into the problem of extending Federal aid to schools, if Federal aid is for the purpose of equalizing educational opportunities between the States as claimed by its advocates:

First. The problem of segregation in the schools of the South. Will Federal aid accentuate this problem or diminish it?

Second. The problem of Federal aid for our parochial schools. Will Federal aid to education be provided for parochial schools in order to create equal educational opportunities? If not, why not?

Third. The problem of Federal supervision and Federal control of schools that are subsidized by Federal taxes. Federal supervision and control always accompany Federal aid. The present United States Commissioner of Education has said:

> If Federal aid is to bring about better schools, it seems apparent that there must be some Federal control.

Mr. Speaker, Federal aid to equalize educational opportunities is not as simple as it appears on the surface. It is both complicated and controversial. Cautious exploration and consideration are required before a proper solution can be found under our Constitution.

I have been, and still am—because of the above reasons—opposed to Federal aid for schools.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. JOSEPH F. HOLT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. HOLT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

Congressman JOE HOLT, Republican, from California, author of the legislation which created the White House Conference on Education, today issued the following statement:

"President Eisenhower's special message on education fulfills his promise to the White House Conference on Education to give careful consideration to their findings. In almost every instance, his school-construction proposals jibe with the White House Conference recommendations.

"Those who charged that the White House Conference on Education was an administration device for avoiding action have been proven wrong. President Eisenhower has translated the will of the people into a positive, sound program of action.

"The President's school-construction proposals embodies the following principles expressed by the White House Conference on Education:

"1. Federal aid 'Should be granted only on the basis of demonstrated needs.'

"2. 'Federal aid should never be permitted to become a deterrent to State and local initiative in education.'

"3. 'State aid should be increased.'

"4. 'The administration of Federal funds should be through the appropriate State agencies for education.'

"5. 'These State agencies should determine the relative needs of local school districts.'

"6. There should be no 'Federal control or educational use of funds in local school districts.'

"7. 'All States and Territories and the District of Columbia should be eligible.'

"The President's recommendations provides the foundation for much sounder and safer education legislation than the Kelley bill, now before the Rules Committee.

"The need for Federal aid to education, State by State, has not yet been proven to me personally, either by the hearings held before our committee or by the newspaper and oral reports I have heard on the results of the White House Conference on Education. For that reason I have requested the chairman of the Education and Labor Committee to have the officials in charge of the White House conference come before the full committee and give a report on the manner in which the conference was held, delegates selected, the results, and how they were reached.

"As a Representative in Congress from the State of California, there is doubt in my mind whether any Federal-aid legislation will be proven beneficial to our community and State in the long run. We are doing a very good job of solving our own problems. The amount of effort being put forth by other States and the taxes their people are paying for their schools in comparison to the high taxes our people pay for schools must be taken into consideration before any definite conclusions are reached."

Make Their Services Available

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Retired Officer of November-December 1955:

MAKE THEIR SERVICES AVAILABLE

Gerontologists uniformly agree that man's usefulness to society is not necessarily limited by age alone. Another obvious fact is that advances in medical science in recent years have served to extend man's productive capacity, particularly in our country.

In this era of danger to the preservation of our ideals and institutions, all our human

assets and talents must be kept available and put to use where needed, especially by the Federal Government.

Requirements of the military profession necessitate much earlier retirements than in any other calling of which we are aware. This is to insure youth and vigor in command positions where the highest physical attainments are essential. Consequently, thousands of able officers are retired at the peak of their proficiency and at ages after which men in other fields make the greatest measure of contribution. Further, these men have been trained by the Government at great cost and many are expert in new applications of science through study and experience. They are men, too, whose loyalty and devotion to their country have been established in military service.

One would conclude that the Government would immediately put these men to use or at least insure the availability of their services like those of other citizens. But what do we find? Under the provisions of the act of July 31, 1894 (U. S. C. 1940 edition, title 5, sec. 62), and section 212 of the act of June 30, 1932 (U. S. C. 1940 edition, title 5, sec. 59a), retired officers of the military services are severely restricted in accepting civilian positions under the Federal Government.

Retired officers cannot hold civilian positions under the Federal Government where either the rate of retired pay or the rate of compensation fixed for the civilian position amounts to $2,500 per annum unless (1) elected thereto, or (2) appointed by the President with Senate confirmation, or (3) retired because of battle injuries or incapacities incurred in line of duty (5 U. S. C. sec. 62; 13 Comptroller General 60; 21 Comptroller General 1129). Retired officers who receive more than $2,500 per annum may not even avoid the application of this statutory provision by waiving their retired pay during the occupancy of the civilian position (14 Comptroller General 289).

Thus, with the minor exceptions noted, we have a situation under which our Government actually has barred itself from utilizing its own trained loyal officer personnel.

Another curious thing is that officers retired for physical disability are employable while those retired for other reasons and presumably the best fitted from the standpoint of physical condition are not employable.

When a retired officer is eligible for employment in a civilian position under the Federal Government, he is subject to the dual compensation statute (5 U. S. C. sec. 59a), which limits the aggregate income from such a position and his retired pay to $10,000 per annum. Although this amount covers adequately the rank and file of cases, it does not permit the employment with appropriate compensation of the most talented in the higher paying Government positions.

More than 8 years ago (March 1947), our president, the late Adm. David Foote Sellers, United States Navy, retired, pointed all this out to the then Secretary of the Navy Forrestal who replied in part:

"I recognize the need for clarification of the subject, as pointed out in your letter, and have instructed the chief of industrial relations to confer with officials of the Civil Service Commission with request that consideration be expedited in order that Congress may consider the specific recommendations made."

After elaborate studies, a recommendation was made to Congress in 1948 which would have repealed the 1894 dual employment statute but the proposed legislation, although it was passed by both Houses of the 81st Congress, failed of enactment because of a small amendment by the House which was not reconciled during the closing days of that Congress.

The subject is again under study and one would conclude that, although it is somewhat complicated, the time should come when the study should cease and action should take place. What is needed and needed promptly is the repeal of both laws. Retired officers should be rendered as available for Federal employment as anyone else. In effect, they should have their citizenship restored to them in this respect. In other words, career service in the military should not result in loss of opportunity to serve.

The executive branch of the Government should lose no time in this matter. It should recommend to the Congress that consideration be given to removing the present restrictions so that the Federal Government may have the benefit of the services of experienced retired military officers and to afford to these officers the same opportunity of service in Government open to all other citizens. Failing the prompt receipt of such a recommendation, Congress, itself, should take the initiative.

An Answer to the Unsubstantiated Charge of Giveaway of Our Natural Resources Levied Against the Eisenhower Administration

---

EXTENSION OF REMARKS
OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1956

Mr. VAN ZANDT. Mr. Speaker, in the interest of the traditional American spirit of justice and fair play I have been greatly disturbed over the unsubstantiated charges of giveaway that are being frequently and recklessly hurled about our natural resources. These politically inspired charges are directed at the record of the Eisenhower administration and as a result of my inquiries I am pleased to furnish the "answer" which in my opinion will permit any fair-minded American to point with pride to the record of the Eisenhower administration in strengthening and advancing the cause of resource conservation. Here is what the record of the Eisenhower administration actually shows:

National park system: the national park system today is larger, more adequately staffed and more efficiently administered than it ever has been. In 1953, the year this administration entered office, 65,000 acres were added to our national park system. The boundaries of the Everglades National Park were extended to take in an additional 271,000 acres. Last year 40,400 acres were acquired. In the first 9 months of 1955, 29,560 acres were added to the park system.

Two new and historically important areas were added to the system with the establishment of Fort Vancouver National Monument in 1954 and Cumberland Gap National Historical Park in 1955. Establishment of Fort Union National Memorial in New Mexico was authorized last year and the National Park Service now is in the process of acquiring necessary lands. The West Virginia portion of the Harpers Ferry National Monument has been accepted for administration pending formal establishment of the area upon tender of the Maryland portion.

Establishment of the City of Refuge National Historical Park, in Hawaii, was authorized in legislation approved by the President in July 1955, and the Department of the Interior has recommended that the Congress authorize establishment of a Virgin Islands National Park. Moreover, the Department has signified its willingness to designate Chimney Rock, Nebr., and Promontory Point, Utah, as national historic sites in non-Federal ownership.

Important progress has been made toward fulfillment of the Cape Hatteras National Seashore Recreation Area project and all but 5,000 of the 28,500 acres within the project boundaries have been acquired. Negotiations for the majority of tracts needed for the Independence National Historical Park are in their final stages.

The integrity of the national park system has been maintained under this administration. Not only have park boundaries been protected and extended but vigorous support has been given the National Park Service in resisting developments which would unjustifiably intrude upon the natural beauty of park areas. Among such proposals which the administration rejected were:

An effort to obtain authority to construct a dam at Glacier View which, if built, would flood 20,000 acres of Glacier National Park. Rejected.

Efforts to obtain permits for construction of tramways at Mount Rainier National Park, Rocky Mountain National Park, Crater Lake National Park, and Grand Canyon National Park. Rejected.

Efforts to modify the newly extended boundaries of Olympic National Park. Rejected.

Efforts to construct a TV transmission tower in Scotts Bluff National Monument. Rejected

Efforts to open Joshua Tree National Monument to mineral prospecting and mining, or to abolish it altogether. Rejected.

Protection of Joshua Tree National Monument was strengthened when 10,000 acres inside the monument boundaries were acquired in exchange for 10,000 acres of federally owned grazing land outside the park.

One of the first acts of this administration was to reverse the unfortunate 15-year cycle of neglect of our parks which was touched off by World War II and prolonged by the Korean conflict. An administration program calling for substantial increases in parks appropriations has been approved by the Congress.

In January 1953 the National Park Service was operating under a fiscal-year budget of $33,162,330.

For the current fiscal year the park budget is $45,029,300—an increase of some 40 percent.

The new budget provides for 4,650 man-years employment in the parks system, an increase of 25 percent over the man years provided in the 1952–53 budget. One result has been to raise the park ranger force to its greatest strength in history.

Increased appropriations have enabled the National Park Service to make a

good start on reducing the accumulated backlog of uncompleted and projected projects for road and trail construction and improvement of public facilities and park housing. Working cooperatively, the Park Service and concession operators have made great strides in development of a more realistic program for the modernization of privately operated facilities in the parks. For instance, in Grand Teton National Park, where travel has increased more than 500 percent over 1946, public use facilities are being developed in a program calling for an investment of more than $5 million in private capital; a building and expansion program under way at Grand Canyon National Park calls for expenditure of about $1 million by the concessioner; and similar forward looking programs are either under way or contemplated in other areas.

Gratifying progress is being made in the task of catching up with the demands being made upon the parks today. But that is not enough. The increasing number of visitors to national park areas—21 million in 1946—about 50 million in 1955—demands action on a dynamic program which will place the Park Service in a position to cope with an expected visitor load of 80 million a decade hence.

Such a program is now being formulated by the National Park Service. Its preparation already has revitalized the Service. Called Mission 66, its objective is to fully equip the national park system to carry out its basic purposes by 1966, the 50th anniversary of the Service.

It is the sincere belief that Mission 66 will prove to be the finest contribution to our national parks since the Service was established as a Bureau of the Department of the Interior in 1916.

Sport fishing: Funds for financing the program of Federal aid to the States for fish restoration have been available at record levels under the Eisenhower administration. Under this nationwide program significant progress has been made in Pennsylvania.

The Pennsylvania Fish Commission has emphasized the creation and purchase of public fishing waters. Federal funds have been used to defray 75 percent of the cost of the following projects:

Project:	Cost
Somerset Lake and Dam	$127,042
Glade Run Lake and Dam	66,647
Glade Run Lake and Dam site (Butler County)	21,614
Ice Dale Lake (Chester County)	21,000
Virgin Run Dam and Lake (Fayette County)	68,166
Somerset Lake site (Somerset County)	75,682
Total	380,151

In addition to the foregoing, project plans have been approved for 2 additional projects, which, when completed, will cost an additional $66,300, as follows:

Goldsboro Lake (Wayne and Monroe Counties)	$30,000
Lower Woods Pond (Wayne County)	36,300
Total	66,300

When completed, the work which has been approved to date will have added materially to the recreational opportunities available to Pennsylvania's anglers.

The Fish and Wildlife Service is conducting a nationwide survey to determine the amount of money and time spent annually by American sportsmen afield and on the water. This survey is being undertaken to determine what help the sportsman needs in the form of legislation. It is hoped by this survey to make the public better aware of the sizable contribution of sportsmen to our national income so that greater attention might be focused on their needs.

Wildlife protection: False rumors of a giveaway of wildlife refuges and a land grab of refuge areas by the military have caused sincere conservationists much undue concern. Again, let us examine such rumors in the light of hard facts on the public records.

Not one acre of wildlife refuge area under the primary jurisdiction of the Fish and Wildlife Service has been transferred to the military since the Eisenhower administration took office.

Since January 1953 the Department of the Interior has established 8 new wildlife refuges and 3 more are in the process of being established. During that period the Department acquired 79,946 additional acres for wildlife preservation through purchase, lease, or transfer of federally owned lands.

Under the Eisenhower administration Federal wildlife refuges have been established for the first time in Kansas and Colorado and new lands have been added to the Federal refuge program in Louisiana, North Dakota, Kentucky, Tennessee, South Carolina, Texas, Washington, Florida, Maine, Oregon, Idaho, Michigan, and New York.

During the fiscal year ending June 30, 1955, wildlife refuges received the largest allocation ever made for acquisition, development, and maintenance. This totaled $6,614,200 and was $2 million more than the refuges had been allocated in the annual budget when this administration assumed office.

It is gratifying to know that during the fiscal year ending June 30, 1955, the Migratory Bird Conservation Commission approved purchase of 30,189 acres of refuge lands at a cost of some $645,000—the largest expenditure of duck-stamp funds for refuge acquisition since 1945.

In administration of a national wildlife-refuge program that has been carried out over a period of 52 years, it must be expected that some refuge areas would outlive their usefulness, especially where they were established to meet temporary emergencies until more efficient areas could be acquired.

In the 6 years preceding the Eisenhower administration, for instance, 36 wildlife refuges were abolished. The total Federal wildlife reserves were reduced by 408,527 acres.

The Eisenhower administration has dropped 7 refuges totaling 6,226 acres, made up of small units of low productivity, where administrative costs were not justified.

Secondary use for wildlife of the 56,954-acre Fort Keogh Refuge in Montana, administered by the Department of Agriculture, was relinquished by the Fish and Wildlife Service because of administrative duplication and limited wildlife values. Wildlife potentials of this area will continue to be maintained by the Department of Agriculture.

The Eisenhower administration has not and will not voluntarily surrender any refuge of proven value to wildlife as long as it continues to meet wildlife conservation needs. Wildlife refuges, as well as national parks and forests, are regarded by the administration as irreplaceable national assets whose value is clearly established.

A refuge of proven value is the Wichita Mountains National Wildlife Refuge. Currently, the Department of the Interior is negotiating with the Department of the Army in an effort to maintain the refuge boundaries intact. In 1953, the Department of the Interior, of which the Fish and Wildlife Service is a part, made known its strong opposition to any reduction in the size of the Wichita refuge, and Secretary McKay has reiterated this position.

In the last session of Congress, legislation was enacted authorizing the expansion of Fort Sill, which adjoins the Wichita refuge. The Army's plans, as outlined before congressional committees, called for the acquisition of some 20,000 acres of privately owned lands and the transfer of some 10,700 acres of the Wichita refuge.

The Fish and Wildlife Service has proposed an alternative plan under which the refuge boundaries would remain intact while the Army would be permitted to set up areas within the refuge from which projectiles could be fired to land on target areas within the military reservation.

The Military Establishments have been cooperative in allowing large areas over which they hold primary jurisdiction to be used as wildlife refuges. It is the hope that a mutually satisfactory solution of the problem at Wichita can be found.

In this connection, a significant agreement between the Fish and Wildlife Service and the Corps of Engineers was completed in August 1954. Under this plan, the transfer of wildlife lands to the Service and to the State conservation departments has been expedited. The Service now assists the Corps of Engineers in conducting hearings at which there is full public consideration of the importance of integrating fish and wildlife protection measures into planning for flood control and navigation developments.

The national wildlife refuges, under the programs of this administration, are contributing importantly to the Nation's recreational needs without interfering with the paramount conservation objectives for which the refuges were established. Last year over 5,200,000 persons visited the refuge areas, an increase of more than 11 percent over the 1953 record of visitors.

Public lands and forests: One of the most important conservation measures in many years—Public Law 167—was signed by President Eisenhower on July 23, 1955.

A major provision of this law gives the Department of the Interior authority to control surface resources on mining claims. This is a conservation tool for which the administration worked ever since taking office.

Another major provision, removed commonly occurring minerals such as sand, gravel, and cinders from the general mining laws and placed them under jurisdiction of the Materials Act of 1947.

Now, at long last, the Government has authority to end many of the abuses which had developed over the years under the old mining laws. Prior to enactment of Public Law 167, location of a mining claim conferred upon the locator rights of exclusive possession of the surface. It was possible to establish claims for low-value minerals and acquire far more valuable surface resources, such as rich timber stands, or a summer home or business site, or a water hole on grazing land. Many such claims were established in our national forests and under the law the Government was required to honor them.

The Government now has the authority, prior to issuance of a patent on a mining claim, to manage the surface resources of the claim. This includes, of course, the cutting and sale of timber, grazing of livestock, and use of the surface of the claim for access to adjacent lands.

Important measures for the conservation of the open public rangelands of the West have been taken by the Eisenhower administration. The Department of the Interior's new 20-year program for soil and moisture conservation is but one of the progressive steps that have been taken to conserve our important natural resources. Under this program, the Federal range is being reseeded and effective measures are being taken to halt heretofore unchecked erosion of the soil.

Good conservation calls for wise use without abuse of the vast expanses of public domain land beyond the boundaries of national park and wildlife refuge areas. Many citizens do not realize that the Federal Government still retains control of about 1 out of every 4 acres in the United States. As our population expands, so do public demands for use of undeveloped Federal acres. A number of laws provide that public domain lands must be transferred to private ownership when all requirements of those laws are met. The Department of the Interior has the responsibility of so classifying the vacant public land that it is put to its highest use possible under the law. Often when the administration complies with the law—and I am sure that no citizen would want it to do otherwise—the cry of giveaway is raised in some political quarters. It is significant that not one allegation of giveaway has been, or can be, substantiated.

Water resources: Regarding the problem of water as a diminishing resource, the Eisenhower administration has also been moving forward on that front. Realizing the importance of the Nation's water resources and that the conservation and use which we make of them may in large measure determine our future progress, President Eisenhower last year established a Presidential Advisory Committee on Water Resources Policy.

The President realized that policies in this field have been modified repeatedly and that unfortunately the Government has often relied on piecemeal or stopgap measures. Accordingly, he charged the committee with the task of undertaking a comprehensive review looking toward strengthening and modernizing Federal policies and programs in the field of water resources.

The Presidential Advisory Committee's report is now nearing completion and will provide the administration with a sound basis on which to make recommendations for the solution of these tremendously important and complicated problems.

In conclusion this report of progress will do much to convince the American people that the Republican administration is faithfully exercising its stewardship of the Nation's natural resources. Our record is ineed creditable and it is up to us to bring it to the attention of the people thus revealing that the charges of giveaway are wholly unsubstantiated.

Now Retired Officers Are Sought

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Army-Navy-Air Force Journal of January 7, 1956:

NOW RETIRED OFFICERS ARE SOUGHT

The Department of Labor's action in having its Bureau of Employment Security undertake a program for seeking out retired officers and other former Armed Forces personnel to fill some of the hundreds of vacant teaching positions in the Nation's secondary schools is most commendable.

There must be literally thousands of retired service personnel skilled in mathematics and sciences who would make excellent teachers. Certainly, anyone who has served a career in one of the military services must have attended a number of service schools and many of them have had experience teaching in them.

The ironical twist is that here we have an agency of the Federal Government recognizing the special qualifications of retired service officers and actively working to get them placed in the school systems of the various States. Yet the Federal Government itself has erected formidable barriers to keep the majority of such officers from its own employment.

The act of 1894 says that retired officers may not accept Federal civilian jobs where the retired pay or the civilian position amounts to $2,500 or more unless it is an elected office or appointed by the President and confirmed by the Senate or unless the officer was retired for battle injuries or disability incurred in line of duty. Furthermore, the Economy Act of 1932, as amended last year, provides that even those permitted Federal employment by the 1894 act may not draw more than $10,000 in combined retired and civilian pay.

The result is that hundreds of qualified officers are kept from Federal jobs they could fill efficiently and honorably. They are barred by the same Federal Government which is now seeking to find them jobs in the States.

Both the House Armed Services Committee and the Civil Service Commission are studying this problem. Some action may be expected at this session. We hope both of these restrictive laws will be repealed and retired officers placed on a par with others in the matter of filling Federal Government positions.

Address by Hon. Herbert H. Lehman, of New York, at Civil Rights Rally of the Conference on Civil Rights

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, January 12, 1956

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of remarks I made at a civil rights rally held at the Manhattan Center, in New York City, on Thursday, December 15, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is my pleasure and privilege to be here tonight at this rally sponsored by the Leadership Conference on Civil Rights, in a cause to which I am committed with all my heart.

I began fighting for Federal civil rights legislation 7 years ago, as soon as I became a Member of the Senate. Your organization, the Leadership Conference on Civil Rights, was brought into being at about the same time. Our efforts, mine in the Senate, and yours, within the framework of this leadership conference, have been both contemporaneous and collaborative.

In these 7 years, marked progress has been made toward the goal of equal human rights for all our citizens. Indeed, we have moved steadily forward during the past 30 years.

One redoubt after another has been captured in the assault against the destructive institutions of discrimination and segregation. One area of activity after another has been liberated, or partly so, from these degrading practices. This progress has been made, and continues to be made, as a result of action by State and local law-making bodies, administrative agencies and officials, and by the courts of the land.

This progress has been made possible—indeed it has been forced—by the militancy of the groups you represent, armed with the massive support of public opinion. And to you, and the groups you represent, will belong an important share of the credit for the future progress that will and must be made.

But in giving credit, let us not forget to name one individual—one very dear to me, and to many of you—the founding and driving spirit of the leadership conference from its inception until his untimely death—a rare spirit with a dream in his heart and unquenchable courage in his soul—the late, beloved Walter White.

Yes, there has been progress. But the distance left to go is farther—much farther—than that which we have already come.

I believe, with all my heart, that the fight for equal human rights must be pressed, in full vigor, and at all levels—in the executive branch of Government, in the courts, and in every law-making body throughout the land. And I mean to include not only the State legislatures, the city councils, and the school boards, but also, and even primarily, the Congress of the United States.

I believe that the whole struggle for civil rights—for equal treatment under law and equal opportunity for every man, woman, and child, regardless of race, creed, or national origin—must be carried forward relentlessly and tirelessly until victory is won. There must be no delay in this struggle for reasons of political expediency—or any other.

The demand by one-eighth of our population for the full minimum rights of citizenship—and for all the protections which our Constitution affords to each and all—cannot be postponed, denied, or repressed.

The electric shock which passed through a major section of our people as a result of the shameful murder of Emmet Till and the acquittal of his assailants has given new meaning to the demand for equal justice under law for every American.

We must and will demand action in the months ahead, including, as I have said, in the Congress of the United States. That is my forum of action—the Senate. I pledge you my efforts, for what they are worth, up and down the line, on this front.

I have referred to the progress that has been made in the past. Congress has played a role in this progress. Its role has been to supply pressure and to exert, through the threat of national FEP legislation, for instance, a strong impetus for action at other levels and on other fronts.

But it is an astounding fact that Congress has not passed one single piece of major civil rights legislation—not one—not only in the last 30 years, but in the last 78 years. Think of that.

You all know the reason for that—the filibuster, and the threat of the filibuster—in the Senate.

That weapon is still available to those who desperately oppose civil rights legislation.

The only cure for the filibuster is a change in the rules of the Senate—an antifilibuster or cloture rule—a change in rule 22. For the past 5 years we have concentrated on getting such a change in the rules—but, thus far, in vain.

There wasn't much of an effort last year, in the first session of the Congress. I doubt whether there will be much more of an effort in the next session.

I hope that in 1956 a Congress will be elected which will make such an effort, and succeed. But that is up to you and to all the voters of the United States. The civil-rights issue must be framed in 1956, and the voters must give a clear mandate for action by the Senate on, among other things, its own rules of procedure. If such a mandate is given, an effective antifilibuster cloture rule can and will be adopted.

But I want to say a few words about the session of Congress that will meet, not in 1957, but next year—in fact, in about 3 weeks from tonight.

A great number of civil rights bills were introduced in the first session of this Congress which ended last August. These bills are pigeonholed in committee. With some exceptions and modifications, these are the same civil rights bills which have been before the Congress for a number of years. Included among them are FEP bills, anti-poll tax bills, and antilynch bills.

I doubt if any substantial legislation on these subjects will get very far, or even be given much genuine consideration. I hope that my prediction will turn out to be wrong; I will do my best to prove it wrong, but I'm afraid it is going to be sadly right.

There are, however, some less controversial civil rights measures which might be favorably acted on. One is a bill I have introduced to make it a Federal offense for a civilian or group of civilians to attack or assault a GI while on duty. This is a common occurrence in some parts of our country, especially if the GI is of a minority race or national origin. Local sheriffs and police officers are frequent offenders in this regard, and the bill I have introduced would provide GI's with the protection of Federal law. There is some prospect that such a bill might pass since the Defense Department has been in favor of it.

A second measure which might pass is a constitutional amendment prohibiting poll taxes. The majority leader of the Senate, Senator LYNDON JOHNSON, has announced has announced that he will use his influence in behalf of such a measure.

With his support, and that of the majority policy committee, such a constitutional amendment might well pass the Senate, and the House, too. Such an amendment would then require the approval of the legislatures of 36 of the 43 States of the Union. Whether ratification by such an overwhelming number of State legislatures is practically possible, I do not know. It would, of course, be much easier for Congress to pass a simple law outlawing the poll tax. I, myself, would prefer such a course of action, but there is not much chance of that in this session.

But even approval of a constitutional amendment would represent some action on this front by the Congress. As such, I will vote for such a constitutional amendment, if it is, in fact, brought up for a vote. But let me make myself clear.

I am not going to be content—and I don't think you are going to be content—with congressional action on a constitutional poll-tax amendment if such action is offered in satisfaction of our demands for substantial and significant civil-rights legislation.

The time has come for Congress to take some real action on civil-rights legislation, and this Congress, at this forthcoming session beginning in January, is going to be faced, whether some like it or not, with some meaningful honest-to-goodness civil-rights issues.

There is going to be a demand, I am sure, for a strenghening of the civil-rights section of the Justice Department, so that there can be no doubt of the right of the Federal Government to act in such cases as the Emmet Till tragedy.

I favor such legislation, and am a sponsor of a bill to this effect.

There is also the matter of an antisegregation amendmnet to the school-construction bill.

There are pending in Congress several measures for Federal grants of money to the States to help build more public schools. There is nationwide support for this legislation. We are, indeed, in critical need of more and better public schools for our children.

I strongly favor this legislation, in the version proposed by Senator HILL.

Yes; I favor the principle of Federal aid to help build more and better schools for all our children. But it seems almost elementary to me that for the very purpose of improving and expanding our public-school facilities, it is essential to carry out the decision and decrees of the Supreme Court with regard to school segregation.

The question is: Shall we distribute tax money, raised by taxation of all the people, to States which are trying to avoid, evade, and defy the Supreme Court decree? Shall we help some States and school districts perpetuate segregation and defy the law of the land? Shall we in Congress say that school segregation is not our concern but only the business of the courts? Shall we in Congress stand above the battle and let the issue be fought out exclusively in the courts?

To these questions, I, personally, answer with all the fervor at my command, "No."

I am going to propose an antisegregation amendment to the Federal school construction bill, even if I am the only one in the Senate to support it. I shall offer such an amendment, although I reserve decision as to the time and place for offering this amendment, whether in committee or on the floor of the Senate. And I shall fight for it, with all the strength I have.

But believing with equal fervor in the cause of Federal aid to education, I shall vote for and support a Federal aid to education bill, even if, despite my efforts, the anti-segregation amendment is defeated. I want to be frank with you about that.

Now I said a few moments ago that the kind of Congress that is elected in 1956 will determine the kind of action that is to be expected on major civil rights legislation in the Congress that convenes in January, 1957. And I indicated that the voters and citizens have it in their power to determine the kind of Congress that is elected and the kind of mandate that is given to that Congress.

But I am well aware that in some parts of our country there are large groups of potential voters who are denied the right to register and vote—not by the poll tax, but by naked intimidation—moral, physical or economic.

Among the areas in which this is true are some in the North, but mostly in the South.

This is not democracy. It is a subversion of democracy.

I propose that we remedy this situation. I propose that we establish Federal machinery to insure to every citizen protection against intimidation, direct or indirect, physical or moral, in exercising his constitutional right of voting and participating in the political life of community, state, and nation.

I propose that a Federal electoral commission with enforcement powers be established for this purpose. I am going to introduce legislation to accomplish this purpose. I have been working on a draft bill. As soon as I perfect it, I am going to introduce it. I don't know how far it will get in the coming session, but such a bill must be passed eventually. I commend this measure to you. I hope that the organizations represented here tonight will consider such a proposal worthy of support.

My friends, I have not given you an optimistic report on the prospects of major legislative action on civil rights in the coming session of Congress. But I have not meant to be discouraging, only realistic. I offer no counsel of despair, but I believe we should see the situation for what it is and commit our forces and energies accordingly.

Speaking for myself, I believe the struggle has got to be waged—not sometime in the distant future, but next year, now, beginning tonight. I believe, and strongly feel, that we need to offer full-scale battle in this good cause, no matter how great the odds, nor how bleak the prospect.

The greater the difficulty, the greater the challenge. Let us hereby resolve with sober and measured determination, that we will not give up, nor diminish our effort nor lose hope, nor surrender—until victory is ours.

In these efforts, we know we are on the side of right. We know that we are animated by high moral purpose. We know that much of the world watches what we do, and measures our country by the dedication we show in this cause. Let us not flag nor fail.

Postal Policy

EXTENSION OF REMARKS
OF

HON. W. KERR SCOTT

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, January 12, 1956

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the Appendix to the RECORD a speech on postal policy made during the recess by my distinguished colleague, the Senator from South Carolina [Mr. JOHNSTON]. I also ask unanimous consent to have printed also an editorial from this month's Progressive Farmer, Dr. Clarence Poe's great southern farm journal, complimenting the Senator on his forthright stand regarding the so-called postal deficit.

There being no objection, the address and editorial were ordered to be printed in the RECORD, as follows:

ADDRESS BY HON. OLIN D. JOHNSTON, OF SOUTH CAROLINA, DELIVERED AT THE ANNUAL MEETING OF ASSOCIATED THIRD CLASS MAIL USERS, THE MORRISON HOTEL, CHICAGO, ILL., SEPTEMBER 13, 1955

Ladies and gentlemen, your association was kind enough to invite me to be its speaker at Milwaukee in October 1952. I looked forward to that meeting, but unforeseen developments made it impossible for me to join you. I understand my very able colleague, Senator DENNIS CHAVEZ, of New Mexico, addressed you on that occasion.

When you met in Detroit in 1953, you were fortunate to have Senator FRANK CARLSON, of Kansas, as your speaker. I read the fine address he delivered on that occasion. Although Senator CARLSON and I belong to different political parties, we hold similar views regarding the need for an improved postal establishment. I can assure you that the members of our Senate Post Office and Civil Service Committee will continue their efforts to achieve a realistic, modern postal policy for the United States.

Your association's practice of inviting to its annual meetings speakers from the legislative and executive branches of Government is a wise one. I know of no more complex or more misunderstood subjects than the creation of a modern postal establishment and the continuing request for higher postal rates. More often than not the prepondenance of pressure on these issues is exerted by appointees in the executive branch. Since all wisdom does not repose in these public servants, the Congress is extremely anxious to recruit the ideas, the thinking and the cooperation of persons and business firms whose own livlihood, plus that of their millions of employees, depends on what we legislators do in Washington.

The Congress has refused to be stampeded into hasty and ill-advised action. It has stood firm in the face of the severest pressures by the administration to have legislation enacted divesting Congress of the ratemaking power and hiking mail rates to ruinous levels.

The Constitution clearly directs that the Congress shall have full responsibility for United States postal policy.

You have my personal assurance that I will fight to the limit of my endurance to protect that prerogative.

Both major political parties are anxious that post office operations be modernized, that improvements long overdue be inaugurated. Unless we agree in the beginning that there are broad areas where economies can be achieved through modern business practices, it will be impossible to tackle the problem intelligently. Certainly we cannot legislate on postal rate legislation wisely until a sound course has been set for the Department. If, as many qualified observers believe, $250 million can be saved by elimination of waste in the postal establishment, it is unfair to the taxpayer to do nothing about it and then require the users of the mails to pay for such waste through increased rates.

The keystone of the Administration's present program is what they choose to call "temporary" rate increases. The enactment of this rate bill would only compound the ills which plague our postal service. There would be a declining volume of mail and, at the same time, a spiraling of postal costs. If Congress should relax its inquiry into postal problems, top officials would continue to ignore defects which are so costly and make for poor postal service.

A complete overhaul of the Department is in order. Like Barkis in David Copperfield, Congress is willing, yet all attempts to get underway have met with the firmest resistance by the present Postmaster General.

This is not simply political talk. It is not the natural aversion for one who foully characterizes my political party as "the party of treason." Testimony from all sides is available to show that Mr. Summerfield has played fast and loose with the facts to trick the public into believing that the postal establishment, under his guidance, has achieved almost revolutionary improvement.

There came a time a year or so ago when the Post Office Department was issuing press releases designed to convince the unwary that their management policies had produced savings of $1 million each working day. I took them to task on that one. I simply pionted out that they had conveniently neglected to show that $70 million of airmail subsidies had been transferred from Post Office accounts to the Civil Aeronautics Board, that $36 million of franked and penalty mail, in a bookkeeping transaction, had been moved elsewhere. He neglected further to state that postal rate increases totaling over $200 million ordered by the 82d Congress are also included in the million dollar a day savings.

In a speech at Buffalo on August 17, Mr. Summerfield stated: "You will recall that earlier I stated that the postal deficit was $727 million for the fiscal year 1952, the last full year before we assumed responsibility.

"In 1954, when the effects of new management policies were first reflected, the deficit was reduced to $399 million. This is a 45 percent reduction in 2 years."

He never seems to be bored with claiming that his policies have reduced the postal deficit.

Sometimes I feel like taking him at his own word. I am inclined to say, "Mr. Summerfield, you are an amazing administrator. In only 2 short years you have lopped $328 million off the postal deficit. Why, give you another 2 years to work your wonders and we will have this deficit licked."

In one of their first official appearances before a congressional committee, post-office spokesmen assured the House appropriations group they could achieve savings of $200 million within 2 years. They have a very neat formula for postal economies. They ask the Appropriations Committees of the House and Senate for a certain amount of money to operate the Department, based on a predicted volume of mail in the ensuing year. Invariably the estimates of the volume of mail have been too high. Since the Department gets more money than it needs, it always has funds to turn back to the Treasury—although never quite equal to the overestimate of volume.

The most ridiculous waste of postal funds is the way the Nation is presently being bombarded with press releases.

But publicity will not solve the postal troubles.

Let me tell you of some things we have done about the postal problems and what we propose to do in the months ahead.

You will recall that the last Congress approved Senate Resolution 49. That measure provided for an investigation of the postal establishment under the guidance of a Citizens Advisory Council. The Advisory Council came up with some startling findings. They urged many reforms. They set the groundwork for a realistic, modern, business-like, efficient postal service. That report was severely criticized by the Department. Many of the suggestions have been adopted. On the major issues, however, the Department has refused to act. I was shocked when the work of the very fine Advisory Council under Senate Resolution 49 met wtih such strong opposition from the Department. If the major recommendations had been adopted, we would now have a sound postal policy.

As I have said, this is not a partisan issue. There have been Democratic Postmasters General, too, who failed to inaugurate needed reforms.

That the issue is bipartisan is best evidenced by the unanimous approval given both House and Senate resolutions in the last session of Congress to further investigate the potsal service. Our Senate Post Office and Civil Service Committee is operating under Senate Resolution 33. I can assure you that we are not taking our task lightly. As agents of the United States Senate, we are expected to do as complete a job as possible and to make recommendations for the permanent improvement of the postal service . The Congress is anxious to dispose of this issue once and for all.

Here are some of the questions we will try to answer:

1. Is the manpower of the Department—500,000 employees in all—being utilized efficiently?

We know that postal workers are hard working and loyal Federal employees. For too long a period they were denied a rightful increase in their salaries. In spite of two presidential vetoes of pay bills, they finally had their salaries hiked. I am as sure of this as anything: If we give them the tools, better supervision, more modern working conditions, they will outproduce anybody. Their morale has necessarily been low. Their top boss has managed to convince a large segment of the public that the Post Office Department is the least important of Government agencies. The contrary, of course, is true.

That postal workers have continued working on so loyally in the face of the inability of Department officials to assess their true worth and the wonders performed by the postal establishment for the American economy is tribute to their tenacity.

2. Is the potsal service purely a business, or is it a service to all the people?

In this area, we have got to pin-point those services performed by the Department under legislative mandate at a calculated loss in the public welfare. We know, for instance, that only about 2,000 of the 40,000 offices take in sufficient revenue to meet their overhead.

We know that rural free delivery was established to serve millions of people remotely situated throughout America. The Congress knows that this service will never be able to show a profit. We should stop calling the cost of these needed services a deficit. Rural delivery is no different from the lighthouses operated by the Treasury Department. Shipowners do not pay a fee every time they pass one of them. They are operated at a calculated loss in the interest of better, safer shipping. The benefits of the postal service to the people are every bit as

direct as is the lighthouse service to the ship owner and the sailor, and they do exist.

The Congress has established low rates on many categories of mail. In these instances the question of profit has been shoved aside. I refer, of course, to free mail for the blind, free-in-county newspapers, philanthropic, educational and religious mail.

Under our agreements with the Universal Postal Union, the United States knowingly takes a calculated loss.

There are many, many more such items. Added up, they cost many millions of dollars. They are worth-while services. They will be continued by the Congress. I enjoyed reading in one of your trade magazines, the Reporter, a short list of nonpostal services performed by the Post Office Department. Permit me to read from the article:

"The Armed Forces ask that relatives of deceased men be located.

"The Housing Administration asks that former tenants be found.

"The Treasury pressures the sale of savings stamps and documentary stamps.

"The Department of the Interior depends upon the post offices to sell bird-hunting stamps.

"The Veterans Administration asks that we deliver flags for veterans' funerals.

"The Civil Service requests that we supply blanks and information on every vocation from lens grinders to linguists.

"Charitable organizations ask that money be received and transmitted for Heart, Polio, and Cancer.

"We count doves for the Agricultural Department.

"We answer inquiries from Selective Service.

"We give applicants blanks for alien registrations and their changes of address for the State Department.

"Even the Federal Bureau of Investigation enlists our aid and the 1040's we give away for Uncle Sam.

"What would happen to the revenues, if every post office didn't have income-tax blanks available on January 1 to April 15?

"Widows and children are certified in January and July for continued pension benefits.

"The Post Office Department operates the biggest savings bank in the world. Money orders are sold and cashed in the most remote places. The big mail-order houses look impressive, and they are, but the little people in the little places, using the money-order and parcel-post services, make them possible and big.

"The Post Office Department is the Government agency which deals most closely with every American citizen."

The only difficulty is that when the Post Office Department incurs these expenses on behalf of the people, the term "deficit" is used. With respect to expenditures for all other Government agencies, the nicer word "appropriation" is employed.

Post Office Department officials have made a bogeyman of the postal deficit. If they would only announce—as they should—that their Department creates more in wealth, taxes, and employment than any other Federal agency, people would realize that for millions spent, billions are earned.

3. In the dull realm of accounting, statistics, regional management, classification, etc., our committee expects to uncover many glaring deficiencies.

4. The controversy over parcel post is another of the many questions our committee will examine.

The Hoover Commission hints that parcel post should be discontinued. The Railway Express people contend that parcel post competes with private enterprise. The Postmaster General, in effect, recommends repeal of Public Law 199.

Representatives and Senators, snowed under by the pros and cons of the fourth-class issue, are looking to our committee for some sound recommendations.

Our committee will be calling on many of you for help and guidance. We feel confident you will give us all-out cooperation.

These are just a few of the matters our committee and the House committee will look into. We fully expect that any recommendations we make to the Senate and House will be favorably received.

I suppose your own industry is the best evidence of how much good can be created by Government acting wisely in the people's interest.

Direct mail has been the subject of attack in the press and, sometimes, in the halls of Congress. For the most part, these attacks have been unfair. Your very success has probably stimulated many of them.

I should like to outline some of the facts regarding third-class mail, not necessarily for your own edification but rather for those outside the industry who at some future time may read these remarks.

Many people have been led to believe that you are taking a free ride. They assume that it costs as much to handle a third-class letter as it does a first-class mailing. They fail to realize that the factors which prompted the creation of this category of mail warrant charging a lower rate of postage for it.

Back in the depression-ridden thirties someone figured out that there wasn't a sufficient volume of mail to keep each postal employee fully occupied for an 8-hour period. It was recognized that first-class mail doesn't flow in evenly all day. At certain peak periods it floods in. This first-class mail properly receives preferred treatment. During peak periods, every clerk was needed to speed first-class mail on its way. The job was usually completed in several hours. How to keep these clerks profitably occupied during slack periods?—whoever answered that question would raise revenues for the Department not otherwise obtainable. Lower rates during the evening hours paid off for the telephone and telegraph companies. Why not for the Post Office Department? The charge for a 50-word telegram at straight rates from Washington to San Francisco is $3.45. The same 50 words at night rates, which received deferred service, cost only $1.30. Why the lower rate? Overhead remains the same, and employees get higher rates of pay.

The answer was, of course, obvious. It was better to use these expensive facilities at a lower rate than not at all.

The same thing applies in other fields. You pay less to see a movie in the afternoon than at night. Natural gas companies often contract on the basis of lower rates during slack periods.

The reverse principle is sometimes applied. Barbers may charge more for children's haircuts on Saturdays. They figure the youngsters can come in after school any day when other customers are scarce.

It was this economic principle which prompted Congress to lower the minimum piece rate on bulk third-class mail to 1 cent. In order to qualify for the special rate, the mailer had to sort the mail into State and city bundles, face the letters on either side of the bundle, tie the bundles, use printed indicia or precanceled stamps (this eliminated the canceling indicia expense), place the bundles in mail sacks, and deliver them to the post office. All that was left to be done was to put the sacks on an outgoing train. In other words, the mailer himself had to do 7 of 11 expensive handling operations. These rules still apply to third-class mail. In addition, third-class mail is not handled until all other mail is out of the way. This category of mail is sort of a byproduct of the postal service, a fill-in operation, if you please, to keep valuable clerks busy in periods when they might otherwise be idle.

The results of this congressional action have been fantastic. The volume of third-class mail has increased from 4½ billion pieces in 1944 to 13 billion pieces in 1954. Direct mail today is the second largest advertising medium, surpassed only by newspapers.

This phenomenal growth of direct mail undoubtedly stems largely from the fact that countless small-business men have been able to use it profitably.

Large corporations have advertising budgets which permit nationwide television, radio, and magazine coverage. Direct mail permits the smallest company to market its goods in any or every part of the Nation on a small budget.

In this era of big-business mergers, it is essential that small-business men be encouraged and protected. A Democrat-controlled Congress will, as it has in the past, be always on the alert against efforts to destroy our Nation's greatest asset, its small-business men.

Only in the aggregate may it be said that you are big business. The vast outpouring of direct mail by the 250,000 bulk permit holders means millions of jobs for those creating the advertising and those Americans who produce the goods and services sold.

In 1944 the Post Office received $62 million in revenue from third-class mailers. By fiscal 1955 the figure had reached $250 million.

If we were to further raise the rate for third-class mail, we might very well set off a disastrous chain of events which would cause a reduced volume of such mail, unemployment, and lower taxpayments. As recently as July 1952, we raised the rate on third-class mail by 50 percent. I tried in that particular Congress to hold the increase to 25 percent, but without success. I am certainly opposed to increasing it the full 100 percent over the original 1-cent rate, as the Postmaster General wants to do.

It is highly doubtful that the overhead of the Department would be reduced to any extent if third-class mail were legislated out of the service entirely. The only sure result would be the loss of one-quarter billion dollars in revenue to the Department, aside from the economic hardships you businessmen would endure. Postal rates should not be changed until a sound postal policy has been established by Congress.

It has been a pleasure being here today. I only wish other Members of Congress had an opportunity to meet with you in person, to learn of your business operations. Since all of you cannot get to Washington, you are well advised to continue your trade association there. When the advisory council was functioning during the last Congress, your director, Mr. Jack Tillotson, was a source of unending information. He worked as hard as anyone on the advisory council. He deserves a vote of thanks from all.

Your executive manager, Harry Maginnis, has cooperated fully with the House and Senate Post Office Committees. His testimony before the House group in July 1953 was a gem of logic presented in your behalf.

Senators and Representatives are busy considering many problems. It is particularly important, therefore, that associations such as yours continue to exist. We are constantly bombarded with propaganda from the executive branch of Government, and it is essential that we hear from you.

If ever the time comes when we hear only one side of the postal picture, I am afraid it will be a sad day for small-business men like yourselves.

I wish you a successful meeting. Keep the mail rolling. We will do all we can in Washington to keep you in business.

Post Office Department: Service or Business?

The Post Office Department costs the Federal Government several hundred million

dollars a year more than it receives from those who use the mails. The postal deficit has led to a demand for increased postal rates on the first-class mail, such as letters; on second-class material, such as magazines; and on circular letters and other third-class mail. You have also heard it claimed that present rates give a huge subsidy to those magazine publishers that deliver their publications to subscribers through the mail. Farm organizations have taken certain publishers to task for opposing subsidies to farmers, claiming publishers themselves are the recipients of millions of dollars in postal rate subsidies.

All this leads to some very pertinent questions that should be earnestly considered by all users of the mails, including Progressive Farmer subscribers.

Is the postal service purely a business, or is it a service to all the people?

If it is purely a business, then the logical thing to do is to insist that the Post Office Department put into effect every possible economy consistent with good service. Then charge the users of the mail what it costs to deliver it. But before you decide that the postal service is purely a business, let's see what services it gives, to whom they are rendered, and why they cost so much.

First off, Progressive Farmer readers should know that there are 40,000 post offices in the United States. And only about 2,000 of them take in enough revenue to meet their overhead costs. Perhaps your own post office is one that does not pay its way. Why then is it kept open? Certainly, not as a service to magazines, such as the Progressive Farmer. Monthly magazines can be delivered from 20,000 post offices just about as effectively as from 40,000. If you have a post office that costs the Government money, it is not as a favor to magazines. It is because the people in your community want it. It renders services they would not willingly give up.

The rural free delivery was established to serve millions of people living a good way out from town. Congress knows that it would be out of the question to raise rates enough for this service to show a profit. Yet, if the postal service is purely a business, shouldn't rural free delivery show a profit?

As Senator OLIN D. JOHNSTON, of South Carolina, chairman of the Senate Post Office and Civil Service Committee, so aptly illustrates, "We should stop calling the cost of these needed services deficit. Rural delivery is no different from the lighthouses operated by the Treasury Department. Ship owners do not pay a fee every time they pass one of them. They are operated as a calculated loss in interest of better, safer shipping. The benefits of postal service to the people are every bit as direct."

There are a number of categories of mail that are either carried free of charge or at very low rates. An enormous volume of official Government mail—correspondence and publications of Congress and all Government agencies, and organizations—is carried free. Other such mail carried free of charge or at low rates includes free-mail-for-the-blind, free-in-county newspapers, charity, educational, and religious mail. And there are many other nonpostal services performed by the Post Office Department from which it receives no revenue. Here are just a few of them; as listed by Senator JOHNSTON:

1. Relatives of deceased men in Armed Forces are located.

2. Former tenants are located for the Housing Authority.

3. Doves are counted for the USDA.

4. Post offices receive and transmit money for heart, polio, and cancer organizations.

All these services cost money. If they were rendered by any other department of the Government, their cost would be taken care of by congressional appropriations. But when the Post Office Department incurs them, they become deficits. And those who use the mails are held responsible.

There is nothing wrong in the Federal Government spending money for these good services. And it is entirely proper for the Government to have 38,000 money-losing post offices, if they are a service to poeple and the people want them and are willing to pay for them. But it is decidedly unfair to say that the cost of these services to all the people should be charged largely against the comparatively few concerns that must use the mails to conduct their business.

Is the postal service purely a business, or is it a service to all the people? Until this question is answered by Congress, there can be no sound basis on which to establish postal rates. If the Post Office Department is a service to all the people, it does not follow that publications such as the Progressive Farmer should be carried free of charge. But it should mean rates somewhat lower than are necessary for the Post Office Department to show a profit. And it would also be recognized that the deficits of the Department are not a subsidy to publishers, but rather a service to the people that creates more in wealth, taxes, and employment than any other Federal agency.

Insofar as the Progressive Farmer is concerned in postal rates, we can say this: If we have been subsidized by low postal rates, it has not gone into the pockets of Progressive Farmer owners. If we have received a subsidy, then that subsidy has been passed on to our subscribers in low subscription rates. We give 60 big issues of from 100 to 200 pages an issue for the low cost of $2. That's 3⅓ cents an issue. To send a 176-page issue to a subscriber costs the Progressive Farmer 20 cents.

Three increases of 10 percent each were made in second-class postage rates in 1952, 1953, and 1954. The Progressive Farmer does not oppose further increases, if they are found necessary after Congress has established a sound fiscal and postal policy for the Post Office Department. But we do object to the continual agitation of the rate question by the Postmaster General and his attempt to make it appear that publishers are the recipients of huge Government subsidies.

Japan's Garment Worker Problem

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, January 12, 1956

Mr. LEHMAN. Mr. President, I am sure many Members of the Senate are aware of the problem resulting from the large-scale importation into the United States of Japanese blouses in recent months. This situation has given great concern to many citizens of my State, including members of the International Ladies Garment Workers Union.

In connection with this problem, I ask unanimous consent that there be printed in the Appendix of the RECORD a reprint of an article dealing with this matter, which appeared in the December 20 issue of the Christian Science Monitor.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BUSINESS HORIZONS: JAPAN'S GARMENT WORKER PROBLEM

(By Gordon Walker)

TOKYO.—Fumiko Tamashita, age 17 and just out of high school, is a worker in what is known as Japan's garment industry.

Like hundreds of other young girls in the smoky outskirts of Osaka, she races through a breakfast of cold rice and then takes a crowded tram to her factory. It really isn't a factory; it is a poorly heated and poorly lighted shed in which 28 girls gather each day to sew, cut, and pattern cotton blouses.

One might also say that there really isn't any garment industry, either. It is really only an adjunct to the textile-producing industry—a sort of cottage industry to which contracts are let out by the big spinning mills.

Unlike employees of the big textile mills with their labor standards laws, their company mess halls, and dormitories, the garment workers of Japan are in a different class. There are no such things as labor standards, no unions, no wage levels except very low ones, and no such thing as fringe benefits.

Fumiko gets an average wage—$9.25 a month for working 6 days a week at an average of 10 hours a day. She is a sewer in the establishment of a small enterpriser who manufactures cotton blouses on contract for one of the Big Ten textile manufacturers. When the blouses are finished, they are delivered to the textile firm which in turn processes them, packages them, and exports them.

Even with a liberal markup for local profit, the American importer gets the blouses at a ridiculously low cost, based upon the fact that Fumiko and others like her work for what amounts to slave-labor wages.

Women who work in the big textile mills make an average monthly wage of $34 for an 8-hour day. But in the subcontracted garment shops, a girl may make as low as $7 a month, and a maximum of $20. With thousands of young girls pouring out of the schools of Japan each year, the cottage-industry employer has little difficulty finding girls who are willing to lash themselves to his machines.

The problem which this poses, meanwhile, is only too obvious. American garment industry representatives are now protesting vigorously over what they consider to be Japanese dumping. And they have a case. They are justifiably concerned over the fact that there are American importers who are willing and eager to accept Japanese blouses, manufactured under repressive labor conditions, and who in some cases put on American labels as a means of disguise for otherwise discriminating buyers.

The fact that the Japanese have voluntarily cut down on textile exports to the United States in recent weeks is not enough. And the claim, made here, that Japan is not dumping but merely engaging in free trade based upon an advantageous wage structure, is also unlikely to make for better international understanding.

What appears to be happening is that by pushing its garment exports to the United States, Japan is building up protectionist sentiments not only among American textile organizations, but over a much larger cross section of American industry.

It is too much to expect that the benevolence of Japanese garment manufacturers will result in Fumiko and her fellow workers receiving a substantial raise. That will come only through pressure from trade unions which so far have not penetrated into the dismal back streets of Osaka's industrial metropolis.

It is possible for the Japanese Government to move in, as it has in other industries, and impose a series of controls. Government interference is not something which private

manufacturers normally welcome. And yet in Japan today there appears to be little alternative. A refusal on the part of the Japanese to recognize the damage they are doing to their own export program in the matter of large-scale garment sales abroad may result in injury to a wide range of other sales ranging from toys to cargo freighters.

Shipbuilding Report

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Thursday, January 12, 1956

Mr. BUTLER. Mr. President, the importance of the American merchant marine to our national economy and our national security is no less today than it was last year, or for that matter, during the last decade. For the sake of the future, our fourth arm of defense must be preserved, and all of its supporting industries must be encouraged. In this regard, I ask unanimous consent to have printed in the Appendix of the RECORD an interesting editorial on the subject of Shipbuilding Report, which appeared on November 17, 1955, in the Pilot, a fine weekly newspaper published at Union Bridge, Md.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SHIPBUILDING REPORT

A short time ago the Federal Maritime Board, along with a group of members of the Merchant Marine and Fisheries Committee of the House, visited European shipbuilding centers. The Board's Chairman, Clarence G. Morse, has made a significant report in a speech entitled "An Adequate American Merchant Marine."

Early in this talk Mr. Morse said: "The worldwide potential of shipping business continues to increase—and we, as a nation, have got to have our fair share of it. Foreign-flag operators will offer tough competition in worldwide shipping experience as well as with new, fast, and efficient cargo ships." Then Mr. Morse described the beehive of activity he saw in the yards and machinery works of Scotland, Germany, and other countries. With few exceptions "every major shipyard we visited employed more workers than are presently employed in all of the major American shipyards turning out seagoing merchant vessels." These yards are efficient, excellently equipped, and are well organized. For the most part, there is plenty of skilled labor and it works hard. The ships they produce are of good quality. As Mr. Morse put it, "True, our ships are built to what we feel are higher standards—of safety and comfort for passengers and crew. But their ships are designed for the purpose of making money, and in that they are eminently successful."

Then Mr. Morse went into some of the problems that confront the United States merchant marine in this intensely competitive situation and what is being done to solve them—both by Government agencies and by the shipping and shipbuilding companies.

In a short time we must replace some 300 of the ships in that important part of our merchant fleet which receives Government subsidies, provided to help offset the very great differences in both building and operating costs as between foreign and United States lines. Schedules for replacements have been worked out. As an example, Mr. Morse cited one of these schedules, which has been finalized, made for a company with 31 ships to be replaced. The job will be completed, over a 12-year period, at a cost of $313 million.

He also dealt with what is being done to "develop and maintain an American shipbuilding industry capable of filling our commercial needs and at the same time provide a basic, ever-ready nucleus of shipbuilding skills and facilities which can be expanded in time of national need." The figures are certainly impressive—contracts placed by private operators, along with Government programs placed through the Maritime Board, now total many hundreds of millions of dollars.

Space precludes coverage of many other important points brought up by Mr. Morse. He does not, it should be emphasized, intimate that all the problems involved have been licked. These are problems of a complex and long-range nature—and it is vital that they be continuously reviewed and dealt with in the interest of the national security and the economic welfare alike.

Finally, Mr. Morse said of the laws providing Government aid to our merchant marine: "These laws are designed for one thing alone—to put our private shipping business on a basis of parity with our foreign competition; from then on out it is up to them to successfully compete. I have every confidence that they can and will do so."

Address Delivered by Hon. Barry Goldwater, of Arizona, Before the American Mining Congress

EXTENSION OF REMARKS
OF
HON. BARRY M. GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Thursday, January 12, 1956

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered before the American Mining Congress convention, at Las Vegas, Nev., on October 10, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Gentlemen, it's a privilege and a pleasure for me to be here, and to have this opportunity of discussing with you the problem of public relations.

I must admit when I received your gracious invitation, my immediate reaction was: "Who, me?"

This is an opportunity I cherish and shall try to deal with honestly and objectively.

I am not an expert at public relations. There is an old definition that an expert is someone who knows more and more about less and less. But I have lived all my life in a State where mining is a basic industry. During my boyhood, mining was the major source of income. Every student of American history knows that gold and silver and copper built and populated the West.

I am reminded of the experience of a friend of mine who, while driving to work one Friday morning realized he had a scratchy throat. He decided to stop by his doctor's office and get a shot of a new antibiotic and insure his ability to enjoy the upcoming weekend.

In the doctor's wating room he said to the receptionist: "I'd like to see Joe for just a minute. He knows me and * * * well * * * I'm not very sick. I'd just like to see him for a minute or two if I may."

The receptionist demanded to know his name and all the items they put on the case history sheet.

My friend reluctantly complied with her request. Then she ushered him into a small waiting room. A moment later a nurse came in, told him to stand on the scales, jabbed a thermometer in his mouth, and made her notations on the chart.

When my friend could speak again, he said, "Look, I'm not sick. There is really nothing wrong with me. I know Joe, he knows me, and I just want to see him for a minute. Well, to tell the truth, I have a little scratchy throat and I just want a shot of penicillin or some aureomycin or one of those things to keep me in shape for my golf game tomorrow."

The nurse nodded and ushered him into a second room, and after 4 or 5 minutes a second nurse came in bearing one of those ridiculous little smocks they sometimes give you in a doctor's office.

"Hang your clothes in the closet and put this on," she said and ducked out the door before my friend could object.

He stared at the smock and he stared at the closet and he stared at the door and, finally, he surrendered. He hung his clothes in the closet and put on the smock and stood there feeling quite naked and inadequate.

The nurse returned and ushered him into a third waiting room. Here he found three other men attired in the same smocks. After a moment or two my friend said, "Look, fellows, I'm not really sick. I * * * I shouldn't be here. I * * * I'm kind of embarrassed to be here with you."

Over in the corner of the room a little fellow looked at him, grinned, and said, "You're embarrassed! I just came in to deliver a telegram."

May we consider that I am here to deliver a telegram, a message from one concerned individual to a group of industrial leaders who are also concerned.

This concern of ours must not stop within the limits of our own particular industry or our own job or our own State. You and I are involved in a process far bigger than mining or department stores or politics or the United States Senate. We are involved in the destiny of man, and man is more than just an economic unit or a physical unit or a political unit. Man is also a spiritual entity, destined by Almighty God to enjoy the blessings and the responsibilities of economic, physical, political, and spiritual freedom.

If we are to approach the problem of public relations with any chance of finding a successful solution, we must begin with a clear and basic concept of man.

Public relations is one of those $64 phrases developed by professionals to confuse the layman.

Public relations is not radio or television or newspaper editorials or newspaper news stories or newspaper advertising. Public relations is not gifts to the community chest or to the boys club or scholarships to the university. Public relations is not putting a key man from your industry in every service club, or making sure that your men control the board of directors of the chamber of commerce.

Public relations is a person to person acceptance.

And acceptance exists only where there is mutual understanding, mutual respect, and mutual confidence.

Radio, TV, newspapers, service clubs, community organizations, are the tools available with which you can do this job, but they aren't to be used as weapons to force your opinions down someone else's throat.

Every man in this room knows a great deal more than I know about the basic contribu-

tions your mining industry has made to the political, economic, social, moral, and cultural development of our society. And I suspect most of you are more keenly aware of the failures of your industry.

For more than 20 years during the great experiment of the New Deal and the Fair Deal, big business was used as a whipping boy by the demogogues and the opportunists.

Following the great depression and under the pressure of political, economic and social change, there was and continues to be a planned program designed to divert the attention of the average American citizen away from the goals and objectives of those men of vision who "dedicated their lives, their properties, and their sacred honor" to the creation of this Republic, and away from the concept of a free society where all men should stand equal, where all men should be free.

Many of these advocates of security from womb to tomb are well motivated individuals, men and women who, recognizing the imperfections in our economy and our society, are attempting to do something about it. And there is little to be gained by dismissing their activities with harsh names and anger.

As you and I grow older we resist change. We cling firmly to the practices of the past. We are inherently suspicious of innovation. Yet in business we constantly contradict ourselves by adopting new production practices, new processes which were completely visionary just a few years ago.

May I suggest that if and when this attitude of eagerness to learn, this willingness to listen, inspect and consider is applied to the problem of public relations, true progress will commence.

Acceptance is a two way street, and when a busines or an industry becomes big and important and successful by following a prescribed program, it is dangerously easy for that busines or industry to forget to listen. And when we forget to listen we build a wall around ourselves.

If we want the general public, and this includes our employees, our customers, and our stockholders, to listen to us and to respect our problems, we must break down and destroy every barrier which serves to separate us from them and their problems.

A great many men with more background and more qualifications than I offer you have devoted time and effort to an examination of this problem which confronts us. Immediately upon accepting your invitation to appear here, I directed my Washington staff to make a study of public relations in the mining industry. That study lasted the better part of 4 months and produced a lot of encouraging and inspiring information.

The editorial staff of Fortune magazine addressed itself to this problem. In September 1950, Fortune stated bluntly that American industry was failing to sell free enterprise and to be intelligently and consistently concerned that free enterprise be forever accepted as the only system under which the people of this Republic can prosper.

Fortune said the root of the trouble was a lack of the feeling of participation and the need for self-expression both on the part of the worker and of management.

If you will forgive me, I should like to quarrel with that word "sell" as used by Fortune. It has a connotation which offends me. We think of the supersalesman as a man who persuades you to buy some article, idea, or process which results primarily in a profit for the salesman.

Successful public relations must produce a profit for all participants. Far too many public-relations programs are little more than high-pressure, selling campaigns. You and I know that unless the product itself justifies the purchase, there will be no repeat orders.

In our survey of public relations in the mining industry, we solicited opinions and information from all the major producers and operators. As might be expected, we found the leaders and the laggards. Many of your companies have instituted complete programs with all the outward trappings and a careful exploitation of all the tools available. But we failed to find a united effort equal to the programs of such comparable industries as the railroads and the oil companies.

Everywhere in our world today there is evidence of a desire for political self-determination, a desire for independence. This trend is partially economic, partially political. It provides good use for a word coined by one of my staff members, polynomics, which describes the practical wedding of politics and economics.

You gentlemen are dedicated to free enterprise, to individual opportunity, and to independent action. This is both a political and an economic problem. May I suggest that as free men and women dedicated to the concept of man as a child of God, with an important, individual, immortal soul, it is up to us to preach what we practice as well as to practice what we preach.

In my own State the mining industry has long been interested in politics. And while these political activities may actually be no more than necessary self-protection, the manifest politicial strength of the industry, coupled with its economic importance, has made it a bigger target for those who preach a planned economic and social state. Because of its size, some of the wildest shots have had a telling effect on some portion of that target.

The mining industry has been politically conscious of taxes for a long time, and necessarily so, because the mining industry pays a substantial portion of the total cost of government in the State in which they operate.

It is quite natural that this political interest should have as its first concern the protection of its sponsor. But I have discovered big companies, contrary to popular conception, are not totally selfish and, in many cases, the mining industry has urged and sponsored development of schools, roads, and local governments with full knowledge that a large proportion of the cost of these improvements will be paid by the industry. For sure industry polices government against harebrained fiscal policies which would result in damage not only to industry but to the economy as a whole. Many times a policeman is not very popular, particularly with vociferous self-seeking minorities.

May I suggest there is no reason for American big business, the mining industry or any other facet of our economic life, to be on the defensive just because it is big.

Certainly you are the target for the demagog, the opportunist who seeks to use envy and discouragement to gain his personal objectives.

Let's get off the defense. Let's put in the first team. Let's tell the story of free enterprise and free political government to all the world, and most especially to our own friends and neighbors, our employees and customers and stockholders.

You and I know the American system of free enterprise has created the greatest opportunity for the individual known to history. We know the American free enterprise has made possible a higher standard of living for the average American than has ever been possible anywhere else on the face of the earth. You and I know the American system of free enterprise is the only social, political, and economic system which can meet the challenge of tomorrow and still preserve the basic freedoms of the individual.

We know that with all the progress and growth of our Nation, there is still room for improvement and that improvement will never come from the social planners who seek to regiment the lives of men.

Let us forget about defending freedom and begin to proclaim freedom.

Mankind was not destined to be called a class, a collective, or a group. And what we seek is a basic person to person understanding and acceptance, and the place to begin is with the individual.

Let's look at this American citizen for a moment, this individual human unit in the multitude of customers, employees, and stockholders we are trying to serve and whose understanding and acceptance we seek.

I promise you this is going to be the most convenient study we have ever undertaken because our subject is here in this room, a fellow who is already pretty well known to us. He is the engineer, he is the office manager, he is the mucker, he is the shift foreman, he is the clerk, he is the office boy.

This fellow is concerned first of all with his own problems. His own wife and his own kids are most important to him. He'd like to have a little better home than mom and dad had. He wants to advance in his work.

This fellow glows with pride when the boss appreciates him. He wants you to accept and respect him, and in turn he will accept and respect you.

Oh, he's cantankerous at times, at times he's lazy. Sometimes he just doesn't have the ability to do the job the way it should be done. Envy and self-pity will give his thinking a quick twist in the wrong direction. He's more apt to be vocal about his dislikes than his likes.

And when he fails at something, he finds it pretty easy to blame the other fellow.

He has lived long enough to discover that life is a pretty grim struggle, but he has been able to conquer some disappointments.

He may not exactly wear a chip on his shoulder, but he is determined that nobody is going to sell him a bill of goods, and when he listens to you, if he does listen to you, you can bet that behind the appearance of outward attentiveness, he is saying to himself, "What's his angle? What does this guy want from me?"

A proper public-relations program must begin at home with your fellow workers, your own employees. Let them have a share in your problems. Let them work with you and not for you. Let them know you on a person-to-person basis, and take the trouble to know them in the same way.

And when they become convinced that you are concerned with their problems, they will, in turn, be concerned with yours.

By all means participate in community projects and undertakings. But do it on an individual, personal basis. Forget the notion that you are to be treated with respect just because you are the representative of the big XYZ company.

Use radio and TV and newspapers, but don't think you can buy understanding or overpower opposition by the size of your ad or the editorial comment of a company-owned newspaper.

Be willing to listen, to accept suggestions, to make changes, to eliminate company practices which make you vulnerable to the sniper.

When the mining industry developed the West, it was necessary for many companies to build company-owned towns, to operate stores, to provide medical dispensaries and hospital services.

We are all familiar with the company town of 50 years ago with its rows of identical houses, the company store where the mining employee was always in debt, the company doctor whose office bore the stamp of socialized impersonal medicine, the frequently well-intentioned paternal policies which provided a lot of the security the social planners think is a new idea today, but at the same time robbed the individual of his feeling of independence and in some instances of his self-respect.

This human being you are dealing with is an independent creature. He wants and deserves to experience the pride of ownership. He may let his house go to rack and ruin but still it's his. He may be unwilling to provide the same standard of medical care offered by the company, but still he wants and deserves the right of independence in his family living.

This man may buy his groceries from a merchant and pay higher prices for an inferior quality, but his wails of complaint will never match his resentment against the company store and the compulsion implied in that feudal arrangement.

You gentlemen represent a fascinating, dynamic industry. Your investments, your technological know-how, and your management skills have materially contributed to man's progress.

You transform unusable raw material from mother nature into items of utility and beauty to satisfy man's longing for a better world. You have a story of romance and ingenuity and devotion unequalled in history. And the 20th century, with our methods of mass communication gives you the opoprtunity to make all men everywhere partners in your progress. Begin your public relations programs by granting to all men, to the janitor and the boss, to the stockholder and the customer, the respect you would like to receive.

Dedicate yourself to defending the right of every individual to be free, to cherish ambition, to struggle for advancement and to control his own life. Proclaim your devotion to the concept of man as a child of God, endowed by his Creator with freedom of choice. Demonstrate your willingness to accept every individual on a person-to-person basis.

Our world today is joined in mortal combat which can only end in total victory for one side or the other. The issue is simple: Shall men be slaves or free. The basic premise of communism views man as an economic animal, a social animal, and a physical animal incapable of thinking for himself, or exercising independent judgment, of guiding his own destiny.

Every voice in our Nation today which speaks out in favor of the regimentation of men, every political demagog who denies man the right to think for himself is echoing the thinking of Karl Marx who said: "The democratic concept holds that each man is a sovereign being. This is the illusion, dream and postulate of Christianity."

In this time of peril and crisis let us rededicate our lives, our fortunes, our sacred honor to the perpetuation of the integrity of the individual.

Let us use the skill and the resources and all the technological gains of the 20th century to reaffirm the truth that man's destiny is freedom and that man's obligation is fully expressed in that ancient law:

"Thou shalt love the Lord thy God with all thy heart and with all thy soul and with all thy mind, and thou shalt love thy neighbor as thyself."

I thank you.

One Hundred and Sixty Years of Service

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. QUIGLEY. Mr. Speaker, during the Christmas season the York (Pa.) Gazette and Daily marked two important anniversaries—its 160th year of publication and the 40th year of publication under the direction of Josiah W. Gitt, editor and publisher.

This newspaper started life as a German-language newspaper 160 years ago and, up until just before the turn of the century, continued to publish both English and German editions. It has built a reputation for independence and outspokenness.

Under leave to revise and extend my remarks, I include two tributes from other newspapers. One was published on October 13, 1955, by Labor, and the other was published on December 25 by the St. Louis Post-Dispatch. The editorials follow:

[From Labor of October 13, 1955]

TRIBUTE TO A DAILY PAPER

Labor has often called most daily newspapers one-sided and reactionary, but it has mentioned shining exceptions—among them, the crusading Madison (Wis.) Capital Times. This week Labor wants to cite another, the York (Pa.) Gazette and Daily, which is something of a modern miracle.

Like the Capital Times, it is proving that a city daily can be both liberal and successful—that its news and editorial columns can be honest and enlightening—without losing the advertisers upon whom publishers must depend for their bread and butter.

The success of the York paper in holding readers and advertisers is largely due to its wide and thorough reporting of local news. But there may well be another reason—that most Americans like a truthful and crusading newspaper, when they have a chance to get it.

If there were more papers like the York Gazette and Daily and the few other similar liberal newspapers, this would be a different and better country.

[From the St. Louis Post-Dispatch of December 25, 1955]

TWO FREE MEN

Two of the truly courageous editors in the United States—and unhappily there are very few in that vital company—have just celebrated notable milestones. Josiah W. Gitt, editor and publisher of the Gazette and Daily at York, Pa., has observed the 40th anniversary of his direction of that 160-year-old newspaper. In Madison, Wis., William T. Evjue, editor and publisher of the Capital Times, has completed his 50th year in the journalism of his State.

Each is a brave, free man. Each has been unshakeable in standing for honesty, integrity, intelligence, and information. Each has seen from experience that where these prevail there will be progress and growth and high standards in political and social affairs.

Mr. Evjue, who grew up in the great tradition of the elder LaFollette, has exposed and battled against McCarthyism from the beginning. It is his satisfaction to have been right all along and now to see others belatedly trying to catch up with him. His newspaper is a daily application of his motto, "Let the people have the truth and freedom to discuss it and all will go well." Thanks in large part to Editor Evjue and his fearless staff, Madison stands high among the best-informed, most forward-looking communities in the country.

Similarly the people of York, Pa., can be grateful for the unswerving attachment of J. W. Gitt to constitutional principles and particularly to the civil liberties guaranteed in the bill of righs. No influence peddler, high or low, in politics or out, has ever pushed around York's staunch editor. His slogan is "Print the truth and let it speak." And that is just what he has been doing—enabling truth to speak—for four decades. No editor need do more than that.

If there were even a dozen William T. Evjues and Josiah W. Gitts in American journalism, the American people would be infinitely better informed. Our people would be less inclined to listen to demogagues, quacks, and self-servers. They would be far quicker to recognize and support leaders in the tradition of freedom and free men. May the Gitt and Evjue examples wax and multiply.

The Polish Daily News of Detroit, Mich.

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. LESINSKI. Mr. Speaker, one of the most familiar objects in the majority of American homes today is a newspaper, either one from the hometown or one from the local area in which one lives. Without a morning or evening paper a family would be lost for complete news of the world or the locality. And in these days it is important that we, as citizens of the greatest nation in the world, keep informed about world and local happenings. I realize, of course, that radio and TV provide a source of news, but this is more or less of an outline coverage. We must depend on newspapers for the more complete details of current events and also for some of the news that is not deemed of sufficient importance to be included in a news broadcast over radio or TV. I believe we are all the more impressed with the part a newspaper plays in our daily lives when suddenly we have no local paper to read.

The majority of the people of Detroit and the vicinity have almost found themselves in such a situation. For over 42 days, since December 1, 1955, the three major newspapers serving the Detroit area, the morning Free Press and the afternoon News and Times have not been issued because of a strike. However, because of the ingenuity of one of the smaller local newspapers, the citizens of the area are still being served. Within 24 hours after the announcement of the strike of the workers on the major dailies in Detroit, the Dziennik Polski, the Polish Daily News, started printing a limited edition in English. Ordinarily, the paper is printed in the Polish language, as it has been since 1904, to serve the Americans of Polish descent. In its English edition, it carries stories of local and national importance and includes a sports page and the radio and TV programs, as well as some advertisements and the funnies.

I want to take this occasion to commend the publisher of the Polish Daily News, Stephanie Januszewski, and her staff for the wonderful public service they are rendering to the people of their community. They are doing a magnificent job in this emergency. They have stepped up at a time of need, as is characteristic of Americans of Polish descent,

to lend a helping hand to their fellow citizens. The publisher and staff of the Polish Daily News can, I am sure, take justifiable pride in their accomplishments. I am sure that the people of Detroit are most grateful to them for their efforts.

Peace With Honor

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. QUIGLEY. Mr. Speaker, under leave to revise and extend my remarks, I include the following speech delivered by Edward "Skip" Suchocki, 12th district commander, Veterans of Foreign Wars, at the annual celebration in Mount Carmel, Pa.:

SPEECH AT VETERANS DAY, MOUNT CARMEL, PA., BY EDWARD "SKIP" SUCHOCKI, 12TH DISTRICT COMMANDER, VETERANS OF FOREIGN WARS, POST 2110, MOUNT CARMEL, PA.

This year and every year—by act of Congress—we observe the 11th day of November as Veterans Day. In the past it was called Armistice Day, but that is no longer so. It now is—and will continue to be—Veterans Day.

Wherever citizens gather on November 11—Veterans Day—we salute our fellow Americans who have exemplified the highest tradition of citizenship by wearing the uniform of our country.

Twenty-two million living veterans, men and women, young and old, merit our salute.

Few of us can match their personal knowledge of the ugly face of modern war. Few can match veterans in their experienced understanding of what America truly seeks in the determined effort to achieve peace with honor.

Our President has made peace with honor a noble crusade throughout the world. Nothing could be more truly American than our insistence that peace without honor is unthinkable.

It lies at the very heart of our American creed. It is older than the entire lifespan of our Republic. It goes back to ancient days when there were Americans—but not a United States of America.

Americans always have wanted peace. But we never have been willing to accept it when the price was dishonor to ourselves.

They proved it anew—our fighting men, our veterans—on land, on sea, and in the air—when the challenge to peace with honor was flung down, even more brutally than before, by enemies of mankind who made good their mad promise to engulf the world in the blood bath of World War II.

They proved it—our fighting men, our veterans—on the bare and zero-cold mountains of Korea. They proved it, when to have hesitated in the will to oppose aggression would have been to betray the deepest qualities that make us Americans.

What are we to say about men like that on this solemn 11th day of November? Nothing that has not been said before. Nothing that will not be repeated proudly as we continue to salute our veterans in the years to come. On Veterans Day we say this:

Veterans are the best we've got in manhood.

Veterans have led the way to victory in war and security in peace.

Veterans have used their well-earned benefits wisely. Our Nation is better and stronger as the direct result of the work of veterans in the schoolroom, at the office and factory, and on the farm.

Never once have our veterans failed us in our determination to achieve peace with honor.

These are solid certainties to remember on the 11th day of November—on Veterans Day.

They are solid certainties to make all of us proud of our American past, and confident of our American future in freedom.

They are our surest certainty that the safest, best way to freedom and security is to continue along the straight, open, courageous road that leads to peace with honor.

Foreign Aid

EXTENSION OF REMARKS
OF
HON. JAMES G. DONOVAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. DONOVAN. Mr. Speaker, arguments pro and con on the amount of foreign aid to be appropriated during this session of the Congress may develop into the biggest debate of the session. Mr. Harold Callender, one of the great foreign correspondents of our time, under his byline dated Paris, January 8, 1956, appearing in the New York Times on Monday, January 9, 1956, analyzed the Red vote in France in the January elections as follows:

THE RED VOTE IN FRANCE—AN ANALYSIS OF THE FACTORS THAT IMPEL MANY NON-COMMUNISTS TO BACK PARTY

(By Harold Callender)

PARIS, January 8.—The national election last Monday took place at a time of general prosperity and full employment after 4 years of fairly stable prices and rising real wages.

Yet the vote polled by the Communist Party in metropolitan France was higher than that polled in the corresponding election of 1951, when the worker's purchasing power was much lower and more uncertain.

A DIVERGENCE FROM MARX

In other words, the economic interpretation of history, a Marxian doctrine attributing all social phenomena to the economic condition of the peoples involved, does not seem to apply to the advance of the Communist Party in Western Europe, or at least in France.

If this is a point against Communist dogma, it seems also a blow at the theory that a sure cure for the Communist infection is to raise the standards of living.

The theory that higher living standards should cut the ground from under the Communist involves the same error as that of the economists a century ago who based their economic laws upon an economic man who existed only as a working hypothesis. Man is economic, but much else besides.

Mr. Speaker, of significant coincidence were the remarks of Mr. George Meany, head of the labor movement in the United States of the combined American Federation of Labor and the Congress of Industrial Organizations, in an address at Seton Hall University, South Orange, N. J., responding to the honorary degree just conferred on him as reported by the New York Times in the January 9, 1956, issue as follows:

MEANY CAUTIONS ON VYING IN AID—LABOR CHIEF, AT SETON HALL, DECRIES MATCHING SOVIET, URGES PIONEERING ABROAD

SOUTH ORANGE, N. J., January 8.—George Meany, head of the new united labor movement, warned here today against a "panicky rush to drown rubles with dollars" in foreign aid spending.

Rather than merely react to Communist programs, he declared, the United States should devote its skills and ideals to a pioneering program to save peoples from hunger and disease.

Mr. Meany asserted that "the time has come for our Government to re-examine and study our country's last decade of experience in foreign aid."

Deploring what he called a tendency of the United States merely to counter Communist maneuvers, he said:

"We should never say we will merely match Moscow's aid to others. At best, that would mean that we would do next to nothing. That would mean turning our back on needy nations.

"We Americans have much experience in pioneering. We are rightly proud of this creative spirit. Let us infuse our efforts to aid other peoples now menaced by Communist subversion and Soviet aggression with the spirit of the American pioneer."

Mr. Speaker, I have always believed that the points made by Messrs. Meany and Callender are fundamental, fuzzy thinkers and bleeding hearts and demogogues to the contrary notwithstanding. Both gentlemen are eminently correct.

Rural Mail Delivery

EXTENSION OF REMARKS
OF
HON. JACKSON E. BETTS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. BETTS. Mr. Speaker, on February 7, 1955, I introduced a bill, H. R. 3655, which would extend rural mail delivery to the homes of all persons living on improved highways. Since then I have noted interest in this problem on the part of various farm organizations. At its national convention in Chicago in December 1955 the American Farm Bureau Federation included extension of rural mail delivery among its resolutions. The following was taken from the American Farm Bureau Official News Letter of December 19, 1955:

Rural mail delivery should be made available to every accessible farmstead. We urge that legislation be enacted or administrative action taken to accomplish this. This may necessitate consolidation, extension, or relocation of routes. In some instances it may be advisable to eliminate post offices and replace them with rural routes. It is apparent that many of these changes will come more quickly if rural people take an interest in this problem in their own communities.

The Ohio Farm Bureau endorsed the same policy at its convention in Columbus in November 1955. The following resolution, as adopted by their organization, appeared in the Ohio Farm Bureau News of January 1956:

RURAL POSTAL SERVICE

We insist that rural mail delivery be made available to every farm home on a passable

highway. Since direct-to-farm rural mail service is vital to every farm family, we recommend that county farm bureaus give such assistance to farm families as is necessary to bring their problems to the attention of proper postal authorities.

Mr. Speaker, it is my hope that such actions as these will stimulate interest in H. R. 3655.

Boom Is Not for Everybody

EXTENSION OF REMARKS

OF

HON. JAMES M. QUIGLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1956

Mr. QUIGLEY. Mr. Speaker, the pollyannish optimism—to be kindly—of the President's state of the Union message has been the subject of much pointed criticism. Perhaps the keenest analysis was made on Sunday last by the syndicated financial writer, Sylvia Porter, whose column, Your Money's Worth, was published by the Washington Star.

Miss Porter has done an excellent job of painting, in human terms, the meaning of the dangerous soft spots in our economy—soft spots that administration politicians are apt to brush off all too lightly.

The article follows:

BOOM IS NOT FOR EVERYBODY

Who are you? What do you do?

How you answer these questions will determine whether 1956 will be a boomy or a bumpy year for you—just as the answers determined whether 1955 was a top or tough year for you.

All but lost in the millions of bouncy words now being written and spoken about the new year's outlook—and that goes for the President's state of the Union message, too—is this vital point:

It was not boom for everybody in 1955, not by a long shot. It will not be boom for everybody in 1956, also not by a long shot.

For instance:

If you are a high official in a big corporation in most industries, the tide is running strongly with you. You will be the exception if your income isn't increased this year.

FIERCE COMPETITION SEEN

But if you're part of a small firm in most industries, you're in for fierce and quite possibly cut-throat competition. Your expenses will be rising, your big competitors will be after your business, and you may find it as rough a year as you've ever had.

If you're a wage earner in the heavily unionized steel industry, your prospects are bright. Your industry is making fabulous profits, your union leaders are set to ask for a sensational wage package this summer and you're certain to achieve fat gains.

But if you're a wage earner in the equally unionized auto industry, your prospects are mixed. Your industry is facing a slowdown in production and sales. You well may be working a shorter week as the months roll on; layoffs in Detroit are by no means out of the question. It'll be astounding if 1956 is as good a year as 1955 was for many who work in the automobile and allied industries.

If you're a salaried worker in a prospering industry you'll move up the scale this year. Salaries will rise as wages generally rise. You should be able to keep ahead of the increases in your cost of living.

But if you're a farmer—particularly a small farmer—well, what's going on is hardly a secret. Despite the plethora of programs being prepared to improve your position, the Agriculture Department forecast is that farmers' net income will sink another 5 percent in 1956—on top of a 30-percent slump just since 1951.

EXPANDING INDUSTRIES

If you're a skilled worker or executive in such expanding industries as electronics or chemicals, you should continue to climb the income and living standard ladder in 1956.

But if you're a similarly skilled worker or executive in the textile or apparel industries, the signals are flying that by mid-1956 you'll be into what the experts call the "definite downswing of the cycle"—which is another way of saying you'll be operating in a declining, increasingly competitive market.

If you're a professional or in one of the service fields, you'll make out fine. You'll be able to raise your fees and to still count on plenty of eager customers.

So it goes—big business will prosper more than small business; some industries will soar, others will sink; industry generally will move ahead of agriculture.

It is perilous to fall for the delusion that we're into a boom that has no bumps. It already has plenty and will develop more.

Whether you'll be on the boomy or the bumpy side of the economic road in 1956 goes back to those first crucial questions: Who are you? What do you do?

Proposed Declaration of Minerals Policy

EXTENSION OF REMARKS

OF

HON. BARRY M. GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Thursday, January 12, 1956

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the proposed declaration of minerals policy presented by the Arizona delegation to the Western Governors' Mining Advisory Council.

There being no objection, the declaration was ordered to be printed in the RECORD, as follows:

PROPOSED DECLARATION OF MINERALS POLICY

The Arizona delegation of the Western Governors' Mining Advisory Council introduced the following resolution at the November 9, 1955, meeting in Sacramento. Since it was beyond the authority of the Western Governors' Mining Advisory Council to approve such a resolution, the council referred the resolution to the western governors conference presumably to be held in Reno in early 1956 with the council's unanimous recommendation that the governors give this resolution favorable consideration:

Whereas the mineral industry of the United States is vital to the welfare of the Nation both in war and peace, ours being essentially a minerals and metals economy; and

Whereas for the above and other reasons it is essential that the United States be as nearly self-sufficient as possible in both the minerals and metals commonly used as well as those classified by the Government as strategic and critical; and

Whereas dependence upon foreign sources of supply for our minerals and metals needs, in this atomic age, would invite possible national suicide; and

Whereas only by constant exploration, development, research and production can our minerals industry maintain its reserves and its supply position in a healthy condition: Therefore, be it

Resolved, That the western governors conference ask the Congress of the United States to declare a national minerals policy recognizing the aforementioned basic facts, and implement its declaration of policy with appropriate legislation to make our Nation self-sufficient insofar as possible in respect to our tremendous minerals and metals requirements.

Government and Education—Part I

EXTENSION OF REMARKS

OF

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1956

Mr. BOLLING. Mr. Speaker, the following fine statement entitled Government and Education was given in the great issues course at Dartmouth College on November 14, 1955, by Dr. Earl J. McGrath, the outstandingly able president of the University of Kansas City. Dr. McGrath, a distinguished educator was formerly United States Commissioner of Education:

GOVERNMENT AND EDUCATION

(Earl J. McGrath, president, the University of Kansas City)

That there is a close relationship between Government and education has been evident from the earliest days of the Republic. Political theorists of the 18th century, as well as the practical statesmen who founded the new Nation on this continent, were well aware that the quality of government in a democracy would be largely determined by the general enlightenment of the citizenry. The latter would in turn depend on the character and the general availability of education. When George Washington said, "Promote then, as an object of primary importance, institutions for the general diffusion of knowledge. In proportion, as the structure of Government gives force to public opinion, it is essential that public opinion should be enlightened," he was stating the practical implications of this democratic social philosophy. His bequest of funds for the establishment of a national university and his views expressed at that time give palpable evidence of his conviction that the Federal Government itself had a direct responsibility to foster and support the cause of education. The foundation upon which the development of the public school system in the United States has rested has been the acceptance by our people generally of this view of the relationship between Government and education.

It would be a mistake, however, to suppose that our early statesmen intended that the Federal Government itself should to a large extent determine the character of, or control, education, as has been customary elsewhere in the world. On the contrary, the Constitution was silent on the subject of education. It has been assumed by some that, since the Constitution of the United States provides that all powers not specifically conferred upon the Federal Government are retained by the States, and since education was not mentioned, the drafters of the Constitution must therefore have considered education a function of State government. This assumption is doubtless false. The evidence suggests on the contrary that these early Americans believed that not even the States themselves, but rather the local communities, should establish

schools and determine the character of education.

This interpretation is borne out by the fact that for three-quarters of a century after the birth of the Nation, State education authorities were either nonexistent or without significant force. In the early years, therefore, the education of children was clearly considered to be a local concern.

It is very important to observe, however, that even in the first years of the Republic, the Government gave consideration to the general support of education. Congress in 1785, in arranging to dispose of the land ceded to the Federal Government by the States, adopted a rectangular survey providing townships of 36 sections, the 16th section of each being reserved for the support of education. Beginning with the admission of Ohio to the Union in 1802, each State has been granted land for the support of public schools. In many States the funds thus provided formed the basis of a permanent school fund and encouraged additional support out of all proportion to the value of the original grant.

In 1862 the Federal Government again acknowledged its responsibility to support education in the States, when the Congress passed and President Lincoln signed the Morrill Act. This Federal legislation provided financial assistance to the States in the establishment and maintenance of colleges of agriculture and mechanical arts. Acts passed by the Congress in later years increased these grants. They continue today to be an important source of revenue for many State colleges and universities.

Again in 1917 the Smith-Hughes Act supplied Federal financial aid to the States for the support and promotion of vocational education. These funds, too, have been considerably increased through later legislation. During this fiscal period over $33 million of Federal money will be spent for vocational education.

The most tangible evidence of the Federal Government's concern for the education of children in the several States appeared only in recent years. On the basis of studies and recommendations made by the staff of the United States Office of Education and by legislative study groups, the 81st Congress enacted Public Laws 815 and 874 providing substantial financial assistance to local school districts. This aid for both the erection of school facilities and for the maintenance of the educational program is given to those communities in which the activities of the Federal Government, such as military and atomic energy installations, have materially increased the educational burden. Since the passage of these bills in September 1950, $962 million have been appropriated for this purpose.

This brief review of the activities of the Federal Government in the field of education, which has made no mention of the billions of dollars of Federal money spent indirectly for the support of education, such as the so-called GI benefit bills, the vast expenditures for research in the colleges and universities, and the school-lunch program, reveals the fact that the Federal Government has from the beginning substantially supported education and the amount and variety of support has increased through the years. The question before the American people today is not, therefore, whether the Government has any responsibility for education. That question has been decided long since. The question for decision today is, "To what extent shall the Federal Government aid the States in providing an adequate education for this generation, and how can this aid be provided within the traditional relationships between the Government and State and local educational authorities?"

As the present and future responsibilities of the Federal Government for education are considered, therefore, it is very important to focus attention on the latter part of this question. The activities of Government in the field of education, which have been of such great benefit to individuals and to society as a whole, have been carried out within the traditional pattern of State and local control of education.

As we have seen, the control of education was in the beginning in the hands of local school officers, with no supervision or control either from the National or State Governments. Through the years, however, each State created an educational office, which assumed responsibility for establishing standards and services for local school districts. Later many States developed school-aid programs from State tax revenues to equalize educational opportunities for all children, regardless of their place of residence. At no time has the Federal Government attempted to assume responsibility for the operation, supervision, or control of American education. There has been an understanding among our legislators that relationships with the schools should be through established authorities in the States.

My principal thesis in this discussion is that the participation of the Federal Government in the financial support of education within the several States has been sound national policy; that the Federal Government's participation should be extended without delay; and that in the absence of assistance from the Federal Government the deterioration which has already begun in the educational system of many communities will continue apace, with a consequent weakening of the entire fabric of our democratic society. It is urgently necessary that legislation providing some type of Federal aid to education be enacted by the Congress in the next session.

I shall attempt to show why Federal assistance is justified and necessary. One of the strongest arguments for increased Federal financial support of education is related to basic changes which have occurred during recent years in the structure of American society. Especially since the turn of the century, advances in transportation and communication and the concentration of industrial activities in urban centers have caused a rapid increase in the mobility of our people. There was a time in our national history when a large percentage of our citizens either stayed in the communities in which they were born or joined a westward movement toward a frontier settlement, where they then remained for the rest of their lives. Now, however, this pattern has radically changed. The urbanization of our population has been swift and steady. The growth of great corporations with establishments throughout the Nation have caused families to move from one section to another. The results of these social forces are clearly evident in the census statistics for 1950. In that year 25.2 percent of native-born Americans lived in some State other than the one in which they were born.

Government and Education—Part II

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. BOLLING. Mr. Speaker, Dr. McGrath's speech continues:

If there ever was a time in our national history when the citizens of one community or State could be unconcerned about the education of fellow citizens in other sections of the country, that time has surely passed. The welfare of the Nation demands that all children regardless of their place of residence receive a minimum basic education for the responsibilities of citizenship, for productive economic life, and for personal happiness. But the fact is that an increasing percentage of our future citizens are not receiving such an education. The citizens of many States in recent years have recognized that economic differences in the constituent communities were responsible for undesirable differences in the quality of local education. Programs of State financial aid were inaugurated to erase, or at least minimize, these differences on the ground that all the citizens of a commonwealth had a right to a satisfactory basic education, and it was in the interest of the State as a whole to provide such an education, in part at least, at State expense. In my judgment our society has now evolved to a stage which justifies the application of this same principle to the national economy and to the National Government.

Concrete evidence exists showing that differences among the citizens of various States in the amount and quality of their education are already creating problems of national scope and significance. During the Second World War, for example, when the industrial activities of the Nation accelerated and expanded so swiftly, thousands of additional workers were needed in urban centers. Most of the new workers required in large industrial establishments moved from rural sections to cities and large masses migrated from the southern States to the North. Thousands of workers, for example, came from Mississippi and Alabama to Detroit and Cleveland. Many of the migrants had far less education than their fellow workers who were native. A considerable percentage had less than 5 years schooling and could, therefore, be classed as functionally illiterate. An intensive educational program was established within industry to fit these new workers for their occupational duties. In a time when their technical skills were urgently needed in the successful prosecution of the war, naturally little or nothing was done to extend their basic general education. Yet, after the war was over, many of these new residents stayed in their new places of residence. They have, on the average, less education than their neighbors. They constitute a depressed economic and social group. Such a group dramatizes the evils which in the modern world flow from inadequate education. It also gives weight to the argument that, with an increasingly mobile population, the citizens of one State cannot be unconcerned about the quality of education in other States. All Americans now have a stake in the education of all America's children regardless of place of residence or condition of life.

A second example is even more convincing, especially to members of the younger generation who, in recent years, have had to serve in the military forces. As men were being selected for service, their physical and mental fitness were thoroughly investigated. With regard to the physical disabilities discovered among selectees, it is enough to point out that many who were rejected suffered from disabilities directly related to a lack of education, such as faulty diet, uncorrected minor physical ailments, or undetected chronic disease. The most disturbing revelation of these examinations, however, was the fact that hundreds of thousands of men had to be declared ineligible for military service because they could not read or write, or because they had failed to master the other basic intellectual skills required even in the most rudimentary activities of military life. When the percentages of rejection for mental unfitness on the basis of scores on the Armed Forces qualification test are studied, it is

clear that they correspond very closely to the amount and quality of education. These found to be educationally deficient in the Korean war varied from 2.2 percent in Minnesota to 48.7 percent in Georgia. Such a barrier to the discharge of the duties, and the enjoyment of the rights of citizenship in a democratic society should be struck down. The solution of this problem of national scope will, however, require national attention and national effort.

Federal aid can also be justified on economic grounds. Our continued social well-being is closely connected with a constantly expanding economy. The efficiency of our free enterprise economy and our prosperity as a people are closely related to the general availability and the quality of education throughout the country. The United States Chamber of Commerce in a recent publication, Education—An Investment in People, reveals that the general conditions of life and the expansibility of the American economic system are determined by the amount and character of education among our citizens. Since the better educated live at a higher level of production and consumption, the health of our domestic economy is clearly related to the education of our people. Moreover, as the chamber of commerce study shows, there is a close relationship between the level of education and international prosperity, and understanding among the nations. This dependence of our economy in general and industry and commerce in particular on education is responsible for the demand among employers that the school system of the Nation provide an extension of both general and specialized education for occupational activities.

But the various units in our political system are not bearing their proportionate share of the cost of the educational program which supports the national economy. In fact, many States and communities under present tax policies and practices cannot hope to be able to pay for the extended education required in the country at large. In the past, public education has been largely supported by taxes on real property. The largest sources of taxable wealth are, however, no longer in real property, but rather in income. Because of the expansion of our industrial society, enormous differences in taxable wealth have been created in and among the several States. School communities with little industrial and commercial activity have relatively small taxable wealth to provide the funds for school purposes, while districts with considerable industrial activities can provide a high quality educational program with little financial effort. These differences in the ability of the States to support an adequate educational program account for arresting differences in educational opportunity among our people.

If the present inequalities in educational opportunity, and the attendant social inequities are to be abolished, the practices of the several States in distributing tax money to local school districts in accordance with their varied needs, ought to be extended to the Federal level. The taxing power of the Government must be used to distribute school funds regardless of their source where they are needed to provide a minimum foundation program for all children. The same argument which has been used to support the use of State funds for equalizing educational opportunity within the States applies in my judgment with equal force to the Nation as a whole. In terms of the general welfare, it seems to me just as logical to argue that the wealth of New York or Illinois should be taxed to support education in South Carolina or Mississippi as to argue that the wealth of one county in a State should be used to support education in other counties less well favored economically. If the social benefits of education are to be enjoyed by all citizens without regard to place of residence, the tax burden should properly be distributed among the States in terms of their financial resources.

One of America's most thoughtful statesmen, the late Senator Taft, after having studied the question of Federal aid for several years, came to the conclusion that the rights of the individual and the welfare of the Nation argued for such a program. In its defense he stated that:

"Without question, the primary obligation to educate children under our constitutional system falls on the States and local districts. But I believe very strongly that the Federal Government has a proper function in the field. We are a great and wealthy Nation. I believe the people of this country feel that our productive ability is so great that we can prevent not only illiteracy but hardship and poverty in the United States. * * *

"The Federal Government is authorized to levy taxes to provide for the general welfare of the United States, and under that constitutional grant has the right to dispense money to the States and local districts for purposes not within the constitutional power of the United States to control or regulate. * * *

"I believe, therefore, that the Federal Government should undertake a system of extending financial aid to the States with the objective of enabling the States to provide a basic minimum education to every child, to the end that equal opportunity shall not be interfered with by the financial condition of the State or district of the child's residence." [1]

As they have examined these facts, many thoughtful Americans have with Senator Taft been irresitably driven to the conclusion that equal educational opportunity for all, regardless of economic or social status or place of residence, cannot be realized without Federal financial aid to States and communities. In the conviction that such educational opportunity is not only the right of the individual but also a necessity for national prosperity and survival, many are now urging the immediate enactment of legislation by the Congress for the support of education within the several States. Though the estimates of need for the country at large vary, the figure $500 million a year has been mentioned by several students of the subject and for the period of the next 5 or 6 years. This figure appears to me to be modest and justified. Help of this proportion can be provided without excessive strain on our financial resources and without violence to our political traditions which place the control of education in State and local authorities.

[1] Official report, the American Association of School Administrators, Atlantic City convention, March 1947, pp. 168–169.

Government and Education—Part III

EXTENSION OF REMARKS

OF

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1956

Mr. BOLLING. Mr. Speaker, Dr. McGrath's speech continues:

In weighing the merits of a program of Federal aid of this magnitude, three basic questions deserve serious consideration:

The first question has to do with the traditional relationships between the States and the Federal Government in the field of education. We have rightly believed that education in the United States should be controlled by the States and the local communities. This social policy has had many beneficial effects on our educational system, the leading of which are the greater interest among our citizens in their schools, a greater adaptability of the school program to local needs, more widespread experimentation with the content of instruction and the methods of teaching, and, most important of all, greater protection of local educational authorities against the possible domination of a dictatorial and remote Federal Government. The preservation of our free democratic political institutions will in large measure be determined by our ability to preserve local initiative and control in education. In many years of conversation on this subject with both laymen and members of the profession alike, I have yet to find a single American citizen who advocated the transfer of educational control from State and local authorities to the Federal Government. Those who favor, and those who do not favor Federal financial aid to education, are united in this common purpose. The very consistency and intensity with which Americans generally oppose any domination of our educational system by the Federal Government is in my view the best guaranty that such domination cannot occur in this country.

On the other hand, as I have shown, the Federal Government has made grants to the States for general and specific educational purposes, and the evidence from these experiences indicates that Federal money can flow into States and local communities without carrying with it Federal domination of local educational policies and practices. As a student of American educational history, and as the former educational officer of the United States Government, who over a period of years was responsible for the distribution of several hundred million dollars to the States in support of education, I see no reason to believe that further Federal aid will inaugurate Federal control. Every piece of educational legislation introduced into the Congress in recent years, and in 1 year there were more than 500 such acts, has included an express prohibition against Federal interference in local educational policy and practice. Moreover, one of the most reliable protections against the encroachment of the Federal Government is the very attitude of the members of the profession itself. Educators differ widely in their views on nearly every aspect of our educational system, but on the matter of State and local control of education, they stand as one man. All the evidence seems to me to indicate that though the argument about Federal control may not be irrelevant, it is certainly immaterial and inconsequential. For informed persons to continue to raise this issue is to confuse the discussion of a very pressing social problem, mislead our people, and deprive many of our children of their educational birthright.

Even those who have no fear of Federal control raise a second question as to whether the several States could not bear the expenses of providing an adequate program of education out of their own financial resources. As I have said, there is, in my judgment, a moral reason why they should not be reqiured to do so, but neglecting that reason we ought to inquire whether, even with maximum effort, all States could, out of their own resources, provide an educational program adequate to the needs of modern life. The most convincing evidence on the financial ability of the several States to support education is provided in statistical studies made by the National Education Association. These studies show that the financial burden involved in providing education for children between 5 and 17 years of age varies considerably from State to State, as measured by the number of children per thousand in relation to wage-earning adults. The United States census for 1952 shows that for the country at large there were 390 chil-

dren 5 to 17 years of age for each 1,000 wage-earning adults. In 1 State, however, South Carolina, there were 600 children 5 to 17, while in New York at the opposite extreme, there were only 303 children. It is clear, therefore, that even if the income per capita were equal in the various States, the amount of money available for each schoolchild would vary considerably.

The income per capita, one of the best measures of a State's ability to support the functions of government, however, is by no means uniform from State to State. In fact in 1953 estimated income payments per capita averaged $1,709 for the entire United States, but they ranged from $834 in Mississippi to $2,304 in Delaware. And unfortunately the State with the fewest children per wage earner, New York, was near the top in per capita income, $2,158, while South Carolina, the State with the highest number of children per thousand wage earners, was nearly at the bottom with $1,095. On the whole, States which are poor in dollars are rich in children. It is not surprising, therefore, that the amount of money spent on each pupil in an academic year varies tremendously. The United States Office of Education several years ago made an analysis of the cost of operating schools in terms of the median expenses per classroom unit of 27 pupils in the elementary school and 25 in the secondary school. The highest median expenditure was found in New York, $7,627, and the lowest in Mississippi, $1,451, a variation of more than 500 percent from one State to another. The evidence is clear that the educational burden in some States is much heavier than in others, and the amount spent for education far less.

Are these differences in the support of education within the several States, and the consequent differences in the quality of education a result of the unwillingness of citizens to make the necessary financial sacrifice to educate their children? Here again, statistical evidence is illuminating. One measure of effort is the percentage which total current school expenditures from State and local sources is of average income payments. For 1950–51, the average percentage for the Nation as a whole was 2.27, but in 5 States the school expenditure was less than 1.90 percent of the average income, whereas in 7 others it exceeded 3 percent. In 16 Southern States where as we have seen the educational burden is much above the average for the country, and the income much below the average, 13 made a much greater effort than the average to support the school program. It is clear that some of America's children are being denied an adequate education not because their parents are unwilling, but rather because they are unable to meet the bill. In some of the wealthier States, the effort made to support education in terms of available resources is a pathetic commentary on our values.

It has been stated by some that there is no State in the Union which could not afford the best types of education now available in the States with the greatest wealth. In an absurd sense, this statement is true. If some of the poorer States were to close their State hospitals, discontinue the State police force, stop public services to agriculture, labor, and industry, and halt the present large expenditures for the maintenance of public highways, the cost of a superior program of education could be met. But the social disorder and the rapid degeneration that would immediately ensue in the quality of life within those States would be not only an unberable privation for the citizens immediately concerned, but a positive danger to the entire American body politic. As a practical matter, of course, none of the States, even those which are now making the greatest efforts to supply an adequate education for their children, can be expected to make these sacrifices of other public services; nor will they do so. If, therefore, children in these States are to have a proper education for a productive life and the responsibilities of citizenship, the Federal Government must come to their aid.

Government and Education—Part IV

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. BOLLING. Mr. Speaker, Dr. McGrath's speech continues:

One more major question concerning Federal aid to education needs to be examined. Some of our fellow citizens have asked the question, "As a Nation, can we afford it?" Here again, a few figures can be helpful in reaching a conclusion. The gross national product in the United States this year will according to the most reliable estimates be the largest in our history; the New York Times for November 14, 1955 placed the figure at $391 billion. This figure covering the total value of goods and services produced in our economic system has been rising steadily for the past 25 years. Walter Lippman, however, in commenting on the deficiencies in our educational system points out that while expenditures in most other phases of our national life have risen materially in recent years, expenditures for education in terms of dollar value have dropped perceptibly. A rough indication of our ability to pay for additional education can be gained by an analysis of the other things for which Americans spend their money. Two years ago, the American people spent over $13 billion for automobiles and accessories, approximately twice the amount spent for all types of education. In that same year, the expenditures for liquor, cigarets, and cosmetics exceeded the cost of operating the entire educational system both public and private. It is paradoxical that in these days when almost every phase of our society is flourishing, education, the one social service on which the long run well-being of our entire national life depends is languishing.

The condition of education in the United States today, though better than that in most other nations, is a sad commentary on our system of values. This is not the occasion to attempt a comprehensive appraisal of American public education. It is enough to point out two of the major causes of the present deterioration in the quality of American education. Last September there was a shortage of teachers in the public elementary and secondary schools of approximately 150,000. Though low salaries are not the only factors driving young people away from the profession into more lucrative vocations, the relatively low compensation in teaching is unquestionably an important factor in the present shortage. It is hard to believe that in one State the average salary of all public school teachers in 1953–54 was only $1,740, but it is true, and it is not surprising that this is the State with the lowest per capita income, and one of the States making the greatest financial effort to provide education for its children.

There is likewise an alarming shortage of school facilities. From 8 to $10 billion would have had to be spent for school construction to have accommodated all children in a proper classroom last September. Thought the building program has accelerated materially in recent years, hundreds of thousands of American children are now being educated under makeshift conditions. Half day sessions, and increasingly large classes, factories, churches, and other non-educational structures are being used to absorb increased enrollments. The evidence is clear that the inadequate supply of teachers and schools is going to become much worse before it can become better. Though it is true that many States could and should spend more for education before going to the Government for help, without a program of Federal aid to education there is no likelihood in the visible future that there will be sufficient teachers or classrooms to provide the kind of education urgently needed by the children of this and succeeding generations if the Nation is to remain strong, prosperous, and a leader of the free world.

Our economic system can provide the necessary revenue from taxes for financial assistance to the States. As the National Citizens Commission for the Public School says: The financing problem is a problem of policy and not of resources. Few Americans want to increase the already heavy burden of taxation. All will agree that it is desirable as rapidly as possible to reduce the Federal budget and the public debt. Most would likewise agree that deficit spending of Federal funds ought to be discontinued as rapidly as domestic well-being and current military exigencies permit.

If, however, to provide the Federal aid to education which I consider absolutely essential, it is necessary to increase the annual Federal budget or even to increase deficit spending and thus increase the Federal debt, I would favor either or both courses of action. There are groups in the United States vigorously opposed to any further subsidy of education from Federal funds. Some of these groups, strangely, are the very ones who are already benefiting either directly or indirectly by substantial Federal financial assistance or advocating additional expenditures for purposes other than education. Before listening very attentively to the objections of these opponents of Federal aid to education, our citizens should examine the major items of expenditure in the Federal budget. If they do this, they will find that the Government has subsidized, and continues to subsidize, many branches of our economy through such organizations as the Commodity Credit Corporation, the Reconstruction Finance Corporation, the Maritime Administration, the Post Office Department, and the Department of Health, Education, and Welfare. Other substantial indirect benefits have been provided by Government financial assistance, such as, high tariffs, sales of surplus Federal property, and the postal deficit on second class mail. There is no need in this discussion to try to make fine discriminations as to which of these expenditures constitutes a real subsidy and which does not. The fact is that the Federal Government assists various groups in our society with large financial support.

I do not wish to engage in debate concerning the merits of subsidies in general, nor do I wish to create the assumption that past subsidies have necessarily been undesirable or bad public policy. I do wish to raise a question of good faith with regard to organizations and special interest groups in our society which denounce Federal support for such an important thing as education, while urging the Federal Government to increase already large expenditures for other purposes. As an example, consider the proponents of Federal financial aid to States for the construction of highways. It may be true as one of the advocates of highway legislation has said that ours is literally a society traveling on wheels and that, therefore, the Government would be justified in expending large sums to keep our roads in good conditions. It seems to me to follow with equal force that large expenditures of Federal funds for education can be justified on the ground that as a people we ought to know where we are going. Without reflecting in any sense

on the present programs of Federal aid, I would suggest that all items now in the Federal budget, even those related to our military activities, be examined with respect to the contribution they are now making to the welfare of our people and to the preservation of our prosperity and our democratic institutions. After more than 4 years as head of one of the branches of the Federal Government, I have the deep-seated conviction that such an examination would show that the American people could afford to add several hundred million dollars annually to the Federal budget for the support of education within the States. I have an equally firm conviction that the expenditure of such funds would do more to advance the interests of the Nation than any other single activity of Government except the military defense of our country against foreign attack.

Two weeks from today, the White House Conference on Education will begin its deliberations in Washington. Over 2,000 citizens, educators, and laymen will assemble to discuss the most pressing educational problems now before the American people. This conference can be one of the most significant in the history of the Nation. In its general form, it follows the American tradition of bringing together citizens of widely differing interests, background, political persuasion, and social status to deliberate upon a matter of common concern. These citizens, through preliminary conferences in the several States, have become familiar with a vast body of information bearing on the educational problems of our day. They have had before them reliable information on such matters as the present and growing teacher and classroom shortages. There can be no doubt in the mind of any thoughtful person who examines this material objectively that the American educational system has already begun to deteriorate in quality and unless drastic steps are taken immediately, this degenerative process will not be reversed for many years. As is proper in a democratic society many solutions will be offered to these problems which now beset us. It is of the utmost importance that the matter of Federal financial aid to education be presented to this body, that the subject be thoroughly debated, and action taken. My own judgment on this matter is clear, as I have attempted to show. I believe that unless the White House Conference urges immediate legislative action on Federal aid, it will have forfeited a unique opportunity to rally our people to the support of a program without which the quality of American education will surely be in doubt, and the future of American society placed in jeopardy.

Gov. George M. Leader at San Francisco

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. QUIGLEY. Mr. Speaker, under leave to revise and extend my remarks, I include the following text of a speech delivered by my distinguished constituent and friend, the Honorable George M. Leader, Governor of Pennsylvania, at San Francisco, on September 14, 1955:

SPEECH OF HON. GEORGE M. LEADER, GOVERNOR OF PENNSYLVANIA, AT THE FAIRMOUNT HOTEL, SAN FRANCISCO, CALIF., SEPTEMBER 14, 1955

It seems to be my enduring good fortune to be fated to come to San Francisco under the best of auspices.

My first visit came when Mary Jane and I decided it was the ideal place to spend our first wedding anniversary—and we were not disappointed. I was then here in the role of husband, junior grade.

My next trip was in wartime, when I came here as a naval lieutenant, junior grade, to get my eagerly awaited sailing orders to join the U. S. S. *Randolph*, a carrier, out in the western Pacific.

And now, for the third time that binds the charm, I am here as a governor—still perhaps junior grade—at your invitation and that of the Democratic National Committee.

I must confess I had a doubt or two before I accepted the invitation. There are so many notable Democrats, more experienced and more distinguished than myself. And we have a very serious set of problems in our State government of Pennsylvania, problems that require and have been getting the constant daily attention of the governor.

But my hesitations were resolved as I reflected how important it is that we elect a Democratic President and Congress in 1956—how such a President and such a Congress are vitally necessary to the solution of many of these very problems that so concern us now.

We are supposed to have a partnership of the States and the Federal Government. But since the Eisenhower administration took office in 1953, the senior partner, the Federal establishment, has been edging away, holding back, running out on its responsibilities in all those areas where our need is greatest. My Pennsylvania list would include flood control, housing, declining farm income, school construction, specific areas of chronic unemployment. Your Western list would add the special problems of the Mountain and Pacific Coast States.

The Democratic Congress which the people elected in 1954 has been able to prevent the Eisenhower retreat from developing into a complete and shameful abandonment of the field. But a legislative body, no matter how hard it tries, cannot put heart into the craven, put faith into the doubtful, put belief and zeal into men who have no real devotion to the programs they are supposed to execute.

The Eisenhower administration has plenty of lipservice for all good causes. The phrases are intentionally fuzzy and the performance is intentionally weak.

Charles P. Taft, brother of the late Senator and a recent Republican candidate for Governor of Ohio in his own right, summed it all up the other day.

Taft was talking about the administration's weak-kneed policy on foreign trade, but he put the finger on the whole Eisenhower Republican administration.

This is what Charlie Taft said:

"Nobody at the top of the administration stands up and fights."

There you have it. That's the difference between them and us, between the Republican Party and the Democratic Party, between the successful leadership of a Franklin D. Roosevelt and a Harry Truman as Democratic Presidents and the failure of leadership in Dwight D. Eisenhower as a Republican President.

As a Democratic Governor, I feel that my place is with the fighting men. I am sure that I can best serve the people of my State by enlisting in the campaign to change the National administration. I am sure that my party service is also my public service.

It is time that all Democrats, everywhere, made it clear to the President that the honeymoon is over; that he and no one else is responsible for the administration which he heads; that Talbott and Hobby and Benson and Dixon-Yates are not individual failures—they are Eisenhower failures.

It should be made absolutely clear that it is a matter of indifference to the Democratic Party whether Eisenhower runs again or not. We are very happy to take him on as the best the Republican Party has.

To defeat a RICHARD NIXON for the Presidency would be like taking candy from a baby's hot, sticky little hand.

Even in the election of 1952, the American people showed they had no confidence in the Republican Party. They elected General Eisenhower—the greatest military hero—but they held the Republican majorities in the Congress down to the thinnest possible margin. As soon as they had the chance, they turned even that razor-edge margin around, in spite of the most aggressive campaign that any President had ever made for his party in a midterm election.

All along the line, in almost every test, the Democratic Party has gained strength and the Republican Party has lost support since Eisenhower took office.

The trend is still there.

In Pennsylvania, we are in the process of field registrations for local elections in November. In the city of Pittsburgh, new Democrats have out-registered new Republicans 8 to 1. In traditionally Republican Philadelphia, new Democrats have out-registered Republicans by almost 2 to 1.

If Dwight Eisenhower has any political magic, he keeps it to himself. It doesn't rub off on the Republican Party.

And, strange are the paradoxes of our political life, it was the election of a Democratic Congress in 1954 which rescued the Eisenhower Administration from sickening dissension and public out-in-the-open collapse.

The world is enjoying a summer in the sun. For the first time in many years, there is hope that war is not of the instant; that powerful nations may restrain their power; that the great weapons of destruction will not fall from the skies to kill scores of millions of people and wreck our civilization which has been so marvelously wrought.

Tangibly, nothing much has changed.

Russian farmers eat fried chicken in Iowa and American farmers eat cabbage soup in the Ukraine. The secretary-general of the Communist Party in the Soviet Union turns out to be a 2-fisted drinking man, and Molotov puts on a 10-gallon hat. Eisenhower becomes a pen pal of Marshal Zhukov and the American President gives a wedding present to the Soviet Marshal's daughter. The Chancellor of the West German Republic is feted in Moscow. There is some kind of a vague agreement that the foreign ministers will get together and discuss things. Senator MCCARTHY is unhappy with the turn of events, and Senator KNOWLAND is preparing for the role of Cassandra.

But all around the world, there is at last hope that man's reason will somehow prevail—in spite of the shooting on the Gaza strip, in spite of the massacres and countermassacres in Morocco, in spite of new trouble between Greeks and Turks, in spite of the lamentations of those Asiatic darlings of the Republican right wing, Chiang Kai-Shek and Syngman Rhee.

The Republican National Committee already feels so relaxed that it orders up a brand new slogan from the Madison Avenue copy mills—"Everything is booming but the guns."

And all of this in a few brief months since the Stevens-McCarthy hearings were tearing at the vitals of the Republican Party and the Nation; since the Republican Senators were publicly hand-cuffing Secretary Dulles before they'd let him go abroad; since Admiral Carney was leaking imminent war to the whole Washington press crops; since Vice President NIXON was making tentative air strikes at Dien Bien Phu; and Senator KNOWLAND was building another Gibraltar at Quemoy and Matsu.

Peace, it's wonderful, especially with a campaign coming up.

I do not pretend to be an expert in foreign affairs.

Like anyone else with a sense of responsibility, I try as much as my work permits me to read the newspapers, to follow the commentators, to absorb something of the content of the journals of opinion.

Necessarily, I have learned something of politics, as a county chairman, as a State senator, as a candidate for statewide office in Pennsylvania.

Not that it requires a special gift, or intensive training, to see the flagrant and unashamed political distortion the Republican Party strategists are always ready to give to America's foreign policy.

The preservation of peace, together with freedom, is the single great and overriding issue of our times. Searching our hearts, we know that nothing else really counts. If the peace is broken in a war of massive retaliation, to use Secretary Dulles' unfortunate phrase, everything that we have labored to build is lost, even if we survive as individuals.

Properly, therefore, the issue of who can best lead the Nation and the world into an era of peace may be the principal issue of the 1956 campaign.

As they have been doing for 15 years, the Republicans will attempt to rewrite history and create a special mythology of their own. All the foolish words about unleashing Chiang against the Chinese mainland will be forgotten. Dulles will no longer testify that Russia is on the brink of collapse.

In his new role NIXON will concentrate on the physical education of young America. KNOWLAND will glumly smother his doubts for his party's sake. Admiral Radford, the politically selected Chief of Staff, will be under tight restraint.

Eisenhower, the great soldier of World War II, will be paraded as the great President who kept us out of world war III.

It will be smart politics, and it may be effective.

It will be effective unless we Democrats are able to drive home the truth to the people.

The truth is that the Republican Party leadership has never hesitated to put politics first and America last; to risk all-out war for domestic political consistency; to sacrifice their country's for their party's good in every consideration of American policy and world leadership.

Eisenhower, Bricker, Dulles, Nixon—the whole lot of them—were shameless demagogues in 1952. They exploited the hardships and the losses of the Korean war as President Truman's private police action undertaken, by some strange quirk of logic, because Secretary Acheson was soft on communism. The country had seen nothing like it since the campaign against Lincoln and the Union in 1864.

Then, as we all know, the Eisenhower administration proceeded to make a peace in Korea on terms for which a Republican Congress would have undertaken the impeachment of Harry Truman.

By the very skin of our teeth, we avoided involvement in the war in Indochina because the President, after all the bluffs had failed, vetoed the policy that was urged by Radford and Nixon; and because Premier Mendes-France and Foreign Minister Anthony Eden exercised the leadership which failed to come from Dulles and from Eisenhower.

We saw another bluff come close to a deadly ending in the Formosa Straits when the issue of the offshore islands of Quemoy and Matsu heated up, and as suddenly, cooled off.

We saw the reluctance, the timidity, with which the administration regarded the shift in Soviet policy; we saw the persistent brushoff that was given Winston Churchill as for years he sought the meeting at the summit.

It was a sad thing to see the President of the American Republic—the greatest and most powerful of Nations—so lacking in self-confidence as to be fearful of a meeting with the heads of other states. The man was a prisoner of Republican campaign oratory; he was constrained by the Republican right-wing Senators with their constant threat to attack any semblance of "coexistence" as "appeasement."

The Geneva Conference, now shining as a star in the administration's crown, was only made possible by the shift in control of the Senate to the Democratic Party. Dulles remained reluctant; the President was still bashful. It was Senator WALTER GEORGE, Democratic chairman of the Senate Committee on Foreign Relations, who gave them the impetus—and it was a rather sharp kick in the right place.

The Democratic Senate leadership—WALTER GEORGE, LYNDON JOHNSON, and their colleagues—gave the country and the world a lesson in responsibility. They resisted the temptation to play politics with foreign policy; they gave Eisenhower and Dulles the freedom of action which had been denied them by their own Republican Party; they made possible the approval of the Formosa resolution which the President asked and the foreign aid appropriations which the President asked. They extended the Reciprocal Trade Act for 3 years, killed off the Bricker amendment, and pounded down the McCarthy influence in the Senate until the Wisconsin Senator could only muster four votes for his anti-Geneva resolution.

Of course, we all know how Eisenhower requited the Democratic leadership in Congress.

He gave them the back of his hand.

I do not think we need fear that the Democratic Congress will abandon bipartisanship in foreign policy because of the President's bad manners and ingratitude.

I do think, perhaps, we will all be strengthened in our conviction that only the Democratic Party can direct the foreign affairs of this Nation toward the painful, ceaseless, enduring, age-long struggle it will take to establish peace.

It is a sad, hard world where little things make us hopeful.

The Russian leaders smile and act like human beings. The world is relieved.

The American leaders stop the foolish rattling of atomic bombs. The world breathes easier.

And yet, we all know that unnumbered crises lie ahead.

Nothing has really changed on the frontiers which divide the world. Germany is still divided; the satellite countries are still satellites; the Communist parties are still immensely strong in France and Italy; the artificial lines in Korea and Indo-China are still danger spots for the free world; Japan edges toward the East for economic survival; the Russian and the Chinese regimes are obviously strong and unshaken.

Wishful thinking alone will not bring us peace.

Nor will a foreign policy tempered to the needs of each election.

In our time, only the Democratic Party has contained the vigor, the statesmanship, the imagination, to prosecute a world policy for the United States will give us a reasonable chance of success.

It was the Democratic Party which built the Marshall plan which saved Western Europe.

It was the Democratic Party which set the Truman doctrine which saved Greece and Turkey.

It was the Democratic Party which built the North Atlantic Treaty Organization and sent a man named Eisenhower to preside over its forces.

It was the Democratic Party which stopped aggression in Korea, established the principle of collective security, maintained the United Nations, and kept communism from Japan.

It is the Democratic Party which has restored a proper freedom of action to President Eisenhower and Secretary Dulles.

It was the Democratic Party which is willing to vote the necessary appropriations for foreign aid and our own armaments.

It is the Democratic Party which stands for the elimination of trade barriers, and a policy of mutual prosperity among the nations.

There is no secret right-wing war party among Democrats. There is no group in the Democratic Party which in its heart of hearts believes in a so-called preventive atomic war—now.

Let the issue be peace, and who can best preserve it.

On that issue, the Democratic Party need fear no man and no campaign. The Republican right wing, the Hoovers, the Nixons, the Knowlands, have been wrong—dead wrong—invariably wrong—through all these tragic years.

John Foster Dulles has been weak, a compromiser, a man who trimmed his course for each expedient wind.

Eisenhower has drifted and vacillated. He seems capable of a clear sense of purpose only when directed by a democratic administration or pushed forward by a Democratic Congress.

He is the best the Republicans have; he is their indispensable man.

But Dwight D. Eisenhower is not the Nation's indispensable man; he is not the best man for the country, not the best man to seek and keep the peace.

For Dwight Eisenhower, with all his admitted services to America and to the world, with all the honors that are due him, with all his amiability and good will, is not a great president. He is not a leader.

He reigns, but he does not govern.

Were he to win the office once again, carrying with him a Republican Congress, the hard and ugly underworld in the Republican Party would again reveal its measure of control, again make the President and the Nation their captive. They fawn on Eisenhower now because they need him desperately. As a President serving his second and final term, they would wear him down; shatter him; if need be, destroy him.

There would be dangerous eyes peering through the bomb sights; dangerous men playing reckless politics with armies, with atoms, with the survival of humanity.

This hard struggle, this great hope, for enduring peace will be pressed hardest, will be best attained when you and I and 35 million of our fellow Americans elect in 1956 the nominee of the Democratic National Convention.

And, as Governor of Pennsylvania, a very real pleasure will come to me. I will have the honor of welcoming as a permanent resident of our State, for 7 days a week, and 52 weeks a year, a former President and a general of the Armies of the United States—a man who longs, as we all know, for the comforts of a handsome farmstead on the fertile soil of Adams County, near Gettysburg, in Pennsylvania.

The Communist Conspiracy

EXTENSION OF REMARKS

OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, January 12, 1956

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD several ad-

dresses I delivered on the subject of the Communist conspiracy.

The first was an address I delivered at the Boston Arena, in Boston, Mass., on October 30, 1955.

The second was an address at the annual fall meeting of Sertoma International, in Chicago, Ill., on December 5, 1955.

The third was an address delivered in Tulsa, Okla., on December 7, 1955.

The final one was an address I broadcast on January 8, 1956.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

ADDRESS BY HON. JOE MCCARTHY, OF WISCONSIN, BOSTON ARENA, BOSTON, MASS., OCTOBER 30, 1955

My fellow Americans, I always like to come to Boston because we don't have to spend our time discussing elementary things. I always feel that Bostonians—unlike some of the people in Washington—have a pretty good understanding of what the Communist fight is all about.

There is no need, for example, to tell a Boston audience that the spirit of Geneva is the spirit of illusion, folly, and appeasement.

In Boston, it is unnecessary to explain that when you propose friendship with tyrants and murderers—however good your intentions—you advance the cause of tyranny and murder.

There is no hesitation in this audience, I am sure, to refer to Communists as the eternal enemies of God and the human race, and to the Soviet Union as an unregenerate international bandit—even though the Paul Hoffmans and the Milton Eisenhowers tell us that the use of such words is a serious breach of coexistence etiquette.

I trust that you good Americans will never lose sight of, or minimize, the central fact of this struggle—namely, that whatever be the current twist of Soviet diplomacy, international communism is irrevocably committed to destroy this Nation and our way of life.

We cannot do business, we can never make friends, with that sort of enemy.

Creating the spirit of Geneva was, of course, a great triumph for Communist diplomacy, and the Kremlin leaders are still exploiting that triumph to the hilt. But we must not suppose the Communists have placed all their bets on their ability to outguess us in the diplomatic chess game. In case they fail to defeat us in this way, they are plotting our military defeat.

It is this aspect of the struggle that I want to discuss with you tonight. Tonight I shall discuss the life-and-death race between the United States and Russia in the intercontinental guided ballistic missile field, and whether at our end of the race we are being sabotaged.

A vital part of the job of destroying us militarily has been assigned to the Soviet Union's undercover agents in this country. The mission of the Soviet fifth column is twofold: Communist espionage agents are ordered to steal our secrets, and Communist policy-subversion experts are instructed to cause disastrous slow-downs in the development and production of vital military weapons.

We are most familiar with the first type of sabotage—that of stealing our secrets—and most Americans realize how it has jeopardized our national security. We know that had it not been for Communist agents turning over our most valuable secrets to the Soviet Union, the danger to this country today would not be nearly as great as it is. Take, for example, what happened to our atom bomb monopoly.

In the years immediately following World War II—while we had exclusive possession of the atom bomb—it was inconceivable that the Soviet Union would attack the United States. But in 4 short years this magnificent balance of power in our favor evaporated and our own country was in very great peril. And why? Because Klaus Fuchs, the British scientist, and American spies, such as the Rosenbergs, gave the Russians the vital secrets of the atom bomb. The Communists were thus able to produce an atom bomb in 1949, a full 4 years ahead of schedule.

You might think, after the great A-bomb treason, that those who had pooh-poohed the internal Communist threat through the late forties would have learned their lesson. But no: Irresponsible individuals—who pose as intellectuals—started making jokes about hunting Communists in the Bureau of Wildlife and Fisheries, and, at the same time, renewed their smear campaign against those who were trying to tighten up our security system. Those left-wingers are responsible—those scoffing, sneering pseudo-intellectuals, supported by wealthy, tax-exempt anti-anti-Communist organizations such as the Ford Foundation—they are responsible, no less than the Communists themselves for the fact that many Soviet agents remain unexposed, and to this day have access to our newest military secrets.

According to testimony of former Communist spies, a number of unidentified Communist espionage rings are still operating in the United States Government. Because they are not identified, it is only prudent to assume that Communist agents are gathering information every day about our Military Establishment and sending it to the Soviet Union.

Let me say, in passing, with regard to that fantastic suggestion that we give the Communists blueprints of our Military Establishment, that one likely reason the Communists did not at first accept the plan is that copies of our blueprints are already in Kremlin safes.

But important as it is to protect ourselves against spies, we must not lose sight of the other, and even more important assignment of the Soviet fifth column. If Communists are successful in slowing down the development of new weapons, and the production of already-developed weapons, it won't matter much whether the spies are successful in stealing secrets.

For remember: the Russians have a highly trained scientific establishment of their own, and they employ some of the most efficient methods of mass production. If, through policy sabotage, we are held back in the race to develop and produce a decisive weapon, the Communists can beat us on the strength of their own knowledge and skills.

Today the decisive weapon is the hydrogen bomb; yesterday, it was the atom bomb. Tomorrow—and by tomorrow I mean possibly within the next year—the decisive weapon with be the intercontinental ballistic missile. The race to produce this weapon could well determine the fate of Western civilization. Yet tonight I must report to you that the available evidence is (1) that the Soviet Union is winning that race, and (2) that it is possible that the Soviet Union is winning the race because well-concealed Communists in the United States government are putting the brakes on our own guided missile program. The Killian report is to the effect that within a short time the Communists will be ahead in the ICBM race.

The subject of the intercontinental missle race is both interesting and frightening, and I want to discuss it with you in some detail. But first, it would be well to square off to that type of thinking that says it is inconceivable that Communists are in such elevated and strategic positions as to effect slowdowns in our secret-weapons program. Nothing could be more dangerous than to rule out the possibility that Communist agents have infiltrated the uppermost echelons in our Defense Establishment—and nothing demonstrates so well an ignorance of very recent history.

In the fall of 1953, you may remember, I was viciously attacked by the left-wing press for stating that certain highly placed individuals in our Government had deliberately caused a slowdown—and for awhile, a complete cessation—of the American hydrogen bomb program. You remember the reaction: "MCCARTHY makes a wild charge"; "a baseless accusation"; "an unfounded smear," and so on. But the truth was known in high places, and the administration, through fear of exposure, was forced to act.

In a matter of weeks, my charge that a slowdown had occurred was verified and the American people finally learned that the man who was primarily responsible for the slowdown—had paid according to his own admission over $1,000 per year to Communist causes up until the very week he was asked to participate in our top secret atom bomb development program. This man was J. Robert Oppenheimer.

Oppenheimer persuaded Harry Truman that it was immoral for the United States to develop the hydrogen bomb—when, as an expert in the field, he knew full well that it would only be a matter of time before the Communists had a hydrogen bomb of their own.

I shudder to think what would have happened had Oppenheimer had his way for another 5 years. The Communists would then have had an H-bomb stockpile, before we had produced a single hydrogen bomb—which means that in 1954, or possibly this year, the Communists could have annihilated the United States.

Of course, today J. Robert Oppenheimer, like Alger Hiss and Owen Latimore before him, is the darling of the leftwing. Books are written about Oppenheimer's persecution. Edward R. Murrow made Oppenheimer the hero of one of his "unbiased objective" television shows. The Ford Foundation's Fund for the Republic is distributing this Murrow film, free of charge, throughout the country. And, to round out the picture, it has recently been brought to my attention that Murrow's film, eulogizing this man Oppenheimer, was included in an employees' training program in a department of the United States Government—to be exact, the General Services Administration.

The Oppenheimer case is worth keeping in mind on two counts. It shows how easy it has been for men even with the most flagrant Communist backgrounds to rise to the top in our secret-weapons program; and it holds out the prospect, moreover, that the man who deliberately sandbags the development of a weapon on which the survival of this Nation depends will be treated, not as a criminal, not even as a rascal—but as a serious candidate for national sainthood.

When the liberals say that sabotage of the new weapon is inconceivable, my answer to them is that I consider such sabotage not only conceivable but likely because I realize the power and influence of the liberals, and because the manifest purpose of the liberals' pro-Oppenheimer propaganda is to see to it that the next J. Robert Oppenheimer keeps his job.

Now, what about this new decisive weapon—the intercontinental ballistic missile? Most of you have heard vague and mysterious references to the ICBM—and you may have gotten the impression that intercontinental missiles, like spaceships to the moon, are something of the distant future, a Buck Rogers' fantasy. But this is a dangerous illusion. For the scientists have nearly caught up with the science-fiction writers. The development, production, and use of the ICBM as a weapon of war may be—as I indicated earlier—just around the corner.

Work on the ICBM began in Germany during he Second World War. The German

V–2 rocket, which was used with devastating, though erratic, effect during the closing months of the war, was an adolescent ICBM. The V–2 lacked the necessary range and accuracy for effective use in intercontinental warfare—and, of course, it did not have a nuclear warhead. But the V–2 rocket embodied the basic principles of the weapon that may decide all of our futures.

The intercontinental ballistic missile will revolutionize warfare in our day—as, in the past, warfare was revolutionized by the invention of gunpowder, later by the airplane, and, more recently, by the atom and hydrogen bombs. And, as always—when one side has the revolutionary weapon and the other does not—the latter is at the absolute mercy of its enemies. If the Communists develop a long-range guided missile before we do, the balance of world power will shift completely, and this country will face the alternative of surrender to the Communists, or utter destruction.

The long-range guided missile will be "the" decisive weapon because there is no known way of defending against it. This is due to the terrific speed that can be generated in a rocket-propelled missile. We tend to think of our present jet planes that travel at or near the speed of sound, as just about the fastest things that man can make. But present estimates indicate that the first intercontinental missiles will travel at least 8,000 miles an hour—or 12 times the speed of sound!

At the present time we are developing means of defending ourselves against hydrogen bombs delivered by planes. Our defenses against bombing attacks are by no means foolproof, but guided missile antiaircraft fire will be able to knock down many—perhaps most—enemy planes before they reach the United States.

For defense against H-bomb attacks, we are now relying most heavily on the Army's famous Nike missile. Should enemy planes approach this country, a Nike installation in the area of the enemy approach will launch a missile into a radar beam with which our plane-spotters are tracking the oncoming aircraft. After the missile has reached the center of the radar beam, an electronic mechanism inside the missile will cause it to "ride" the beam until finally the missile reaches the plane and destroys it. This is not as easy as it sounds because the Communists may have ways of distorting or deflecting the radar beam, and also may be able to concentrate their bombers so heavily as to make it impossible for Nike to knock down all the planes.

Others, and possibly more effective, defensive missile systems are being put into operation. For example, the Air Force has developed an aircraft-to-aircraft guided missile, called the Falcon—which is launched by fighter planes. Air Force detachments in the Arctic are being supplied with the Falcon, so that we will have a fair chance of stopping Communist bombers before they reach continental United States.

We thus have some defense against aircraft-delivered bombs. But against superspeed guided missiles, that can make the trip from Russia in less than half an hour, defense is practically impossible.

The question is often asked: will Russian missiles, traveling at such speeds, be able to hit American cities and other strategic points with any degree of accuracy? The answer here is, unfortunately, yes. Russian intercontinental missiles will have self-contained guidance mechanisms that will guarantee a hit within 2 to 10 miles of the center of the target area. With hydrogen bomb war heads, the missiles will thus be accurate enough to knock out any metropolitan area at which they are aimed.

The guided mechanism of the Russian missile is a tremendously intricate piece of machinery—but marvelously simple in concept. The guidance mechanism will give the missile a "brain" of its own. By means of an accelerometer, which will tell the missile how far it has traveled, and a gyrocompass which, when corrected by automatic star sights, will "inform" the missile of its course, the missile will "know" where it is at every moment of its flight from Russia to the United States. The missile will also have been "told" by prelaunching instrument settings, the total distance it has to go and the course it must follow in order to reach a given American city. By putting these two pieces of information together—namely, where the missile ultimately has to go, and where it is at the moment—the guidance mechanism "figures out" the direction and distance left to travel, and automatically sets the missile at the proper speed and course.

The grave danger to every American city is, thus, self-evident. As soon as the Russians perfect this guidance mechanism, and develop sufficient range for their rockets, Milwaukee or Washington or Boston can be wiped out by pushing a button.
